Fourth of July Address by Secretary of Defense

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Secretary of Defense Louis Johnson at the West Virginia State American Legion Convention, at Wheeling, W. Va., on July 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The celebration of the anniversary of our Declaration of Independence is a solemn occasion. We commemorate the birth of our Nation. For a fleeting moment we try to reenact the scene and the environment of a hot July day in Philadelphia many, many years ago and to recapture the spirit and the thoughts that passed through the minds of those who signed that declaration. They risked their lives, their property, and their opportunities for the pursuit of happiness, but they did so courageously and unfalteringly. They knew they were right.

In the Declaration of Independence our founding fathers declared for freedom; expressed for themselves and for posterity the basic realities of humanity and good will. On that date, the Continental Congress in Philadelphia wrote down the enternal principles which so far transcended administrative formula, that they had to be inscribed before a constitution for government could be blueprinted.

I wish that every member of the world family of nations could know how we Americans feel about the Declaration of Independence. They would surely know, then, that democracy seeks to impose no stipulated governmental form on other peoples. They would realize beyond shadow of doubt that our democratic vigor covets no conquest over any man or over any territory; that on the contrary, it demands with unconquerable spirit that none shall enslave another.

But we Americans do believe that proper human government, whatever its form and wherever it functions on earth, must be established upon the basis of human rights endowed to man by God. We believe with all our hearts in the great fundamental assertion which the Continental Congress wrote into our Declaration of Independence.

In a few simple words our forefathers condensed the whole philosophy of the American people—faith in a Supreme Being, an ethical concept of moral life, and an enduring confidence in our fellow men as human beings worthy to govern themselves in a world dominated by reason, logic, and justice.

Certain corollaries follow these bold propositions. Since we have confidence in each other we must learn to get along together, learn to give and take, to become good losers and gracious winners. The ability to compromise on detail without sacrificing principle comes natural to Americans who respect each other and it is in the cultivation of that kind of spirit, simple as it is, that the whole future of mankind rests.

Because we have confidence in each other, we exert every effort to encourage the little fellow, to make the rules of the game fair so that he, too, can play and enjoy the fruits of his labor. So the little fellow, the farmer, the laborer, the small-business man has always been the concern of our people; and that attitude, too, is an essential part of the American philosophy which flows as a corollary to the fundamental propositions of the Declaration of Independence.

The ideals expressed in the Declaration are ageless, are just as applicable to the American spirit in 1949 as they were in 1776, and as they will be in all the tomorrows that lie ahead. Its ideals and precepts were not new even in 1776. The spirit embodied in this document was nurtured for long centuries in the breast of mankind. The historic achievement of our forefathers was to put into words these noble aspirations of the human race at a time when a forthright statement of human rights was paramount. The doctrines which it expounded so clearly were on everyone's lips in the early days of our Republic.

As a matter of historic sequence, the Declaration may be deemed a creation of Anglo-Saxon civilization, but its deeper aspects, its sturdy philosophy of natural rights can be traced back to what is at the root of all western civilization. And in its essence and spirit, this philosophy of the Declaration of Independence represents today the hope of civilized man everywhere. There is not a man or woman alive anywhere in this world, who would not like to live under such a doctrine as that embodied in the spirit on which America was founded—a philosophy we call the Spirit of Seventy-six; a philosophy adopted by brave men and hardy women, who were determined to be free.

By the same token, our Declaration of Independence can never grow old or out of date. The Constitution may be changed, of course, by the will of the people. Wisely, indeed, its framers so drafted the Constitution that it might be modified on occasion to meet the needs of changing times. But not so the Declaration of Independence. That remains a firm, unchanging document expressing the eternal credo of the American people. Its tenets stand as the living monument of the principles for which our forefathers fought and gave their lives in the eighteenth century. And I am proud to say that they are the same fundamental ideals for which the fathers, brothers, and sons of American Legionnaires have fought and died in two world wars during the twentieth century.

There has been considerable talk, in these days of bitter differences between two world ideologies of government, about the need for some new American slogan—to serve as a fresh rallying cry; a force in which we can believe, and for which we are willing to fight. I suggest that we need no such new slogan—that we have such a force, and such a rallying point. It is in the Declaration of Independence. In this document rest not only the finely distilled conviction- of our forefathers, but the immortal philosophy of our continuing American way of life as well.

To my mind, we could want no better rallying cry than freedom; no stronger force than America's burning faith in the instinctive virtues of man as a human being; no slogan preferable to "Life, liberty, and the pursuit of happiness."

There are still shackles to be broken in this world today. The grievances that the American colonists had are the same kind of grievances that human beings in many quarters of the globe suffer in this modern age. Only a spirit like that of our great Declaration of Independence can throw off chains and end these grievances.

Fundamentally, the men and women in chains must help themselves. But we can do more than merely sit on the sidelines and watch. The spirit of our own Declaration of Independence requires us to do more. We have signed the North Atlantic Pact, which is an agreement among freedom-loving nations that any attack by an autocratic aggressor on one of the signers is an attack on all. And we should back it up by sending military assistance to the nations which are our companions in freedom, not because of generous altruism, but because our own security is bound up in their liberty. This effort to help in the preservation of world freedom constitutes in its essence the very heart of the human philosophy on which our great Government was founded.

It is because this bears a close kinship to the spirit which lives within the heart of the American Legion that it is an inspiration to be privileged to speak in my own State, before my fellow members of the American Legion and their friends, in Wheeling, on this Fourth of July.

Our State, West Virginia, owes its very existence to the spirit of independence which

we celebrate today. Our inception as a State was in the finest traditions of the Declaration of Independence and ever since we have proceeded to live and let live in accordance with the code of freedom laid down by our forefathers on July 4, 1776. In the motto of our State we have tried to condense in a few simple words the spirit of that Declaration. "Montani semper libri." Mountain men are always free, we say, and we mean it.

Here in our State are men and women of diverse origins, some who can trace their ancestry to the early cavaliers of Virginia and others who but recently have reached our American shores. Here are people who serve their God in accordance with their various religious traditions as Catholics, Protestants, and Jews. Here are Republicans and Democrats who vie with each other for office and opportunity to serve their communities, their State and their country. But all of these apparent differences are but skin deep. In fundamentals, we are united. We live together peacefully and harmoniously and respect the right of the individual to live his own life his own way. In West Virginia, among mountain men who are always free, we celebrate the anniversary of the Declaration of Independence on this one day, July 4, and proceed to live in its spirit every day of the 365.

In fostering that spirit, you, my fellow Legionnaires, have proved to be the leaders in your local communities and in our State. Legionnaires come by that leadership naturally. Military service has taught us to depend on our fellow American and to recognize in him those salient military qualities that made it easier to do one's duty and carry out missions in the face of danger. Differences of race, creed, and color did not matter. The individual and his courage, loyalty, and resourcefulness are what counted. When you returned to civil life and became members of the American Legion, you joined your fellow veterans to further the American ideal and to furnish the leadership toward its realization.

The Legion has done its job well in West Virginia and the health and happiness of the people in our local communities are the best evidence thereof. It is on the local level that the Legion does some of its best, its most understanding, its most human work. It is in the local post that the seeds of leadership are planted, to grow into wider service for State and country.

The American spirit which lives within the heart of our American Legion has as its cardinal principle, military preparedness. We, of the Legion, have twice gone forth to battlefields on land and water, and in the air, for defense of our country in war. We want no more of war. We are equally intense in our devotion to all developments aimed at assuring world peace. This spirit of freedom and peace lies deeply engraved in the Declaration of Independence. The American Legion's charter of organization likewise expresses a similar faith and devotion to these basic aspirations of our founding fathers.

"For God and country, we associate ourselves together," declares the preamble to the American Legion charter. Then it goes on, and lists Legion objectives. Here are some of them:

"To uphold and defend the Constitution; * * * to maintain law and order; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of freedom, justice, and democracy."

These ideals of the Legion are indeed the ideals of the Declaration of Independence itself. We have proudly and firmly held to them in the past. We live by them now. We will not let them go in the future.

Our ideals are the foundations of the system we call capitalism which gives more happiness and greater opportunity to individual enterprise than any economy that has yet been developed by man. And though we stand under the banner of capitalism almost alone among nations, all of them still look to us for leadership, guidance, and inspiration. We are still the hope of mankind and should remain true to our democratic ideals.

Any scheme which may undermine the strength of the American democracy may also undermine many of the great American privileges. And I am sure you will agree that while the privilege of being a Legionnaire is great and honorable, the privilege of being a free American must always be greater.

In its service to America the American Legion has consistently over the years raised its voice to favor and its strength to influence a program of adequate national defense. Had America been adequately prepared—had the American Legion program for preparedness been adopted—we might never have had a World War II.

Today the American Legion again calls for strength as the way to peace, and this time we must be determined to get it.

The first item in our peace-through-strength program is unification of our armed forces. In these crucial days we cannot afford the luxury and the wastes of duplication and the lack of cohesion among members of the same all-American national defense team that characterized some of our past efforts.

It is a matter of great pride that the American Legion was among the first to accept unification. The Legion's national convention in 1946 formally resolved: "That the Congress is requested to enact appropriate legislation to establish a single department for national security with provisions for the Army, Navy, and Air Forces on an equal level therein."

The Legion stand for unification was a natural development. This organization is itself a symbol of unification of defense forces. In the Legion we have former marines, sailors, airmen, engineers, paratroopers, artillerymen. Some Legionnaires are former officers. More were privates, corporals, and sergeants. When the Congress voted to unify the Army, Navy, and Air Force under a single Department of Defense, the Legion was already in line.

And it will stay in line for America in response to call in the future as it has in the past.

We veterans of the First World War are slowly passing out of American Legion leadership today. We have kept the faith since World War I and through World War II. We are glad to receive the young veterans of World War II and make way for them. We have full confidence that they will carry on as the task is handed to them. And we hope they will be even more effective in holding our country to its cherished ideals.

In the final analysis, we hope there will be no more veterans after these of our present generation. Fine as the organization is, we hope that it will some day die for lack of eligible membership. It is up to the youth of the Legion to make this happy eventuality come to pass. As you young veterans of the last great and tragic war settle into your work in this world, as you move into American leadership, it is up to you to direct affairs so that there will be no more wars. Let not the lesson of the ages be lost upon you. To protect our American way, to uphold the ideals of the Declaration of Independence, we must always be free, and to be free, we must be strong. In these endeavors, I am confident, our country will always find that the legionnaires of West Virginia, those mountain men, ever free, will always be found in their place, in the vanguard of an America, determined in its march toward freedom, democracy, and peace.

And as we march we would do well to sing to the tune of "Finlandia" this inspiring poem by Lloyd Stone entitled "A Song of Peace." Here are the words:

"This is my song, O God of all the nations,
A song of peace, for lands afar, and mine;
This is my home, the country where my heart is,
Here are my hopes, my dreams, my holy shrine;
But other hearts in other lands are beating
With hopes and dreams as true and high as mine.

"My country's skies are bluer than the ocean,
And sunlight beams on clover leaf and pine,
But other lands have sunlight, too, and clover,
And skies are everywhere as blue as mine.
O, hear my song, thou God of all the nations,
A song of peace for their land, and mine."

Address to the Graduating Classes of Northwestern University by President Franklyn B. Snyder

EXTENSION OF REMARKS
OF
HON. CHAUNCEY W. REED
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. REED of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following address made by Dr. Franklyn B. Snyder, president of Northwestern University, on June 13, 1949, to the graduating classes of that university:

Members of the graduating classes, friends of these young people, and of Northwestern, a commencement day such as this, with all its happy wistfulness, belongs primarily to these men and women who have just become alumni of this university. Theirs is the special sense of accomplishment; theirs the memories of tasks well done; theirs the consciousness that much remains to be done in the future. We are here to honor them, and to wish them well in the years that lie ahead.

But I am sure they would be the first to say that the day belongs also to the fathers and mothers who have watched their progress through school, college, and university; who have sacrificed much that their children might be here today; and who are proud to find their sons' and daughters' names in this commencement program.

Today belongs also to the husbands and wives of many of these new alumni; yes, and to their children, who will be here in their own right 20 years from today. They have lived under noisy tin roofs and in crowded quarters and have put up with much that was inconvenient in order that he or she might not be deprived of the education he came here to find. To all of you who believe in these young men and women, and have helped them reach this goal, a most hearty welcome. I am glad you are here, and even more glad that you believe in Northwestern. And I claim you as well as these graduates as members for all time of the great Northwestern family.

Let me say a special word to the veterans in this year's class. We are proud of the records you made during the war, when you took the khaki and the gun in place of cap and gown. You served your country with devotion, courage, and skill. Our enemies thought you might be soft, unequal to the hardness which war requires. Well, you were not soft; you did a grim and unpleasant

job magnificently. And when you returned to the campus, you set new and higher standards in every school of the university. We are grateful to you for your services to the Nation during the war, and for the real contributions you have made to the university since VJ-day.

There are not as many of you veterans at this commencement as there were a year ago, but the total number of names in the commencement program is larger than ever in the history of the university—3,600. No two of these men and women have done precisely the same things at Northwestern, or will carry away the same memories of life on this campus. The permutations and combinations possible in so large a group are astronomical in number. Yet all of you young people in caps and gowns have had at least four experiences in common: You chose of your own free will to enter this university; after most careful scrutiny you were admitted; you selected your own programs of study, you followed these programs successfully to this commencement day. I congratulate you on having enjoyed that priceless American heritage, freedom to plan your own lives. I congratulate you also on having done what you set out to do. There is great merit in finishing a job.

At any time until this morning you could have withdrawn from the university, and have transferred in good standing to any institution that would have accepted you. But from now on you belong to Northwestern, and Northwestern belongs to you. You are in for life. Your names are on our records, and in a very real way in our hearts. Today for the first time Northwestern becomes irrevocably your university. I congratulate both you and the university on this new relationship.

Last Saturday I had luncheon with some forty members of the class of 1899, who were back in Evanston to celebrate their fiftieth reunion. These stalwart veterans of half a century are still young in heart and mind, an inspiring group of old boys and girls who will never grow old. They believe in their university, and came back to the campus to check up on us, their successors, and to keep fresh and lustrous their memories of their own college days.

When you who are graduating today return for your fiftieth, the calendar will say 1999. Few of the men and women on this platform will be present to greet you. But the university will be here, and the lake, and the tree-shaded paths of the campus, and probably Old College and the Commerce Building yonder. What will you remember, 50 years from today, about your experiences at Northwestern?

Some of you will certainly remember the Rose Bowl, and all that this phrase implies: the trip west, the crowded hours in Pasadena, the game, the blizzards on the way back. Nearly all of you will remember the Rose Bowl vacation, which the football team and the student government board shamelessly bullied the president into approving. You will remember many extracurricular activities, such as the Waa-Mu show. And you will agree with me that this sort of good fun is a legitimate part of a college course. It has its real educational value.

You will certainly remember the faculty members with whom you studied; those great teachers and scholars who alone make a university distinguished. Buildings, equipment, all the physical paraphernalia of education, are important. They are the necessary tools—but only tools. It is the men who use them who really count. You will never forget the stimulus that has come to you through contact of mind with mind, of spirit with spirit, in the classroom and laboratory.

You will remember, too, that here at Northwestern you found and did not abuse that most precious of all gifts, freedom: intellectual freedom, social, political, and religious freedom. There has been no censorship on this campus to restrict that freedom, or the freedom of the faculty members with whom you have studied. You did not win this freedom by any act of yours; it was not given you by the faculty; you inherited it from men who fought for it long ago, and from those others who—like the veterans among you—defended it against all attacks. In other words, you have been the beneficiaries of the American way of life, the system of free enterprise, operating in the realm of the intellect. Under no other system can a real university exist.

I hope that 50 years from now freedom will still exist in this land of ours. I hope we shall not have been enslaved by either an all-powerful Federal Government in Washington, or by debt, much of it incurred in the name of a vague concept called security, which will inevitably crush all initiative. I have no objection to paying a debt incurred in the defense of our country against Germany and Japan, nor to providing proper security for the aged and the infirm. But I do not wish to be taxed so that my grandchildren need not work for a living or pay their doctors' bills.

The concept of freedom which we Americans cherish is a many-sided one. It implies freedom to fail as well as to succeed. We learned long ago that the rewards of victory are tawdry indeed unless they are won under the hazard of defeat. Who would watch a football game with only one team on the field? Yet that is precisely the condition that some of our social planners would like to see established. They would remove all elements of conflict, of struggle, of hazard, from life; or, as they put it, they would extend security from the cradle to the grave. The men and women who listen to the blandishments of these theorists forget that as Mr. Justice Holmes put it, "Security is generally an illusion," and that the slavery imposed by a planned economy can be much worse than that of poverty or disease. The pioneers who settled this State of ours were not seeking a life of either ease or security. They were eager to work, and gloried in the opportunity, not the security, which they found here west of Lake Michigan.

As an indication of our belief in freedom we have been careful to protect a man's right to stop work, when he thinks that by doing so he can better himself economically. The right to strike is part of our many-sided American freedom. I hope you young Americans are also interested in the right of a man to remain on the job if he wishes to—a right which is too often denied him. We are careful, here in America, to make sure that a man receives a fair day's pay for a fair day's work. This is eminently proper; concern for the welfare of labor lies at the foundation of our whole economic structure. But I hope you also believe that the man who furnishes the capital should receive a fair return on his investment. Remember that without Mr. Ford's millions ploughed back into the business there would be no 60,000 jobs at River Rouge. If the unjustified demands of labor or the unchecked greed of the tax assessor or the theorizing of the planner estops men from saving money and investing it in agriculture or in industry, the United States 50 years from now will be a sorry place in which to hold a class reunion.

Some people tell me that our worries concerning the future would disappear if all college students could be required seriously to study American history. Well, I yield to no one in my interest in the history of this country of ours. Only against the background of the past can one understand the present, or venture tentatively to anticipate the future. But sometimes I wonder whether it would not do us more good to ponder the history of ancient Rome. For Rome can be seen in perspective: It does not press so close upon us as to distort our vision and our judgments.

What a magnificent story it was. Five hundred years of the Republic, and then another 500 of the Empire. During many of those ten centuries Rome was quite literally the mistress of the world, and maintained peace wherever her eagles gleamed in the sun. The Roman citizen, like you and me, enjoyed freedom within a law of his own making, and accorded justice to everyone, even to the captive of war and the slave. Courts, hospitals, banks, markets, roads, systems of transportation—all these modern developments were features of Roman culture. Literature reached higher levels than it was to attain till the spacious days of Queen Elizabeth. A magnificent army threw a protecting barrier around the Empire; the Roman navy held the Mediterranean in fee, and pushed boldly beyond the Straits of Gibraltar to the white cliffs of England. Behind these human ramparts of the great city-state lived proudly on her seven hills, and received tribute from all corners of the globe.

And then, not swiftly, but steadily, inexorably, as darkness wraps itself around the earth after sunset, the Empire crumbled. The Goth and the Vandal pillaged the city; Alaric and Attila led their barbarian hordes in triumph up the Capitoline. Why? Not because of superior physical force. Rome fell because the nation collapsed spiritually; because a hardy race succumbed to the insidious poison of the idea that "the Government will do it"; because rulers bought power at home and favor abroad by gifts of treasure and food; because integrity and thrift and industry gave place to corruption and waste and indolence; because the nation bartered its ancient heritage of hard-won freedom for the specious ease and false security which a corrupt government promised it. Then and only then the Centurions' swords were blunted in their hands; their spears rattled harmlessly to the ground. Then and only then the invaders from the north and east took over the empty shell of the Empire.

Sometimes I wonder about this land of yours and mine. What destiny waits for it behind the thin veil of the future? I have no fear that any power in the world can forcibly break through the steel wall of our young manhood. Twice within a single quarter century we turned back the barbarian from our gates; a third assault would be crushed in the same way. But too many of us are asking the Federal Government to do for us what our grandparents would have done for themselves; too many officeholders are keeping themselves in power by promising spectacular gifts to the electorate; the old concepts of thrift and economy are laughed out of court by theorists who delight in squandering money that other people have earned; what seems to be wasteful and inefficient Federal Government is reaching out like an octopus to wrap itself around more and evermore phases of your lives and of mine. If these trends continue unchecked we may well destroy ourselves from within, as did Rome.

I hope that no such fate awaits this country of ours. I hope that the intuitive common sense of 140,000,000 people is still strong enough to assert itself and to reestablish the antique virtues of courage and honesty and industry and thrift in the minds and hearts of our citizens. I hope that the young people who this month are graduating from American colleges and universities still have the hardihood of their pioneer ancestors and do not wish to be nursed and coddled by the Government as if they were weaklings. I hope the college men and women of this country will make their voices heard in every legislative hall when they say: "Our universities encouraged us to think and to live like free men, and we do not propose to surrender the freedom which above all else makes life worth living. We shall plan our lives as we think best, with due regard for

the happiness of other people, and any bureaucrat who tries to plan them for us we shall toss out of office. We shall not be enslaved by foreign conqueror or domestic theorist or even by our own Government. We want no state socialism in this land of ours; we want no special favors for ourselves; all we ask is the freedom which is our birthright as Americans; and that freedom we shall certainly maintain."

If you will say something like that to your representatives at Springfield and at Washington, ladies and gentlemen, and keep saying it, they will listen to you, and you need have no worries about your fiftieth reunion. It will be a pleasant occasion.

And now I claim from you the pledge traditionally taken by all Northwestern men and women before they receive their diplomas. Please rise and repeat after me the words printed on the inner cover page of your programs:

"With a solemn sense of my responsibility, I pledge myself to hold my degree as a sacred trust, with untarnished honor to myself, in generous loyalty to alma mater, and with fidelity to my country, my fellow men, and my God."

And may the Lord direct you in all your doings, and further you with His continued help; that in all your works, begun, continued, and ended in Him, you may glorify His Holy Name, and finally by His mercy, obtain everlasting life.

Russian Imperialism in China

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, I wish to call to the attention of the Senate a further article on Russian imperialism in China by the distinguished Senator from Nevada [Mr. McCARRAN], appearing in the June issue of the National Republic. Part III of a series, it deals with the Red terror, and reveals a thorough and scholarly understanding of this particular phase of Russian efforts to bring the Chinese people within the orbit of the U. S. S. R. Because of its splendid contribution to better understanding of the Chinese problem, and in view of the distinguished Senator's outstanding leadership in efforts to maintain the integrity of China as a democratic nation, I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RUSSIAN IMPERIALISM IN CHINA

(By Hon. PATRICK A. MCCARRAN, United States Senator from Nevada)

PART III: THE RED TERROR

Russia's armies—as they had always before—crumbled before the well-disciplined troops of the Kaiser. World War I was a disaster for both Russia and its Tsar. The defeat was the worst the Russians had suffered in 250 years. The revolt following the defeats of the Crimean War sprang up again with greater intensity. This time the Tsarist system of domestic security could not resist the pressure. By successive stages a democratic government under the leadership of Kerensky was established. Before the naive new republic could organize its resources it was, in turn, swallowed up by the organized terrorists of the Bolshevik Party.

The red revolution was announced to the world as the end of Russian imperialism; as the new dawn of people's government. To all appearances it restored the situation in the Far East to conditions existing prior to the Treaty of Nerchinsk in 1689. Lenin voluntarily relinquished all extraterritorial rights in China, remarking that the powers had "through force and corruption enslaved the Chinese people."

These were hopeful words to the struggling Republic of China in whose memory the imperialist adventures of the Western Powers were still freshly engraved. It was many years before China realized that the Soviet propaganda of equality had the same imperialistic goal as that which brought Tzarist armies surging south of the Amur River.

The Comintern immediately began its drive to Sovietize China, and the Chinese Communist Party was formally established by 1922. This was an opportune year for Soviet infiltration: China had become divided by independent warlords. In the south, at Canton, Dr. Sun Yat-sen, the father of the Chinese revolution, had set up an opposition government in a desperate effort to recapture the dream of unity.

But Dr. Sun needed money and armaments to extend control over all of China. He appealed to the United States and Britain. These powers turned the rebel down; he was forced to turn to Moscow. The Soviets were not slow in realizing the imperialist possibilities in this situation. An agreement was quickly reached. In January 1923, Sun and a special envoy of the Soviet Government in China, Adolph Joffe, issued a joint statement that communism was not suited for China and that it was necessary to achieve national unification. In this effort China could count on the support of Russia.

The Sun-Joffe statement was hardly issued before the Chinese Communist Party, aided by a group of Russia advisers, undertook an intensive organization. By the summer of 1923, the party had gathered sufficient strength to call a national conference in Canton, issuing the manifesto that "the Chinese Communist Party, under the guidance and with the aid of the Comintern, succeeded in drafting a concrete political and tactical line for the organization of a national front."

The Communist move in China followed the Russian historical pattern. Defeated in fostering Red revolutions in Europe, the Soviets—as had the Tsars—began to look eastward, to look to China's poverty-ridden millions as a fertile ground in which to nurture world revolution. Here was an unlimited supply of manpower and an untapped reserve of natural resources which could be hurled at the rest of the world at the decisive moment of world revolution.

In 1924, the Nationalist Party, Kuomintang, was reorganized prior to the launching of the northern military expedition. A united-front understanding was reached with the Communists on condition that they would accept the national policy.

"We have not the slightest intention," said a leading Communist of the day, "of turning the Kuomintang into a Communist Party."

Dr. Sun died in the spring of 1925 to be succeeded by his able and politically sagacious Field Commander, Chiang Kai-shek. It was Chiang who first discovered the Communist plan to infiltrate and destroy the Kuomintang.

When the Nationalist armies reached the Yangtze River in 1927, the Communists boldly proceeded—again with the aid and advice of their Russian advisers—to set up a Soviet Government in the twin cites of Wuchang and Hangkow. Chiang put down the rebels, promptly threw out his own Russian advisers, and expelled the Reds from the Kuomintang. A segment of the Nationalist Army broke away under Communist instigation and fled into Kiangsi Province.

After years of fighting and Soviet intrigue, Chiang was able to drive the Communists out of central China. In 1934, the remnants of the Red Army undertook a long flight into northwestern China. Stalin never forgave Chiang for inflicting this disastrous defeat upon his agents in Asia. The Communist propaganda machine from that time on organized the systematic vilification of this great Chinese leader. It eventually gained a foothold in this country and became the official line of the left-wing clique, which came to rule the Chinese policies of our own Government.

When the Russians' hold on outer Mongolia was relaxed following the revolution, the Mongols declared themselves independent. In 1919, Chinese troops were sent into Urga to reestablish Chinese sovereignty which had been lost because of Russian intervention. The Mongols, who were unaware of the fact that far eastern Russia was now divided into two camps, called for Russian aid. The man who came to their aid was the White Russian General von Ungern Sternberg. Eighteen months later Soviet troops arrived which disposed of the White Russians and of the Chinese armies. The Soviet armies brought to Mongolia trained Communist revolutionaries, who set up a "People's Revolutionary Government" in November 1921.

After Chinese protests, the Russians agreed to a treaty (May 31, 1924) recognizing Chinese sovereignty over outer Mongolia. This treaty was—in the best Russian tradition—never honored, and Soviet control over the areas was completely solidified. Outer Mongolia became a Soviet province by 1931 when the Japanese moved into Manchuria.

In 1924, Soviet Russia attained Chinese recognition by agreeing to surrender extraterritorial rights, recognizing Chinese sovereignty in both Manchuria and Mongolia and to support no activity or organization designed to undermine the Chinese Government. This treaty commitment had no greater effect than similar commitments made by the Tsars. By clever political maneuvering the Soviets retained and solidified their hold on north Manchuria and on the Chinese Eastern Railway.

In 1929, the Chinese attempted to regain control of their railway line, resulting in a brief Sino-Soviet War. The Russians were able to defeat the Chinese troops and to take thousands of prisoners. The Manchurian theater of operations was, however, being entered by another contestant: The Japanese Empire. After a long serious of maneuvers Japan struck at Manchuria in 1931, taking the city of Mukden, which had been the old Russian capital of the Province.

Not wishing to engender Soviet hostilities, the Japanese Government promised to keep hands off the Soviet's sphere of influence in Manchuria. One may well speculate over the familiar echo which this promise must have evoked in the halls of the Russian Foreign Office. How often that same promise had been uttered by Tsar and Commissar alike—to be broken with equal vigor by the Russians as it was soon to be broken by the Japanese. It was not long before the Japanese continued their expansion in Manchuria, eventually establishing the independent puppet state, Manchukuo.

By 1933 Japanese pressure had increased to a point where the Russians found it advisable to withdraw entirely from the disputed province and to sell the Chinese Eastern Railway to Japan. This was the end of Soviet infiltration of Manchuria until their way was paved again by the United States under the Yalta agreement.

The Soviets were quick, however, to take advantage of the Sino-Japanese conflict by signing an agreement with the governor of

Sinkiang, receiving extensive political and economic rights in exchange for military and other equipment. Here again, by a continuous process of penetration, the Russians worked to sever Sinkiang from China and bring it within the Muscovite orbit.

The Soviets were able to establish in Sinkiang a puppet Governor of their own choosing and training. He ruled for almost 12 years, but in 1943, when the Germans were moving deep into Russian territory, Governor Sheng broke away and made his peace with Chiang Kai-shek. Faced with the threat of defeat in Europe, the Soviet attitude toward China showed a marked change. It was a temporary maneuver, exposed as soon as American aid and American troops brought World War II to a victorious conclusion. Even before the actual end of the war Soviet agents were instigating revolt against the legitimate government of China.

Between Russia and Mongolia is the Chinese area of Tannu Tuva. After the establishment of the Russian-sponsored Mongolian separatist movement, Tuva became isolated from China. From 1912 to 1917 the area became a Tsarist protectorate; after 1918, its status paralleled the situation in Mongolia. Soon an out-and-out Soviet government, complete with secret police and collectivization, was established.

In 1944, the Tuvinian Government "asked" to be taken into the Soviet Union, a request which was quickly "granted" by the Soviet regime.

The fact that China was bound in a wartime alliance with the United States, Soviet Russia, and Great Britain gave that nation the greatest promise of postwar freedom from the imperialistic invasions of western powers. The Chinese people had reason to believe that the sacrifices which they had been making in the war with Japan, prior to our entry, and the sacrifices which they were making together with us would result in the establishment of a completely unified and independent nation. This belief was fostered and encouraged both by propaganda from the Soviet Union and the United States. The action, however, of both powers was, in the final analysis, contrary to the best interests of China and to their own promises.

Russian agents were active as early as 1944 in instigating revolt in Sinkiang Province. In June 1946 China was forced to concede autonomy to the northwest area of Sinkiang, which was established under Communist aegis as the Turkestan People's Republic.

The change of Soviet policy—rather the continuance of the old Soviet aggression—was officially signified on June 11, 1945, when the propaganda organ Izvestia launched an all-out attack against Chiang Kai-shek and his heroic Nationalist Government. This was merely the public acknowledgment. The actual workings of Soviet aggressive policy had already been expressed and had already succeeded in the wartime negotiations between Stalin and Roosevelt.

Soviet success in world politics reached its high point at the conference in Yalta February 1945. President Roosevelt agreed to a program which gave Soviet Russia hegemony over eastern Europe as well as northern China. President Chiang was not even informed of the secret deal with Stalin, and he continued to place his faith in the integrity of both Soviet Russia and the United States.

It was not until June 1945, when T. V. Soong was sent to Moscow to negotiate a "peace" treaty at Soviet request, that the terms of the Yalta Pact were made known to the Chinese. Soong, shocked by the humiliating terms placed before him, refused to sign. When a protest to Washington was answered by the White House with a demand that China accept Stalin's terms, another envoy had to be sent to Moscow to put his name to the treaty.

At Yalta, Soviet Russia received control over Manchuria without a struggle and without effort. Although the Sino-Soviet Treaty provided for an eventual evacuation by the Red Army, this was never actually accomplished. Not only did the Soviets strip away all Manchurian industry, but when the deadline for evacuation arrived the Red Army did not move out. The plundering continued. More important, however, the Soviet Union made certain that a powerful Communist army was organized in the area, supplied with all the military equipment of the Japanese Kwantung Army. The belated Soviet evacuation was therefore of no benefit to the legal Chinese Government. It only resulted in the transfer of territories to the Communists.

While the Soviet-Communist seizure of Manchuria was in progress, the State Department in Washington refused to take cognizance of the real situation. Instead of helping the government of Chiang Kai-shek to beat down the Communist aggressors, the Department did everything in its power to force the Chinese to attempt a suicidal coalition with the Reds—the same type of "coalition" which brought about the downfall of democracy in Poland, Rumania, Bulgaria, and the other countries now behind the iron curtain. The pressure exerted upon the Chinese Government by the Department is a matter of public record and need not be commented on here. The results of that policy are today showing themselves in the sweeping successes of the Red army of China which has already flooded across the Yangtze River. As the situation stands today, China is rapidly slipping behind the iron curtain of Soviet imperialism.

The problem which confronts our country as a result of the decisive Communist successes can no longer be ignored. Once China falls to the Red terror, all Asia is in danger of Soviet control. We can no longer temporize with the Soviet-sponsored aggressors. If the hundreds of millions of Asiatic peoples are integrated into the Russian war machine, we will be faced with an overwhelming flood of Communist slaves whose sole goal will be the conquest and destruction of the United States and its free institutions.

Fourth of July Address by Hon. William Langer, of North Dakota

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered yesterday at Chicago, Ill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to be invited to participate on this day for Americans of German extraction celebration, and it is a privilege and pleasure, in the presence of such distinguished company, to be surrounded by so many personal friends.

It is always an inspiration to join in such a gathering as this, where fellow-Americans, moved by a common faith and united in a common cause, seek new courage and new inspiration for the future.

As we look back over the tragic war and postwar years, one inescapable conclusion stands out, in which I am confident we are all united. That conclusion is, that nothing has happened to shake our faith in and allegiance to the enduring principles of our great American heritage.

I am confident that instead, everything that has has happened throughout these tragic years, has only strengthened our determination to continue our fight to preserve and strengthen these traditional safeguards of human dignity and human freedom, both at home and abroad. For if history has any lesson whatever to teach the American people, it is the single fact that whenever and wherever American ideals of human decency, of liberty under law, and of unimpassioned justice are compromised, the whole cause of human liberty suffers, and humanity is inevitably the loser.

It is because this is the outstanding lesson which the American people must draw from the pages of history that I want to recall to our minds again, as I have done on so many other occasions, the reasons why America still stands today as the last sanctuary of human dignity and freedom on earth.

America was carved out of the remnants of five ancient empires, the British, the French, the Dutch, the Spanish, and the Russian.

Our constitutional form of government, which so many of recent years have sought to discredit and to undermine, still stands today as a living symbol of the protest in the hearts and minds of our founding fathers against the degradation, the denial of human liberties and rights, the oppression and the exploitation of imperial governments. Those who framed this Constitution were determined that, so far as it was humanly possible, the tyranny and oppression of the imperialism against which they broke out in open rebellion and from which they set themselves free, would never again reemerge on these shores to impoverish and enslave our people.

This is why the Constitution provides for a system of government based on law, and not on the whims and fancies of any popular leader who might emerge. It was Thomas Jefferson himself who said that we shall lose our freedom if ever the day comes when we transfer our primary allegiance from the legal basis of our freedom to personalities. This is why the Constitution provides for a form of government which operates on a system of checks and balances, in order to prevent either the executive, or the legislative, or the judicial branch of Government from encroaching upon or usurping the rights, powers, or duties of the others. Then, in order to make doubly sure that even under this system of government there should remain a maximum respect for and safeguard of the rights, the dignity and the freedom of the individual, the Bill of Rights was drafted and enacted into law. All of this was the product of a common concern and a realistic understanding of just what tyranny and oppression really meant. It was born out of actual experiences of men who lived and died to see their dreams come true. And behind this chapter in human history was the determination to prevent the concentration and abuse of power in the hands of any American Government that could be used to defy the Constitution, to set the law aside, or to abandon these traditional principles of government for the sake of political expediency, either on the domestic or on the international scene. For those who drafted the Constitution and who charted the course upon which our ship of state set sail had just escaped from the domination of governments which maintained themselves in power only at the expense of their own people. These American statesmen and patriots had learned first-hand what the consequences would be if the day ever came when the safeguards they had erected on the basis of principle should ever be abandoned.

First, they knew that the abandonment of these principles, which they had enacted into law for the protection and the welfare

of Americans, meant abandonment of principle and a return to political expediency under which system America would be launched back into the ruthless realm of power politics, where human beings become nothing but pawns in the struggle for power, thus losing any control whatever over their own destiny.

Second, they knew such an abandonment meant that the economic, the financial, and the social resources of this Nation would be degraded into political items, to be used to finance the unproductive projects necessary for the attainment of purely political ends.

Third, they knew that, since in a constitutional, representative republic men hold their power by popular consent, this power could only be maintained by those who abandoned these traditional safeguards through the use of misrepresentation, progaganda, and deliberate falsehood. And they knew what this vicious circle meant. It meant that the deeper such political pied pipers became involved in policies and commitments which threatened the future welfare of the American people, the more they would be forced to resort to propaganda and deliberate misrepresentation of fact to keep themselves in power.

Fourth, these great American statesmen knew that an abandonment of these principles they had laid down in the Constitution meant a return to secret diplomacy and the bartering of the rights, the resources, and the liberties of our people in the market place of greed and war hysteria. And they knew that whenever secret agreements were entered into by representatives of this Government without the knowledge, advice, and consent of the United States Senate, even the elected representatives of a free people, who are charged with the specific duty of defending the Constitution, even these representatives would learn of these agreements too late to do anything but take the tragic consequences.

Twice now, in one generation, we have lived to see the wisdom of these earliest American statesmen vindicated.

Surely the American people, after the tremendous price they have paid, should have learned by now, once and for all, that they can ignore this outstanding lesson of history only at their peril. This lesson was reaffirmed following the end of the First World War. I am sure that none of us have forgotten how that war was concluded by a surrender on the basis of President Wilson's Fourteen Points, which really represented the highest idealism of the American people, and which really expressed the principles of justice that underlie our heritage.

Yet, is it not tragic that so many Americans to this day fail to understand the significance of Wilson's final abandonment of these traditional American principles and his signing of the Treaty of Versailles? For 25 years, the State Department kept buried in its vaults the bitter protest resignations of members of the American Peace Conference who revolted against President Wilson's betrayal. Not until the year 1946 did the State Department dare to publish the story of the Paris Peace Conference, which included the violent protests of such outstanding men as Secretary of State Robert Lansing, who on May 8, 1919, wrote:

"Examine the treaty, and you will find peoples delivered against their wills into the hands of those whom they hate, while their economic resources are torn from them and given to others. It may be years before these oppressed peoples are able to throw off the yoke, but as sure as day follows night the time will come when they will make the effort."

Then there was Mr. John Storck, a member of the American Peace Commission, who wrote—concerning the Versailles Treaty:

"It will stand as a monument of shame above the graves of millions who have suffered and died in the greatest of all wars."

Lt. George B. Noble, another member of the Peace Commission, wrote on May 15, 1919:

"I believe that the peace, as proposed, will be an exceedingly dangerous settlement. I believe it will be provocative of future wars, rather than a guarantee of world peace. I feel that the idealism of America has been largely sacrificed on the altar of imperialism."

Just one more protest will bring home to us the significance of the Versailles Treaty. On May 17, 1919, none other than Mr. William Bullitt, a close friend and personal confidante of both President Wilson and President Roosevelt, sent his resignation to President Wilson in which he wrote:

"I was one who trusted implicitly in your leadership and believed that you would take nothing less than 'a permanent peace' based upon 'unselfish and unbiased justice.' But our Government has consented now to deliver the suffering peoples of the world to new oppressions, subjections, and dismemberments—a new century of war."

It is incredible to believe that such a terrible experience as the First World War and the consequences of the abandonment of American principles in the peace settlement should have gone unheeded. Certainly the American people ought to have learned what a terrible price we have to pay when we forsake our own traditions.

Yet, instead of learning this lesson and instead of guiding our actions by it, for the second time in this generation we find ourselves parties to the betrayal of American principles which make Versailles seem like a Utopia.

This time the betrayal was long in the making. Few American people know that the original document containing the Morgenthau plan, which was signed on September 15, 1944, is still a secret, locked up in Hyde Park. No United States Senator has ever seen it, although its basic provisions were incorporated into the Potsdam Declaration. For four long postwar years, this Morgenthau plan has remained the basis for our policies toward the German-speaking people. No greater outrage has even been inflicted on the American people, who have become the unwilling victims of the very exploitation and suffering which our earliest American statesmen warned would follow inevitably whenever this Government abandoned its great traditions. The truth is, that no other people in history have ever been singled out for such brutal degradation and deliberately inflicted suffering by the Government of the United States.

Furthermore, 33,000,000 Americans of German extraction have been forced to pay their shares of the $1,000,000,000 a year it has cost to inflict this starvation and degradation on the German-speaking people.

All during this time, those who have been responsible for these outrages have been poisoning public opinion and covering up their own bloody tracks with as vicious a propaganda and deliberate falsehood as we have ever known. And to this moment, the United States Senate has never been consulted or had a chance to accept or reject these policies which are betraying our whole future as a free people. For four long years, this has been going on. We are meeting today, following on the heels of the latest conference on the German problem which has just been concluded in Paris. And no amount of propaganda now can blind us to the fact that this conference, miserable failure that it was, has served only one, real useful purpose.

The Paris Peace Conference forces us now to recognize how late the hour really is, if America is to save Germany and Europe by returning once more to traditional American principles. Probably there can be no greater hypocrisy in the world today than that which is practiced on the part of those American representatives who claim that claim that Stalin is the sole cause of the gathering world conflict and the sole obstacle in the path of a peaceful settlement of the German problem, while at the same time these same Americans continue to carry out policies which are playing directly into Stalin's hand. This hypocrisy is covered up by the propaganda that if Mr. Stalin would only keep his word under the Potsdam Agreement peace would be assured, when we know that we could never have peace in a thousand years on the basis of the outrageous provisions of the Potsdam declaration. How much longer are the American people going to permit themselves to be deluded by those who continue to insist that Mr. Stalin change his ways, even while these same people fail to exert the slightest influence in forcing our own Government to change its basic policies, which are forcing Germany and Europe down the throat of the Russian bear.

The great tragedy of this whole long series of acts designed to perpetuate inhuman suffering and economic privation is that even at the Paris Conference there was not a single constructive alternative course of action suggested by our American representatives. Instead, on April 28, 1949, Secretary Acheson admitted that, as a result of the policies we had been following since the end of the war, Germany became divided into disconnected administrative areas and was rapidly being reduced to a state of economic chaos, distress, and despair.

As a result, Mr. Acheson said, the three Western Powers announced a joint program on June 1, 1948, to try and halt this disintegration. But then he went on to admit that, even the three Western Powers, without Russia, were committed to carry out the basic provisions of the Potsdam declaration. I quote his own words:

"This joint program I wish to emphasize is in no sense a repudiation of our international commitments on Germany, embodied in the Potsdam protocol and other agreements. It represents a sincere effort to deal with existing realities in the spirit of the original allied covenants pertaining to Germany."

Here is a bold admission by the Secretary of State as recently as April 28, 1949, that with or without Russia's cooperation or obstruction this Government is determined to carry out the basic concept of the Morgenthau plan which is embodied in the provisions of the Potsdam declaration, what is more, every step that has been taken by our State Department during the year of the three-power rule of western Germany against the Russian blockade is an added confirmation of the futility and the insanity of the policies which America continues to underwrite toward the German-speaking people.

And at every single step that has been taken during the blockade, the State Department's policies and acts have merely reaffirmed the intention of this Government to single out the German-speaking people from among all others as the special objects of their vengeance. What are these major steps that were taken during this year of the Russian blockade?

First, in spite of the fact that the three western governments have been free to act during the past year to change basic policies which were playing into Russia's hands, they have merely carried on these policies without interruption.

Second, in spite of the fact that Marshall plan experts agree European recovery is impossible without the recovery of Germany, authorization for the second year's appropriation of Marshall plan funds was agreed upon in spite of the fact that vital information necessary for intelligent action by the United States Senate was deliberately withheld by Mr. Hoffman, who also admitted that he had nothing to say about the level of industry that was necessary in Germany if she was to make her full contribution to European recovery and that, in effect, the ECA was merely rubber-stamping the Morgenthau plan.

Third, we were flooded with propaganda praising the achievements of the Bonn Constitution which was going to turn over controls of Germany to a new German civilian government, while at the same time the three Western Powers released the occupation statute of April 8, 1949, making a mockery of the function of any German government that would have to operate under its provisions, by reserving to the occupation powers authority in the field of control, scientific research, industry, and civil aviation; continued controls over the Ruhr, the reparations program, decartelization and foreign interests in Germany, continued control over foreign affairs, including all international agreements made by or in behalf of Germany, continued control over taxation and over foreign trade and exchange.

Such hypocrisy by the occupation powers makes it impossible for any German government to inculcate a faith in democratic processes and will leave it powerless.

Fourth, was the signing of the Atlantic pact for the so-called defense of western Europe, a pact which completely ignored the necessity for providing not only for the defense of Germany but which if it is to have any chance of success whatever must provide for Germany's contribution to the common defense.

Fifth was the announcement on May 9, 1949, of the International Fisheries Convention dealing with the North Atlantic fisheries, which was kept secret until the day of its release. Yet, in spite of the fact that the western powers sunk the German fishing fleet in the North Sea as their first peaceful act following the end of the war and deprived the German people of desperately needed fats and oils and protein foods from that source, Germany has been deliberately excluded from any consideration whatever under the provisions of this treaty.

Sixth, throughout this past year the Western Powers have been feverishly extending the destructiveness of the senseless dismantling program further into the economic and industrial resources of Germany. At this very moment, in spite of the fact that this Government knows it is fighting for the future of Western civilization itself, right in the heart of Berlin, the following insanity continues to be committed by this Government and financed by the American taxpayers. Since the end of the war even the military authorities in the western sectors of Berlin have been depending for their light and power upon plants located in the Russian sector. During the past year of the blockade, attempts have been made to erect three new power stations in the western sectors as independent sources of electrical power.

The completion of these units is absolutely dependent upon the products of the Deutsche Edelstahlwerke in Bochum in the British zone. Yet, in the revised list of dismantling contained in the Washington agreement of last April, it was agreed that the dismantlement of this plant should be undertaken on the 1st of July 1949, that is within the coming week.

This Washington agreement on dismantlement, which Russia had nothing to do with whatsoever, merely extended the insanity of individual plant dismantlement to prohibitions against whole industries, even including those which make synthetic fats for washing materials and ersatz soap. Yet, within a month after this agreement on Germany was announced, Maj. Gen. Frank R. McCoy, United States representative on the Far Eastern Commission, announced that the United States Government was putting an end to the removal of all further reparations from Japan.

In answer to the protests of Chinese and Philippines representatives on June 10, 1949, the State Department defended the stopping of reparation with the following statement:

"The United States cannot indefinitely bear the burden of Japan's support. It must therefore assist the reattainment by Japan of a self-sustaining economy at the earliest possible time. Further reparations from the deficit Japanese economy would obviously be inconsistent with this objective.

"It should be apparent that Japan faces a most difficult problem in developing its agriculture, industry, and trade to a point where they can support its population, and that if Japan again threatens the peace of the Far East, it will in all probability be because it failed in that objective rather than because it was permitted to retain existing industrial plants for peaceful, productive purposes."

Of course, this is just plain common sense and represents at least a partial return to international sanity by representatives of this Government, but, by what possible stretch of the imagination can the same Government take such a position toward the utter necessity of permitting Japan to earn her own livelihood and to work her way back into the family of nations, and deny the same necessity and the same right to the German-speaking people?

Those of us who are most vitally concerned over this problem must recognize how little time there is left to right the wrongs that continue to be committed in our name and face the ugly realities with which we are confronted for what they are.

The hour is later than we think. Even this constructive change in the policy toward Japan has occurred only after the Chief of the Planning Division of the Joint Chiefs of Staff, one of our greatest experts on China, Gen. Albert Wedemeyer, admitted that as a consequence of the stupid blundering of our State Department, there is nothing left in Asia now to stop the march of Communist aggression.

Since we have been following exactly the same kind of policies in Europe that have led to the collapse in Asia, only in a far more aggravated form, it is perfectly obvious where we are headed.

The recent Paris Conference which produced the proposal for an Austrian treaty has only postponed the day of reckoning. Actually, so far as Austria is concerned, the Western Powers were again guilty of appeasement of Russia. It is hard to believe that at Paris we agreed to give Russia 60 percent interest in Austrian oil concessions for 30 years, and a permanent 100 percent assets of the Danubian Shipping Co., in Austria, Bulgaria, Hungary, and Rumania, thus giving Stalin a stranglehold on the Austrian economy, complete control of the strategic Danube, $150,000,000 in reparation which must be paid by a so-called liberated country with no concession on the part of Stalin whatever in exchange for these gifts.

And so far as Germany is concerned, one of our greatest authorities on international affairs had this to say:

"The dominating fact at the Paris meeting of the foreign ministers has been the tacit recognition that the Big Four are no longer able to make a German settlement. The control of the German problem has slipped out of the hands of the foreign ministers and their four governments.

"The Germans have been denied even the hope of a settlement within which they could live decently and with self-respect, with loyalty to themselves and to Europe. They have been left with no prospect except partition, occupation, political inferiority, and of economic and social distress." (Walter Lippmann, Washington Post, June 21, 1949.)

How can there be the slightest question in the minds of this administration, of the United States Senate, or of the American people that this is a one-way road to catastrophe, and that the time has come for an awakening of public opinion, for a reorientation of the American mind, and for a complete about-face in America's dealings with the German-speaking people? Across this country today, there are millions of our fellow Americans who sense this danger, who are as deeply concerned, and who are as earnestly determined to prevent this catastrophe as are those of us who are gathered here.

In my own humble opinion, of all the problems we confront as a free people, there is none so urgently demanding a solution. Those of us who have been closest to this problem know from the bitter experience of the past that this solution will not be forthcoming until it is forced upon the representatives of the American people at the ballot box. Therefore, we must use what time remains to bring this issue out into the open, to make it the No. 1 political issue in the next election and prove once again the wisdom of our founding fathers, who devised a system of government which still provides, through the exercise of the ballot in the hands of a free people, the power to right the most grievous wrongs, to amend the gravest injustices, and to remove from office those who would abuse their sacred trust.

I am confident that, with so much at stake in this single issue, with not only the future of the German-speaking people at stake, with not only the future of Western civilization itself involved, but with the future of our own way of life hanging in the balance, we shall finally succeed in awakening the conscience of the American people as a whole, and united together in this common cause will be able to force a change in our relation with the German-speaking people that will enable us together to set our feet back on the road to sanity, decency, and a just and lasting peace.

Our American Destiny—1949

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "Our American Destiny—1949," delivered by me before the Annual Congress of the Daughters of the American Revolution, which was held in Constitution Hall in Washington, D. C., on April 18 of this year.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, good friends of the platform and of the audience, Americans all, Walter Cassel just now said he was going to begin his singing with a bit of old English, and I think I shall start my speech by giving you a bit of Churchill's English, because I read recently of an exchange alleged to have taken place between Winston Churchill and his great contemporary, in ability to use the King's English effectively, George Bernard Shaw.

It seems that Mr. Shaw had written a play, and in his desire to increase the box-office harvest, he decided to write a letter to Churchill through the newspapers inviting Churchill to attend it, because like most of those most articulately opposed to the private-enterprise system, Shaw opposes it only

as it applies to others but endorses it for himself, so he wanted to have a big audience to increase his profit on the play. In order to get a big box office take he wrote something like this:

"DEAR WINSTON: We are having down in London the premier showing of my new play. It is a good play and will be good for you and so I am enclosing a complimentary ticket for you and one for a friend, if you have one left.

"GEORGE BERNARD SHAW."

Now, Mr. Churchill is something of a master of the fine art of repartee himself and he had an idea of what the self-proclaimed Socialist, Shaw, had in mind—exactly that he was going to get some free publicity for his play—but Churchill is not one to let his reputation down, so he wrote in response to the newspapers something like this:

"DEAR GEORGE: I have received the invitation to attend the opening of your play down in London come next Monday night. It was mighty nice of you to invite me and I am sorry I cannot attend but due to an earlier commitment (that is an old parliamentary gag—'earlier commitment'), it is impossible for me to attend, but I am retaining the tickets because I shall be happy to attend the second performance—if there is one.

"WINSTON CHURCHILL."

I wish to proceed from there to say that I am happy that America has received a second chance after a Second World War to do those things which we thoroughly, completely, and totally failed to do at the conclusion of World War I. We have been given a second chance to make our democratic dreams come true and I doubt very much whether after a third world war any of us seriously believe that we would find ourselves again unscathed from atomic bombs, and our homes not destroyed and that we would find them as they are when we confront this second opportunity.

This second performance of history, this second great chance to grapple with American destiny and expanding conditions is now ours.

I think it is highly appropriate that this great convention of American patriotic women is being held here in this historic hall of what has become virtually the Capital City of the world on a day which is recognized among the Christians of the globe everywhere as Easter Monday, because it seems to me we have much in common, today, with that first Easter Monday of more than nineteen centuries ago when a tiny population living on the southern shores of the Mediterranean Sea gathered together on that first Easter Monday and confronted a world in many respects like that which we confront here on the banks of the Potomac River tonight.

Those early Christians confronted a world filled with evil forces and power and might, yet they lived in an era of hope because it was shortly after the resurrection and they were inspired by a great cause which was well worth projecting. I think that these factors are all present at this time and in our lives too there are evil forces here and now apparent. We also, however, have a cause well worth proclaiming.

Your president general in her remarks almost indicated that she had slipped into room 432, Senate Office Building, and had been reading my mail because we agree so fully on everything that she had to say.

We need to face these evil forces, many of which could be described as a threat of war—plus the dangers of infiltration—and the most dangerous of which is communism. And yet we have great hopes because we are freshly victorious in our last war so we have earned this second chance for peace and progress.

We, too, have a most important cause to project, that code called the American formula—that way of life with which Christianity can work its inspiring guidance with better opportunities for success than with any other may of life in history.

I say that it is perhaps prophetic and significant that this meeting is held on Easter Monday—because of the significance of that day and this thing that we are called upon to protect, to proclaim, and to project—this cause of ours which requires active support just as Christianity did 19 centuries ago. This means simply that we must now as never before defend and protect the basic freedoms involved in the maintenance and exercise of our free competitive political and economic system against this threat of communism and every other kind of collectivism aimed directly at the basic tenets of our eternal freedoms. These Communist challengers of ours know that if they can control our political independence and destroy our free competitive enterprise system in the United States they have made a tremendous step toward their goal of world domination in this momentous period of history.

Our cause, like that glorious first great cause of 1,900 years ago, needs disciples to carry it forward and promote it and to proclaim it proudly and without apology in every community of this land.

What better way, may I ask than for the DAR to be the group of disciples of this creed? You whose ancestors came to our shores to procure and secure the great life and sound economics and the political freedom and peace-preserving policies that we like to consider to be a birthright of all Americans—those cardinal rights which we undertake to preserve both at home and abroad.

I realize that it is like carrying coals to Newcastle to speak historically before a convention of the Daughters of the American Revolution because, you more than most of our citizens are students of history and know how our activities are guided by the lights of history. Let me put this picture before us tonight as clearly as possible and let me try to get down to the taproots of the dangers we confront—let me recount a little history, therefore, even at the risk of oversimplification, pointing to three great historic eras in order to analyze the economic and political progress of mankind.

HISTORY'S FIRST GREAT ERA

The first era began of course down on the banks of the Nile River in Egypt, some thirty centuries ago, nobody knows exactly how much more than that, when the birth of civilization started with the periodic overflow of the waters of the Nile. That era ended in England in 1215 A. D. So for more than 3,000 years, perhaps more than 5,000 melancholy years, man made less progress in more time in the direction of becoming the master of his own soul and captain of his own faith than any other time in the history of the world.

This good life that we like to think of as part of the American system today was unheard of back prior to 1215 and if the average man thought of it, he thought about it as something conceived exclusively for the rulers of the country or the military men of power. Sound economics were also unknown to him and the only economics he knew was that to the strong belonged the fruits of the toil of the weak. The men of experience in professions and commerce actually had no political freedoms for well over thirty centuries. Man had the choice either to court the favor of the men in the capital cities of the land or to cringe before their mandates of intolerance in order to preserve life itself. As for peace-preserving practices and programs—those were the days when wars were launched by kings and fought by common men in that long period of the world's history.

HISTORY'S SECOND ERA

There was but little progress toward American concepts as we enjoy them tonight until 1215 when some Englishmen took old King John down from his ivory towers to a meadow in Runnymede and compelled him to sign the Magna Carta and put pen to paper to indicate in writing that there were functions and rights that mankind had that even a sovereign could not take away. This opened the second era of history starting that day in 1215 A. D.

Starting there and then, man had for the first time the thrilling experience of a sovereign being compelled to agree in writing to the fact that his subjects had certain rights he himself could not quite take away. For more than seven centuries, for more than 700 years, this second great era of history unfolded and in that comparatively short period of 700 years man made more progress than he had made in the entire preceding 30 centuries.

Document followed document, invention followed invention, creed grew upon creed, and man grew to the respected and respectable place he has today. Man grew to have a human dignity that state and government recognized and considered as they built this system of economic and political freedom. Then came the petition of rights in 1628 and the Bill of Rights of Britain in 1689 and a document about which you DAR members know considerable, the Declaration of Independence in 1776. Then a few years afterward in 1789 came the Constitution of the United States, with the Bill of Rights included, I am happy to say, at the session of the First Congress of the United States. I think from that early date up until now Congress has always played a much more important part in Government than many are willing to recognize. We in the legislative branch of Government point with pride to the Bill of Rights as a congressional contribution to the Constitution of the United States.

THE CURRENT ERA OF HISTORY

Thus freedom developed until we get down to this third era of history. It cannot be marked by any definite date or location as we did with the first period at the dawn of civilization in Egypt, and you can prove that, or the second great era of history in economic and political development, which started with the signing of the Magna Carta in England. It is a little more difficult to fix the date of the third period but of this we can be sure, it began in the early 1930's. Men had begun to have everywhere rights and opportunities to work out their own economic problems such as were unheard of before we saw these rights being challenged again early in the 1930's.

Here and there men started thinking about new powers for the state until a fellow called Marx wrote the Communist manifesto. So we ended the second phase of history and there grew out of Germany another ism and a new creed called state socialism or communism. Men studied it and stumbled over it and didn't recognize exactly what it was and it finally came to be defined as a godless, conspirational movement with ambitions extending far beyond the boundaries of the one country of Germany. It became known and practiced under the various names of communism, nazism, fascism, state socialism, or military dictatorship, depending upon the country in which it operated.

As we come to this third era of political and economic history, I think that all students of history will recognize that this third era began some place in the thirties, a little earlier in some countries, a little later in other countries. It is difficult to fix the time and date and place but if I were called upon to fix a date so far as the United States is concerned, I would fix that melancholy date in 1933, November 17; the date the United States gave its official recognition and there-

fore its sanction to the Communist Government in Russia. If we must find a starting place it seems that there was a significant change of events flowing from that recognition which tend to justify those studying economic and political history in putting their attention on that November 17 date in 1933.

Since the early part of 1930, moreover, around the world, in every country and on every continent—and we are no exception to the rule—man has seen his areas of political freedom and economic independence slowly but steadily shrinking all over the place, and now we find ourselves either marching down the trail into the valley that we thought we left or off on a new road the definition and designation of which is obscure to us all. We are not sure which. But each of us knows dimly in his own heart, we are marching today in the wrong direction.

I think students of the world today cannot well deny that a change is taking place all over the globe in this business of good living. We find now in our country strange people have moved into our neighborhood; we are not quite happy about some of the folks that have crept into high places in Government; we are cautious about many an organization because while it sounds like a patriotic one but we are not sure but what it is actually controlled by Communists.

Good living has attained a sort of artificial semblance so that it disturbs those of us who think seriously, but in some of the areas of the world good living ceased altogether sometime in the early part of the 1930's insofar as the right of the individual to enjoy the good life under the great lights of freedom and sound economics is concerned.

Sound economics is being challenged in every country of the world including ours where by strict adherence to sound economics we became the unchallenged and unchallengeable envy of the world. Still many in our land attack the creed by which we grew great and unchallengeable. Abroad in other countries in other ways since the beginning of the 1930's sound economics have almost become a thing of the past. Collectivism has taken over with the silly idea that you can create a sound economic situation by appointing to an economic job a military follower or a precinct political leader. It captured the imagination of the world in an attempt that failed in Italy. We saw it mushroom up and collapse in Germany. We saw it bring failure and dismay in the atomic mist that destroyed Japan. We see it now denying happiness and food and clothing to the conquered people in the captive countries of communism. We see our English cousins trying an experiment in socialism which they can finance only because of the good-natured generosity of America and the British apparently fail to see that socialism is simply an empty way station on the road to communism.

We in America tonight stand perplexed about production problems, some of us almost unwilling to admit that the areas of free competitive economic and political life in our modern world have shrunk so small that you can count on your two ears the countries of the world where people can still enter into partnership to build a railroad in the fashion that railway construction helped develop this country. You can count on the fingers of your hands the countries of the world today where people in private enterprise are permitted to establish a radio station to broadcast programs in the great field of communication which has done so much to make America strong and friendly and neighborly.

No one can deny successfully, I am sure, that in turning backward the wheel of economic and political experience all over the world since the early thirties there is good and sufficient reason for it, because there is abroad a vigorously undertaken campaign of propaganda ably led and well-financed by skilled propagandists who since 1917 in Russia have hewed steadily to the line that if they create enough confusion they eventually would be able to dominate the world with the Communist creed.

Many do not recognize these flank attacks, but we would all recognize them if they came down the aisle tonight under the hammer and sickle singing the Red Internationale. It is the flank attack with its insidious poison from the side, in a sly manner, that begins to devitalize the strength of the world because the Communists have such a group that they expect to conquer from within.

Unless they do one of two things they cannot conquer this country: Somehow or other they must destroy the political independence of America, which means that they must destroy the basic functions of the biparty system, and if they cannot do that they must in some way or other collect enough power in economics and politics in Washington to permit them to usurp, with or without means of force and violence, the activities centered here in the city of Washington. One method or the other is the way communism must attack us because they must destroy the political freedom of our land or they must bring into Washington sufficient political and economic controls so that once placed in their hands they can dominate the whole if they are to successfully conquer the 48 States and an unknown number of cities in our 3,000 counties and all the different private institutions of economic enterprise in America, because men will fight for those things and for the protection of their homes or farms or railroads or steel companies or air lines. Men will spring to the defense of that American creed that has made the United States so great and kept us so strong for so long, provided they are still enjoying the blessings of our way of life when the challenge comes home to them.

This is not a pretty picture that I have painted, but it is an accurate one down through the long, sad political and economic history of the world, and I trust I have not talked too much from the heart to ruffle your pleasant and important convention. I have done so only because I have a profound respect both for the courage and the energy of the DAR. I want to spend the remainder of my time, therefore, not speaking about the past or about our present precarious position, but about what members of the DAR and folks like you, working with many others, can do, and do now, to turn back the evil trend which has carried us so far into the whirlpool of eternal disaster.

WHAT CAN BE DONE TO WIN AGAINST COMMUNISM?

There are a great many things we can do both at home and abroad. We have done some things about this challenge of communism abroad. We have a program called the Marshall plan or ECA (they change the name so often it is difficult to keep up or it). I just happened to be on the House Committee on Foreign Affairs in the House of Representatives when ECA was first presented. I sat in on the committee meetings, I heard all of the testimony and I spent several weeks in Europe studying the situation, when the ECA was launched. I conferred with many officials in various countries including those behind the iron curtain, as well as those of the so-called Marshall plan countries.

WHAT IS OUR AMERICAN FOREIGN POLICY?

I sat in on the conferences between the House Foreign Affairs Committee and the Senate Foreign Relations Committee which wrote the final language of the ECA plan and I thought I knew what the program was. You could write in a single sentence what that plan meant when it passed the Congress. It was: "To the extent of our ability, the United States is resolved to give assistance to countries anywhere in the world which are willing and able to resist further Communist aggression and which will join with each other and with us in this common objective."

That is all there was to it. There was nothing in all the testimony which should lead us to believe there was to be anything beyond or below that. So I became an early supporter of that proposition. In Congress I did my best to get as large a vote as possible. I supported this policy in speeches in many areas of America. I voted for its extension again about a week ago.

I would be less than honest, however, if I did not say that I voted for it with much less enthusiasm last week than I voted for it a year ago, and I think I owe it to you to tell you why I had less enthusiasm for it this time—because some place in the process of its unfolding during all these months the administration has stricken out of the ECA policy these words: "Countries anywhere in the world." They were not deleted by any suggestion, I am happy to say, of Congress. China and Asia ceased to be part of the program of the fight against communism on a world-wide basis. The program for containing communism by giving aid to countries anywhere willing to resist the evils of communism cannot do the job with half of the fence blown down—that part of the fence to keep the Reds out of Asia. Congress knows this but apparently the State Department and the White House have not learned that lesson.

Some of us in Congress failed to see the reason for this change in the ECA policy, so we went directly to the Department of State (and I say this as a friend of the Department of State) and learned that there is no policy toward China—unless you get it from Dean Acheson, who said, "Our program is to let the dust settle for a while." I tell you, tonight, I think that dust is going to settle in the eyes of the State Department, and when it does it is going to be red dust out of Moscow, Russia. I give it to you and I think it is an eternal verity—the world is like an egg; it cannot be half good and half bad at the same time and you can't stop the tide of communism from overflowing its boundaries by building a dike in Europe, no matter how high you build it, while leaving the red waters to rush unchecked through the flood plains of Asia, and every American with good sense knows it.

We need now and we need it clearly and courageously stated, a world-wide foreign policy and I am sure that Americans everywhere will support a workable concept of ECA while it makes sense. I voted for it now because it is better than nothing, but it cannot work without recognizing the fact that we must not let over half the world fall into the clutches of communism by writing China off as a lost cause and expect to defeat communism in Europe with $5,000,000,000 a year and an Atlantic pact joining us in alliance with less than one-sixth of the potential power of the world.

I have said this in Congress, I have said this over the radio and from the public platform, I have written this in letters, and I shall continue to discuss this matter in public until something effective is done which shows some chance for success in shaping a consistent, effective world-wide American foreign policy.

There are, however, a few things I want to mention which can be done by the folks I am having the happy opportunity of addressing here tonight. There are many things that I wish to discuss in my last 5 or 10 minutes tonight which can be done by members of the DAR. I learned from my job on the House Committee on Un-American Activities of your support of the fight against communism, the support we always had. We appreciated it and you kept it up when a lot of the fair friends of America

pulled down the flag. So I want to issue a challenge tonight and I am sure you will accept the challenge as you have done in the past.

A CHALLENGE TO THE DAR

I want to suggest that you on the home front in your activities in every field do what you can to erase the menace of communism and to strike out around the globe against it. You can start next Monday morning. And this is how:

In the field of legislation we need some laws which are no more an infringement on the rights of Americans than if the head of the household refused to hire a kidnaper as a baby sitter. We need a law to keep Communists out of Government jobs, and all these bleeding hearts and soft-headed pseudo liberals that cry "infringement on the rights of Americans" should realize such legislation is both necessary and proper. I don't like to bring in a commercial or plug my own bill but the bill that can fix this situation is the Mundt-Nixon bill which I believe is just the thing and which should pass this Congress.

The second great area of activities is in the field of education. This can have a mighty important part in this business of helping people to understand communism, and every American citizen as well as the DAR should know the true nature of the insidious, international, godless communism that is now creeping into our way of life. I am proud to say that the House Committee on Un-American Activities (and I am not now a member of this committee so I can view it objectively) is doing a great job in supplying booklets and information in order to keep Americans aware of the truth about communism and what is happening in the fight against communism.

For you who would like another challenge—I would like to see on every home front in every community throughout the country an American enterprise committee, or something of a similar name, which would be established as part of every organization. An American enterprise committee as part of every DAR, as part of every commercial and luncheon club, an American enterprise committee as part of every labor union and farm organization, and Rotary, and Kiwanis, and women's organizations, and veterans' organizations—an American enterprise committee whose sole job it is to do this:

To bring to the people of their community, both young and old, the eternal verities and virtues of the system of free competitive political and economic life that have made America the success that it is.

It is a mystery to me that so many well-intentioned people with bad memories keep advocating solutions of problems which have failed every place they have been tried in other eras and areas. Let me get more specific in this matter of American enterprise committees—every organization should have as their representatives on these committees the best citizens of the organization, the most able, the most active, and the most highly respected.

FOUR DEFINITE JOBS TO DO

The first course of action for these American enterprise committees should be this:

1. To see that in every school and college of the land there is at least one course specifically named and specifically taught and proudly instructed which would honestly be called a course in What's Right With America.

All over the United States in the schools the youngsters hear so many criticisms about the things that are wrong with America, we need some way to teach them also what is right about America. We hear so many teachers that lack enthusiasm when speaking of things American that we need to engender some confidence in the youth of today in our American concepts. I would like to see in every school of the land a course specifically designed to make sure that every student going to school in America will know and respect and understand the things that are right with America.

When you return to your homes, and if you make a serious study of the curriculum of your local high school and college you are going to be disappointed because there is no such course being taught in over 80 percent of the tax-supported institutions of America. What a challenge for the DAR to follow the splendid advice of your president general in her address here tonight in educating the people about the good facts and the good features of America. I know you will accept this challenge, and I know the principals of your high schools and your college presidents can devise some sort of a course, if in your approach the people in your community, organized as American-enterprise committees, will say, "Look here, Mr. Educator, all we want is one course in the 4 years that every youngster attends your institution in which nobody criticizes anything about America but teaches only those things which are good and sound and right about the greatest governmental creed the world has ever seen. Let them criticize America in other classes; we are not objecting to that. But let there be one course, Mr. Educator, just one, where the requirement is to teach and sell the good purposes and good features of America."

2. Let me speak now of a second way in which your local DAR and your local chamber of commerce and all other organizations in your community can educate the people in the things that make America great. How thrilling it would be if these American enterprise committees would see to it that 1 week in every 52 would be set aside and called Know Your America Week. One week of education in every community to teach the advantages and glorious creed of Americanism to every person in the community. One week to proudly proclaim this creed which is ours. Let it start with sermons in the churches about what's right with America.

It would be a precious thing to devote one whole sermon in every church in America without a single criticism about anything American. Well might the churches take the lead in this crusade against communism as they have against other wickedness in the world. The church has never had a more vigorous challenge than the fight against communism. On Monday, and Tuesday, and Wednesday, and Thursday, and Friday, and Saturday let there be programs and pageants and essay and oratorical contests and radio broadcasts and exhibits in the schools—a community-wide effort to make people understand why the free competitive enterprise and political system is good for the people. Let this week be set aside to tell everyone why it is good, this American formula, where the people can tell those running for office and those in office to provide good government or get out.

3. The third thing I would like to see these American enterprise committees undertake in every community of this Republic would be to help project the dividends of our American system increasingly to more and more citizens of the community. By providing better economic opportunities, better homes, better recreational areas, better health conditions, et cetera, these American enterprise committees will be making freedom work at the grass-roots level. The more we can utilize local initiative and resources to provide better economic and social conditions for the less-privileged in America, the more firmly we build the type of citizenship required to defeat the false doctrines of state socialism and communism. By making America work better for more people we tend to make America more secure for everybody. The better we do this at the local levels the less opportunity there is for the political demagog to insist on the building of big government to do this by the mandate of the all-powerful state. American enterprise committees can thus help protect America by projecting its advantages through community programs and with local support.

4. In the fourth place these committees should recognize that anything worth having is worth defending. They should defend every community against the menace of godless conspiratorial communism in all organizational activities at the local levels. They should make sure that their local institutions, the local government, the labor unions, and educational groups, and other groups believe in the American enterprise system. They should rise to the defense of freedom and see to it that those spreading the slow insidious poison of communism be exposed and identified—if this is done we are not going to have much trouble with communism.

It has been a pleasure to visit with you and those of us who struggle down here on the wrong side of the Potomac River trust that folks like you will accept this challenge to do something positive and definite at the job which the DAR has proudly done for so long and which I am sure it is going to continue to do. I have confidence you will work for freedom and continue the fight to expose communism, to recognize it and to guard against it. We have a long and multiple purpose fight ahead of us to conquer the evils of communism.

This job is yours and mine. I believe these American enterprise committee can do the job. I hope you will organize them in your communities. If we try and fail, we shall find solace from the fact that we have fought the best fight that we can. We have a hard job to turn back this awful world-wide tide of communism—but we will have at least tried and actively and loyally done our best. But if we fail to try at all and cravenly accept these infiltrations like cowards we will find ourselves becoming the pawns of the state.

I think that the DAR will measure up to this challenge and will radiate the inspiration for their communities to enlist the active cooperation of other agencies and organizations in this fight.

If we do this, freedom will prevail and our American destiny will be both secure and sublimely significant.

Memorandum From American Civil Liberties Union on Right of Broadcasters To Editorialize

---

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum from the American Civil Liberties Union dealing with the policy of the Federal Communications Commission with regard to the editorializing by radio stations.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

AMERICAN CIVIL LIBERTIES UNION,
New York, N. Y., June 30, 1949.

DEAR SENATOR: The recent decision of the Federal Communications Commission, giving broadcasters the right to editorialize on the air, represents a serious threat to free speech.

We have taken the liberty of enclosing a memorandum on this subject, prepared by James Lawrence Fly, former Chairman of the Federal Communications Commission.

Very truly yours,

JOHN HAYNES HOLMES,
Chairman.
ROGER N. BALDWIN,
Director.
ARTHUR GARFIELD HAYS,
Counsel.

MEMORANDUM ON THE FEDERAL COMMUNICATIONS COMMISSION DECISION ON EDITORIALIZING BY RADIO STATIONS

POSITION OF THE AMERICAN CIVIL LIBERTIES UNION

We urge all concerned with the need to preserve our democratic processes to join with us in urging the Federal Communications Commission to reinstate the policy of the Mayflower decision of 1940 reversed by the Federal Communications Commission on June 2, 1949. The effect of this reversal is to permit broadcasters to editorialize; they become advocates. True, the Commission majority tries to imbed this privilege in an encompassing duty to be fair, but the Commission's reasoning is hinged on the assumption that the average broadcaster is like unto Socrates in his intellectual virtue. Theories should be related to facts.

The majority report is most confusing. Broadcasting magazine's editorial on the subject is entitled "Etaoin shrdlu." Confusion and unworkability are both apparent. We strongly concur in the minority views expressed by Commissioners Hennock that (a) the Mayflower doctrine should have been reaffirmed and (b) a vague requirement of fairness is utterly unenforceable. Once the thousands of radio stations are permitted to carry on partisan campaigns, the entire present staff of the Commission would be but a small portion of what would be required to enforce a general standard of fairness. The reach so greatly exceeding the grasp, it follows that no policy standard will be enforced.

The American Civil Liberties Union is committed to the principle that a broadcaster who holds a license to serve the public's interest—and thus distinguished from newspaper and magazine owners—cannot be permitted to editorialize, to harrangue the public with his own private views and thus to turn the public's own powerful mechanism of free speech into an organ to serve the broadcaster's private aims. We do not assert that the broadcaster is a second-class citizen and that his voice may not be heard on the air. We are content to have Mr. David Sarnoff and Mr. William Paley, as persons and responsible citizens, heard on occasional forums and public discussions as often as are other equally responsible citizens. But they should appear as private citizens, just as other citizens appear.

The practical effect of a vague confusing standard and its utter unenforceability, coupled with specific permission to editorialize, is to permit the broadcaster to monopolize the public's free speech facility, and to invite subversion of that public facility to the promotion of private and partisan ends. This, we submit, is not in the public interest. The necessary counterpart of such a position is that many responsible voices discussing the pros and cons of public issues will be suppressed. It is unthinkable that the Government itself would grant to the beneficiary of a valuable public license this powerful device to suppress and restrain freedom of speech.

To suggest that even such fine men as Mr. Sarnoff and Mr. Paley will continue to tolerate other views on the air is to rely upon the hope of beneficent tyranny. Though Mr. Sarnoff and Mr. Paley are both entirely fair, however tolerant may be the rule by such men, the dangers lurk in change of mind and change of management. The most impressive tyrants may well be in our smaller cities where there are only one or two stations, and in cities where the only radio stations are owned by the single newspaper interest in that area. In such places, the Federal Communications Commission can have no semblance of practical power to require a vague standard of fairness.

In short, in place of a simple, workable, and sound policy requiring licensees to operate in the public interest, the Commission has reversed itself and substituted a policy of operation in the private interest. In the light of the critical issues before the public, the ever greater need for general public discussion, and the tremendous force of this mechanism upon public opinion, we feel it both urgent and important that the public airways be kept open solely for the benefit of the public.

THE FACTS

In its decision in *In re Mayflower Broadcasting Corporation*, issued on May 29, 1940, the Federal Communications Commission enunciated the following statement of policy (8 F. C. C. 333 at pp. 339–340):

"Under the American system of broadcasting it is clear that responsibility for the conduct of a broadcast station must rest initially with the broadcaster. It is equally clear that with the limitations in frequencies inherent in the nature of radio, the public interest can never be served by a dedication of any broadcast facility to the support of his own partisan ends. Radio can serve as an instrument of democracy only when devoted to the communication of information and the exchange of ideas fairly and objectively presented. A truly free radio cannot be used to advocate the causes of the licensee. It cannot be used to support the candidacies of his friends. It cannot be devoted to the support of principles he happens to regard most favorably. In brief, the broadcaster cannot be an advocate.

"Freedom of speech on the radio must be broad enough to provide full and equal opportunity for the presentation to the public of all sides of public issues. Indeed, as one licensed to operate in a public domain the licensee has assumed the obligation of presenting all sides of important public questions, fairly, objectively, and without bias. The public interest—not the private—is paramount. These requirements are inherent in the conception of public interest set up by the Communications Act as the criterion of regulation. And while the day to day decisions applying these requirements are the licensee's responsibility, the ultimate duty to review generally the course of conduct of the station over a period of time and to take appropriate action thereon is vested in the Commission."

This policy has been generally known as the Mayflower doctrine.

On September 5, 1947, the Commission ordered a hearing to consider the possible modification or reversal of the doctrine. At the hearings, which were held in March and April of 1948, the American Civil Liberties Union appeared and argued in support of the Mayflower policy. It was there represented by Mr. James Lawrence Fly.

On June 2, 1949, the Commission issued its report which, by a 4 to 1 vote, in practical effect reversed the policy. Commissioner Hennock dissented. In summary, in the Commission's own words, the majority report held:

"The Commission believes that under the American system of broadcasting the individual licensees of radio stations have the responsibility for determining the specific program material to be broadcast over their stations. This choice, however, must be exercised in a manner consistent with the basic policy of the Congress that radio be maintained as a medium of free speech for the general public as a whole rather than as an outlet for the purely personal or private interests of the licensee.

"This requires that licensees devote a reasonable percentage of their broadcasting time to the discussion of public issue of interest in the community served by their stations and that such programs be designed so that the public has a reasonable opportunity to hear different opposing positions on the public issues of interest and importance in the community.

"The particular format best suited for the presentation of such programs in a manner consistent with the public interest must be determined by the licensee in the light of the facts of each individual situation. Such presentation may include the identified expression of the licensee's personal viewpoint as part of the more general presentation of views or comments on the various issues, but the opportunity of licensees to present such views as they may have on matters of controversy may not be utilized to achieve a partisan or one-sided presentation of issues. Licensee editorialization is but one aspect of freedom of expression by means of radio. Only insofar as it is exercised in conformity with the paramount right of the public to hear a reasonably balanced presentation of all responsible viewpoints on particular issues can such editorialization be considered to be consistent with the licensee's duty to operate in the public interest. For the licensee is a trustee impressed with the duty of preserving for the public generally radio as a medium of free expression and fair presentation."

(Commissioners Webster and Jones wrote individual concurring opinions.)

Dr. Douglas Southall Freeman

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the Washington Post of July 1, the title of which is "Virginian Prodigy."

It refers to the retirement of Dr. Douglas Southall Freeman as editor of the Richmond News-Leader, in order to devote his time to completing his monumental life of George Washington and to lecture on history and military strategy.

Dr. Freeman is one of the outstanding editors and authors of this era, and his biographies of Robert E. Lee and George Washington will stand forth as among the greatest works of this kind ever written.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIRGINIAN PRODIGY

At the age of 63, Dr. Douglas Southall Freeman has retired as editor of the Richmond News-Leader in order to devote his whole time, or such part of it as may not be required for travel, or for lecturing about history and military strategy, or for accepting new academic honors, to his monumental life of George Washington. To many a man

of Dr. Freeman's age this will hardly sound much like retirement; but such things are relative, and, compared to the schedule he has been following these many years, it will perhaps be the equivalent of a dignified, tranquil leisure. Dr. Freeman himself insists that his retirement will not necessarily mean any diminution of his net productivity. He is merely changing over, or, as it were, retooling himself, for another kind of product.

According to Dr. Freeman's intimates, his intellectual working day has begun at 3:15 in the morning and ended at 6 in the evening, with time out for lunch, a daily radio broadcast, a brief afternoon nap. Each morning he read all the news dispatches and wrote two or three columns of editorial comment and a radio script about them, consulted with his staff, received visitors, attended to correspondence, and all the rest of the usual editorial routine. After his nap he labored on his books, and was always, it is said, well ahead of the stiff schedule he had set for himself.

Probably nothing like this in the way of literary industry has been heard of since Anthony Trollope, who, as he relates in his autobiography, worked with his watch in front of him to maintain his quota of something like 300 words per quarter hour, and who when he wrote "The End" on the last page of a manuscript, without even pausing for a sigh of satisfaction, reached for a fresh sheet of paper and wrote "Chapter 1." But then, of course, Trollope had the advantage of being able to work steadily upon one thing until he had finished it, which until now Dr. Freeman has not had.

All this must sound strange and rather wonderful to those writers to whom hard work, especially if it involves some degree of cerebration, is usually accompanied by a sense of physical exhaustion. The difficulty is that writers with such prodigious energy as Trollope and Dr. Freeman are never quite able to explain the secret of it. They are usually content to say that it is a form of self-discipline in concentration, apparently somewhat after the fashion of Yoga. This is doubtless true as far as it goes, but not many are capable of writing both fluently and well. "Easy writing, hard reading" and "hard writing, easy reading" have been for some centuries the maxims of the trade.

Possibly, then, men like Dr. Freeman are spiritual survivors of some more heroic age, when there was really a spontaneous association of thought and language. Those were the days when it was possible to say things so readily and so well that whatever one said was destined to become a cliche, and all future generations of writers would be obliged to rack their brains, exacerbate their nerves, and surrender their sleep in the effort to avoid repeating it.

Rockefeller Invests $5,000,000 in Education to Strengthen Our Private Enterprise System

EXTENSION OF REMARKS

OF

HON. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1949

Mr. JOHNSON. Mr. Speaker, it was with much pleasure that I obtained permission to include in my extension of remarks a letter written by John D. Rockefeller, Jr., to Donald K. David, dean of the Harvard Graduate School of Business Administration. Also, included in my remarks is a statement by President James B. Conant of Harvard University.

My attention was called to these two very interesting and constructive expressions by one of my constituents, Raymond W. Miller. In 1945 he was selected as the outstanding man in the field of public relations in the United States by the Public Relations Institute. He is now a special lecturer at Harvard University.

For many years the work of the Rockefeller Foundation has been known to the American public. It is also with great pleasure that I record the fact, which is universally known among informed people, that Mr. Rockefeller looks upon himself as a trustee of the wealth under his control. He recognizes that much wealth that individuals acquire has come through the efforts of many people as well as through circumstances beyond the individual's control, and that part of it could be designated social wealth. It is hard for anyone to measure the tremendous contribution which the Rockefellers have made by the judicious use of wealth which has come under their control. For instance, it was my pleasure to visit Peiping, China, in 1946 and to learn first hand of the remarkable work of the Peiping Union Medical College. At that time its regular work was suspended due to the impact of the war, but undoubtedly the institution will again soon make a tremendous contribution to the health of the Chinese. The work done in many scientific fields by the Rockefeller Foundation is stupendous.

Mr. Rockefeller recognizes that the key to America's continued economic strength is our private-enterprise system. That is perhaps the most precious phenomena in all the fields of American institutions. Likewise, it is true that many of the benefactors of this great system are conducting themselves and their enterprises in a way to develop lack of confidence in the private-enterprise system. They are destroying the very opportunity that enabled them to become prominent, and many times wealthy, by their selfish misuse of the opportunity which they have been afforded through that system. It is for this reason that Mr. Rockefeller is willing to spend $5,000,000 in order to inculcate into the young men at Harvard University who are receiving business training the idea that with their opportunity for leadership in business they also have a challenge: that is, to so handle the affairs of the business concerns with which they will become affiliated in such a manner as to redound to the benefit of their employer, employees, and the public, as well as to themselves. If business is thus managed it will inspire confidence in our private-enterprise system. Any nation that can have a system that produces the leaders that we do, many of whom come from obscure social and economic environments should be very anxious to do what it can to protect that system. One illustration is sufficient. Henry Ford went from a one-man shop mechanic to the head of one of the greatest industries in America. His case is typical of many others well known to the American public. It is therefore interesting to note that Mr. Rockefeller was willing to invest $5,000,000 in the Harvard Business School to help train business leaders who will manage business enterprises so as to make more certain the continuance of the private-enterprise system. Economic freedom is a precious thing. The competitive units in our business structure must act with such self-imposed discipline that the public interest, as well as the private business interest, will be adequately cared for.

Likewise, President Conant recognizes that business must accept its responsibility to society. It cannot afford to disregard the public welfare. He also made a very fine statement which I know everyone will read with great appreciation:

ROCKEFELLER CENTER,
New York, N. Y., June 1, 1949.

MR. DONALD K. DAVID,
Dean, Graduate School of Business Administration,
Harvard University,
Boston, Mass.

DEAR MR. DAVID: It is my profound conviction that the continuation of enterprise based on individual initiative is essential if the American form of government inherited from our forefathers is to be maintained and the Nation's economic strength preserved. I am convinced, as the result of a study I have had made, that the Harvard Business School is making the most significant and objective contribution of which I know to the strengthening and perpetuation of this type of individual enterprise, in that it is helping to raise the technical standards and to broaden the sense of social responsibility of the leaders of business.

Because I hold these views I should count it a privilege to have a part in the $20,000,000 program which you have in mind, to strengthen and stabilize the school. That program, you have told me, covers endowment, scholarships, and two buildings—one an eating and social center, the other a classroom building. Toward that program I will contribute on the condition set forth below $5,000,000. This gift I would hope you might be disposed to use toward the construction and partial endowment of the classroom building.

Should that be your decision, may I suggest that the building be named after Senator Nelson W. Aldrich. This suggestion I feel the freer to make because I can think of no finer nor more inspiring example to set before the future business and governmental leaders of the Nation than Senator Aldrich, and because, from my early manhood until his death, my close association with him meant so much to me. Able, sound in judgment, broad-minded, farseeing, ever selflessly seeking the country's best interest, as charming in personality as he was modest and unassuming in manner, Senator Aldrich was one of the greatest of the Nation's statesmen.

This pledge will become effective if, not later than July 1, 1950, you have received toward the $20,000,000 program in cash and/or in good and responsible pledges (exclusive of bequests) not less than $5,000,000 in addition to the $5,000,000 here pledged. Payment of this pledge will be made on the fulfillment of the above condition, at your request.

Greatly wishing for the program the success it so richly deserves and with expressions of the fullest confidence in your outstanding leadership of this important enterprise, I am,

Very sincerely,

JOHN D. ROCKEFELLER, Jr.

The United States has developed its greatness as a Nation in a period in which a highly

fluid society overran a rich and empty continent; one of the highly significant ideals of the American Nation has long been equality of opportunity. Our educational system, our political institutions, and our social ideals form a closely interwoven pattern. Equality of opportunity could be realized only in a political democracy, it would have meaning only in a competitive society in which private ownership and the profit motive were accepted as basic principles.

As never before, business needs men who appreciate the responsibilities of business to itself and to that unique society of freemen which has been developed on this continent. Such men must understand not only the practical workings of business organizations, but also the economic and social climate in which business operates; they must be as well trained as our professional men in law and medicine.

This is one of the responsibilities of American universities in the twentieth century. Harvard takes justifiable pride in the pioneer work of the Harvard Graduate School of Business Administration in meeting this new educational challenge—education for business responsibility.

JAMES B. CONANT,
President, Harvard University.

Commentator Says Big Business Is Fooling Congress on S. 1008 While the People Sleep

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. PATMAN. Mr. Speaker, the following statement by W. K. Kelsey from the editorial page of the Detroit News gives an outsider's view of the extreme haste with which S. 1008, the bill to amend the Federal Trade Commission Act and the Clayton Act, has been pushed through the Senate and before the House:

Hastily, without waiting for completion of hearings by the House Small Business Committee which were begun Tuesday, the House Rules Committee on Thursday released the basing-point price bill for debate on the floor, which is scheduled to begin about the middle of next week.

Representative PATMAN, chairman of the Small Business Committee, had asked the Rules Committee to wait until the hearings had been finished, to give objectors to the compromise measure which had been rushed through the Senate an opportunity to get their side into the RECORD. Evidently the lobby in favor of the basing-point system, which has been outlawed by the courts, was strong enough to compel the Rules Committee to act.

The fight will now pass to the floor of the House, with big business jubilantly certain that the bill will be passed in the form it wants, giving it clear authority to fix basing-point prices, absorb freight rates, and continue other practices tending to force independents out of business unless "collusion" can be proved. And in the present state of business organization, with its unwritten understandings, collusion is almost unprovable.

Crying "preserve competition" when they mean "prevent competition," the big business interests are fooling Congress while the people sleep. Perhaps Representative PATMAN and others with their eyes open can make this clear on the floor of the House.

Improvement of Race Relations

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from New Orleans States of June 18, 1949:

LETTER FROM TULANE—IMPROVEMENT OF RACE RELATIONS COMES FROM EDUCATIONAL AND MORAL GROWTH

These views by Dr. Rufus C. Harris, president, were published in a bulletin titled "Letter From Tulane" a few days ago:

"Some time ago a few students and a younger member of the faculty of the university attended a party held at a private home at which Negroes and whites were included among the guests. Upon investigation, I was satisfied that there was no rowdyism or misbehavior. It is scarcely necessary to point out that the university was in no way responsible for any party or similar function held off the campus and attended chiefly by town students residing at their homes.

"The important point is that some Tulane students attended a social party where Negroes were present. Some were present out of curiosity. Others think that by such meetings they can improve interracial relationships and understanding. Personally, I do not think so, and I have always offered my opinion to that effect. I believe that such affairs set back greatly the solution of racial problems. The position of men of good will of both races in the South—and I know many of them—who are willing to work patiently and quietly at the racial problem in an effort to find practicable solutions without strife and conflict, is made increasingly difficult by such meetings.

"Since the close of the War Between the States, most educated southerners have felt that one of the essentials for the handling of the race problem has been the encouragement and support of those temperate and realistic leaders of both races who are willing to face the realities of this problem. We should not hesitate to recognize, encourage, and assist those individuals who are endeavoring to lead all Americans along the slow path of hard work, educational advancement, and moral improvement which are the only roads of progress for any race.

"In my opinion efforts toward the improvement of racial relations must be made within the established patterns of social relationships. I disagree with the theoretical idealism of many persons who feel that democracy can be achieved only by imposing laws which would level the masses. To ignore the facts of history and the realities of the present will not contribute constructively to the solution of difficult problems of human relationships.

"There is another important aspect of this situation. To some sincere and honest people such interracial associations are democratic. To others equally sincere they are not. There are still others who suspect the Communists secretly organize such gatherings by planted persons. That sometimes may be true, but if indeed it is, it scarcely seems possible that the university may publicly forbid its personnel upon penalty of expulsion to attend meetings of whites and blacks. This is no indication that the university condones communism, for it certainly does not.

"Tulane does not and will not tolerate communism. We appoint no Communists to the faculty. The greatest precautions are observed. There is no place for a Communist here. We do not believe there are any. We have faithfully probed all contrarily asserted opinion. The acclaimed or proved Communistic affiliation of no one will be tolerated. It does not follow, of course, that one is a Communist because someone asserts that he is, or because he holds opinions on subjects that differ from those of his critics.

"In a university there is room for wide differences of opinion on controversial issues. That is true at Tulane. In the proper place in any university, free to seek the truth, communism is, of course, discussed, weighed, and analyzed. That is necessary. The university must consider the facts in all issues, including communism and the implications of Russian ideology. There is no ground for fear that young people will be tempted by them. The most effective means of confronting communism is understanding—not isolation. It would be folly for anyone to contend that because an idea is despised, the university should decline to learn what there is to know about it. General Eisenhower often said that strategy is successful only if planned in the knowledge of all that is possible to learn of the enemy. A blight such as cancer is probed and studied. It scarcely would be sensible to suggest that those who study cancer approve it.

"When there is controversy and disagreement, it is better and wiser, in my judgment, to handle the difficulties that arise, both in the university and in the home, through guidance, example, and persuasion, rather than by administrative fiat, censorship, and dictation. Faculty members and students, as citizens, have the right to consider controversial issues. I would have no desire to impose my personal views on them.

"It is my duty to protect those rights so long as there is no violation of the loyalties and interests to which the university is devoted and to which it has been immemorially committed."

Political Angle of the Taft-Hartley Act

REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a very fine editorial entitled "All or None" which appears in this morning's issue of the Washington Post. This article should be required reading for every Member of Congress and the contents and implications of this editorial should be made known to all thinking people in the country. The editorial reaches the definite conclusion that too many legislators and politicians are concerned about the Taft-Hartley Act only from the political angle and do not care to approach the problem with any other thought in mind than "how many votes can we get in 1950?"

Mr. Speaker, this is a regrettable situation. I feel that the country is entitled

to the best thought and study that Congress can give to the all-important problem of labor-management relations. Therefore, if the House is to again consider the labor question, I sincerely trust we approach the problem with open minds, dominated completely by what is best for our country and not by vote hysteria.

The article follows:

ALL OR NONE

President Truman's all-or-none policy has come to full flower. After the Senate had completed the work of rewriting the administration's labor bill, Vice President Barkley remarked that the only part left consisted of the first nine lines repealing the Taft-Hartley Act. Thereupon Senator THOMAS made the rout complete by moving to strike out the first two lines of the bill and entitle it the Labor-Management Relations Act of 1949. He added that the pending bill, if as is unlikely, it is enacted, should be called the Taft Act of 1949. The real significance of the Senate vote lies in the resounding rebuke of the administration leaders who attempted to make a political football out of a great economic issue—to force through Congress a labor bill that offered the public no adequate protection against crippling strikes and put all the emphasis on labor's rights without setting up safeguards against unfair labor practices.

The Thomas bill, it will be remembered, was reported out of committee without giving minority members an opportunity to have their amendments considered. It was President Truman's bill, written to satisfy the demands of organized labor for unconditional repeal of the Taft-Hartley Act and reinstatement of the one-sided Wagner Act. From the beginning it was evident that the Congress would not support the bill in its original form. And in the course of the debate it became apparent that administration leaders were opposed to amendments that would have stiffened it sufficiently to make it acceptable. The Senate, therefore, had to choose between a weak measure that satisfied nobody except the supporters of organized labor or the Taft amendments—the only comprehensive and coherent program presented to it. Although the bill that finally emerged was written from the floor in the form of amendments to the Thomas bill, it was in reality a complete substitute bill worked out in advance, providing for retention of the Taft-Hartley Act with modifying changes approved by Senator TAFT.

It is virtually certain, as we have already said, that the Senate action precludes passage of any new labor legislation by the present Congress. The President would unquestionably veto any bill bearing the Taft imprimatur. From present indications the Taft-Hartley Act will remain unchanged on the statute books at least until a new Congress is elected. Only by sponsoring a constructive labor bill of his own could the President change the outlook, and there are no indications that he intends to alter his misguided course.

His attitude goes a long way toward confirming the suspicion that he hopes to keep the Taft-Hartley Act on the books as an issue in the 1950 congressional election and perhaps the 1952 Presidential campaign. The uncompromising attitude of many labor leaders suggests that they, too, are thinking more of politics than of smooth relations between employers and employees. It remains to be seen whether this clinging to slogans at the expense of sound legislation will prove to be good politics a second time. Certainly it is not sound policy in a country that depends upon fair and amiable relations between unions and employers for continuation of economic prosperity.

Basing-Point System and Phantom Freight—Illustrations of Phony Freight Charges on Cement for Kentucky, Michigan, Arkansas, Oklahoma, Kansas, Nebraska, North Dakota, South Dakota, and New Jersey—Phantom Freight Exceeds So-Called Freight Absorption in Any Pricing System Such as S. 1008 Authorizes

---

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. PATMAN. Mr. Speaker, it has been my purpose to show in detail the effects of the basing-point system of pricing on each State. The haste which has pushed S. 1008, as amended, to the floor of the House without due consideration or public hearings precludes a full examination of the facts State by State at this time.

Although there are many heavy commodities which have been sold under the basing-point system, steel and cement have been examined in greater detail because of the court decisions in these industries which have brought to light the infamous double-dealings necessary to the operation of the system. It is ironic, indeed, that the phony term "freight absorption" should be written into a bill. This is because under the terms of the bill S. 1008, as amended, allowing systematic "freight absorption" it means also "phantom freight."

S. 1008, AS AMENDED, A FALSE FRONT FOR DISCRIMINATORY PRICES AND PHANTOM FREIGHT

Stripping S. 1008 of its false front, the bill means exactly this: "That it shall be lawful to charge discriminatory prices, and it shall be lawful to charge freight not incurred—phantom freight—to the purchaser. Further, the use of the lowest-cost method of transportation shall accrue only to the benefit of the seller, and the buyer shall have no right to specify the means or methods of transportation. It shall be lawful to create a monopoly through rigid industry price controls and to grant secret rebates, discounts, brokerage fees, and advertising allowances to the great chain store systems. It shall be lawful to use punitive pricing systems to drive your smaller competitors out of business; provided, however, you do all of these acts in good faith and you act in your individual monopolistic capacity, and further provided if others who follow the leader also act in good faith and independently they are granted all the rights, privileges, and emoluments accruing under this act. It is further provided that the commission of the methods herein set forth shall be prima facie evidence of good faith, and such may be pleaded in any action brought by any enforcement agency of the Federal Government."

S. 1008, AS AMENDED, WILL DESTROY FREE ENTERPRISE AND SMALL BUSINESS

In other words, the bill S. 1008 destroys all the protection heretofore afforded small business and the free enterprise system. It, instead, substitutes rules which defy enforcement of fair trade practices and discriminatory pricing methods and systems. It is a bill which will ruin small business, the hometown merchant and manufacturer; the corner druggist and the wholesale grocer. It is a bill which will continue the identity of prices on cement, steel, and other products to dealers and consumers and to our Federal, State, county, and municipal governments.

S. 1008, AS AMENDED, HAD NO PUBLIC HEARINGS BY COMMITTEES—CHARGED WITH RESPONSIBILITY FOR ANTITRUST LAWS

Senate bill 1008, as amended, is a bad bill except for the monopolists. The hearings conducted thus far by the House Small Business Committee, which I have reported daily to the Congress, prove that assertion beyond any reasonable doubt. Senate bill 1008, as amended, should be defeated. If full and complete hearing could be had, and ample consideration given, Senate bill 1008 would never see the light of day. We who have pled for such hearings to no avail, now request the membership to defeat this measure and allow the Court decisions upholding our antitrust laws to stand. We must strengthen our laws and not weaken them in this hour of peril to the free-enterprise system of our country.

PHANTOM FREIGHT FOR KENTUCKY, MICHIGAN, ARKANSAS, OKLAHOMA, KANSAS, NEBRASKA, NORTH DAKOTA, SOUTH DAKOTA, NEW JERSEY

The tables set out below were computed from a list selected at random from the rate books compiled by the Cement Institute during the middle thirties. These rate books were the handy instruments which furnished the Cement Trust the means to operate the basing-point system. These rate books were renewed every time all-rail freight rates were increased. No basing-point system operates other than on the highest all-rail freight rates. Water-rail-water, or water-rail, and truck transportation, all cheaper methods are never used in the computations. Of course, with several hundred destinations in each State, it is not practicable to include every destination. If it were, I assure you the results would be astounding when the extent of phantom freight could be accurately measured.

The tables illustrating phantom freight in the several States mentioned above follow:

Kentucky

Destination point	Applicable basing-point freight charge per barrel	Lowest mill freight charge per barrel	Phantom or excess freight per barrel
Paris	$0.46	$0.46	0
Mayfield	.44	.44	0

The Antichrist in Action

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remark in the RECORD, I include the following editorial from the Washington Evening Star of June 28, 1949:

THE ANTICHRIST IN ACTION

The thing now happening to the Roman Catholic Church in Czechoslovakia is all part of the vile pattern of action that has come to characterize the Communists wherever they have forced their way into power.

First, as a conspiratorial minority acting on orders from the Kremlin, they worm their way into strategic cabinet positions giving them control of such powerful instruments as the police organization and the propaganda machine.

Next, as soon as they are well established in those positions, they manufacture a crisis, stage a coup, and set up a dictatorship, after which—step by step, through every form of fraud and terroristic coercion—they wipe out the political opposition.

Finally, when they think the time opportune, or when Moscow so decrees, they set out to smash God. What they stand for and what God stands for are mutually repugnant, and so they undertake to shatter the clergy, suppress the churches, and make religion bend its knee to the supermaterialistic, truth-butchering, liberty-destroying tyranny which they describe, with indecent brazenness, as the "new democracy."

It is this last stage that has now been reached in Czechoslovakia. Archbishop Beran apparently is to suffer much the same fate as the one suffered by Cardinal Mindzenty in Hungary not long ago. or by Archibishop Stepinac in Yugoslavia in 1946. About 75 percent of the Czech people are Catholics, but the Communist regime at Prague is so strongly entrenched that it is not hesitating in its attempt to break up their church directly before their eyes. After all, how can they resist? They have only prayers to fight back with, and a good Marxist laughs at prayers.

And so we may expect that Archibishop Beran and a number of his colleagues soon will be dragged before a "court" and "tried" on false charges in another typically obscene Communist mockery of truth and justice. The church, as the Czech bishops declared in their courageous pastoral letter on Sunday, has already, been "robbed, deprived of the majority of its freedoms and rights, dishonored, soiled, persecuted secretly and openly." Not much more needs to be done by the Prague tyranny to complete the dirty work.

But none of this should come as a surprise to anybody. Everywhere behind the iron curtain, communism has been openly at war not only with genuine political democracy but also with religion of every type that recognizes man as a child of God and not the creature of the state. It is an inevitable kind of war. The godless tyranny, by its very nature, is driven to do battle against God-fearing freedom because the two cannot coexist side by side.

In other words, being self-avowedly antispiritual and judging man to be nothing but a animal to be regimented, red totalitarianism must fight any political philosophy that gives him dignity and makes him free. And it must also fight any religion that endows him with a soul, teaches him standards of goodness, and tells him that God alone is his true master, not Caesar.

There is thus a black but powerful sort of logic behind the Communist drive to destroy the influence of the church. What we have here is an evil that will continue to plague the world until somehow, some day, the source of it is overthrown or withers away. The anti-Christ simply cannot live at peace with Christ.

Address Before Pennsylvania Bar Association

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the annual dinner meeting of the Pennsylvania Bar Association, Bedford Springs Hotel, Bedford, Pa., Thursday, June 30, 1949:

Mr. President and my colleagues of the Pennsylvania bar, it is indeed a great pleasure to be with you tonight and by this I mean something much more than the empty oratorical phraseology that speakers are apt to use when beginning a speech.

No one could find more satisfaction out of his work than I, during my 17 years as a Member of Congress. A Representative from the great State of Pennsylvania finds the needs of his constituency require the constant study of more interesting and varied subjects than that of any other job. By reason of the size and diversity of interests in his State, one might say that a Congressman from Pennsylvania is placed in the position of accumulating the equivalent of a 4-year college seminar every session of Congress he attends.

Tonight I want to discuss with you just one phase of this work as represented in pending legislation, a bill which I have charge of and which is known as S. 1008, the so-called basing-point bill.

At the outset let it be understood that I am not too much impressed with the cry of those who claim our free economy is doomed to destruction and who compare the "good old days" when there was no big business with the present hour when they claim we are so beset with it. When this country was first born, they say, there was no such thing as conspiracy in restraint of trade. I would call attention to the fact that markets were more restricted then, than now.

When my ancestors moved to Easton, Pa., nearly 200 years ago, the village store was a monopoly unto itself because folks lacked transportation to put their products in competition with other markets. There was no absorption of freight because there was no freight. There were no allocations of sales territories because the oxcart and the canal boat set the limits of sales areas without connivance. Whoever heard of a quarrel over quantity discounts in an economy that produced things singly and by hand? There were no delivered prices because there were no deliveries. The manufacturer never conspired to fix prices because there was nobody with whom he could conspire. The shoemaker, the glovemaker, each in his own home town, was a complete monopoly unto himself.

Hemmed in by the lack of transportation, limited by the inadequacies of hand production, isolated by the Allegheny ranges, the forests, and the savages, our early ancestors found handicaps and burdens to the free

enterprise system which the detractors of our present life seem to forget.

Who broke down these natural restraints and monopolies of early days? Who made available to all the people of our country the minerals deep beneath the ground and the farm products from the Lehigh, Lebanon, Cumberland, and Piedmont Valleys? Did Government do it by passing laws and making regulations? Did the Federal Trade Commission do it? Or was it the genius of the American businessman?

After 17 years' service in Congress with a rather close look at some of our governmental economists and theorists, I am still inclined to believe that the capstone of our free enterprise system is the industry and inventiveness of the American businessman.

You who are my colleagues at this bar will surely agree that our own State ranks high in this national achievement through free competition.

But all is not going well in Washington, for there is a little group of people working in the agencies of Government who would seek to impose the tyranny of their own fixed ideas on the economy of this country, and who, in the name of maintaining free competition, seek to throttle it. That's why I said at the outset that I am happy to be with you because it is only by getting back amongst the producers and their advisers who operate this great economy that I can recharge my batteries.

There has been a tendency of late years for Government agencies to build up a series of precedents which, if the people of the United States, through their elected representatives, don't stop, will set up for the bureaucrats a nice big monopoly of power, making industrial corporations look like peanut stands by comparison.

I am neither willing for our country to submit itself to economic control by monopolists, nor am I willing to see bureaucracy assert complete political sovereignty over private business.

I reject both of these dismal alternatives which some economists claim we must choose between. I am convinced that the problem can be approached without destroying our 150-year investment in the free-enterprise system.

This brings me to a discussion of S. 1008. This bill passed the Senate. It has been approved by the Judiciary Committee of the House, and I hope it will presently receive the favorable consideration of that body.

But bureaucracy is ever present, and one Government employee sitting in Washington who fears a curtailment of his power can make himself heard a lot louder than a hundred thousand businessmen and consumers spread out over the country.

I made an interesting analysis of just how much stuff gets in the CONGRESSIONAL RECORD against this proposal to clip the wings of the bureaucrats who want to run the country. Since the beginning of this Congress there have been 372 columns of prepared material inserted in the RECORD against the bill, with but 93 columns explaining the need for legislation.

By this token, you might imagine the country is four-to-one in favor of bureaucracy taking over. But it will interest you to know that the Senate passed the bill with but one dissenting vote. So this goes to show that people do have a way of letting their elected Representatives know how they feel.

I do not propose to bore you with a long and detailed legislative history of the basing-point question. There is just one phase that I particularly wish to dwell upon tonight. I would remind you that the general subject of delivered pricing vitally affects the future of our own commonwealth.

For 70 years the steel mills of Pennsylvania have sold their products on delivered prices. This practice extended to all branches of the steel industry and to the cement industry, and later to the sale of many standardized heavy basic products made in Pennsylvania, such as building materials.

Economists refer to Pennsylvania as a "plus production State"—in other words, a State which, by the richness of its natural resources, the skill and aggressive vitality of its people, gradually became the great production center for mass manufactured heavy goods. Producing more than we used, it is but natural that in the free and open competitive markets of this country, our manufacturers sought to extend their sales into other parts of our country by meeting the prices of producers outside our State.

The growth of our Nation has developed its share of inequalities, of monopolies, of restraints of trade, and other unfair practices in commerce, just as growth under any other system would have its share of blunders.

But I don't know why anybody makes a speech about the perfectly obvious and universally accepted truism that we are, all of us, against monopolies and conspiracies. Today this is fundamental to all sensible businessmen.

However, it was to be expected that in the struggle for the industrial development of America, some shortsighted businessmen, whether they made mouse traps or crowbars, would seek to stifle free competition by secretly conspiring to limit the production of their products or to set the prices at which they were sold. In other words, they thought by creating false scarcities or freezing the prices of articles, they could assure themselves a soft existence, free from the competitive irritations of another man making the same mouse trap better for less.

I suppose there are a lot of people who want to make things as soft for themselves as possible. Has it ever occurred to you that this desire to make things soft for themselves also applies to a lot of bureaucrats? After spending '7 years in Washington, I am convinced there are many of them in our Capital who think they really ought to run the economy of our country. This being the case, they figure they might as well make it as easy as possible to do so. How would you do it?

Well, let's pretend you gentlemen were the heads of a Government bureau that policed the trade activities of American industry. Let's make every lawyer in this room a member of the Federal Trade Commission. And let's pretend you wanted to exercise new and vast controls over the everyday decisions that up to now have been left to the private judgment of individual businessmen.

Your first move would be to establish a series of precedents whereby you could, if you wished, sue and get a judgment against any businessman in interstate commerce.

Next you would let everybody know you had that power. And, of course, the power to sue anybody would carry with it the power to not sue. As one person put it:

> "Eeny, meeny, miney, dink
> Throw a merchant in the clink,
> Eeny, meeny, miney, mo,
> Let the other merchants go."

The best way to get this power would be to make the rules of industry so uncertain that no one but yourself would know them. In fact, it would be easier if you made the rules as you went along so you could add to them each day.

I have discovered that such a power now rests with the Federal Trade Commission. Here is how Mr. Justice Jackson and Mr. Justice Frankfurter put it in their comments on the Morton Salt decision, No. 464, of the October 1947 Term of the Supreme Court:

"The law of this case, in a nutshell, is that no quantity discount is valid if the Commission chooses to say it is not."

If there is anything that a lawyer brought up in the American tradition hates it is to advise his clients under government by whim. We like government by law, not by the personal fancy of Federal administrators.

Such unbounded powers can only lead to serious abuses in the future. Knowing the antecedents and the history of our own Commonwealth, you can hardly expect any Congressman from Pennsylvania to silently accept the continuance of such authority.

On the other hand, if you desired to further increase the bureaucratic control over industry in Pennsylvania, the next step you should take would be to establish a rule of law providing that orders could be entered against anyone, regardless as to whether he was guilty. This technique has found great favor in the people's courts of the U. S. S. R. and is discussed at some length under the heading of "Crime without guilt" in Gsovski's book on Soviet civil law.

Krylenko, before he was purged, was commissar of justice, and he at one time, like many other Soviet penologists, advocated the elimination of the principle of personal guilt as a basis for the imposition of punishment, and the substitution of a concept of social danger. Finally, he advocated a code which should state only general principles for the imposition of punishment without giving any legal definition of individual crimes, i. e., without indicating in the statute the factual elements constituting an individual wrong.

Those of you who have studied recent Federal Trade Commission decisions will be alarmed at the similarity between the ideology of Commissar Krylenko and that expressed in the order of the Federal Trade Commission under count 2 of the Rigid Conduit case. The Soviet Government evidently felt that to insure complete mastery over its people, it should advocate the elimination of the principle of personal guilt as a basis for the imposition of punishment and substitute the concept of social danger. For social danger is an elusive thing, and it can mean whatever the commissars (or commissioners) decide it should mean.

In the Rigid Conduit case the Commissioners determined it was socially dangerous for one merchant to systematically charge certain prices after he found out that his competitor was charging the same price. This is what is known in Government circles as "conscious parallel action" and, even in the absence of conspiracy, is condemned as unlawful by the order in the Rigid Conduit case.

Just what this means to the attorneys practicing in Pennsylvania or any other State is hard to say. Perhaps you had better advise your clients in the manner one dissident Federal Trade Commissioner suggested. Here is what Lowell Mason had to say about this:

"Be sure you don't know your competitors' prices. In other words, be careful not to find out what prices are being charged by the fellows that make the same rubber mounted shaving mugs you make. This is difficult.

"What happens when one of your salesmen walks into a store and offers a retailer your 1949 model of rubber mounted shaving mugs at $13.75 the dozen? The first thing the purchasing agent says is, 'Why, you poor so-and-so. Glutz is selling his mugs for $12.95.'

"This means the jig is up. For the minute you find out Glutz' price is $12.95, you know you are not going to sell any of your mugs unless you also come down to $12.95. And if you come down to $12.95, you are matching competitors' prices, and that, my dear friends, if carried out systematically, results in a conscious parallelism which, according to count 2 of the Rigid Conduit decision, is tantamount to a conspiracy.

"There is, however, a way of getting around this difficulty. Equip all your salesmen with ear muffs. When the purchasing agent says, 'Why, you poor so-and-so, Glutz is selling his—,' then have your salesman flop

the ear muffs down over his ears and he'll be able to come back to you, clean, pure and innocent in the eyes of Government, for he won't know your competitors' prices.

"Then after he has made the rounds of his sales territory, he'll be able to say in all candor and honesty, 'Boss, the customers you used to have were certainly a nice crowd of fellows. Maybe I didn't get any orders but, believe me, I sure fixed it so the Federal Trade Commission can't sue you.' "

This apparent flippancy is but the cry of a man, and a bureaucrat at that, who sees the danger to our free enterprise system if we follow the Krylenko philosophy.

There is but one cure for this dolorous condition—that is, legislative action to restore the American system of jurisprudence to our quasi-judicial agencies. S. 1008 will give businessmen the right to meet their competitors' prices; S. 1038 will give our producers the right to sell their products in other markets by absorbing freight; S. 1003 seeks to revoke the Krylenko philosophy inherent in the charge and order under count 2 of the Rigid Conduit decision.

But what is more important, it puts all agencies throughout the Government on notice that the people of America still subscribe to the free enterprise system, and that if and when we discard it, the change must come through the elected representatives of the people, and not through a spurious extension of the law by administrative rulings.

Field Hearings on CVA

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland Oregonian of June 13, 1949:

FIELD HEARINGS ON CVA

The necessity for full-scale public hearings on Columbia Valley Administration bills in Oregon, Washington, and Idaho, before either the committees or Congress vote, should be obvious to all. Congress should make every reasonable effort to determine the need for a CVA and the attitude of the people immediately affected before taking action. Paid lobbyists can afford to go to Washington, D. C., for hearings, but many persons cannot.

It has been the hope of this newspaper that the Senate and House Public Works Committees, considering identical bills, will get together and hold joint hearings in the field. That would be the efficient and least costly way of getting the regional reaction, which must be considered along with the national welfare.

We are advised from the Capital, however, that Representative WILLIAM M. WHITTINGTON, of Mississippi, chairman of the 27-member Public Works Committee, has a hard-and-fast rule against hearings in the field. His committee is expected to start hearing testimony on the legislation later this month, about the time the Senate committee resumes its recessed hearing at the Capital.

Senator DENNIS CHAVEZ, of New Mexico, chairman of the Senate group, is favorable to bringing his committee to the Northwest to meet the public and learn the facts which may be presented locally. Thus, if Representative WHITTINGTON prevails, there will be only one set of hearings in the Northwest instead of duplicate hearings. Yet there is no assurance that the House committee can get the picture in adequate detail from reading Senate hearing testimony, and precedent indicates that it will scarcely try.

We urge the Northwest members of the two committees, Senator CAIN and Representatives ANGELL and MACK, to use their utmost influence to prevail on the House committee to join with the Senators in the Northwest hearings. The issue is too important to this vast region and to the Nation to allow precedent or the preference of an individual to stand in the way of accurate interpretation of the issues to both Houses of Congress.

Alabama Bans the Hood

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. RAINS. Mr. Speaker, the Legislature of Alabama, responding to the demands of an aroused citizenry, has struck a blow for government by law in the enactment of legislation outlawing the wearing of masks or hoods. It is to be hoped that other States will follow Alabama's example. The following editorial from the Birmingham News, entitled "Alabama Bans the Hood," reflects the sentiment of our people:

ALABAMA BANS THE HOOD

In a very refreshing and inspiring demonstration of sentiment in this State, the Alabama Legislature has overwhelmingly outlawed use of the mask or hood except for obviously innocent purposes. Any such concealment of identity, in sinister demonstrations or activities of any kind, is specifically banned.

Governor Folsom signed the Mize bill in less than an hour after the House had approved the legislation by a very impressive and heartening vote of 84 to 4. The Senate had passed the measure by a vote of 23 to 3.

This is another in the series of heavy blows that have been swiftly dealt against hooded operations in this State. It is another powerful testimony to the aroused and resolute opposition of the people of Alabama to any such activities. Again hope is encouraged that we have come to the end of a period marked by a rapid sequence of incidents of such lawlessness.

Enactment of this legislation gives voice to the will of the people in unmistakable and conclusive terms. That expression of public opinion in itself constitutes a very strong deterrent to any repetition of the kind of masked outrages which recently have occurred in this area.

But more than that, it arms law enforcement officers with specific authority to act against Klansmen or any others who use hoods to conceal their identities in public demonstrations or depredations of any sort.

The act provides that no person over 16 years of age shall appear on streets or highways or in public places "while wearing a mask or other device which conceals his identity; nor shall any person demand entrance or admission to, or enter upon the premises of or into the enclosure or house of any other person while wearing a mask or device which conceals his identity; nor shall any such person, while wearing a mask or device which conceals his identity, participate in any meeting or demonstration upon the private property of another unless he shall have first obtained the written permission of the owner and the occupant of such property."

That is a broad ban. It should go far toward hastening the disintegration that already seems to have set in within the Klan and toward putting an end to all vicious hooded activities.

If any additional legislation seems needed to complete the outlawing of sinister operations of that kind, it also should be enacted.

Attorney General Carmichael has urged the legislature itself to revoke the charter of the Klan, citing constitutional provisions which he says give it that authority. One section gives the legislature power to dissolve any corporation whenever in its opinion its character may be injurious to the citizens of the State.

Plainly there is no justification for a charter for any organization which engages in illegal hooded operations.

It is to be borne in mind, of course, that in their recent operations hooded gangs have done things that in themselves clearly and grossly violated the law. Such gangs might operate despite a law against the hood. It consequently remains urgently important that the utmost efforts continue to find and prosecute those guilty of past outrages. Otherwise the danger of new defiance of law will be heightened.

Portland Housing Aid

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Portland Oregonian of June 26, 1949:

PORTLAND HOUSING AID TO BE LIMITED TO THOSE WHO CAN'T PROVIDE OWN—FEDERALLY FINANCED PROJECT TO AVOID COMPETITION WITH PRIVATE ENTERPRISE

(By Paul Laartz)

Permanent public housing that will be erected in Portland under housing legislation expected to pass Congress shortly will be rented only to that certain proportion who can't pay economic rents or buy their own homes and will be noncompetitive with privately owned housing.

Lamar Tooze, newly elected chairman of the Portland housing authority, made that clear as the authority's guiding policy in a brief address Friday before the mayor's advisory committee on housing.

"There is no doubt but that we must have public housing—we of the Portland housing authority need only look at our occupancy reports to see that," he declared.

SEVEN THOUSAND UNITS DOOMED

The authority has only 2 permanent projects—the 400-unit, low-rent Columbia Villa development and 85-unit Dekum court, which was built in wartime, he explained.

"But we have 7,000 temporary, substandard dwellings which sooner or later must be vacated, and the present act provides they must be demolished January 1, 1950. However, the administrator of the housing and home finance agency has latitude to permit an extension," he pointed out.

"Thus, we are faced with the fact that at least 7,000 families must be housed."

TWO THOUSAND UNITS SOUGHT

The board chairman then reviewed the authority's recent actions, one an applica-

tion for at least 2,000 units of new permanent housing under the new Federal legislation, and another initiating action to compel families now living in temporary housing here to move to privately owned housing where their incomes will permit.

Recent figures, he said, indicate about 1,500 families, or about 20 percent of the authority's occupancy, are now receiving public assistance or adjusted rents.

The authority's survey of its tenants' incomes, started as a part of the move to evict those able to rent or buy private housing, also shows some 3,118 families are earning less than $2,500 annually, he said. Of that total, 764 receive yearly incomes of $1,000 or less and 519 incomes of $1,000 to $1,500, he said. There are others, though, who have incomes of above $5,000 and $6,000, he added.

"On the basis of our surveys, it appears our estimates of at least 2,000 units of housing needed here are pretty close to right," Tooze declared.

LOCAL WORK PLANNED

Tooze emphasized to the group the authority plans its proposed new housing development on a local plane. Specifications he said, will be prepared by an architect selected by the Portland housing authority, actual building will be by private contractors on a bid basis, and Oregon materials will be used for the most part.

He also emphasized that clear-cut salary limitations will govern occupancy of the projected new units. The act now before Congress, he said, provides that before any annual Federal subsidy can be made for low-rent projects, the local authority must show that a gap of at least 20 percent has been left between the upper rental limits for admission to the proposed project and the lowest rents at which private enterprise, unaided by public subsidy, is providing housing.

TWENTY PERCENT FORGOTTEN

"Actually," he declared, "That means the 20 percent will be the forgotten people, they will not be eligible for public housing and they will not, in many instances, be able to provide their own housing."

In earlier sessions of the housing authority, it has been pointed out the proposed Federal act calls for construction costs of $1,750 per room, with a $750 override to meet local building conditions, if the administrator permits.

As it stands now before the House of Representatives, it calls for 810,000 units to be built in the next 4 or 5 years—much like the previously approved Senate version.

Whether the $20,000,000 of new housing here will be of multiple type or single-family dwellings, or a combination of both, will be determined by the authority.

FEDERAL SCRUTINY DEFEATED

Also discussed informally by authority commissioners have been sites for the development—whether to use a single site or several, or to use sites now occupied by temporary war housing here.

Tooze closed his address to the mayor's committee with a hope "this problem will be approached from an objective standpoint. With the approval of this committee, I believe we will receive the approval generally of the people of the community."

Earlier in the committee sessions, discussion developed over how questions should be circulated for study and review before inclusion in the housing need survey scheduled to be conducted in the Portland area by Dan E. Clark II & Associates.

Francis Harrington proposed a resolution urging that the questions before their use in the survey "be submitted to appropriate Federal housing and financing agencies for review and recommendations to determine if they contain information needed by them."

It drew support from Mrs. John R. Catlin, past president of the Portland Housing and Planning Association, and State Representative Phil Dreyer, and opposition from Carl Frelinger, chairman of the Multonomah County Veterans Council, and Robert Hensel, consultant to the mayor's housing need survey committee.

It was defeated on voice vote.

Roy Bardsly of the Clark organization reviewed procedural steps for the survey and asked the committee to send question suggestions to the city council, which will act on award of the housing need survey contract.

A pretesting is planned before the survey is actually launched, he said.

Frilinger, a member of the mayor's housing need survey committee, said the contract calls for approximately the same number of questions as were used in a recent similar survey in Seattle.

Francis Staten, chairman of the mayor's housing advisory committee then appointed a committee to make recommendations for organization of future subcommittees.

On it he appointed Fred Eichenlaub, chairman; John K. Dukehart, and Kenneth Kraemer.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, a former member of the board of trustees of the John Gaston Hospital in Memphis, Tenn., Hon. John B. Vesey, speaking recently made this statement about socialized medicine. As a man of wide and varied experience, as a deep thinker, and as a patriotic citizen his views are highly respected in the mid-South. Under leave to extend my remarks, I include his statement in the RECORD:

SOCIALIZED MEDICINE

For some years I was trustee of John Gaston Hospital here, and throughout a lifetime have been closely acquainted with some of the fine doctors of our locality. I am intimately familiar with the service they render, from the human angle. There is much talk about doctors' fees, and not enough talk about the service they render.

First, they are required to give more years in preparation to be a doctor than most professions.

Secondly, the long hours and conditions of their work require that they dedicate their lives to the relief of human suffering without regard to their own physical comforts or social obligations.

Show me a prominent, successful doctor and I will show you a doctor who has had the will to work in a manner that few people would care to emulate. A doctor's life, from the work standpoint, is the proverbial "dog's life," and he must take his greatest compensation from his knowledge that he is helping his fellow man.

When it comes to employing the services of a doctor I want to make the choice. I do not want any politician telling me what doctor to go to, or telling the doctor how much that he will pay him to treat me. Whenever this is done there will be no such thing as confidence in a doctor, and very few doctors will feel a closeness to their patients.

I am just an average fellow, and I believe I am like most other average folks. I want to respect and love my minister and I want to feel the same way about my doctor. When we take this human element out of this profession, we are destroying the profession itself.

Oh, I know the Government will say that we can still select our own doctors, and your doctor can select the number of patients he feels like selecting, but this is like a lawsuit. A good lawyer can get on either side of any case and make a pretty good argument for whatever side he happens to be on. In this age of specialization I want a doctor who has a wide experience in whatever happens to ail me, and whenever possible I would like for him to be a friend as well as a doctor.

There is a sinister influence at work in our Government to deprive Americans of the freedom they have known for the past 50 years. Our Government is being sold the idea of moving into our lives in many ways. They tried awfully hard to put over the idea of wage control. They are collecting and wasting more taxes in peacetime because they had so much to spend during the war that they hate to give up the power that goes with big money. They want control of all materials, of all labor, of wages and hours, of education, and now, of our health.

When the Government gets through binding up this socialized medicine idea there will be so much red tape around it that if you have an acute case of appendicitis you would be dead and buried 4 weeks before you and the surgeon could decide whether or not you could employ him, or whether or not, under Government regulations, he could operate on you. If my appendix has to come out I want it out now, and not after a consultation with the politicians in Washington, and I want some friend of mind who is a surgeon and in whom I have confidence, to take it out.

For heaven's sake, brothers, do not let these Washington bureaucrats take control of my ails and ills, and my appendix. I say, like good old Patrick Henry, "Give me liberty or give me death," and if it must be death for heaven's sake shoot me and do not let me die in long, slow stages, waiting for some Washington bureaucrat to tell my surgeon that he can operate on my appendix.

The Constitution of the United States guaranteed to me the right of pursuit of health and happiness; I want to pursue my own happiness and I want to pursue my own health, and I know that I could never catch up with it if I had to detour around a Washington bureaucrat.

I am against socialized medicine, and socialized everything else that the Government proposes, which means I am against socialism in every sense of the word. I am an old time southern conservative Democrat, and I would just as soon change the name of America to the Soviet Republic of the United States as to submit to the social ideas being foisted on the American public today, in spite of our Constitution which forbids them. You know I would not agree to the first, and I am sure you know I would not agree to the latter.

Who is there among you who believes that some bureaucrat in Washington is in a better position to decide for you the intimate matters pertaining to your business, and to your individual home life and problems than you are?

Public Housing Bill

EXTENSION OF REMARKS
OF
HON. W. M. (DON) WHEELER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. WHEELER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose herewith

an editorial from the Lanier County News, Lakeland, Ga., which, in my opinion, is very pertinent to the question which was decided on this floor last week relative to H. R. 4009:

TRUMAN WINS: ANOTHER SOUL IS SOLD

There's a sad history lesson being written in the headlines of today's newspapers. Our children and their children will study parts of it, and some of us will live to talk about it.

This week President Truman "Won a round in Congress," according to the newspapers. Americans everywhere, and a world of freedom wanting people with eyes turned to America for faith and help, lost another round. They lost when a public housing bill, supposed to help them, won.

The bill sounds good, at first. It will permit the spending of $400,000,000 a year for 40 years for the building of public (Government owned) housing projects. Most of the housing will be big apartments in cities. Only the lower-income groups can live in these houses, and the rent is not even supposed to be enough to pay for them. For example, if $15 a month would pay for an apartment and keep it in some sort of repair by the time that it had simply rotted down, the tenant living there would have to pay only, say $10 per month.

That sounds good and might be good, if no one had to pay for the housing, if the Government could just reach out into space and pluck the four hundred millions a year out of thin air. But it can't, no more than you or I can. It would be good, too, if the families who live in the housing would take advantage of the partially free rent and try to make and save more money so that they could eventually move into a privately owned home where they would pay a rent that allows the owner a return on his investment. But they won't. And others who can't qualify for the free rent will deliberately sink even lower and politic their way into the free-rent house.

That's the way things will go, and here's why: The house that I live in is pretty much like the house that most of you live in. Better than some, but far from good. Too small and too hot (too cold later), needs painting, needs new screens and new windows and on and on for a house never stops needing. But it is what I pay for, just as yours is what you pay for. The owner makes from it a profit, I hope, but not very much. A profit that he is entitled to make just as is any man who invests, whether it be in a farm crop or a business. I want a better home and when I can pay the price I will rent or build a better place, just as you hope to. And we need always remember that if the owner makes too much profit the rent will one day go down because more people will get into this high-profit business.

But when we have become able to move to better housing, the free-rent boys won't move up the line into our old ones. They won't move up because their house is already as good as or better than ours and they pay only half as much.

They won't move up the line and maybe we won't either because you and I and our neighbors are, through taxes, paying the half that they don't pay (never think that it will come from the pockets of the rich or someone else, history shows that it never has, but that's a long story, too). We'll pay half of theirs and all of ours until some of us sell our God-owned souls to the politicians to get under the free-rent roof.

And our children and their children and the world will later learn that Americans lost a little initiative and a little ambition and a lot of freedom when Truman won a round in Congress.

W. A. ROQUEMORE.

Uncle Sam, Which Shall It Be?—Over the Hill to the Poorhouse or Decent Old-Age Security?

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Townsend convention, July 1, 1949, Columbus, Ohio:

Mr. Chairman, Dr. Townsend, and my good Townsend friends, first let me say that I am indeed happy to have the opportunity to participate with you again in this great national convention of earnest workers in the vineyard for old-age retirement legislation in the national Congress. I am sure it is as heartening to every Member of the Congress as it is to me to be privileged to take part in this great convention and to feel the pulse and share your enthusiasm for the great cause for which thousands of you, ardent supporters of Dr. Townsend, have assembled here in Columbus. We in the Congress are so engrossed in the busy workdays that are ours that I fear we sometimes fail to appreciate the critical problems that confront so many of our citizens throughout the Nation. It is good and wholesome to meet with you today and to consider with you one of the major problems facing us, old-age security.

I know you are interested in getting first-hand reports from us who are in the thick of this fight in the Nation's Capital and who have been selected from the 435 Members of the House to lead the fight for this great humanitarian project, adequate retirement for our elderly citizens. For more than 10 years now I have been battling in the Congress for this cause. It is a hard fight but also a good fight in a just cause. We bear many scars as a result of the bitter contests we have waged but with it all there is a feeling of satisfaction in engaging in such a worthy cause. Thus far we have not succeeded in having adopted into law the whole Townsend program, but through the heroic efforts of Dr. Townsend and the Townsend organizations in every State of the Union, and our loyal workers in Congress, we have made progress in securing the enactment of some laws which have lightened the burden somewhat of the old folks of America. There is much more to be done. Let us not weary in well doing.

The Townsend organization has made the Nation Townsend-minded. Wherever you go, whether it be in the Congress, in congressional committees, or out on the highways and byways of America, the mere mention of the Townsend plan at once brings to the forefront the tireless fight Dr. Townsend and his groups have made down through the years for old-age security. It is 20 years now since I first entered the Oregon Legislature, and from that day to this, either in the State legislature or the National Congress, I have been doing all within my power to bring this program to a successful conclusion. I want here and now to pledge again my loyal and continued support to this great movement for the old folks of America.

Almost immediately upon the convening of the Eighty-first Congress we Townsend supporters met and organized our forces and started the fight for the plan. On February 21 I introduced H. R. 2136, the Townsend bill, in the House and at the same time my colleague, Representative BLATNIK, introduced the companion bill, H. R. 2135. On February 24 and on May 5 I again discussed the program on the floor and called attention to the fact that at that time 87 Members of the House had joined in a petition to the Ways and Means Committee to report out this legislation. You will note that thus early in the session we not only introduced the bill but began the footwork among our colleagues to get behind the program and help us to get the bill out on the floor for a vote.

The Ways and Means Committee acceded to our request to be heard on the legislation and provided for a full hearing before the committee which consumed 2 days. Dr. Townsend, Capt. Robert Townsend, those of us who filed the bills, and many other loyal supporters of the program in the House, appeared before the committee, including Townsend staff members and experts. We made an excellent presentation of the whole subject.

The Ways and Means Committee has been engaged during most of the Eighty-first Congress in the consideration of social-security legislation, not only the Townsend program but the whole field of social security. It is our purpose to follow through and continue the fight regardless of the action taken by the Way and Means Committee. If the committee reports out the bill we will carry the fight to the floor of the House. If it fails to report out our bill we will immediately file a petition to discharge the committee and put on an organized campaign to take the bill from the committee and bring it to the floor for a vote.

Dr. Altmeyer, the head of the Social Security Agency, appearing before the Ways and Means Committee, recently testified that:

"As a matter of fact, our social-security system has become decidedly lopsided. Today there are over 5,000,000 people in the United States receiving some form of public assistance. In contrast there are only about half that number receiving old-age and survivors insurance benefits. As a Nation we are now spending at the rate of nearly $2,000,000,000 a year for public assistance. But we are paying out only $600,000,000 in old-age and survivors insurance benefits." He added, "The following figures will give some idea of the scope of public assistance in this country today and the need for appraising the effectiveness of the present provision of the Social Security Act relating to public assistance. Today, as I have said, there are over 5,000,000 needy persons receiving various forms of public assistance. Of these persons, 2,500,000 are old people; 1,700,000 persons in families receiving aid to dependent children; 86,000 blind, and 800,000 are needy persons who do not fall within the first three categories. The Government is now providing grants-in-aid to the States to help them meet the cost of providing assistance to the aged, dependent children, and the blind. However, no Federal grants are made to the States to help them bear the cost of providing assistance to needy persons who do not fall within these three categories."

The Social Security Act now provides Federal grants-in-aid to the States to cover a share of the cost of cash assistance, up to specified maximums to three groups of needy persons—the aged, the blind, and dependent children. With the aid of these matching Federal funds, 51 jurisdictions, including all 48 States, the Territories of Alaska and Hawaii, and the District of Columbia are administering Federal-State programs for old-age assistance; 50 jurisdictions provide aid to dependent children; and 47 jurisdictions provide aid to the needy blind. Nevada is the only State which does not participate in the Federal-State program for aid to dependent children, and Missouri, Nevada, Pennsylvania, and Alaska are the only jurisdictions which do not participate in the Federal-State program for aid to the blind.

For assistance to the aged and the blind the maximum amount of individual monthly payments in which the Federal Government will share is $50. In aid to dependent children, the maximum for Federal matching is $27 a month for the first child in a family and $18 for each child in the family beyond the first. The Federal share of old-age assistance and aid to the blind is three-fourths of the first $20 of the average monthly payment per recipient, plus one-half the remainder within the maximums. Similarly, the Federal share of aid to dependent children is three-fourths of the first $12 of the average monthly payment per child, plus one-half the remainder up to the maximums. States may, and many do, make payments in excess of the Federal matching maximums, but they must pay all the additional amount from State and local funds. Each State determines for itself who is a needy person eligible for assistance under the State law. Each State also determines the amount of assistance to be given to each needy individual.

In December 1948 the average monthly payment of old-age assistance was $42.02 in the country as a whole. In California, Colorado, Massachusetts, and Washington it exceeded $60. In nine southern States however—Alabama, Arkansas, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Virginia, and West Virginia, the average remained under $25.

Ex-President Hoover, the head of the Hoover Commission on the organization of the executive department, made a very valuable contribution to the subject of old-age security. His recommendations are of interest to us and particularly applicable to our legislation. Mr. Hoover calls attention to the difficulties and inefficiencies in our payment system of social security for the aged of America, and suggests that an entirely different system should be considered on a pay-as-you-go basis, which would avoid the huge costs of administration of the existing social security program, avoid duplication, and would substitute some other form of taxation more simple and more direct for its support and which would give more positive security to the aged than the complicated system we now have and which would also abolish the existing indefensible social-security trust fund, now exceeding $10,000,000,000 — all spent, I may say in passing, and represented only by Uncle Sam's I O U's.

Our plan—H. R. 2136—meets these objectives and is a self-financing, noncontributory retirement system under which beneficiaries will receive annuities as a matter of right without reference to charity or prior contributions. It is Nation-wide and covers all citizens 60 years of age or over. It is a pay-as-you-go system. Annuities will be paid currently out of currently raised revenues. Sums received by annuitants must be spent within 30 days. The existing system of old-age and survivors insurance and old-age assistance is abolished, together with the payroll tax for financing old-age and survivors' insurance and the fake trust fund.

Annuities should be offered with neither the stigma of charity nor the aroma of poverty. They should be offered as a matter of right as dividends from the national wealth the aged have helped to create. The system should be one that would replace the complicated, arbitrary, and inequitable provisions of the existing law. It should be one which will have a stimulative effect upon our economy and one which will help to make available jobs to all our young people who will replace the aged as the latter move into retirement at a decent standard of living.

Only noncontributory pensions will meet the needs of those now grown old and in want because of past neglect in providing an adequate contributory retirement system. Since at the time the present system was adopted most of the States were financially unable to assume the burden of so many aged who moved from State to State and on to Federal relief rolls, it was deemed proper to continue to provide Federal aid to States to provide relief to those aged who were in need.

Much of the argument in support of our plan stems from the limited coverage and inadequate benefits of the present system. For example, most of today's aged who are not working, left the labor force before they could build up rights to benefits under OASI. And even among the young and still employed, under the present OASI system, there is no coverage for jobs in agriculture, domestic service in private homes, Federal, State, and local government employees, and workers in religious, charitable, and certain other nonprofit organizations, the self-employed, and others as well. About one-third of the workers engaged in employment are not covered by the system; and of the 78,700,000 living persons with OASI wage credits at the end of 1948, about 40,500,000 were neither fully nor currently insured on the basis of their wage records, and hence were not protected under the programs.

Under the existing law under old-age and survivors insurance the average benefits are $25.28 per month according to the latest data available from Social Security records. To obtain this payment the worker and the employer would have to make contributions over a long period of time. On the other hand, the average of old-age assistance—not available to those under the retirement plan but given only on a claim of need—was some $16 more per month than the old-age and survivors insurance payments. It is thus seen that those receiving assistance who did not contribute to the program received very substantially more than those who through the years contributed taxes based on monthly incomes.

Recipients of relief now exceed by nearly 1,500,000 the insured workers who are drawing benefits. In the month of October last the number granted cash on the basis of need totaled 2,469,372 as against 1,016,303 retired workers receiving old-age insurance. This experience is directly opposite to that contemplated when the Social Security Act was enacted. It was believed that gradually all old-age beneficiaries would come under the provisions of the old-age and survivors insurance program and those receiving assistance on the basis of need would be gradually reduced and eventually eliminated.

Last March the Director of the Legislative Reference Service of the Library of Congress advised me that, according to the statistical information available, there are in the United States 17,050,000 persons 60 years of age and over, 2,000,000 persons kept from gainful work by disabilities which have continued for more than 6 months, and 651,000 widows with dependent children who would be covered by the Townsend program and receive the annuities provided therein. From these statistics it is shown that only one-fourth of those eligible are now even partially provided for under the present social-security legislation.

It is vividly impressed upon my memory from boyhood the stigma and humiliation of old fathers and mothers having to go to the poorhouse in their declining years. We are endeavoring to comfort our consciences by believing that poorhouses have been abolished, yet there are millions of deserving Americans who helped to build this great country and rear the present generation who are in dire want and need, and some of the old people's homes of today are little better, if any, than the poorhouses of yesterday. Only last May we noted in the public press throughout the Nation news of an old people's home in a neighboring State where 29 inmates died in a very brief period. The attending county-appointed physician attributed this excessive mortality to nutritional starvation which, he said, had weakened the resistance of the aged inmates to germs and infections to such an extent that they died from starvation and malnutrition. He attempted to keep some of the patients alive by the use of vitamins, but he reported that vitamins were so expensive that he was permitted to buy only in limited quantities, as sufficient funds were unavailable for adequate purchases. He further reported that the lack of trained personnel was an aggravating factor in the sacrifice of these human lives. The Washington Post editorially said that this shocking condition no doubt is duplicated in varying degrees in public institutions throughout the country. When will America wake up from its lethargy and from the coffers of the richest nation on earth provide suitable sustenance, medical care, and shelter for the aged citizens of America? When will Uncle Sam abolish the poorhouse, neglect, and shame? The Townsend plan will do it.

We believe that the economy of the Nation will benefit under the Townsend plan by reason of the expenditure of the annuities within 30 days after receipt. The bill provides: The annuity shall be spent within the confines of the United States, its Territories, and possessions. Each installment of the annuity shall be spent by the annuitant within 30 days after the time of its receipt. An annuitant shall not engage in any occupation, business, or other activity for profit, except collecting interest, rents, or other revenues from his own investments. No annuitant shall support an able-bodied person in idleness except a spouse. The proceeds from a 3-percent gross income tax, with an exemption up to $250 a month from personal income, shall be divided pro rata each month among all qualified annuitants. This will provide a good income to all of our elderly folks which will permit them to spend their declining years in decency, peace, and contentment.

There will be no incentive for elderly people of limited income to hoard their meager earnings as the haunting fear of old age and destitution will have been removed. The proceeds of the tax will go to people who will move out of employment. This will stimulate production, production will promote employment, the younger folks will move into jobs vacated by the aged, and we will have a balanced economy. This is necessary now that we are moving into financial economic storms with production on the down-grade and unemployment increasing.

In our long fight for reasonable and sufficient incomes for our elderly citizens to live in decency and health, we have always been confronted by the opposition with the claim that it costs too much and the Government cannot afford it. First of all let me say that the moneys now being paid by Federal and local governments for the support and maintenance of our elderly people and for relief is equal in amount to that which would be required to finance the Townsend program, covering all instead of only a privileged few. Aside from this we are spending billions of dollars every year for many Federal programs which do not have the merit and the equity of an old-age retirement plan. To do this the tax burden on the American people has been sky-rocketed until it is about to break the backs of the taxpayers. In 1929 Federal spending amounted to less than two-thirds of the personal income of the inhabitants of California. By 1947 it had increased so much that the Federal expenditures were approximately the total personal income of all of the inhabitants of California, Washington, Oregon, Nevada, Idaho, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, and about four-fifths of Texas.

With the moneys owing to the United States for loans unpaid from the First World War and with the expenditures overseas since, Uncle Sam has taken from the American taxpayers for foreign aid over $92,000,000,000. Since the war ended we have contributed to these countries over $30,000,000,000 alone. Although in one generation we have had two world wars we are now spending over $15,000,000,000 in the next fiscal year for rearmament and preparation for war. The President's total budget for the year will approximate $42,000,000,000 to $45,000,000,000, more than two-thirds of which goes for war preparation and taking care of the costs of former wars, at a time when our national debt is over $252,00,000,000. World War II cost over $350,000,000,000.

Am I wrong when I say that with a judicious handling of our governmental affairs, more common sense and less war and devastation, we would be able, from savings alone without increasing the taxes, to take care of our own people here in America, provide a decent living retirement for all of our old people, the widows, the injured, and the orphans, and still have billions of dollars left over for schools, churches, libraries, hospitals, and for the upbuilding and rehabilitation of this great Republic?

Are we not overlooking the admonitions of the Sermon on the Mount and the great spiritual values of life and placing our dependence on material things, the war engines of destruction and the atomic bomb?

"For heathen heart that puts her trust
In reeking tube and iron shard—
All valiant dust that builds on dust,
And guarding calls not Thee to guard."

The Great Architect of the Universe has been good to Americans. He has given us the greatest country on earth. It is rich in natural resources. We have great fertile fields, broad rivers charged with almost boundless hydroelectric power, great forests, an industrial system, with skilled workmen, the greatest and most productive for human welfare and needs in all history, and a garden spot in which to spend our days during the short span we are permitted here on earth.

We have, indeed, a wonderful world to live in, yet we are spending most of our time in petty, intolerant jealousies, selfish grasping for wealth and power, and in waging world-wide wars, preparation for war, or the sordid business of cleaning up the mess after death and devastation wrought by war. Am I out of place today here in this great company, before this loyal and patriotic group of American citizens who believe in the promises of a just God, in saying that we need in America today more good will among men and less war, more of the spirit of cooperation, brotherly love, and fellow feeling and less of selfishness, hatreds, animosity, and jealousies which are abroad in the world? I agree with James Keller, founder of the Christophers, when he said in the home, in all our personal relationships, we must practice love and we must pass on the message of the good life. As you grow in love for others you will find your own power increasing. You will learn how to disagree without being disagreeable. You will become more approachable. You will better understand why all people want to be truly loved and not just tolerated. You will emphasize more and more of the good side of even the worst people. You will develop an inner warmth, an abiding sense of humor. Naturally you will make mistakes, but you will always be able to laugh at yourself. Your never-say-die spirit will give courage to everyone you meet. Life itself will take on a new and exhilarating meaning, because you will be fulfilling the purpose for which you were created: to love God above all things and your neighbor as yourself.

At best we will be here but a little while in this great adventure of life. We brought nothing into this world when we came and we can take nothing out when we go. It behooves us to garner our resources and put them and our talents to good use and to extend the hand of friendship and good feeling to our neighbors before we are called home forever.

If we fortunate Americans could in this great freedom-loving Republic put into practice such a program, would we not be taking the most forward step toward abolition of war and the restoration of peace and brotherhood among the nations of the world? And could we not then say with the poets—

"The day is done
And the night shall be filled with music,
And the cares, that infest the day,
Shall fold their tents, like the Arabs,
And as silently steal away.

"When Earth's last picture is painted,
And the tubes are twisted and dried,
When the oldest colors have faded,
And the youngest critic has died,
We shall rest, and faith, we shall need it—
Lie down for an eon or two.
Till the Master of All Good Workmen
Shall set us to work anew."

The Great Rehearsal and Its Application

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, many of our wisest citizens are giving thought to the necessity that the world unite the democratic thinking people in some sort of world government which would insure peace and which would stabilize the economy, the thinking, and the living habits of all.

I have been reading much on this general subject. In my own city Hon. John W. Apperson, a learned member of the bar, recently delivered an address on the subject of The Great Rehearsal and Its Application. He has said so much so well that I have asked to extend my remarks in order that my colleagues may have the same privilege which I enjoyed in an examination of this very fine address. It follows:

My subject is so big and my time tonight is so limited that for fear I may stay too long on one or more points and not cover the principal ones I am compelled to speak from a prepared paper. I shall touch the high spots and perhaps in the question period to follow I may be able to more fully develop certain phases.

Carl Van Doren, the well-known historian, has recently written The Great Rehearsal. It deals with the formation of our Constitution and its adoption. It gets its name from the fact that Van Doren believes that the principle of federalism being demonstrated by this Nation is being rehearsed for its eventual adoption by all the peoples of the world. It is very interesting and readable. All citizens of the United States especially and all citizens of the world in general should read it.

In his introduction Van Doren says:

"But it is impossible to read the story of the making and ratifying of the Constitution of the United States without finding there all the arguments in favor of a general government for the United Nations, as well as all the arguments now raised in opposition to it.

"The opponents of the Constitution in 1787 could talk only of the difficulties of forming a new government. The supporters of the Constitution, aware of the dangers facing the Confederation, demanded a new government be attempted, no matter what the difficulties."

Tonight I shall briefly review the formation and adoption of our Constitution and then endeavor to show how the application of the same Federal principles as applied by our Constitution on a larger scale should bring about freedom, prosperity, and peace in the world.

In the beginning and while our Revolutionary War was being fought, we had 13 States which were 13 separate nations, each having its own government and each just as sovereign and independent as the 57 nations composing the UN today. They had gotten together in a league just as the nations did after World War I in the League of Nations, just as the nations have done now in the UN and just as we and about seven other nations are getting ready to do in the Atlantic Pact. They called their league the league of friendship. It operated under the Articles of Confederation.

Each of the 13 States retained its right of veto. None was bound by any so-called laws passed unless it chose to be. To enforce any so-called laws against an unwilling State meant war, just as enforcing any ruling of the UN or of the Atlantic Pact would mean war against the offending nation. Millions of innocent people would have to suffer because of the lawlessness of a few leaders.

Each of the 13 States had its own laws, currency, tariffs, and armed forces.

When Washington was fighting against the British he was constantly hampered by the various States not furnishing him troops, or when furnished, having them withdrawn. What a wonder it is that we finally won that war.

Conditions among the 13 States became chaotic. Business was at a standstill. There was no sound money. The States as well as the people were verging on bankruptcy. The League had no standing in Europe. Each State had trade barriers. The times were referred to as "the Critical Period in American History" and the people as "The Desperate People."

Finally through the influence of such men as Washington, Franklin, Hamilton, Madison, and others, the convention was called in Philadelphia in May 1787. It was called to amend the Articles of Confederation—not to write a new Constitution. Some of the colonies sent no delegates.

The delegates to that convention struggled for four long, hot months debating various plans and proposals. The little States were afraid of the big States and the big States of the little.

Hamilton representing New York left in disgust. Washington, who presided, was so afraid that the convention would break up without accomplishing anything worth while that he finally arose and made the only speech he had made at the convention. Practically all he said was:

"It is too probable that no plan we propose will be adopted. Perhaps another dreadful conflict is to be sustained. If, to please the people, we offer what we ourselves disapprove, how can we afterward defend our work? Let us raise a standard to which the wise and honest can repair; the event is in the hand of God. This is our final opportunity. One more mistake may be the last."

Finally the Constitution emerged which was called "a bundle of compromises—a mosaic of second choices accepted in the interest of union."

To the surprise of many of us today, the Constitution was adopted after the hardest kind of struggle and by very slim majorities in the respective States.

As to what some of the leading citizens thought about the possibilities of creating an effective union between the 13 States, hear what the famous Thomas Paine, the author of "Common Sense", who did much to bring about the Declaration of Independence and the Revolutionary War, had to say:

"If there is a country in the world where concord, according to common calculation, would be least expected, it is America. Made up as it is of people from different nations, accustomed to different forms and habits of government, speaking different languages, and more different in their modes of worship, it would appear that the union of such a people is impracticable."

Hear also what Josiah Tucker, the Dean of Gloucester, had to say in 1780:

"As to the future grandeur of America, and its being a rising empire under one head, whether republican or monarchial, it is one of the idlest and most visionary notions that ever was conceived, even by the writers of romance. The mutual antipathies and clashing interests of the Americans, their differences of governments, habitudes and manners, indicate that they will have no center of union and no common interest. They can never be united into one compact empire under any species of government whatever; a disunited people till the end of time, suspicious and distrustful of each other, they will be divided and subdivided into little commonwealths or principalities, according to natural boundaries, by great bays of the sea, and by vast rivers, lakes, and ridges of mountains."

It was feared by many leading citizens that we would lose our liberties if the Constitution were adopted. Patrick Henry campaigned vigorously against adoption of the Constitution in Virginia.

One writer in the Pennsylvania Herald of 1787 said:

"For the sake of my dear country, for the honor of human nature, I hope and am persuaded, that the good sense of the people will enable them to rise superior to the most formidable conspiracy against the liberties of a free and enlightened nation, that the world has ever witnessed."

Our Constitution came into being because able and earnest individuals in sufficient numbers worked unceasingly to that end in the belief that it must be done and it, therefore, could be done.

The authors of our Constitution did three very important things, at least two of which are original contributions to political science. They provided for checks and balances which would prevent any one man or group of men to be able to obtain too much power. They protected minorities. They made it so that each State would retain its own form of government and control its own internal and domestic affairs while its citizens surrendered to the Federal Government control of affairs which transcended State boundaries such as foreign affairs, arms and armaments, money, postal services, navigable streams and commerce between the States.

They provided that the laws enacted by the Federal Government should be the supreme law of the land and should be applicable to the individual citizens of the respective States and not to States alone. So that should Mr. John Q. Public in Memphis break a Federal law, the Federal Government would send its marshal and arrest him and would not have to declare war against Tennessee and kill many of its innocent people and destroy much of its property in order to enforce its law.

An amazing burst of prosperity with increasingly peaceful relations among the States soon followed Washington's inauguration. No other internal change than the ending of interstate anarchy by the establishment of a common government was sufficient to account for this astonishing transformation.

The Thirteen Original States have now grown by peaceful expansion to 48 and soon to 50 when Hawaii and Alaska come in. We are now the most powerful Nation on earth. Our beliefs in the dignity of man and his freedom, the fact that government is made for man and not man for government, have largely contributed to our achievements and greatness. We do not want to lose or sacrifice those dearly gained principles.

There is much being said and written about a military alliance between the United States and seven or more other free nations, such as Great Britain, Canada, France, Holland, Belgium, Luxemburg, and Norway. In fact, from all reports, the instrument to bring about this alliance is about ready for signing and ratification.

The main purpose of my talk tonight is to submit for your careful and earnest consideration the proposition that an alliance is not enough. That a federation of the people of those nations is far better. A federation similar to our own where there would be a new union with a new federal government for all the people of those nations. Mind you, I am not proposing a world government. I am proposing only a federal union of the free.

An alliance, a league, or a confederation is nothing more than a treaty or treaties between nations. Agreements are made by the one-nation, one-vote method. Their agreements are enforceable against nations only. No nation is bound by any agreements made. They are nothing but mere scraps of paper.

A union is formed by the people of the respective nations. They surrender to a central government limited power over just enough things which are common to all and which transcend national boundaries to maintain their freedom, prosperity, and peace. They retain the balance of their power and give some to their local governments. The laws of a union are made by a majority vote of elected representatives and the laws so made apply not alone to member nations but to every citizen in all the member nations. Thus a violation of a national law is punished by arresting and trying the citizens who violate the law, not by war against whole nations.

The attitude of the Politburo sitting in the Kremlin is driving the free people to seek some means of strengthening themselves against the threat of communism.

Unlike Hitler who was relying on force alone to conquer the world Stalin and his gangsters are relying not alone on force but also on conversion of the masses of people in all countries to the communistic doctrine.

The communistic germ is to the body politic what the pneumococcus germ is to the human body. Each attacks and conquers when the body is weakened by lack of nourishment and a reasonable standard of living.

The result is that in order to strengthen the free people against communism they have got to be strengthened in a political and economical way, which will raise their standards of living and protect their freedoms and the dignity of the individual, and in a physical way by means of arms and armaments.

The United States for the past 30 years has been going to the rescue of the western European democracies. In doing so we have furnished tons of our substance, billions of our dollars and gallons of our blood. We are definitely committed to continue such aid with the likelihood of bleeding ourselves to death and of reducing our own economy and standard of living to the level Stalin wants, unless we can find a solution.

There are good reasons why we should aid those democracies. They mean much to us both in an economic and a military way.

So the question is, How can we strengthen ourselves as well as the other free nations without constantly weakening ourselves, without constantly increasing our public debt and consequently our taxes which are already oppressive?

Our statesmen have offered us nothing except alliances and leagues, a few of which I have mentioned. They all have failed. The last being the United Nations. The main reason being that they are multilateral treaties between nations, with no nation firmly bound and no means of enforcing their agreements except by war against a whole nation or group of nations.

Our statesmen are now preparing to offer us the proposed military alliance which, like all alliances, will be inadequate to fulfill what is needed. Under it we will have to continue to foot the bills. It will stress the idea of military force and power as against the nobler concept of the general welfare of mankind. Nor will such an alliance enable the bold new program which Mr. Truman has in mind to be carried out.

It is difficult to conceive how an instrument may be worded in creating the proposed military alliance which can do away with our constitutional requirement that our Congress must declare war. There are other grave weaknesses and inadequacies in such a plan too numerous to go into here.

Our real concern is to build up the living standards of the people, not only of the free nations, but eventually of all the world, and at the same time maintain our own. In doing so we will have a healthy body politic in which war is less likely. This most certainly will not be done by a military alliance. It cannot be done by the United States bleeding itself to death. It cannot be done as long as the people in the nations we are trying to help have the threat of war continually hovering over them. A military alliance is not going to remove this threat. We almost failed them the last two wars. They cannot depend on mere alliances.

There is only one true and tried principle to accomplish what we need. This is the principle of federal union. It is the only principle so far revealed under which the people of nations of different laws, customs, languages and religions have been able to establish a central government to control things common to all and which transcend national boundaries. That principle has been reasonably successful for 160 years in the United States, for many years in Switzerland, Australia, Canada, and the Union of South Africa. No federal union has ever failed.

Were we to enter into a union with the seven or more free nations with which we are planning to ally, the economic and general welfare advantages would be the primary and great objectives and the military strength to result would be the secondary objective.

Consider what would result from such a union in which the new federal government could have control over (1) foreign affairs, (2) arms and armaments, (3) money, (4) communications, (5) commerce, and (6) citizenship.

Such a union would, (1) mobilize the world's best remaining productive assets at maximum efficiency and minimum cost, (2) end alarm over "dollar shortages" in Britain and France, (3) remove, as rapidly as possible, the nations' tariffs that now stifle production among the democracies, (4) enable private capital to largely rebuild Europe as it rebuilt San Francisco after the earthquake, and to develop the European colonies, thus putting into effect Mr. Truman's "Bold New Program," (5) finance recovery without raising taxes largely by reducing our armaments tax burden and without lessening our

armed security (we would not need an Army, Navy and Air Force as big as those of all the member nations combined), (6) relieve the United States from paying the entire cost of recovery and rearmament, (7) release thousands of men and factories producing arms and armament for productive work, (8) bring down the cost of living and raise the living standards of all the people of the member nations, (9) greatly strengthen the free people against the spread of communism and aggression, and (10) discourage the rise of dictators.

It stands to reason that the same amazing burst of prosperity with increasingly peaceful relations among the united democracies will soon follow their federal union as did the union of our States in 1790.

Think of what confidence all businessmen in these United Nations would have should they know that they could go ahead developing and expanding their businesses under the aegis of such a powerful nation as would result from such a union.

No one need fear this great union because it would have moral power. Free people are never guilty of Pearl Harbors. They can never strike secretly and quickly as can totalitarian states. They could never occupy any military role save the defensive.

This union would have overwhelming power and strength in a military way for defense.

The difficulties and dangers to be seen in forming the proposed union are small when compared with the difficulties and dangers both economically and physically in continuing the existing system.

The President should be urged by congressional resolution to invite the nations with whom we form the military alliance to send representatives to a convention to explore the possibilities of drawing up an instrument through which the people of these nations could form a new Federal Union.

It has been said that this is "the Age of America"; that America the music maker for the rest of the world. Whether we wish it or not the leadership is ours. Let us then hold the torch of freedom on high and offer to the free people this partnership so that the aims and ideals for which our young men gave their lives in two wars will not have been in vain. Let us lift up our hearts to this great union as the gradual approach to the parliament of man the federation of the world.

Housing Survey Still Needed

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland Oregonian of June 21, 1949:

HOUSING SURVEY STILL NEEDED

With a firm of canvassers selected and State and city money appropriated, the long-delayed survey of housing needs in the Portland metropolitan area is about to get under way. There is some thought in the community that time and the builders have relieved the shortage and that a survey may not be so necessary as it was thought to be a year ago. We think it is still important to know the facts.

In a little more than 6 months, the Federal law authorizing temporary war housing will expire, unless extended by Congress—which is unlikely in view of the deterioration of these dwellings to a point where cost of upkeep exceeds rentals. About 7,000 temporary dwelling unit in the Portland area will be demolished, and their occupants will have to find roofs elsewhere, if the act expires as scheduled on January 1, 1950.

There is, in addition, a considerable dislocation of the residential population. It probably will be shown that thousands of families now living in war housing, apartments or temporary quarters want to build, buy, or rent elsewhere—and the survey will show how many of them can afford to do so, and at what costs.

As pointed out by Carl Freilinger, of the housing needs survey committee the study is not intended to prove the need for public housing or to prove anything other than the facts of residential demand and ability of families to meet their needs. The report should be of value to private builders and local business, as well as to the community in meeting its share of the responsibility for any Federal slum clearance and housing program which Congress may approve.

Address of Chancelor Robert M. Hutchins of the University of Chicago—Presents the Viewpoint of the Teachers of America

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. O'HARA of Illinois. Mr. Speaker, under leave to extend my remarks, I include the address of Chancelor Robert M. Hutchins, of the University of Chicago, at the two hundred and thirty-seventh convocation of the university for students graduating from the college:

We hear on every side that the American way of life is in danger. I think it is. I also think that many of those who talk the loudest about the dangers to the American way of life have no idea what it is and consequently no idea what the dangers are that it is in.

You would suppose, to listen to these people, that the American way of life consisted in unanimous tribal self-adoration. Down with criticism, down with protests, down with unpopular opinions, down with independent thought. Yet the history and tradition of our country make it perfectly plain that the essence of the American way of life is its hospitality to criticism, protest, unpopular opinions, and independent thought. A few dates like 1620, 1776, and 1848 are enough to remind us of the motives and attitudes of our ancestors. The great American virtue was courage.

We ought to be afraid of some things. We ought to be afraid of being stupid and unjust. We are told that we must be afraid of Russia, yet we are busily engaged in adopting the most stupid and unjust of the ideas prevalent in Russia, and are doing so in the name of Americanism. The worst Russian ideas are the police state, the abolition of freedom of speech, thought, and association, and the notion that the individual exists for the state. These ideas are the basis of the cleavage between east and west.

Yet, every day in this country, men and women are being deprived of their livelihood, or at least their reputation, by unsubstantiated charges. These charges are then treated as facts in further charges against their relatives or associates. We do not throw people into jail because they are alleged to differ with the official dogma. We throw them out of work and do our best to create the impression that they are subversive and hence dangerous, not only to the state, but also to everybody who comes near them.

The result is that every public servant must try to remember every tea party his wife has gone to in the past 10 years and endeavor to recall what representatives of which foreign powers she may have met on these occasions. A professor cannot take a position on any public question without looking into the background of everybody who may be taking the same position on the same question. If he finds that any person who is taking the same position on this question has been charged with taking an unpopular position on another question, the professor had better not take any position on this question, or he may be haled before some committee to explain himself.

Is this the American way of life? The great American word is freedom, and in particular, freedom of thought, speech, and assembly. Asserting the dignity of man, and of every man, America has proclaimed and protected the freedom to differ. Each man is supposed to think for himself. The sum of the thoughts of all is the wisdom of the community. Difference, disagreement, discussion decided by democratic processes are required to bring out the best in the citizens. America has grown strong on criticism. It would be quite as consistent with the American way of life to offer prizes for the most penetrating criticism of our country as it would be to offer prizes to those who have done the best job of advertising it.

The heart of Americanism is independent thought. The cloak-and-stiletto work that is now going on will not merely mean that many persons will suffer for acts that they did not commit, or for acts that were legal when committed, or for no acts at all. Far worse is the end result, which will be that critics, even of the mildest sort, will be frightened into silence. Stupidity and injustice will go unchallenged because no one will dare to speak against them.

To persecute people into conformity by the nonlegal methods popular today is little better than doing it by purges and pogroms. The dreadful unanimity of tribal self-adoration was characteristic of the Nazi state. It is sedulously fostered in Russia. It is to the last degree un-American.

American education has not been constructed on such un-American principles. In general, the practice has been to give the student the facts, to try to help him learn to think, and to urge him to reach his own conclusions. It is not surprising that the heart of American education is the same as that of Americanism: it is independent thought. American education has not tried to produce indoctrinated automatons, but individuals who can think, and who will think always for themselves. The basic principle of American Government, and one that accounts for the importance of education in this country, is that if the citizens learn to think and if they will think for themselves, the Republic is secure. The basic principle of the Russian dictatorship is that the people cannot think or cannot be trusted to think for themselves.

The American doctrine rests on the proposition that it is the individual in himself that counts. It is not who his father was, or how much money he has, or what his color or creed is, or what party he belongs to, or who his friends are, but who and what is he? So the test of a teacher is whether he is competent. The professional competence of a teacher is hardly a question on which lay bodies, or even administrators or trustees,

would wish to pass without the advice of persons professionally competent in the teacher's field.

If we apply any other test than competence in determining the qualifications of teachers, we shall find that pressures and prejudice will determine them. In 1928 it was said that Al Smith could not be President because he would be subservient to a foreign power; and today in many places, and if not today it may happen tomorrow, anti-Catholic or anti-Jewish campaigns may mean that teachers who belong to those churches will not be able to practice their profession.

Teachers may be expected to obey the law of the land. But it is still permissible, I hope, to ask whether a law is wise. To discriminate against teachers—to act as though they were all disloyal—and to put them under special legal disabilities seems injudicious, if we want able, independent men to go into the teaching profession.

The assumption appears to be that American education is full of Reds, an assumption that is the precise reverse of the truth. All the excitement of the last few years, all the hearings, investigations, and publicity releases have not turned up more than four or five Communist professors, even though membership in the party has been perfectly legal up to now. To require oaths of loyalty from all because of the eccentricity of an infinitesimal minority is an unnecessary and derogatory act. And, of course, it will not effect any useful purpose, for teachers who are disloyal will certainly be dishonest; they will not shrink from a little perjury.

The way to fight ideas is to show that you have better ideas. No idea is any good unless it is good in a crisis. You demonstrate the failure of your ideas if, when the crisis comes, you abandon them or lose faith in them or get confused about them to the point of forgetting what they are. The American idea is freedom. Freedom necessarily implies that the status quo may come under the criticism of those who think it can be improved. The American idea is that the State exists for its citizens and that change in society must occur to meet their developing needs. The whole theory of our form of government is a theory of peaceful change. Many of the changes that Marx and Engels demand in the Communist Manifesto have taken place in this country, and they have taken place without communism, without dictatorship, and without revolution, thus disproving, incidentally, one of the central theses of Marx and Engels—that such things cannot be accomplished without communism, dictatorship, and revolution.

These reflections on the Communist Manifesto lead me to say that labeling some thing or some man Communist because Communists happen to favor it or agree with him, that easy process by which one disposes of different views by applying a dirty name to them, involves the negation of thought of any kind. If it had been applied consistently in American history it would have deprived us of some ideas and some men that we are proud to think characteristically American. For example, the Communist manifesto demands free education for all. Are we therefore to recant, and renounce the American doctrine of free education for all?

And what would the FBI say of Thomas Jefferson, who calmly remarked in his first inaugural, "If there be any among us who wish to dissolve this Union, or change its republican form, let them stand undisturbed, as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it?"

Jefferson was not in favor of revolution; he was serene in the face of talk of it because he had confidence in our people, in our institutions, in democracy, and in the value, power, and results of independent thought.

We are now in the midst of a cold war. We must protect ourselves against external enemies, their representatives in this country, and any citizens who may be conspiring to overthrow or betray the Government. But the statute books are already filled with laws directed to these ends. It has never been shown that there are so many spies or traitors in this country, or that the external danger is so great and imminent that we have to divert the entire attention of our people into one great repressive preoccupation, into one great counter revolution in which the freedoms of our citizens must be thrown overboard as too burdensome for the floundering ship of state to carry.

It is useful to remember that Jefferson spoke in 1801, when our Constitution was 12 years old, and when the infant Republic was in dreadful danger from deep divisions within and from the wars that were raging between the great powers. If he was right in speaking in such a way at such a time, we cannot be far wrong if now, when America is the most powerful Nation on earth, we seek to recapture some of his sanity and courage.

How is the education man to show the fruits of his education in times like these? He must do it by showing that he can and will think for himself. He must keep his head, and use it. He must never push other people around, nor acquiesce when he sees it done. He must struggle to retain the perspective and the sense of proportion that his studies have given him and decline to be carried away by waves of hysteria. He must be prepared to pay the penalty of unpopularity. He must hold fast to his faith in freedom. He must insist that freedom is the chief glory of mankind and that to repress it is in effect to repress the human spirit.

If you have the intellectual and moral courage to see these things and to take your stand upon them, you will do honor to your alma mater, and you will serve your country.

By Plan They Lowered the Flood

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oregon Journal of June 18, 1949:

BY PLAN THEY LOWERED THE FLOOD

Most residents of the Columbia Basin, remembering last year's destructive flood, heaved a relieved sigh as this year's high water subsided without serious damage the other day. What went unnoticed was the fact that for the first time since it was constructed by the Bureau of Reclamation, Grand Coulee Reservoir, some 300 miles above Portland and Vancouver, was employed for flood-control purposes. And it certainly did its stuff.

By a simple, three-way arrangement between the Corps of Engineers, the Bureau of Reclamation, and the Bonneville Power Administration, approximately 360,000 acre-feet of the 425,000 acre-feet of storage available at Grand Coulee was employed for flood-control purposes. As a result the peak flow of the Columbia at The Dalles was reduced approximately 35,000 second-feet. The flood crest at Vancouver was reduced by 1 foot. And BPA's power commitments were not appreciably affected.

This experimental operation with a relatively small amount of flood-storage space serves to illustrate how the basin-wide flood-control plan recommended in the Corps of Engineers' 308 review report, now coordinated with the Bureau of Reclamation's basin-development plan, would work with 27,000,000 acre-feet of flood storage provided by dams strategically located throughout the basin.

Some of these dams are already in service, others are under construction and others are either authorized by the Congress or recommended to the Congress.

Had this integrated flood-control system been available last year, the flood crest of 1,010,000 second-feet at The Dalles would have been cut to 700,000 and the record flood of 1894, with a crest of 1,240,000 second-feet, would have been reduced to 800,000.

The point is, we have the coordinated plan. We have made a good start. And it took only one conference between responsible agencies to demonstrate on a small scale how it would work on a grand scale.

Men Against God

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, there appeared recently in the Memphis (Tenn.) Commercial Appeal a strong editorial entitled "Men Against God." Because of its challenge, I have asked to extend my remarks in the RECORD and include it:

MEN AGAINST GOD

The Vatican's revelation that more than 1,500 priests have been arrested or have disappeared in Soviet-dominated eastern Europe since the end of World War II should further shock the conscience of the west. It ought not to surprise, however, any student of Communist objectives and strategy. Communism and faith in God are incompatible.

In a survey of the struggle between atheistic communism and religion, the Associated Press reports accurately what is happening as the climatic struggle for the minds and souls of generations yet unborn. Behind the iron curtain, says the AP, "organized religion fights for its life."

Several months ago, in discussing here what we regard as the anarchy of atheism, we said:

"Communism has brought its determination to make war on man's faith in God into the open. The vile and cruel assaults against the religious leaders of the Communist-controlled nations symbolize the anarchy of atheism in action.

"It is a terrible challenge to all who believe in God from the ruthless forces of a Machiavellian materialism. It is a sharp sword thrust to the heart of Christianity."

There is little which can be added to that. The repressions and persecutions which communism is now instigating are new as to events, but not as to objectives. Materialistic atheism is not qualitative. It is absolute and unchanging.

What new and terrible crucifixion the human family must experience before the issue is resolved cannot be foreseen, but resolved it will be to the glory of God and mankind. Those who make war against the soul make war, in reality, against God. There can be

but one victory in such a test—the victory Cal Alley depicts in his cartoon of today.

Grossly ambitious men and nations have arrayed themselves against God from time immemorial. Not even their ashes or their ruins remain. So will it be that way when this new and vilely cruel barrier to human progress has been thrust aside.

It is possible for a political ideology to suppress the manifestations of a man's religion and to destroy his spiritual advisers, but it cannot destroy the love of God which is in man's heart. Because it cannot, all of its other efforts are in vain.

When men make war against God theirs has become the madness which assures their destruction.

A Basic Power Issue

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Portland Oregonian of June 21, 1949:

A BASIC POWER ISSUE

An appropriations subcommittee of the Senate will decide this week, after many hearings, an issue of basic policy for the Northwest. It is whether the Bonneville Power Administration—or its CVA successor—shall transmit electricity from a fully integrated system to major load centers in Montana and Idaho, or whether private power companies will be permitted to take deliveries at isolated dams, such as Hungry Horse, and build their own transmission lines.

The dispute does not involve any proposed change in distribution of power to individual customers, which still would be by private utilities, PUD's, municipalities, REA's and cooperatives. It does involve, first, the interconnection of Federal dams, and, second, transmission of power to the big centers of need in Idaho and Montana.

The main fight in the Northwest involves Hungry Horse Dam on the Flathead River in Montana, but the decision on this dam will affect the later decisions on Hells Canyon Dam on the Snake River in Idaho and Oregon, as well as interconnections with Anderson Ranch Dam in Idaho and others. Hungry Horse will be completed in 1952, a year before McNary Dam on the Columbia, and will be the first important source of new energy following completion of the installation of generators at Grand Coulee in 1951.

The House of Representatives approved an appropriation to build an interconnecting line between the main Bonneville system at Grand Coulee and Hungry Horse Dam, via an intertie with the Montana Power Co.'s Kerr Dam on the Lower Flathead, as well as funds for a 230,000-volt transmission line south from Kerr Dam to Anaconda.

Montana Power Co. has attacked both these proposals in Senate committee hearings. It has been supported vigorously by Idaho Power Co., which wants to block a similar invasion of Idaho by Bonneville lines extending from authorized Hells Canyon Dam and interconnecting with Anderson Ranch and the Montana Line.

The Senate can scarcely deny the wisdom of tying Hungry Horse Dam into the main Columbia River system. As an isolated project, providing some but not a great deal of firming up advantage to Grand Coulee by water storage and release, alone, Hungry Horse could produce only 77,000 kilowatts of firm power though with a rated capacity of 285,000 kilowatts. Intertied with the Columbia Grid the firm power benefits would increase to 399,000 kilowatts, a gain for the entire Northwest of 322,000 kilowatts.

Such an intertie has been approved by a conference in which private power company engineers participated, and were in agreement.

Montana Power Co., while objecting to an intertie via its Kerr Dam, is not adamant against a connection between Spokane and Hungry Horse by a northern route via the proposed and distant Libby Dam on the Kootenai—a more costly line and one not needed for many years, and then only if Libby is approved by Congress.

Here is the nub of the opposition. Montana Power wants to take Federal electricity at the Busbar at Hungry Horse and transmit it via Kerr Dam to Anaconda on its own 230,000-volt line. Similarly, it may be assumed that if Congress appropriates money to build Hells Canyon Dam on the Snake, Idaho Power Co. will seek to take the power at the busbar and transmit it via its Snake River Dam interconnections to Boise and other Idaho load centers.

The fundamental controversy is not so much interconnection as it is the question of whether the Bonneville Power Administration will have authority to transmit power to areas of demand throughout Montana and Idaho—phosphate beds, mines, and other industrial centers—in the grid pattern developed in Washington and Oregon—or whether the responsibility assumed by the Federal Government for development of energy from the rivers of the West shall end at the generators of widely separate dams.

Margarine Tax

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Atlanta Journal of July 4, 1949:

NO. 1 DAIRY STATE PROTESTS MARGARINE TAX

Wisconsin, which boasts of being the No. 1 dairy State, is providing some of the most significant protests against taxes and restrictions on margarine. Consumer groups are demanding repeal of the discriminatory laws. So, too, are important industrial and mercantile interests. Even the Wisconsin Creameries' Association has declared: "There is no legal basis to justify the tax, and it can't be justified on health, quality, or food reasons."

While most of the dairy farmers oppose repeal, it is pointed out that of each $100 of their cash income, only $1.77 comes from butter. The great bulk of their earnings is derived from milk, cheese, and other nonbutter products. Moreover, the leading voices of the Wisconsin press are outspoken against the punitive margarine tax.

The Milwaukee Journal, for instance, one of the most admired newspapers in America, reports that the State's margarine tax which yielded only $1,862 in 1934 is expected to pass the million-dollar mark in 1949—an increase of 54,000 percent in 15 years. What does this mean? It means, for one thing, the Milwaukee Journal comments, "that the tax has failed utterly to accomplish its original purpose of freezing oleo out of the Wisconsin market. In the second place, it is obvious that it is taking a large part of its million-dollar yield from the pockets of the less prosperous, which everybody should admit is bad."

In spite of the discriminatory tax of 15 cents a pound, the people of the largest dairy State, are buying margarine instead of butter in ever-increasing quantities. Naturally, these consumers demand relief from an unjust tariff on a wholesome and economical food product.

The battle for fair play now going forward in Wisconsin was recently won in neighboring Michigan, and since 1947 nine States have abolished antimargarine laws. A bill to repeal the Federal taxes on margarine has passed the House of Representatives this year by a majority of 3 to 1 and has been favorably reported by the Finance Committee of the Senate. Public opinion on this issue has grown strong and militant throughout the country, including the principal dairy regions. The rank and file of American consumers are determined to get their rights—and get them they will.

Segregation in Housing

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial which appeared in the Mount Vernon News under date of July 1.

I think this editorial definitely calls to the attention of the people the fact that the present administration is responsible for the defeat of the nonsegregation amendment which was attempted to be placed in the public-housing bill. I deeply regret there was no roll call on this amendment so that the people would know how their respective Congressmen really stand on the issue of segregation.

I cannot help but make the observation that the Truman administration tells the people they are opposed to discrimination, but when the time arrives to vote on a subject their position is clearly shown, namely, they believe in discrimination especially relative to public housing constructed with Federal public funds. If my memory serves me correctly, there was not a single Democratic Congressman who voted in favor of the nonsegregation amendment.

The editorial follows:

SEGREGATION IN HOUSING

When the administration public housing bill was being rushed toward passage in the lower House of Congress, an attempt was made to amend it by inserting a provision barring discrimination in construction, sale, rent or tenancy in any of the projects undertaken, because of race, color, creed or national origin.

The Truman forces in the House fought this proposal and succeeded in defeating it. Their argument was that the segregation amendment had no place in the main legislation, but should be introduced as separate legislation.

This argument doesn't hold water. The segregation issue does have a proper place in public housing legislation, an important place.

And sidetracking it to be considered later as separate legislation is dooming it to defeat, as the proponents of the bill must know.

It has a place in this legislation because the public housing measure is a public, not a private, enterprise. It will be financed with tax money taken from all of the residents of the country, those who might be excluded from its benefits as well as those who would be able to take advantage of this vast expenditure of money.

The Truman administration has made a great play of its opposition to discrimination, through its civil-rights proposal and similar measures.

But when it comes down to brass tacks, it is a different matter. In the public housing issue it brushed aside the interests of those who may be denied access to the homes which are to be built with public funds, but who will be required to pay their share of the cost.

Economy in Government

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by citizen's of Cortez, Colo.:

CHAMBER OF COMMERCE,
Cortez, Colo., June 17, 1949.

To the Congressional Delegation of the State of Colorado.

GENTLEMEN: We, the citizens of Cortez, Colo., are united in the belief that the current trend of our national economy is toward a more conservative program of production and marketing, and leading to a general lower income level.

Clearly evident to our merchants is the new reluctance on the part of our consumers to be separated from their money. Thus, many products that were nearly impossible to buy a few months ago are now collecting dust on the shelves of our stores. Money is becoming scarce, credit is tight, and collections are becoming more difficult.

We must again revive the almost-forgotten custom of "living within our means," and there is no better place to foster such a movement than in our Federal Government.

We therefore request that you, our Representatives, renew your efforts to practice economy of Government; to look critically on all proposals to spend the people's money; to give consideration to the findings and recommendations of the Hoover Commission; and to balance the budget.

Respectfully yours,

W. V. Dunlap, H. C. Veach, Mrs. J. S. Moss, I. B. Mullin, Jr., Clifford E. Parmley, M. D., O. E. Maxey, Marshall L. Quackenbush, K. F. Carmichael, Delbelt Norbrough, Helen Gafford, Hubert Gafford, Paul M. Posner, Joseph Piccone, Jr., Millie Eastin, Chester Maynes, Alvin E. Ayres, L. W. Hatfield, Elsa M. Griswold, F. H. Griswold, Charles D. Brown, D. F. Brown, C. C. Spotts, Walter E. Ertel, H. L. Bigly, N. E. Carpenter, H. W. Berquist, Harold Tanner, Jess McBee, George E. Dilts, Henry E. Wilson, Clarke M. McNeill, Edwin L. McKelvey, Louis B. Adkins, Frank J. Ghella, Jr.

The Praise of the People Goes to the Eightieth Congress

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. JENSEN. Mr. Speaker, just to keep the records straight, here are a few facts about the Republican Eightieth Congress.

Taxes: The people were saved $4,800,000,000 by a tax-cut bill passed over three Presidential vetoes. Low-income groups gained greatest benefit.

Labor relations: Passed Taft-Hartley Labor-Management Relations Act over veto. It liberated workers, cut strikes, stabilized jobs, increased income to workers.

Un-American activities: Revealed Communist spy rings and exposed infiltration of Communists into Government positions with high authority.

National defense: Passed Unification of Armed Forces Act and greatly expanded the Air Forces, thus strengthening the Nation's defenses.

Home building: Freed the people of red tape, rules, regulations, and directives permitting private initiative to double home building in 2 years.

Aged and blind: Passed a bill over President's veto increasing payments for aged and blind and needy dependent children.

Agriculture: Extended full 90-percent parity price supports on basic farm crops to January 1, 1950.

Soil conservation: Appropriated more than $500,000,000 for soil-conservation practices on farm lands.

REA: Approved $800,000,000 for REA loans to provide electricity for nearly twice as many farms as any previous Congress.

Roads: Authorized and provided funds for 1948–49 farm-to-market road building program five times larger than any previous single year.

Veterans: Increased benefits for needy and disabled veterans, their widows and children, and dependents of deceased veterans.

Health: Provided Federal aid for research into causes and treatment of cancer, heart, and teeth diseases.

Bureaus: Reduced number of useless Government agencies, boards, bureaus, and commissions over strenuous Presidential objections.

Foreign affairs: Cooperated in every way to the fullest extent with our United Nations officials in their efforts to negotiate peace.

Foreign aid: Gave relief to numerous foreign nations to help them reestablish themselves and enable them to restrain Communist aggression.

Budget: Balanced the Federal Budget for the first time in 16 years.

National debt: Paid $7,000,000,000 on the national debt.

Hungry Horse—The Second Year of Construction Starts July 10

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. MANSFIELD. Mr. Speaker, the Hungry Horse project in northwest Montana is the cornerstone of Montana's development. When this huge dam is completed and when the transmission lines from Hungry Horse to Hot Springs and Anaconda are built, we will be on the way to building Montana. This great dam—the world's fourth largest—and these transmission lines will mean security for Montana, new industries, more hope, and greater security for our people.

Hungry Horse power, Mr. Speaker, must be used in Montana to benefit our State. I do not believe that power developed in Montana should be used for the building up of other States, but should and must be used to give the people of Montana the benefits to which we are entitled.

Mr. Speaker, under unanimous consent, I am inserting at this point in my remarks a report on progress at the Hungry Horse just issued by the Bureau of Reclamation:

July 10 will mark the start of the second year of construction on the biggest dam building job now under way in the world—the Bureau of Reclamation's Hungry Horse project on the South Fork of the Flathead River in northwestern Montana.

Although the first anniversary of the beginning of construction falls on Sunday, hard-hatted construction workers will continue their 24-hour-a-day, 7-day-week pace as the General-Shea-Morrison Co., prime contractor for the 520-foot high dam and powerhouse, pushes excavation work and erection of plant facilities at top speed to take advantage of the short construction season.

Big job now underway at the site of the world's fourth largest and fifth highest concrete dam is excavation of rocks from the river channel in preparation for placement of the first concrete in the huge dam in September. Final diversion of the river through the 36-foot diameter, 1,180-foot-long diversion tunnel was accomplished late in June following the spring run-off, and the 1,000-foot section of river channel between the two cofferdams was pumped dry. Wagon-drill operators, jackhammermen, shovel operators, cat skinners, and truck drivers are turning the river bed into a seething cauldron of activity as they drill, blast, and gouge away the surface rock to lay bare the solid bedrock that will support the 6,000,000,000-pound dam and powerplant.

Excavation is also being pushed rapidly on the right abutment for the dam. Working on a subcontract under GSM, the Boyles Bros. Drilling Co., Salt Lake City, is using diamond drills in a new method of deep-hole drilling and shooting designed to speed operations and cut excavation costs.

Diamond drills also were used by the Boyles Bros. Co. to excavate the 35-foot-diameter spillway tunnel, major job completed at the project during the winter months. The

Hungry Horse spillway will be the highest "glory hole" type spillway in the world. Overflow water from the reservoir, cascading over the lip of the spillway, will drop a maximum of 490 feet, approximately the height of a 47-story building, on its swift journey under the dam back to the river channel 550 feet downstream from the powerhouse.

As the first year of construction nears its end, excavation crews have completed approximately 75 percent of the 1,000,000 cubic yards of earth and rock excavation required to prepare the foundations for the big multiple-purpose dam and power plant.

Simultaneously with the big push now under way on excavation work, General-Shea-Morrison is rushing completion of plant facilities required for mixing and placing the 3,000,000 cubic yards of concrete to be used in the dam and powerhouse. Nearing completion on the canyon wall approximately 300 feet above the river is the 10-sided, 139-foot-high concrete mixing plant and silos for storage of cement and pozzolan. Erection of the cableway system that will be used for placing concrete is moving ahead rapidly with the three tall towers on the right abutment essentially complete and erection of steel and installation of machinery for the 200-foot-high main head tower nearing completion. Stringing the four 2,500-foot-long, 3-inch-diameter main cables across the canyon will be started in July.

Construction also is progressing rapidly on the aggregate processing plant and on the belt-conveyor system that will transport sand and gravel from the screening plant to the mixing plant.

Upstream from the site of the dam a second army of workers is engaged in the gigantic task of clearing the 25,000 acres that will be flooded by the Hungry Horse Reservoir. Logging crews have started stripping more than 70,000,000 board feet of timber from the hillsides, and tie mills and resaw plants set up in the reservoir area are turning the timber into railroad ties and lumber. Clearing and road-construction crews are adding to activity in the reservoir area, with batteries of big Diesel tractors bulldozing snags, brush, and slashings into piles for burning, and constructing 31 miles of relocated Forest Service road.

The Bureau of Reclamation's Hungry Horse project is the largest and one of the most important water-conservation projects under construction by an agency of the Department of the Interior during this one hundredth year of conservation service by the Department. The big dam and power plant will harness part of Montana's vast potential of undeveloped water resources and put it to work for the benefit of Montana, the Northwest, and the Nation. Primary benefits will include generation of hydroelectric energy, flood control, and assistance to irrigation.

Preliminary studies indicate that low-cost power from Hungry Horse Dam will make economically feasible irrigation of 44,000 acres in Montana's rich Flathead Valley. The dam will provide power for irrigation pumping, and power revenues are expected to repay to the Federal Treasury that part of the cost of bringing water to the land which the farmers are unable to pay.

In addition to the 285,000 kilowatts of generating capacity to be installed at the project, Hungry Horse Dam will increase the firm-power capacity of existing and potential downstream plants by 811,000 kilowatts.

Flood-control benefits will be substantial and far reaching. In addition to helping eliminate floods in the Flathead Valley, the 3,500,000 acre-foot Hungry Horse Reservoir will reduce flood peaks by as much as 10 percent at Grand Coulee Dam and 5 percent as far downstream as Portland, Oreg.

Federal Communications Commission

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. WALTER. Mr. Speaker, a short time ago I stated on the floor of this House that a special inquiry should be made of the operations of the FCC under the Administrative Procedure Act, and since then I am informed that the acting chairman of the Commission has taken some steps to achieve better compliance with the intent and spirit of the act.

However, there is still a long way to go and a hard row to hoe through the mire of backlog that has been permitted to pile up subsequent to adoption of the Administrative Procedure Act.

In response to inquiries as to the reason for inaction or delay in acting upon matters pending before it, the Commission has made consistent and constant reference to an excessive workload and an inadequate staff to carry the load.

This, of course, is the perennial cry of the agencies and departments seeking additional appropriations to increase the bureaucracy rather than devising ways and means of efficiently and effectively disposing of the matters pending before them requiring official consideration and action.

The Communications Commission, after substantial and continued urging by radio applicants, licensees, legal practitioners, and Members of Congress, finally released last month rules and regulations to the handling of so-called initial and proposed decisions and providing for the more realistic separation of functions of independent examiners as contemplated by the Administrative Procedure Act.

In my prior speech before the House on May 10, I had specifically called attention to the inaction of the Commission in this particular matter, as well as in others, and indicated that, in connection with carrying out the provisions of the act, the Commission appeared to be deliberately procrastinating.

By this I did not mean the Commissioners themselves, but rather that this was premeditated at high staff level, although the ultimate responsibility is that of the Commissioners themselves.

Apparently, the Commission is now awakening and showing a greater awareness of its responsibility to the public, and reassuming the powers and authority given it by statute, which have until only recently been deemed the exclusive preserve of its legal department.

However, despite the fact that the promulgation of the revised rules and regulations to which I have just referred, has released for other work employees who were formerly engaged in preparation of so-called proposed decisions, it appears that the law department has discovered a new device for circumventing the provisions of the Administrative Procedure Act which require the transaction of business with reasonable dispatch.

This device is a "slow-down" process in acting on various matters, pleadings, motions, and so forth, calling for recommendation and action of the law department.

There are such matters which have been pending at the Commission many months, but parties are told that the work load is so heavy, the staff has been unable to get around to them.

I am sincerely in doubt as to the validity of the continued use of this same explanation because of other facts with which I am quite familiar. In fact I believe that there has been abuse of the explanation.

The Commission some months ago stopped processing television applications—this unquestionably reduced the normal work load of the staff very substantially; the number of FM applications and matters concerning FM have fallen off to a dribble, and I am sure cannot be so time-consuming as to constitute part of an undue work load; AM, or regular broadcasting applications, and motions or pleadings pertaining to them are substantially below normal, also tending to reduce the usual work load; yet the stock reply continues the same now as it was 6 months or more ago.

It is obvious to anyone concerned that the normal work load of the law department has been so substantially decreased in recent months that action could be taken within a reasonable time on these very important items requiring the law staff's recommendation.

I am inclined to believe that days are presumably being spent on matters which may and should require hours.

The TV freeze and reduction in FM and AM matters have resulted in a slow-down policy as a means of permitting a few top staff officials to retain a complete complement of lawyers so that they may exercise their bureaucratic prerogative to the fullest extent and even request further appropriations to enlarge their own authority.

In place of a slow-down I am convinced that there can be a definite speed-up on the staff level, which will result in action by the Commission more in conformity with the Administrative Procedure Act.

This will be part of the special inquiry which I propose to make of the Commission in the very near future.

Propaganda and Housing Legislation

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. MADDEN. Mr. Speaker, every Member is familiar with the organized propaganda campaign of letters, telegrams, and so forth, against H. R. 4009,

the housing bill, recently passed by this body.

The following letter from Mrs. Wilma Young, route No. 2, Hobart, Ind., discloses some startling facts regarding the source of a great amount of the anti-housing bill propaganda:

HOBART, IND., *July 1, 1949.*

Hon. RAY J. MADDEN,
House of Representatives,
Washington, D. C.

DEAR SIR: I received your letter relative to the H. R. 4009 housing bill today. I wish to inform you that I know nothing of this bill and that I did not write or send that telegram.

It seems that a certain building concern of Chicago sent out word to send wires to you opposing the bill. My employer wrote the telegram and signed my name to it.

This is an example of public opinion that is not truly the public's opinion.

You were elected to be our representative in the House. I feel that if you think that bill would better the living conditions of our Nation then by all means vote for it and disregard the wires you get opposing it. It's the builders and contractors that don't want it.

Sincerely yours,
Mrs. WILMA YOUNG.

Brannan Agriculture Program

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. LECOMPTE. Mr. Speaker, recently, Mr. John C. Benson became editor and publisher of the Prairie City (Iowa) News and for one of the early editions of the paper under his management he wrote an exceptionally well-thought-out editorial analyzing the reaction of Iowa farmers to the Brannan agriculture program presented at the recent Democratic meeting in Des Moines.

Mr. Benson understands the Iowa farmer and is not concerned that he will swallow the plan without looking into it carefully and first ascertaining whether it is another socialistic scheme to be foisted on the American people in the ruse of a guaranteed farm income.

Mr. Benson issues a timely warning against forsaking the parity plan for a visionary, untried scheme that he believes is one step further on the road to state socialism.

Under leave to extend my remarks in the CONGRESSIONAL RECORD, I include Mr. Benson's editorial:

THE WAY IT LOOKS TO ME

How many farmers fell for the Brannan program outlined at the Democratic meeting in Des Moines is problematical. Not very many, we would guess, because Iowa farmers are thinking farmers.

We suspect it will be quite a while before anybody finds many of them who don't understand that when a government rides off in two opposite directions (high prices to the man who sells and low prices to the man who buys) at the same time, something is likely to go "bang" sooner or later, and a lot of people are likely to get hurt by the concussion.

No doubt that they would enjoy guaranteed minimum prices, but Iowa farmers realize that it's just "part of the game" to ride the economy level along with the rest of us, and that they are men enough to see that if the Government guarantees a farmer's prices, it will soon have to be supporting the prices for the butcher, the baker, and the candlestick maker.

If adopted, this Brannan plan would constitute a step, and a large one at that, toward a State-controlled socialistic economy—the very thing that has England by the throat, and that makes all private enterprise in Russia a nonentity.

Many dirt farmers came to find out how expensive this dream of a guaranteed farm prosperity might be. They wondered about the estimates which range from $5,000,000,000 upward to $15,000,000,000. They wanted to ask how such costs could be justified when the total farm income in normal years probably would reach only 10 to 13 million dollars. But only silence came from the brass on the platform.

A sure way to ruin the whole tried and tested parity plan is to adopt this Brannan visionary and impractical plan—because it soon would turn the American people against both the Government and the farmers.

Minding Your Own Business

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Joseph D. Henderson, national managing director, American Association of Small Business, New Orleans, La.:

MINDING YOUR OWN BUSINESS

(By Joseph D. Henderson, national managing director, American Association of Small Business, New Orleans, La.)

"Mene, mene, tekel, upharsin!"

The great King Belshazzar was astounded. A hand, minus a body, had just written these words on the wall of his great dining hall, and poor old Belshazzar didn't known what they meant.

It's true that Belshazzar's brain was a bit foggy. He had just polished off more than a few short beers. But even at that, the language was strange.

The words also astounded the crowd of revelers present that night in 539 B. C. They had assembled to pay homage to their magnificent ruler. The soldiers, as well as the girls on their knee, remained silent. What could the strange words mean, and whence had they come?

Daniel, the young Hebrew prophet, was dragged from his less than warm bed in the city clink to the presence of the great Chaldean general. "Tell me, O Daniel," said Belshazzar eagerly, "What means those words on the wall?"

"Belshazzar, your days are numbered. Your kingdom is at an end. Today you have wine, women, and song. Tomorrow, if not death, you'll have bread and water and a trial before the war-crimes court." This was the somber reply.

Yep, sure as the nose on his ugly face, Belshazzar died the next day. Cyrus and Darius, of the strong Persian Army, had no trouble whipping the soft Chaldeans.

It's an old story. Rome caught it in the neck, too, when the Vandals under Gaiseric, stormed into the city in A. D. 455. Once a powerful nation relaxes it gets caught with its swords down.

"Mene, mene, tekel, upharsin!" Let's face it today. What has happened to America, the land of opportunity? Our lives are similar to those led in Rome and in Chaldea. We live for security, wine, money, women, laziness, apathy, and song. As in Rome we have turned over the ruling power to the hands of a few. We have built up a great bureaucracy so that we won't be bothered with thinking. All we have to do is pay taxes and the Government will function automatically.

Sure it will. It will function right into the hands of the conquering Persians, Vandals, or what have you. Wake up, America. Take an active part in your Government, or your days will be numbered.

Your Government is your business. Mind your own business first.

Resolution Memorializing Greenfield, Ohio, Sesquicentennial

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas the citizens of the village of Greenfield, Ohio, on September 2, 3, 4, and 5, 1949, will observe the sesquicentennial of the town's founding in 1799 by Duncan McArthur; and

Whereas Duncan McArthur subsequently added great luster to his name as one of the outstanding personages in the opening of the Northwest Territory, by serving his country as a major general of militia in the War of 1812, and by serving his State as a member of the Ohio Legislature and as Governor of Ohio, and by being elected to the United States House of Representatives although unable to fulfill that commission because of ill health; and

Whereas the village of Greenfield stands today as a splendid midwestern American small city, an outstanding example of the happy uniting of industry, commerce, and agriculture, and personifies the highest American standards of civil development and cultural progress; and

Whereas the citizens of Greenfield are joining together to observe this one hundred and fiftieth anniversary and to pay tribute to the memory of their pioneer forebears who, by their courage and perseverance overcome almost insurmountable hardships and obstacles in extending the frontier, and who by their love of freedom and equality helped establish this great Nation; and

Whereas during this sesquicentennial celebration the citizens of Greenfield will take account of today's blessings stemming from the creation of this great Nation and its adherence down through the years to the glorious ideals promulgated by the founding fathers: Therefore be it

Resolved by the United States House of Representatives in formal session assembled on this 5th day of July, in the year of our Lord 1949, That the House of Representatives memorializes the village of Greenfield and her citizens on this sesquicentennial, and extends sincere good wishes for the success of their celebration; be it further

Resolved, That these resolutions be spread upon the CONGRESSIONAL RECORD of the Congress of the United States, as of this date.

The Tidelands and Oil

EXTENSION OF REMARKS
OF

HON. WINGATE H. LUCAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. LUCAS. Mr. Speaker, Mr. Robert E. Hardwicke, of Fort Worth, Tex., a leading member of the Texas bar, and an eminent authority on oil and gas law, has written an article on the subject of tidelands oil which was published in the June issue of Atlantic Monthly. Mr. Hardwicke was associate counsel and later chief counsel for the Petroleum Administrator for War. Because his paper, entitled "The Tidelands and Oil," contains such valuable information on this subject, I ask that it be printed in the Appendix of the RECORD for the benefit of my fellow Members of the House.

THE TIDELANDS AND OIL

(By Robert E. Hardwicke)

I

A new frontier, one-tenth the size of the United States, and rich in petroleum and other natural resources, extends seaward from our shores. This frontier, often called the tidelands, is that part of the Continental Shelf covered by the comparatively shallow waters of the Gulf of Mexico and the Atlantic and Pacific Oceans.

The ownership of this belt of submerged lands and the right to take its resources are now in dispute. The protagonists are the Federal Government on one side, and a large majority of the States on the other. That it will be a bitter contest seems inevitable—a contest involving difficult questions of law and troublesome questions of policy.

Our present economy and our future safety depend heavily on petroleum. If we are to be prepared against sudden attack, we must have adequate petroleum supplies in this country, and we should not rely on foreign sources. It is not enough to know that, with time and unlimited money, large new deposits could be found inland, and also outward under the seas. There may be billions of barrels of oil in the Continental Shelf, but that oil will be of little use until it has been discovered, developed, and made available in adequate quantities at the right place and time.

It takes more than courage and hard work to get crude oil on short notice out from under the seas, and its refined products into the possession of the armed forces. Skill can be commandered by the Government, organization can be achieved, money can be had, costs can be ignored in an emergency; but you can't buy time.

The story of the search for oil deep under the seas is interesting enough to justify the telling, even if it were not enlivened by the quarrel over who owns it or who should control its development. The outcome of this quarrel will inevitably affect all the States and may even change materially our dual system of Government.

Our Continental Shelf, in area about 290,000 squares miles (Alaskan portions excluded), extends to the line where the gradual seaward slope of the continent steepens rapidly into the abysmal oceanic basis. The line marking the 100-fathom depth (600 feet) is ordinarily considered the edge of the shelf. Its width varies from about 5 miles on parts of our western coast to some 140 miles at the Texas-Louisiana line, and more than 175 miles off the New England and Florida shores. The approximate areas of the portions of the shelf bordering the different coasts also vary materially: the Pacific coast, 18,500 square miles; the Atlantic coast, 127,000 square miles; and the Gulf of Mexico, as much as 144,000 squares miles.

The shelf itself as distinguished from the waters above it, contains many valuable resources, such as oysters, clams, shells, kelp, sponges, and sand, as well as salt, sulphur, oil, gas, and other minerals. Already large deposits of oil and gas have been discovered off the shores of California, Louisiana, and Texas, and it is with these resources and the Gulf Coast area that we are now primarily concerned.

Petroleum was first discovered in the shelf in 1894 when a well was drilled from a platform over shallow waters off the coast of California. The search for underwater deposits in that area was further stimulated in 1927 by the discovery that the drilling bit, instead of going almost straight down, would drift so that a well started on or near the shore might slant seaward and penetrate the producing zone at a point beneath deep water a considerable distance from shore. By 1935, California operators had perfected methods of controlling the drift or of conducting directional drilling; consequently, a well could be started on shore and be bottomed with astounding accuracy close to a predetermined point under water a considerable distance from the starting point.

The present and potential value of the petroleum deposits in the shelf which can be produced at reasonable profit may be very great. Despite the difficulties encountered in development of the Pacific shelf, where deep water is close to shore, the total production of four fields producing from the California shelf up to January, 1949, has amounted to about 152,000,000 barrels of oil, worth about $2.50 a barrel at present prices. The future production from those four fields was recently estimated at about 168,000,000 barrels. Great quantities of valuable gas are also produced along with the oil.

Although production in the Gulf of Mexico far off shore has hardly begun, it is very probable that much oil will be found. Already 11 separate fields have been discovered off the Louisiana shore, and 3 off the Texas coast. In the 31½-mile strip (27 nautical miles being the seaward boundary of Louisiana and Texas as declared by statutes of those States in 1938 and 1941) there are about 16,000,000 acres claimed by Louisiana, of which some 12 percent are under lease, and about 19,000,000 acres claimed by Texas, with approximately 2 percent under lease. The seaward boundary of Texas was further extended by statute in 1945 to the outer edge of the shelf. Whether a State can extend its boundary without the consent of the Congress is a question beyond the scope of this article and will not be discussed.

Estimates of oil reserves (oil recoverable at reasonable profit) in the 31½-mile strip along the Louisiana and Texas shores range from 4,000,000,000 to 10,000,000,000 barrels. These estimates are not based on fanciful speculation or unreasonable assumptions. In comparison, the total 1948 production of crude oil in the United States was little more than 2,000,000,000 barrels, and the total proved oil reserves (probable recovery from deposits already discovered) were estimated at less than 24,000,000,000 barrels—a figure which of course does not include the tidelands.

The stakes are high, and so is the ante, yet a few operators are taking the gamble and risking millions. They have leased from the States enormous areas of the shelf in the Gulf and lower Atlantic. The approximate areas leased and the approximate bonuses (cash payments for the purchase of leases) paid to the States since 1944 are as follows: Florida—$29,000 for 6,500,000 acres; Mississippi—$111,000 for 800,000 acres; Louisiana—$26,500,000 for 2,541,604 acres; Texas—$7,300,000 for 370,000 acres; a total of $33,940,000. In addition to the bonuses, operators have paid to the States large amounts in annual rentals (payments made to keep a lease in force until drilling is commenced), and are obligated to pay royalties (usually one-eighth) on oil and gas produced and saved. No areas off Mississippi and Alabama are currently covered by leases. At the present time, the Louisiana and Texas coasts offer the best opportunities for successful development, and most of the activity is in that section.

II

With the purchase of the leases, an operator's troubles begin. Assuming that he has leased an area located some 20 miles from shore and under 40 feet of water, he must first locate the tract accurately, and then find some practical way to keep it readily identified. Obviously, the ordinary methods of marking boundary lines (stakes, pipes, trees, and rocks, with bearings on nearby objects) cannot be used. Triangulation and shoran (a specialized type of radar) are used and positions are described by latitude and longitude. In a very real sense, a tract is often tied to the stars.

Having located the area, the operator must then decide whether the earth formations are such that, at reasonable depth, oil and gas in large quantities might be trapped. More than a hunch or an intelligent guess is required to justify the expense of drilling even one well in deep water.

Usually the operator will drill if he has an indication of a "high" or a domal arrangement of the strata far beneath the ocean floor. Along the Gulf mainland, many subsurface highs have been located which were formed by movement of bodies of salt. Such domes are found by geophysical methods. During geologic time, great salt beds accumulated in the region of the present Gulf coastline of Louisiana and eastern Texas, and were eventually covered by many layers of sedimentary material which finally became rock. The weight of the sediment, combined with other causes, such as folding and faulting, forced the salt masses to move or flow, following the lines of least resistance, usually upward. The effect locally was about the same as if a gigantic plug of salt, shaped something like a bullet with a diameter up to 5 miles, had been pushed by tremendous hydraulic pressure upward against the covering strata of rock, bending some of them into domal shapes, and sometimes actually breaking through several layers. The resulting shapes of some of the layers of rock, called structures, were favorable for the accumulation of oil and gas.

The task of collecting and interpreting accurately the geophysical data, and of correlating them with a great mass of other data concerning subsurface conditions in the area, requires the skill of geologists, geophysicists, paleontologists, and other specialists.

Having found what appears to be a favorable structure, the operator who elects to drill must then overcome innumerable difficulties not encountered on dry-land operations. Offices, camps, supply depots, repair shops, and giant cranes or other lifting devices must be established on shore and be duplicated in part at the well site, and many forms of expensive water transportation are required.

A real challenge to ingenuity comes with preparation for drilling operations. Here, 20 miles from shore, is our assumed location for the well in 40 feet of water. Safe and comfortable living quarters must be devised for the men, and adequate space must be provided for great quantities of heavy machinery and materials. The discomforts and dangers of burning sun, cold winds, fogs, ocean currents, and waterspouts (a species of tornado) must be met; also, the frequent danger from sudden line squalls which, though of short duration, have wind velocities up to 75 miles

an hour. Finally, adequate protection must be provided against hurricanes, common in the Gulf, frequently with winds of over 100 miles an hour and with 30-foot waves. In spite of all these and other difficulties, the operator hopes to carry on operations around the clock, without costly delays for lack of men or materials.

Operators have met the physical challenge in a variety of ways, showing a versatility characteristic of our competitive system. One operator constructed a giant, double-decked structure on 100 piles driven from 150 to 200 feet into the Gulf floor, capable of sustaining a load of 10,000,000 pounds.

A more common arrangement makes use of a smaller platform for the derrick and drilling equipment, supplemented by a barge, usually a converted LST, securely anchored and moored to serve as a floating warehouse, repair shop, and houseboat. When a well is finished, either as a dry hole or producer, the barge can be readily moved to another location.

One operator is now building a huge double-decked structure especially designed so that it may be easily dismantled and moved from one location to another.

From most of the structures in the deep waters of the Gulf, several wells can be drilled to test a relatively large area. This can be done by directional drilling so that the bottoms of the wells are widely separated though the wells are started in a cluster on the platform. Already drilling operations are being conducted in approximately 60 feet of water in the open Gulf, and operators claim that before long they will drill in water 100 feet deep. Wells have been drilled in Lake Maracaibo, Venezuela, in water that deep, but there the waters are quiet and the difficulties not so great as in the open Gulf.

III

The operators have taken great care to make the men comfortable, to protect their health, and to provide for their safety, both ashore and in the Gulf. Under one typical arrangement, the men stay 20 days at the well, then go ashore for 10 days. At the drilling sites, pure water is obtained by distillation. Operators do not use gasoline in any boat or at any location, such as a drilling platform, where it would be dangerous to do so. Radar and radio telephones are standard equipment, and are put to many uses. Special studies have been made of currents, winds, and wave action in the Gulf, and operators are cooperating with the United States Weather Bureau in securing information as to the weather, especially adequate advance information of line squalls and hurricanes. The science of oceanography is being extended, under conditions existing in the Gulf, with new experts in that field being developed by the oil companies.

The problem of keeping the seas out of a well is relatively simple. A string of pipe of large diameter (20 inches or more) is lowered from the drilling platform to the bed of the sea and then driven at least 100 feet into the ground. The upper end extends to the platform, the lower end is considerably below the bed of the sea; consequently, the sea is effectively cased off, though the pipe is full of sea water. The drilling bit, attached to a string of drill pipe, is then lowered through the water-filled pipe. The weight of the equipment may carry the bit through many feet of mud and silt.

Actual drilling begins by rotating the drill pipe, thereby rotating the drilling bit so that it will penetrate the sea bed, cutting or breaking up the rock and other material at the bottom of the hole. During drilling operations a fluid, usually called mud (water, mud, and other substances carefully selected and mixed to proper weight and consistency), is continuously pumped under considerable pressure down the hollow drill pipe, through openings in the bit to the bottom of the hole where the fluid mixes with and collects the cuttings and carries them to the surface. The sea water originally in the pipe is soon displaced or pushed out.

Should oil or gas in quantity be discovered far from shore in deep water, unusual problems of production, storage, and transportation are presented, far different from those encountered in operations on dry land. All activities in the Gulf present bewildering problems of marine transportation, especially in the frequent periods of fog and high winds. Many types of vessels are used, such as speedboats, launches, tugs, barges, shrimp trawlers, luggers, cargo carriers, houseboats, yachts, and others, some of which are queer hybrids. These are also converted naval craft—subchasers, air-rescue boats, Navy YF barges, LST's, LSM's, LCI's, and LCT's—carrying on strange activities for warcraft.

The public records show that 28 companies own leases or an interest in leases covered by the coastal waters of Louisiana and Texas. Among this group, 14 of the 20 largest companies own leases directly or through subsidiaries. About half of the owners are individuals or smaller companies. Few operators have been willing to take the financial, legal, and political risks that are inherent at present in operations in the Gulf of Mexico.

The cost of carrying on deep-water operations is very great. Seismograph crews cost more than $1,000 a day; drilling costs average about $3,000 to $4,000 a day; complete drilling platforms for deep water vary in cost from $200,000 to $2,000,000. Aside from the cost of the platform, the expense of drilling a well in deep water to 14,000 feet is estimated to be about $500,000. One company had spent a total of $18,000,000 on Gulf leases, exploration, equipment, and operations up to January 1, 1949, with only two fields to show for it.

The amount spent in gulf operations by all companies since the middle of 1945 has been estimated at more than $100,000,000. To offset this, the cumulative production of oil to date from wells in the gulf, excluding the Creole Field, which was discovered close to the Louisiana shore in 1938, is about 130,000 barrels of a value not exceeding $300,000. The companies are, therefore, some $100,000,000 in the red and are still spending millions. At least 16 dry holes had been drilled off the Louisiana coast, and nine off the Texas coast, up to January 1, 1949.

IV

In addition to physical, financial, and economic problems, operators are also faced with the claim by the United States that their lessors, the States, had no title to the land leased and no right to control the development of the resources.

The California Legislature, assuming that the State owned the seaward area out to its western boundary line (3 English or statute miles from shore), provided in 1921 for its development under State leases. Several oil fields were discovered within a few years, so that the value of the petroleum resources of the strip was evident by 1937. That was the year when Gerald P. Nye, United States Senator, questioned the title of California and other littoral States to the offshore strip, and tried unsuccessfully to persuade the Congress to declare that the strip was part of the Federal public domain. Indeed, the Congress even refused to direct the Attorney General to file suit to determine the question of title. Similar resolutions were introduced in several succeeding sessions of the Congress, but all failed to pass.

Unquestionably, there were many decisions by the Supreme Court of the United States, and there were other legal and historical precedents, which apparently established title in California and other littoral States to a line at least 3 statute miles from shore. Officials of the United States, including Harold L. Ickes, as Secretary of the Interior, had, before 1937, formally declared that the individual States, not the United States, had title to the strip and the right to grant permits for the development of oil and gas. Mr. Ickes, in 1937, took the position that, since the title of the States to the strip had been questioned, the issue should be settled in the courts. He testified before a joint committee of the Congress in March 1948 that it was President Roosevelt who had raised the question of title in 1937, and he (Ickes) and the Secretary of the Navy had promptly urged the Attorney General to file suit. No suit was filed until 1945, though President Roosevelt, himself, had suggested it in 1937, and through various Cabinet officers and others in high places urged the Attorney General to commence legal proceedings to determine whether the United States had title to the submerged areas.

During the period 1937 to 1945, offshore development continued in California. Its beginning in the Gulf of Mexico was in 1938, when oil was discovered in a well drilled in relatively shallow water about a mile from the Louisiana shore in what is known as the Creole Field. The second field, Rabbit Island, was discovered in 1942 some 7 miles out in the Gulf close to Rabbit Island. Some operators do not consider these fields to be in the Gulf, but in any event the production proved that fields would be found in open water; so large areas were leased in August 1945, from Louisiana, and plans were made to start extensive operations. Because of World War II, new operations in the Gulf were virtually impossible during the period 1941 to 1945, but operations began on a large scale after the war, as soon as materials were available.

All this development took place under State leases. Beyond doubt, the States and oil operators had reason to be confident that the Supreme Court of the United States would hold against the United States in the suit brought against California. This the Court did not do.

By a 6 to 2 decision announced June 23, 1947, the Court declared, in an opinion by Mr. Justice Black, that California did not own the belt extending three English miles (3 x 5,280 feet) off her coast, but that the United States, because it had to protect the country and conduct our foreign relations, had paramount rights in and power over the area, an incident to which was full dominion over its resources, including oil. The opinion of the majority admits that prior decisions of the Court justified the belief that the "States not only owned tidelands and soil under navigable inland waters, but also owned soils under all navigable waters within their territorial jurisdiction, whether inland or not." In spite of these prior decisions, the Court held that California did not own the strip, but the Court refused to declare that the United States was the owner. Justices Frankfurter and Reed dissented. Mr. Justice Jackson took no part in the decision.

V

The implications of the decision are alarming and go far beyond the clouding of titles of States to offshore areas and to the beds of navigable streams and inland waters. The reasoning may logically be extended to inland waters and areas and to the resources of the uplands. Most of the States are joining the littoral States in fighting extension of Federal control by such a doctrine, and are urging the passage of legislation which will restore the status which was thought to exist prior to the decision in the California case, or give paramount rights to the States.

Nevertheless, Attorney General Clark has asked leave of the Supreme Court to file suits against Louisiana and Texas, announcing that the decision in the California case is a conclusive answer to the claims of those two States. According to the Attorney General, it is wholly immaterial that Texas, as a

recognized independent nation for about 10 years (1836–1845), came into the Union under a formal agreement with the United States that Texas would retain all the vacant and unappropriated public lands lying within its limits, and would cede to the United States only edifices, forts, barracks, fortifications, navy yards, and other means pertaining to the public defense."

At that time (1845) and on subsequent occasions the United States recognized the southern boundary of Texas as extending to a line 3 leagues (10.5 statute miles) from shore. Yet now the Attorney General of the United States seeks to file suit to obtain a decree by the Supreme Court declaring that the United States, not Texas, has title to the belt and the right to control the development of its mineral resources. One State official was so disturbed by the action of the Attorney General that he suggested secession and the return of Texas to its status as an independent nation.

Since the decision in the California case, various bills have been introduced in the Congress which would release to the States any claim of the United States to the beds of navigable rivers and inland waters, and would release to each littoral State all claims of the United States to the beds of the seas to a line three nautical miles (3 x 6080.20 feet) from shore, or to a line representing the seaward boundary recognized by the United States, is farther than 3 miles from shore. A similar bill quitclaiming the seaward areas was passed by the Congress in 1946, while the California case was pending, but was vetoed by President Truman in the closing days of the session. Several bills of that nature are now pending.

The Council of Governors, the Council of State Governments, and the National Association of Attorneys General, in accordance with resolutions passed by almost unanimous votes of the representatives of those organizations, have actively supported quitclaim legislation, and have expressed great concern over the extension of Federal power and control over State and private resources which is implicit in the language and holding of the California case. These organizations have also vigorously opposed bills which would undertake to place the resources of the shelf under the control of an agency or department of the Federal Government.

The value of the resources of the shelf may be very great, and undoubtedly there will be sensational appeals to greed and prejudice. Already the cry has been heard that the big oil companies, by favoring State ownership and control, are trying to grab the vast and wealthy Federal domain represented by the tidelands, and that this steal should be prevented.

It must be emphasized that the littoral States for more than 150 years have exercised power and control over the resources of the tidelands, and for years have leased areas of the shelf for oil development. No adverse claim of title or superior right was made by any official in behalf of the United States before 1937, and even that claim was generally thought to be unsound, really fanciful, until the Supreme Court announced its decision in the California case in 1947.

The States and their lessees must have rights and equities which, as between private litigants, would be tantamount to title; otherwise the administration would not have sponsored bills providing that a person holding a lease issued by a State before June 23, 1947, or even at a later date, could, under certain conditions and upon the recommendation of a board, exchange it for a Federal lease containing in many respects the same terms as the State lease. The bills also provide that neither the States nor the operators shall be liable to the United States in damages on account of oil or gas produced before June 23, 1947. One of the bills would allocate to the States a part of the royalty received by the Federal Government from production. Clear it is that the States, not the oil operators, are the ones faced with the greatest lost, and are the real opponents of the Federal Government in this controversy.

Why should the sinister label of "land grab" be used to describe the efforts of the States (even though they may be aided by their lessees) to induce the Congress to pass a bill which would settle questions of title or control in favor of the States—thereby establishing rights which were recognized as theirs until June 23, 1947? Indeed, if the term "land grab" is to be used, there is some justification for saying that the United States has made the grab.

Federal control has not been urged as a method for getting the Government into the oil business. Neither has Federal control been advocated because the States might not enforce adequate conservation measures. Nor has Federal control been proposed as a means of getting a new or better group of operators than those who hold or could acquire leases from the States. No claim has been made by the advocates of Federal control that petroleum supplies were lacking during our two world wars because the Federal Government did not have control of oil development onshore or offshore. This brings the discussion to what might be expected if an agency of the Federal Government should be authorized to grant leases and control offshore operations.

It has been argued that the laws and their administration pertaining to the development of the Federal domain for oil and gas for a period of 28 years (1921–49) indicate what is likely to happen if the Federal-control bill becomes law. It has been said that the Teapot Dome scandal is proof that Federal officials are not always honest, although there was no intention to say that Federal control of the development of the shelf would probably result in a similar scandal. It can be said, however, that the laws and administration of the public domain have often been publicly described as most unsatisfactory in comparison with State laws and administration.

The Mineral Leasing Act was the cause of many complaints by operators, but this the Congress finally recognized by long-delayed revision of the statutes in 1946 for the declared purpose of stimulating production on the public domain. The Department of the Interior, administrative agency under the act, has improved many of its regulations, forms, and practices to encourage development and meet objections, so that complaints as to administration of the Mineral Leasing Act have materially decreased; however, some justifiable grounds for dissatisfaction still remain.

The history of the administration of the Mineral Leasing Act indicates that inefficiency is inherent in an arrangement which places control of great faraway areas and activities in a Federal agency in Washington, subject as it is to inevitable frustrations and restrictions which can be blamed only in part upon inadequate appropriations. Perhaps much of the blame rests upon civil-service laws and the volumes of regulations and rulings which govern the employment, transfer, promotion, discipline, and discharge of employees, and to a considerable extent govern the rates of pay—giving little discretion in those matters to the officials of the agency. The situation is quite different from that prevailing in industry and in most State agencies.

Regardless of the ability of top-rank Federal officials, no way seems to have been found to avoid a complicated routine or red tape with little flexibility, often affecting judgment and always slowing the processing of papers and the announcement of final decisions, even minor ones, to such an extent that planning by operators is made most difficult. The delays and uncertainties have been maddening. Moreover, Federal laws, leases, and regulations still impose upon operators obligations which are generally considered by them to be unnecessary and to confer powers upon the Secretary of the Interior which authorize arbitrary action with respect to important operations.

This much is certain: Development of the public domain for oil and gas has not been comparable to the development of private lands or the public lands belonging to States. There is no indication that Federal laws and administration with respect to the reserves of the shelf will follow a different pattern, much less a better one. On the contrary, the bills sponsored by the Administration are unusually restrictive and harsh. For instance, they would require each lease to provide that the Secretary could control the rate of development and the amount produced as he thought advisable "in the interest of national defense or the public welfare." Each lessee would be required to agree that the Secretary, during war or national emergency declared by the Congress or by the President, could suspend operations under a lease, or even cancel the lease, in which latter event the Government would be obligated to pay the lessee "an amount determined in accordance with regulations promulgated by the Secretary which incorporate guiding equitable principles." These are amazing provisions.

It may be said that the operators would be authorized by the administration bills to supply capital, materials, and men, and take all the risks, while many of the usual functions of management would rest in the Secretary of the Interior. He would also have the power to cancel the lease and pay damages in accordance with his own ideas of values and fairness. Provisions of that nature would not be likely to stimulate leasing or development.

This country needs oil and gas in great quantities. Logically operators should be induced in every reasonable way to develop without delay the petroleum resources of the shelf. Federal control is bound to be a deterrent of great magnitude. Under State control the operators have a brilliant record of achievement, overcoming the impossible almost every day. A prompt disposal of the controversy by the Congress in favor of the States will undoubtedly cause an increase in development activities, and will also avoid the strain and bad feeling which are inevitable if the issues are to be settled by further litigation and by bitter contests in the Congress.

Grasshopper Damage in the West

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. BURDICK. Mr. Speaker, the grasshoppers are on the rampage again in Wyoming and Montana and are spreading eastward. The Bureau of Ethomology are aware of the scourge and with extra financial help now, it is possible to prevent an old-time sweep of this scourge across the entire West. I add here a letter just received from the Northwest grasshopper committee under date of June 30:

NORTHWEST GRASSHOPPER AND
OTHER INSECT CONTROL CONFERENCE,
Minneapolis, Minn., June 30, 1949.

Hon. USHER L. BURDICK,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE BURDICK: Grasshoppers are causing severe damage to range lands in northeastern Wyoming and the adjoining

area in Montana. Grasshopper population average 35 per square yard on a million acres. The State of Wyoming has supplemented Federal funds with $380,000 and the State of Montana has supplied $100,000. Ranchers in the severely infested areas have supplemented their funds at the rate of 10 cents per acre to assist in defraying the cost of grasshopper control.

The Bureau of Entomology and Quarantine has 28 airplanes under contract in this area, which are spreading bait in the heavily infested areas. Ranchers in a single county in Wyoming raised $40,000 and requested similar service which the Bureau and the State were unable to match because of insufficient funds. Ranchers in other counties outside the more heavily infested areas are contributing accordingly. They are now mixing 500 tons of dry bait per day for use in this area, a part of which is used by the outlying farmers who are spreading their own bait.

The Bureau of Entomology and Quarantine is requesting emergency funds of $3,500,000 to complete the 1949 program. This item will probably be included in the third deficiency bill.

The cost of bait has been materially reduced by the use of toxaphene and chlordane. The present estimated over-all cost of the materials, mixing and applications is 50 cents per acre.

The Great Plains area has received limited rainfall this year. Sections of Wyoming, Montana, and the Dakotas have been droughty. These conditions are conducive to increases in the grasshopper population such as is now prevalent in the area mentioned above. If dry seasons continue, grasshopper outbreaks could be as severe as those of the 1930's. The Northwest grasshopper and other insipient insect committee urge your support of sufficient funds for the emergency grasshopper-control work. Proper control in 1949 can well prevent severe losses in future years.

Very truly yours,

HENRY O. PUTNAM,
Secretary.

Agricultural Problems

EXTENSION OF REMARKS
OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address on agricultural problems recently delivered by Mr. Walter C. Berger, president of the American Feed Manufacturers Association:

In discussing with you today our agricultural problems, I think it is imperative to first review briefly the need for a long-range agricultural program in this country. The agricultural economy is so basic to the national economy that we must be very conscious of the need of an agricultural program which will stabilize our agricultural economy. The right kind of an agricultural program cannot keep us from an over-all general national recession, but it certainly can be a safeguard which can keep us from going into a tail-spin depression.

Those of us who are working so closely with agriculture need only to recall what a drastic repercussion price levels on agricultural commodities in 1932 had upon the entire Nation. This Nation cannot stand a recurrence of $3 hogs, $4 cattle, 5-cent eggs, $1.25 milk, 10-cent corn and 20-cent wheat. Today our Government has an indebtedness of $250,000,000,000. A good deal of this the Government owes to you and me in the form of Government bonds. We may not own all of them individually, but they back up such things as our life insurance, our fire, liability and accident insurance, and the deposits in our banks. So, we are all involved directly or indirectly in this great problem. The soundness of our agricultural economy is so basic that we must come to the realization that some sort of reasonable, practicable, sound agricultural price or income assurance is needed. This will require the best brains this country has available to develop the right kind of program. This will require the elimination of selfishness, greed and politics if the right kind of program is developed.

One of the biggest problems we are faced with in developing such a program is that the American public is badly spoiled. We all want too much for nothing, expecting the other fellow to pay the bill.

In the Agricultural Act of 1938 we had a price support in effect, which supported the major agricultural commodities on a 50 to 72 percent of the 1910–14 parity basis, either in the form of loans or purchase agreements. However, during the war, in order to encourage production to the greatest possible extent, Congress assured the farmers that they would be protected with a 90 percent guaranty on the price of the major agricultural commodities for the duration of the war and for 2 years after the war ended. Congress and the Government have lived up to this agreement.

Today we have a law which places your price-support programs on a sliding scale basis from 60 to 90 percent. The law becomes effective January 1, 1950, and will apply to the 1950 crop of the major farm grains. On the crops for this year, the 1949 crops, your present 90 percent support price is in force. During the first 2 years after the war approximately $5,000,000,000 a year were spent on relief programs for the liberated areas and for the occupied territories. In the past year you had your ECA program, which has cost approximately $5,500,000,000. It must be remembered that in these first 2 years, 70 to 75 percent of the money which was provided for relief programs was spent on agricultural products. In the past year approximately 45 percent of the ECA procurements were spent on agricultural commodities here in the United States. Just to mention one item as an illustration—the support of grains—in the past year over 600,000,000 bushels, most of which was wheat and some feed grains, were exported under the ECA program. So, indirectly, you as a taxpayer have been spending in the neighborhood of two and one-half to three and one-half billion dollars yearly on an agricultural price-support program for the past 3 years. This, to date, has been the salvation of the 90 percent agricultural price-support program.

We have one item which has been under the 90 percent price-support program which causes us to realize some of the problems which can come about with too high a price-support policy on perishable commodities. The price-support program on potatoes, which has cost the taxpayers somewhere in the neighborhood of $200,000,000 in the past year, has caused millions of bushels of potatoes to be used in other ways than for the purpose for which they were grown. And still the housewives of this Nation have been paying an exceptionally high price for inferior grades of potatoes.

It is my opinion that this illustration has had much to do in causing Secretary of Agriculture Brannan to come out with his so-called Brannan plan. It is my opinion that after the election last fall much pressure was put upon the Secretary of Agriculture by two groups, one representing a large segment of the purchasing power of the consumers, and another representing a certain type of agricultural producers. We had the consumer element demanding a plan for cheap food. The agriculture element demanded that the present law, which is to become effective January 1, 1950, and which proposes a sliding scale of support prices on the basic agricultural commodities of 60 to 90 percent, be discontinued and the present 90-percent support price be put into permanent legislation. I admire Secretary Brannan for having the courage to lay out on a platter, all in one piece, such a broad program before Congress. It does not contain so many new proposals, but he has presented it so the people can look it over as it stands in its entirety. This was not necessarily true before the war, as the various proposed programs were presented to the public piece by piece, one piece at a time.

For the purpose of this discussion, I merely want to explain in a general way the proposals in the so-called Brannan plan. He proposes to support the prices on the basic storable commodities on practically the same basis as it is being done today, by the present loan and purchase agreement program now in force. His proposal does contain a new method of arriving at the price at which the various commodities would be supported, and in most cases this price is slightly higher on the storable commodities than it is at the present 90-percent basis. He then proposes that the end products of grain, mainly the protective foods—meat, milk, and eggs—be allowed to be sold to the consumer at whatever price the consumer can or will pay for it, and then make payments to the farmer or the producer by a Government check, the difference between the average market price and the price determined to be a comparable price to the support price on the feed grains. This, in theory, is to encourage maximum production of these protective foods. Many economists feel that his proposal does start out as an incentive to increase the production of the end products of feed—meat, milk, and eggs. However, as the program progresses, and unless some adjustments are made by 1953, the feeding ratios will not be as favorable as they would be at the start. This is due to the change in the relationship of the end products to the basic feed prices during the base period.

Politically this is one of the finest programs ever proposed to the masses of voters who may be interest only in a selfish viewpoint. Without taking into consideration what the outcome will be and what sacrifices will have to be made to make it work, the program would appear to provide cheap food on one side and high agricultural prices on the other.

The first problem I wish to discuss with you is that of the cost of the proposed program. In consultation with a group of very able economists, who have been studying the cost to the taxpayers for the proposed subsidies, they pretty much agree that the program could cost us easily two and one-half to three billion dollars the first year of operation, in addition to the $2,500,000,000 being proposed in the ECA program for the purchase of agricultural products which indirectly support agricultural prices. These same economists readily agree that by 1953, if the program was carried out as outlined, it would cost in the neighborhood of ten to twelve billion dollars.

It is hard to visualize a Congress conscious of the cost of government and at the same time the taxpayers' pocketbook, because we haven't had that kind of a Congress for a long, long time. Let's suppose Congress appropriates only $2,500,000,000 for the agricultural price support program and the Secretary of Agriculture needs $10,000,000,000 to carry out the proposed program. The Secretary then would be forced to rely on drastic

production controls, which in effect would cause the consumer, who now feels the program will give him cheap food, to eventually pay approximately the same as present prices anyway. The farmer in turn would be forced to accept drastic production controls which would give him fewer units to sell. The consumer would be mad and the farmer wouldn't like it either.

The monetary cost of all the proposed socialized programs, including that of the agricultural program, isn't the big thing that concerns me. It is the freedom that we must give up whenever we put such programs in effect. During the convention of the American Feed Manufacturers Association in Chicago, Dr. Norman Vincent Peale, a noted clergyman from New York City, gave an inspiring address. He called to the attention of the audience the trend or tendency of the people of this great nation to become involved in more and more socialized programs. Such programs, he said, carry with them more and more Government control and cause people to give up the one great factor that has meant so much to us in America in the past, and that is our freedom. He used the illustration of how these tendencies would act by stating they are very much like creeping paralysis—hitting you first in a foot, or a hand, going to the knee or elbow, then the entire limb, and finally involving the entire body. This is the thing that I hope we can keep away from in developing a long-range agricultural program.

Last fall I had the opportunity of visiting eight European countries. The one outstanding thing that impressed me was the fact that there is one big difference between this country and most of the European countries. This difference is the free enterprise system or the incentive system that we have in this country. It is the thing that has made America great—it is the thing that has enabled us to grow and develop into the most productive Nation in the world—it is the thing that is giving our laboring men, our farmers, our people as a whole the highest standard of living of any people of the same classification any place on the globe.

This incentive system of ours gives us the drive and the determination to do something for ourselves—to make something of our own individual lives—the incentive to work, to create, to save for some future day. Because this one particular factor stands out as the greatest and the most important thing we have, because it gives us so much, I hope we might be able to save it for our children in the future. To illustrate what I mean, let me say that in nearly every country I visited in Europe last fall, I was approached by young men who were ambitious, who wanted to make something of themselves, who could not visualize an opportunity within their own country, and who wanted to know if there was some way they might be able to come to America. To further illustrate the point, and it is applicable in practically every field, I had a driver in Copenhagen—a very fine, nice looking, courteous, fairly well educated young man, 24 years of age—who at the time was working for his father. His father was in the business of supplying cars to the various embassies in Copenhagen and for the use of tourists. He had four sons and he was tied down by government regulations so that he could not expand his operations. He was not allowed to get more cars and take his sons into the business with him, so that they could all make a living. Regardless of how good a job he was doing, how efficiently he was operating his business, how willing his boys were to do just a little bit more than the average person, he could not expand his business. Neither could one of his boys get a quota and start in business for himself. There was nothing this young chap could turn to for himself. Unless something happens, that boy is soon going to become completely discouraged. He'll lose his ambition and determination to do something for himself, and he'll become a liability to society just like millions of others already have. By simple illustration, let's note what could happen in this country if we continue to sacrifice our freedom at the expense of more and more socialized programs.

In the heavy tobacco-producing areas, where they already have marketing quotas established for each grower, the grower's quota today is worth more than the land upon which the tobacco is grown. Look at the expansion in our cotton production in this Nation. We have only been able to use, for our own domestic consumption, approximately 8,000,000 bales of cotton. The most we were able to export this past year was about 6,000,000 bales. Four million through ECA and 2,000,000 bales through other channels. There is very little chance of us selling this much in export trade this coming year. So with the estimated crop of 18,000,000 bales or more, and our total prospective sales—domestic and export—being only between ten and twelve million bales, you can readily see how our problem of surplus cotton is developing. Neither of these commodities are food items. We in the feed business need to think of what type of control can be visualized for our grain farmers, our hog producers, poultrymen, dairymen, etc., if present proposals are carried out. We could reach a point where the poultryman would have a quota to determine the number of laying hens he would be allowed to keep. Like the Copenhagen taxi driver, this poultryman also might have a son or two coming along interested in his father's business. A quota system would pose the same problems and might well bring about the same results as I saw abroad.

It is this element of the supreme sacrifice of freedom that we must think through thoroughly and see if it is worth the price we must pay in order to have the sound security we would all like to have. There are various proposals being discussed at the present time, such as the possibility that the farmer might be given an insurance program for agricultural income for which he would actually pay premiums, the same as he does on life insurance, fire insurance, and so forth, so that the cost would be carried by himself rather than by the taxpayers as a whole. Maybe we should give this sort of a plan serious consideration. There is also the possibility of having farmers carry their own reserve stocks of surplus storable commodities. In this way they would not be getting the full price on the commodities which are in surplus, but would be getting a fair return on that part of the crop which is being used for domestic consumption.

I am frank to admit that it is hard to be critical of any proposed program when you do not have a better one yourself to offer. However, it does hurt me to see this great country follow the tendency of so many of the European nations in having more and more and tighter and tighter controls, which is bound to place us in the same category as that of other nations. I think it is time for America to wake up and think. We must decide whether we want to ride along complacently in the "give me something for nothing" boat, or whether it is more important to assert ourselves in saving our freedom and the incentive system which has made America so great.

John Collyer, president of the Goodrich Co., has declared that our future will rest upon the fundamental principles which are our heritage. The freedoms we enjoy are our most priceless heritage. The door of opportunity should be open to all. For progress, competition, and incentive are absolute necessities. A stable government should provide the rules by which we live together. It should provide recourse against abuses from within and safety from dangers without. Ours should be a government of laws, not men.

Action on Hoover Recommendations Now

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. VELDE. Mr. Speaker, last week I received over 5,000 signed replies to the Peoria Journal Transcript's editorials of June 20, 21, and 24 by aroused, economy-minded citizens of central Illinois who are vitally interested in seeing that the recommendations of the Hoover Commission are put into effect immediately. The text of the reply is as follows:

Hon. HAROLD VELDE,
Member of Congress,
Washington, D. C.

DEAR SIR: Because I believe that billions can be saved and efficiency improved by putting into effect the recommendations of the Commission on Organization of the Executive Branch of the Government (the Hoover Commission) I urge that you make every effort to carry out this program.

Signed_____
Address_____

These more than 5,000 replies are definitely the expressions of the people's desire to see Congress enact immediately legislation adopting the various recommendations of the Hoover Commission.

These people believe as I do that we cannot afford to go on spending $42,000,000,000 or more each year, that we have reached the saturation point in taxes and that continued deficit financing of the Government can only lead to the eventual collapse of our entire economy.

The annual pay roll of the executive branch today is $6,500,000,000 or one-seventh of our present annual budget. The time to reverse the trend of the Government's becoming the master of the people instead of the servant of the people is now at hand.

The Hoover recommendations are in reality a blueprint for remedial and effective action in eliminating waste, duplication, and unwarranted Government expenditures. We are watching with interest to see just how closely Mr. Truman and the administration follow the blueprint of the Hoover Commission.

To date the President has submitted only seven plans to the Congress for action. And of these seven, five have been watered-down to such a degree as to made them much less effective than the original recommendations of the Commission. If this practice is to be continued, we will end up with nothing more than a reorganization on paper, and little, if any, savings will actually be realized. We cannot cut expenditures by merely changing the names of the more than 1,800 Government agencies, bureaus, and commissions. We have got to regroup some, consolidate or merge more, and eliminate altogether a good many

more. This will in effect open the door to at least a 10 percent reduction in personnel from the Federal pay rolls. The excess fat of this sprawling bureaucracy of over 2,000,000 needs to be cut away. True, some people's toes will have to be stepped upon and unless Mr. Truman realizes that this must be done, we cannot expect much from his watered-down proposals for reorganization.

The people of central Illinois have clearly indicated their keen desires by this response to the Peoria Journal Transcript's editorial. The President and Congress are duty bound to give vent to the feelings of these people who are sick and tired of talk and paper work. They want action and they want it now.

Science Foundation and the Loyalty Oath

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. O'HARA of Illinois. Mr. Speaker, from Mrs. Jean Anderson, 5710 Woodlawn Avenue, Chicago, I have received a telegram which I bring to the attention of my distinguished colleagues who, it is expected, will soon have presented to them for decision the matter of the inclusion of a so-called loyalty oath in the science foundation bill.

The question that will be presented to us is not, I think, one that relates to national security. If it were such, I, of course, would support the provision. In two wars, in one just passing 15, and in the other above draft age and the father of four children, I think that my loyalty to country was placed where never it could be an issue.

But I do not believe that we strengthen the security of country by placing our scientists and our educators in the category of suspicious persons. The greatness of America has been that in America freemen have enjoyed freedom of thought. We wisely have accorded to all citizens the presumption of loyalty to the same extent that we have presumed them to be law abiding. Under the orderly processes there is a procedure to be followed when there is violation of the criminal laws, and this procedure has always protected us against the criminal acts and conspiracies of those who would use or advocate the use of violence in the overthrow of government.

The telegram from Mrs. Anderson reflects the sentiment of many of my constituents in the Second District of Illinois. Mrs. Anderson herself is a graduate of the high school at Benton Harbor, Mich., and of one of the finest of the smaller colleges in America, Lake Forest College, beautifully located in a northside suburb of Chicago. She is the wife of a young atomic scientist, of a long line of American forebears, and the mother of two children, Faith and Clifton. I recite these facts that my distinguished colleagues may know the background.

Here is the telegram:

Regarding H. R. 4846 believe there is real need for National Science Foundation. However I believe that loyalty oaths are worse than worthless. They are insulting to loyal citizens and disloyal persons would not hesitate to perjure themselves. Such an amendment is dangerous for it will lend impetus to the hysteria which seems about to spread into the very processes of education which above all must remain free if our country is to be strong. Hope you agree and will oppose any such amendment with every means at your command.

This is the reaction of one fine American woman—the wife of a young man of the stoutest character of loyalty to the institutions of his country who is dedicating his life to science in the vital field of atomic energy—the mother of two typical American children. It is the same reaction which I find expressed in many letters which daily come to me from the men and women of my district.

I submit to my colleagues that the viewpoint of so many worthy citizens should receive our earnest consideration when we make the decision whether the national security actually does require drastic change in our concept of an education for free men based upon free thought and an independence in the kingdom of the mind.

As to the Science Foundation bill in its original form and the purpose to be accomplished by the authorization of such a foundation there is among the scientists and, I think, generally among the people in my district, an unanimity of approval. I bring to the attention of my distinguished colleagues the following endorsements of the Science Foundation conception, which are entitled to bear weight because of the high standing and prestige of their authors:

Mr. R. W. Harrison, vice president and dean of faculties, the University of Chicago:

The educational demands upon the colleges and the universities of this country are great. The need and demand for men trained in science, in industry, in teaching, and in research, are greater than the schools are able to meet without assistance. The research staffs of the educational institutions need more support for their investigations than can be made available from the funds possessed by these institutions and from the amounts provided by the private foundations. I believe the scientific strength of this country will suffer damage unless assistance such as can be provided by a National Science Foundation is made available.

R. W. Gerard, M. D., Ph. D., professor of physiology, the University of Chicago:

It seems unnecessary to reiterate in this letter the many arguments for such a foundation that have been presented with almost complete unanimity at the various hearings held by the House committees. May I recall to you, however, that in a poll taken by the Inter-Society Committee for a National Science Foundation—representing societies that constitute the great bulk of American science—the demand for a National Science Foundation was practically unanimous.

E. M. K. Geiling, M. D., Ph. D., chairman, department of pharmacology, the University of Chicago:

I am sure that no informed person will deny that science is playing an indispensable role in our daily life. Furthermore, the unique position the United States occupies in world affairs makes it imperative in my judgment that every encouragement be given to scientific research and this encouragement can be fostered through the establishment of a national science foundation.

Dr. Emmet B. Bay, professor of medicine, Frank Billings medical clinic, the University of Chicago:

The national scientific foundation bill appears to me to be one which is necessary if this country is to continue its leadership in this field. Private enterprise should, and, I am sure, will continue to do all that it can to further this development, but it now needs to be supplemented * * * by Federal support.

Dr. Lester R. Dragstedt, professor and chairman, department of surgery, the University of Chicago:

I have been active in scientific research at the University of Chicago for a great many years, and I am naturally most interested and concerned in any development that may provide effectual and scientific development in the United States. In my opinion, this bill is the most satisfactory yet provided.

William J. Dieckmann, M. D., chairman and chief of service, department of obstetrics and gynecology, the Chicago Lying-In Hospital, the University of Chicago:

I have been active in scientific research in two large universities since 1924. I think that a national scientific foundation bill such as H. R. 4846 is necessary for the best interest of scientific research.

Paul R. Cannon, M. D., chairman, department of pathology, the University of Chicago:

As a medical scientist and teacher I believe that this bill will help to further medical advances in this country. Without some type of a National Scientific Foundation I believe there is great danger that medical education and research will deteriorate.

Dr. H. Close Hesseltine, M. D., department of obstetrics and gynecology, the Chicago Lying-In Hospital, the University of Chicago:

I have been connected with academic and research activities for about a quarter of a century in State as well as private institutions. As the situation is now developing, some national support certainly is highly desirable, and the present proposed bill seems to offer it.

Dr. Paul E. Steiner, M. D., Ph. D., editor in chief Cancer Research and professor of pathology, the University of Chicago:

As editor in chief of a scientific journal which publishes the results of scientific cancer research, and as a scientist engaged in medical and cancer research in a large university, I take this opportunity to write that in my opinion a National Scientific Foundation bill is necessary for the best continued development of scientific progress in this country.

Dr. W. H. Taliaferro, chairman of department of bacteriology and parasitology, the University of Chicago:

Federal support of science is necessary if we are going to develop science in a way which will provide this country with the scientific background for the needed developments in industry, agriculture, medicine, and national defense.

Dr. C. Phillip Miller, M. D., professor of medicine, Frank Billings Medical Clinic, the University of Chicago:

If that body (National Science Foundation) is properly set up and adequately financed, it should be of tremendous benefit to scientific research.

Carl R. Moore, department of zoology, University of Chicago:

Scientific research under way in large universities at present, and additional investigation awaiting support, will be advanced by a National Science Foundation. I am requesting your support of this bill.

Howard H. Vogel, Jr., Ph. D., chairman, biological sciences, the University of Chicago:

Scientists in general favor such a Foundation, not because of narrow self-interest, but because they believe such a Foundation is necessary today for the growth and development of American science.

James Franck, professor of physical chemistry, the University of Chicago:

As a scientist engaged in research at the University of Chicago, I have a great interest in the National Science Foundation bill.

J. M. Beal, chairman, department of botany, the University of Chicago:

As one interested in education and active in scientific research in a large university, I wish to take this opportunity to state that in my opinion a National Scientific Foundation bill is necessary for the best interests of scientific development in this country.

Lester R. Ford, chairman, department of mathematics, Illinois Institute of Technology:

The establishment of a National Science Foundation would have particular significance for Chicago. The universities, engineering schools, and research groups in this area would have their hands strengthened and would wield an increased influence in the scientific life of the country.

S. S. Cairns, head of the department of mathematics, University of Illinois, Urbana:

I have had personal connections with basic research projects being supported through the Office of Naval Research and I have been greatly impressed by the value of that support to scientific research workers and, through their efforts, to the Nation as a whole. Much of the basic research work now coming under the cognizance of the Office of Naval Research is of a nature more appropriate to the functions of a National Science Foundation.

It is my own opinion and, to the best of my knowledge, the unanimous opinion of those mathematicians who are interested in these matters, that the establishment of a National Science Foundation, with the resulting definite separation of military and basic scientific affairs, is extremely important to the development of a suitable research program on a national scale.

Similar sentiments were expressed in letters and telegrams from: Robert S. Mulliken, professor of physics; John O. Hutchens, department of physiology; J. R. Blayney, Walter G. Zoller memorial dental clinic; G. M. Dack, M. D., professor of bacteriology; Dr. A. Lockhardt, department of physiology; F. H. Wright, M. D., department of pediatrics, Bobs Roberts Memorial Hospital for Children; and Dr. Eleanor M. Humphreys, professor of pathology; all of the University of Chicago.

Other letters of endorsement came from Dr. Peter P. H. Debruyn, chairman of the department of anatomy, and Profs. William Bloom, Friedrich Wassermann, Roger W. Sperry, William L. Doyle, and L. V. Domm, of the department of anatomy, the University of Chicago.

Let's Have Federal Aid

EXTENSION OF REMARKS
OF
HON. JOHN H. MARSALIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. MARSALIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George W. Johnson, principal, Lincoln School, La Junta, Colo.:

LET'S HAVE FEDERAL AID

(By George W. Johnson, M. S., principal, Lincoln School, La Junta, Colo.)

Aid to education, whether Federal or State, is based on idealism. "Every child deserves an education regardless of race, religion, wealth, or the environment in which he lives." "Tax wealth where it is and educate children where they are." These and similar ideals form the philosophy of the school teacher. If the teacher were not an idealist, he would not continue at the pittance he receives for a salary. Today he is not alone in his idealism. Parents all over the country are demanding that children must have equal educational opportunities. They realize this is the only way to keep our Nation safe for democracy. The only way to give our children equal educational opportunities is through Federal and State aid. Communities differ so widely in wealth that a poor district worth only a few thousand dollars may have many children, while a district worth several million dollars may have only a few children. Hence the maximum school tax on the poor district may produce only enough for a 3 months' school, while a very slight tax on the wealthy district gives their school money for luxuries. Equalization must be accomplished by Federal and State taxes. Federal aid does not mean Federal control.

Federal aid to education is not new. It has existed ever since the first land-grant college was established and the first sections of land in each township set aside as "school land." The latter was to aid elementary education, as you all know. Then we have Smith-Hughes and similar laws to aid vocational education. Have any of these resulted in political control? You know they have not. The only strings attached to these funds have been to make a more rounded education and to guard funds against being spent foolishly.

I wonder why no one has been worried about Federal aid to pensions and relief, to highways, to air fields, etc. In each case certain rules must be met, as in education, but no one has been screaming to beware of political control.

As far as the economic picture is concerned, exactly the same rules apply. The wealthy small State is going to pay out much more in taxes than it gets back in highways, while the large poor State will get back more than it pays in. Has this kept any State from participating? No. Does anyone make big charts and spend large sums of money showing why we should not have Federal aid to highways? Indeed not. The same things could be said of Federal aid to old-age pensions, aid to dependent children, the blind, etc. Every State is glad to get this aid. The same circumstance of brokerage and administrative costs apply.

Now take an unprejudiced look at those who are opposing Federal aid to education. If we go to Washington, we find the politicians there who say, "Let the States do it"; they are the ones who said, "Let the communities take care of their own educational problems" when they were in their State capitols.

Many of these people may be elderly people who remember the teacher who "boarded around" for her salary as she taught in the log cabin with a pot-bellied stove for heat. Taxes were naturally low for that kind of a school. Physicians often had no other schooling than this, followed by experience of an older doctor. Surgeons learned to operate by operating on people. Aid to education has changed this picture.

Today education is essential to life. We cannot live adequately in our modern world without intricate education. Think of the thousands of boys in the draft who did not have sufficient education to go to war. Federal aid will change this also.

I appeal to you fathers who have children. Do you want your child to grow up in a third-rate school when a little more tax money would give Colorado first-rate schools? Dean Huston, of the University of Colorado says that $15 a year to the average home owner would make the difference between a third-rate to a first-rate school system. As a father, I want my children to have a good education in a good school system whether I stay in the teaching profession or not. I'll gladly pay the extra $1.25 per month to either Federal or State Government to bring this about. Colorado has not been able to bring her standards up to first class because money has never been available. Is there any reason to believe the future will be better? Very doubtful. Why not let the Federal Government help us with our educational finances as we do with our relief, highways, and airfields—or—don't we value our children as highly as we do our roads, etc.?

If we would spend as much to educate a boy as we spend to punish his crimes, this would have a different world to live in.

Take one look around your community. You will find the people opposing Federal aid are doing nothing to increase State aid to education—if not opposing that also, secretly.

Recent court decisions have determined how public-school money must be spent. We need have no fear of political or religious control of our schools because our American people and our courts are wide awake for their protection. Let's quit worrying about the origin of our school funds and start worrying about the need for funds so our public schools can continue to run as such.

Education and Loyalty

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. O'HARA of Illinois. Mr. Speaker, I have on several previous occasions made mention of the University of Chicago, which is in the district which I have the honor to represent in this distinguished body. It is, in every sense of the word, a great university.

With other educational institutions of high standing, the University of Chicago

stresses independence in the operation of the mental processes. This is not strange, nor is it inconsistent with the spirit which has been ours since the earliest days, because the University of Chicago is in Illinois, which was admitted to the Union on condition that popular education ever should enjoy substantial encouragement. During all the years since our admission to the Union, the people of Illinois have taken very seriously the obligation to encourage popular education and to safeguard it. We in Illinois believe that an educated citizenry is the strongest bulwark of the State.

There can be no education, however, without freedom of thought. There can be no teachers worthy of the name who read without thinking or, having both read and thought, remain silent on that which might be a contribution to our democracy, and to the healthy mental development of their students, because of fear of loss of employment or of professional standing.

On June 22, 1949 Robert M. Hutchins, chancelor of the University of Chicago, delivered a noteworthy address at the two hundred and thirty-seventh convocation of the university for students graduating from the college. This address is a clear, definite but well-balanced presentment of one side of a question which has been widely discussed throughout the Nation and the repercussions from which have reached into this Chamber. I bespeak for it the thoughtful consideration of my colleagues.

Chancelor Hutchins' address comes at a time when the young men and the young women in our colleges are taking an interest in the public affairs of our country to a greater extent than perhaps ever before in our history. The influence of the campus, therefore, is spreading far beyond the confines of the lecture halls and dormitories. It is an influence for liberalism, such a liberalism as represented by President Franklin D. Roosevelt and now by President Harry S. Truman, such a liberalism as in November of 1948 sent to this Congress approximately a hundred new Members to supplant those crowded at the doors of privilege to jam them shut against the expansion of human contentment.

I have heard no one raise the cry of disloyalty against these liberal members who were sent in November of last year to serve as the colleagues of the older—in service here—Members of this body. No one would presume to raise such a cry. Among the new Members are many veterans of World War I and World War II and some with service in two wars.

They are motivated by a desire to make this a better world for all the men and women who live in the world. Thus they will justify the world leadership of their country and give some measure of compensation for the devastation of wars that established that leadership. They are liberal in the sense that they believe that security, the enjoyment of common rights and the opportunity by good conduct to attain human contentment are all within the proper functioning of Government to advance as rapidly as the circumstances of the national economy will permit. While placing human rights in priority to property rights, they are indeed the true defenders of the rights of property since such rights of property in nations of the past have invariably been destroyed when human rights were neglected.

I think, Mr. Speaker, these new liberal Members of this distinguished body do represent the postwar spirit of the American people. And I venture the prophesy that in the Eighty-second Congress their number will be greatly increased. Taking backward steps is not the habit of the American people.

The young men and the young women in our colleges and universities, for the most part, represent the same postwar spirit of America. In the same sense they are liberals. To the same degree they are loyal to their country. Does any sensible person think that the colleges are any less loyal to the United States than they were in the war years, now that in their student bodies are so many former GI's and wives of former GI's?

No, Mr. Speaker, the colleges and universities of the United States do not need my championing. It would be a presumption for me to speak in the defense of institutions whose alumni, by contributions they have made, have proved in service to country that high loyalty which a billion so-called loyalty oaths in themselves could never assure.

Loyalty, Mr. Speaker and my colleagues, is an attribute of character and not a fantasy to be drawn by a penman in the formation of a signature. Loyalty is a virtue which glorifies itself in practice; it is most likely to come under suspicion when its exhibition is saved for the parade.

I am happy that Chancelor Hutchins has so forcibly presented the side of the American educators.

CIO President Philip Murray Calls for Action To Combat Unemployment

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter that was sent out by CIO President Philip Murray to all of his affiliated organizations.

This letter calls attention to our serious economic conditions, and proposes a program of action. It follows:

It has been more than 2 months since I, as president of the Congress of Industrial Organizations, pointed out to the President of the United States the seriousness of the growing tide of unemployment and part-time employment. The time has come for immediate action to be taken to stem the tide of growing unemployment.

As we know, hundreds of thousands of workers in many industries are working less than full time. Total unemployment, with its attendant distress, has risen 50 percent in a year, and the end is not in sight. The situation will become worse before it gets better, unless remedial steps are taken.

Since the war, the CIO has continually predicted that the pricing and profit policies of industry would eventually bring about a serious economic collapse. We have warned that industry was pricing itself out of the market. Big business was determined to make the highest possible profits without regard to the public welfare. High prices and exorbitant profits have forced the American people to cut their purchases because prices were too high and incomes were too low. The result has been that demand has fallen off for millions, production is being cut back, workweek schedules are being reduced—all are producing eventual unemployment.

During the past few months many businessmen have argued that we are going through a "normal readjustment." They have argued that a pool of three or four million unemployed is "healthy." But, as the CIO has pointed out again and again, we cannot have a full-employment and a full-production economy with the present levels of unemployment. Workers cannot be put on the shelf while business goes through its so-called healthy readjustment.

Two months ago, I outlined to the President of the United States the dangers of increasing unemployment, and urged that he submit a special message to Congress dealing with the problems of unemployment and the need for taking positive action to develop and maintain a full-employment and full-production economy.

One month ago, the CIO executive board again took occasion to emphasize the seriousness of the unemployment situation. At that time, we adopted a resolution on economic policy which sets forth an antirecession economic program.

Last week, our CIO full employment committee met with the top economic advisers to the President—the Council of Economic Advisers—and urged again the necessity of immediate action.

The CIO's program would require passage of the following legislation:

1. To increase and extend the duration of unemployment compensation benefits and enlarge the coverage under a well-coordinated Federal system.

2. To increase the benefits of public assistance as well as extend such public assistance to the needy.

3. To give tax relief to the low-income individuals by increasing personal exemptions and eliminating excise taxes at least to the extent of the increases enacted during the wartime period.

4. To develop a shelf of adequate public works projects and start immediate construction in many areas which are now drastically affected by high levels of unemployment. These public works could be constructed directly through Federal grants or loans to States and localities.

5. To increase the minimum wage from its present level of 40 cents to at least $1.

6. To grant loans to new and small business.

7. To transport workers to areas where employment is more readily available.

Action must be taken on these measures if we are to handle properly the growing problem of unemployment and part-time employment.

In addition to these measures, amendments are necessary to the Employment Act of 1946 in order to strengthen the hand of the President and the Council of Economic Advisers in carrying out their responsibilities under the act—to utilize all the facilities of the Federal Government "to promote maximum production, employment, and purchasing power."

This problem of unemployment is more serious than most of our Congressmen and Senators in Washington apparently realize.

I am now directing this letter to all CIO affiliates. I ask that each of the national CIO unions, as well as city and State industrial union councils, contact their Congressmen and Senators and the President of the United States to urge action on the program which the CIO has proposed to combat this growing tide of unemployment.

Is This True?

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1949

Mr. WHITE of Idaho. Mr. Speaker, what I would like to know is, if we, the American taxpayers, are afforded any protection from the manipulation and machination of foreign profiteers by the people our Government has entrusted with distributing the money the American people in their generosity have contributed for the assistance of distressed European governments.

From time to time there comes to light reports of waste and misappropriation of public funds—loot, if you please, going into the pockets of foreign manipulators and profiteers.

If the statements made in Mr. Strickler's letter inserted herewith are true, it is time for Congress to investigate the ECA and take the necessary steps to protect the funds from misappropriation—funds we are donating by sacrificing the development of our country for relief of the people of the Marshall-plan countries.

WASHINGTON, D. C., *June 21, 1949.*

DEAR MEMBER OF CONGRESS: On June 17, 1949, Senator WHERRY, at a public hearing before the Senate Appropriations Committee on 1950 fiscal-year funds for continuation of ECA, raised a question about the use of ECA funds which this taxpayer is anxious to know more about.

The facts would appear to be that the Economic Cooperation Administration on May 16, 1949, announced that $6,000,000 of the American taxpayers' dollars would be given to the Athens-Piraeus Electricity Co., Ltd., of Athens, Greece, for the purpose of installing additional electric generating capacity. This capital equipment consists of power steam boilers, steam turbine driven electric generators, Diesel-engine driven electric generators, etc., most of which capital equipment would have an expected life of 25 to 30 years. This equipment could be acquired in England, Germany, Switzerland, United States, and possibly several other countries.

Senator WHERRY drew from Mr. Hoffman the fact that the Athens-Piraeus Electricity Co., Ltd., was 100 percent owned by Whitehall Securities, Ltd., an investment banking house of London, England. Senator WHERRY inquired further if it was true that the purchase of this equipment had been taken out of the hands of the Greek people and was being controlled by Whitehall Securities, Ltd., through another Whitehall-owned or affiliated company in New York, to the detriment of the American small-business man.

I am conducting for my own benefit (I control no votes) a poll of the United States Congress on the matter referred to above and would sincerely appreciate a direct answer to the questions below:

1. Is it your understanding that ECA is empowered to give away American dollars to a foreign-owned company (England) to be used as a capital investment ($6,000,000) in a third country (Greece)?
2. Would you support an amendment to the ECA appropriation bill that would prohibit the use of American dollars by a foreign-owned company, corporation, syndicate, combine, cartel, or individual as a capital investment in a country foreign to that foreign country?
3. Would you support an amendment to the ECA appropriation bill requiring ECA to submit all power-plant projects (including the equipment to be purchased, prices to be paid) to the Federal Power Commission for final approval and concurrence?
4. Would you support an amendment to the 1950 ECA appropriation bill establishing a small-business priority for all purchases made within the United States with ECA dollars and making it mandatory that such purchase be made on a competitive bid basis with awards going to the lowest bidder?
5. Would you support a bill, based on the gift principle of the present ECA program, to provide United States taxpayers' dollars for use of American business and investment banking companies as capital investments at home and abroad?

Yours very truly,

DEAN G. STRICKLER.

Polish Foreign Trade With West Is Rising Rapidly in Volume

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. SADOWSKI. Mr. Speaker, in yesterday's Evening Star the following article appeared, disclosing the fact that Poland is now doing twice as much trade with the western countries as she is doing with the eastern countries.

The facts disclosed in this article definitely refute the many twisted and distorted statements and the general misinformation that has been given to the Members of Congress and to congressional committees. These facts disclose that Poland is doing business with all of the nations of the world, which is as it should be. One of the essentials for peace and prosperity is trade and commerce.

It is high time that we lifted our restrictions on export-import licensing. We are still pursuing a foolish policy of embargo and restricted trade toward Poland and other eastern European countries. We are still restricting the sale and export of machine tools, precision equipment, trucks, excavators, electrical equipment, locomotives, and oil-drilling equipment. The copper mines in Michigan, Utah, and Montana are closing down because of overproduction, and still we restrict the export of copper to eastern European countries.

Because of our restricted export-licensing system, we will only export $70,000,000 worth of goods this year to all of the eastern European nations combined. We should be doing a $2,000,000,000 a year business with these nations right now. With unemployment increasing, and goods piling up, it is time to ask the question: Who is responsible for our present policy of deliberate bankruptcy for our business? Who are these powerful interests in our country who are selling out our world trade and commerce to other nterests in England, Germany, and Japan? Must we wait until we have 15,000,000 unemployed before we correct our world-trade policies?

The article from the Washington Evening Star follows:

POLISH FOREIGN TRADE WITH WEST IS RISING RAPIDLY IN VOLUME

WARSAW, July 4.—Poland's foreign trade increased nearly fourfold in the 3 years 1946–48, leaping from $273,500,000 to $1,037,600,000. And this year's target for the Ministry of Foreign Trade is a $1,300,000,000 volume—with the increase mostly in trade with the west.

Indeed, the shift away from Russia and her satellites has been the greatest single note in Poland's foreign-trade picture since 1946. That year western trade amounted to $96,500,000, as compared with $177,000,000 worth of trade with Communist nations. In 1948, eastern trade was but $360,000,000, while trade with the democracies had jumped to $677,600,000.

Nevertheless, Russia still is Poland's first customer and source of supply. Before the war Soviet-Polish interchange accounted for less than 1 percent of Poland's export and import business.

Coal is Poland's greatest single export. Last year 25,000,000 tons went abroad; the target this year is 35,000,000 tons in exchange for hard currencies and credits or in direct barter for raw materials and investment materials.

SOME EXPORTS NEW SINCE WAR

Other important exports are textiles, manufactured iron and steel mainly from rolling-mill output, zinc and, this year for the first time since the end of the war, rye, and lumber. At the same time, food sales, principally eggs, bacon, ham, and poultry, are becoming more substantial as agriculture becomes more highly developed.

Two new trade agreements were recently concluded, one with India providing for a turn-over of $14,000,000 within 12 months, the other with Pakistan calling for a total of $20,000,000 within the same period.

A first trade agreement also has been signed with Israel, to an undisclosed value believed around $10,000,000 for 1 year. Coal is the major item, with iron and steel manufactures, textiles, china and glass in return for citrus fruits, juices, and oils, dental equipment, and razor blades.

Negotiations are going forward also with Egypt, bargaining coal for cotton.

Commodity lists for the exchange between Poland and Sweden are currently under discussion in Stockholm and competent observers expect a substantial increase in mutual trade, predicting that Sweden will rank third, after the United Kingdom, with the Russian zone of Germany making a close fourth.

Discussion in Rome is to be finalized shortly at an expected total of $50,000,000 turn-over with Italy, coal for automobiles.

BIGGEST DEAL SINCE WAR

The agreement signed with Britain at the beginning of the year was the largest East-West deal since the end of the war. It was mostly a "breakfast table" matter for the British, with raw wool from the sterling area for the Poles, although many other commodities were included, some of them on the luxury lists of both countries. The total of the agreement was for $1,040,000,000 over 5

years, $160,000,000 being the quota for the first year.

The agreement with Argentina concluded late last fall was the first with any South American republic since the end of the war and the provision for 3,000,000 tons of Polish coal this year was seen as an attempt to break into a market hitherto regarded as an American and British preserve. An interesting point provided for future air-line facilities between the two countries. An agreement with Brazil is expected before the end of the year.

In Europe Poland has firm, regulated trade relations with all countries except Greece, Portugal, and Spain. Outside of Europe proper she is trading with Turkey and the Levant on an increasing scale, with British West African colonies where Polish cement is underselling the United Kingdom product, with North and South America, the Far East, and smaller deals with the rest of the world.

Trade with the United States is almost nonexistent. An American diplomat once remarked, "What has Poland got to offer which we can't produce ourselves?" Well, the answer is, of course, nothing. And yet, in 1938 as much as 6.9 percent of Polish exports went to the States and 7.8 percent of Polish imports came from there.

National Federation of Independent Business, Inc., Strongly Opposed to S. 1008

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. PATMAN. Mr. Speaker, the enclosed statement is self-explanatory:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT IN CHARGE WASHINGTON OFFICE, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE HOUSE SMALL BUSINESS COMMITTEE, JULY 5, 1949

I am George J. Burger, vice president, National Federation of Independent Business, Inc., Bond Building, Washington, D. C.. The federation is a nonprofit organization representing independent and small-business men, and professional men, from all parts of the country in all lines of endeavor. It is supported solely by membership fees secured from these independent and small-business men and professional people. It has the largest individual membership of any business organization in the Nation.

The position of the federation on all issues is determined by direct vote of the entire membership through its publication, the Mandate.

In our Mandate No. 153 we queried our membership as follows: 1. Are you for or against any manufacturer paying freight charges to local or distant markets in the United States when such practice is for the purpose of creating monopoly? 2. Are you for or against agreements between manufacturers to pay transportation charges to local or distant markets in the United States for the purpose of making industry-wide price fixing arrangements? Both of these questions have particular application to the issue of basing-point legislation now before the Congress, which you are now considering.

It is interesting, and significant, to note that in face of all the confusing publicity current over the Nation at the time this vote was taken, our independent and small business and professional membership voted 75 percent against on issue No. 1, above, and 68 percent against on issue No. 2 above. It is also interesting, and significant, to note that our membership has consistently voted in favor of enforcement of our antitrust laws, and for the strengthening of these laws, for the protection and preservation of free, competitive enterprise—and so independent and small business—in our Nation.

Frankly, we of the federation do not agree—we have never agreed—that there is any need for this bill to legalize freight absorptions and delivered pricing. As stated clearly in our testimony of December 8, 1948, before the Trade Policies Subcommittee of the Senate Interstate and Foreign Commerce Committee, we see nothing in any antitrust laws, or in any court decisions on any of the antitrust laws, that makes either of these pricing practices illegal, provided they are not used collusively or with the intent or effect of discriminating against and injuring businesses.

However, we will not not object to the passage of legislation declaring that these pricing practices are not, and have not been made, illegal, subject to the qualifications cited below, if the Congress finds itself convinced that honest confusion does exist over recent antitrust decisions in the fields of cement and steel.

We do not here criticize any persons for being confused on these matters, but we do say that very likely the confusions that do exist result from the operations of certain interests who would like to invalidate these decisions to permit a return to the monopolistic-pricing systems and practices which have been condemned. We do not ask you to take our word for this. Rather do we refer you to the remarks made on the Senate floor, May 31, by Senator WAYNE MORSE, Oregon (CONGRESSIONAL RECORD, May 31, pp. 7025–7032). It is significant to note that not one member of the United States Senate took issue with Senator MORSE on these matters. We refer you also to a statement made recently before the Senate Judiciary Committee by Mr. Otis Brubaker, of the Congress of Industrial Organizations.

We will not object to the passage of such legislation provided that:

1. It in no way infringes on and in no way impairs either the antitrust laws themselves or any court decisions reached under these laws, the effect of which has been, and is, to preserve the independent, competitive business system of our Nation and to beget simple justice and fair play in trade relations for independent and small business.

We refer here specifically to the Sherman Act, the Federal Trade Commission Act, the Clayton Act, and the Robinson-Patman Act. The integrity of these laws, and the integrity of hard-won decisions which have been reached under them, must be protected and preserved if we are to maintain freedom of opportunity in our Nation, if we are to maintain a free, democratic country.

2. It in no way beclouds the antitrust laws mentioned above and in no way confuses the Court decisions that have been reached on these laws. To pass any act that would have either, or both, of these effects would have the same practical result as passing legislation which would overturn these laws and decisions. We do not ask you to take our word for this charge. Rather, we refer you to remarks made on the Senate floor, May 31, by Senator WILLIAM LANGER, North Dakota (CONGRESSIONAL RECORD, May 31, pages 7023–24). Commenting on S. 1008 and some of the terms used therein, the Senator said:

"The antitrust statutes represent an established body of laws which the Congress framed with infinite pains in choosing exact words to convey congressional intent. Through the years of judicial interpretation, these words have come to have definite meanings which are understood by both business and the legal profession. It is like throwing sand into the gear box to force new words and phrases into this carefully developed body of law without giving a clue to their intended meanings."

In this connection we call your attention to testimony given before the trade policies subcommittee of the Senate Interstate and Foreign Commerce Committee by Federal Trade Commissioner Ewin L. Davis and former Federal Trade Commission Chairman Robert E. Freer, June 2, 1948 (study of methods of competition in commerce and impact of legislation and Government regulations on American consumers, hearing before a subcommittee of the Committee on Interstate and Foreign Commerce, U. S. Senate, 80th Cong., 2d sess., on S. Res. 241, June 2 and 4, 1948).

Replying to questioning by Senator HOMER CAPEHART, Indiana, Mr. Davis explained the former United States Attorneys General Mitchell and Daugherty had made some determined efforts to clarify antitrust laws for business so as to establish a set of exact guides. He stated that these efforts were dropped when more confusion than clarification promised to ensue (pp. 25 and 26). Mr. Freer recalled for Senator CAPEHART that former United States Attorney General Donovan had made similar efforts to clarify antitrust laws, but again the effort was dropped because the clarifications promised only additional confusion (p. 22).

We hold that Congress cannot be too cautious about tampering with the antitrust laws. We recall for you how some of our most highly placed Congressmen erred seriously in their judgments on the Reed-Bulwinkle bill. Prior to the time the Congress passed this measure, the sponsors of the bill were questioned about the effect the measure might have on certain important Justice Department antitrust suits then in process against the railroads. In testimony before this House Small Business Committee last year, Mr. Arne Wiprud (formerly United States Assistant Attorney General) said that the bill's sponsors assured questioners that the measure would not in the least affect these suits. Mr. Wiprud continued:

"Late in September of this year, counsel for the defendants (the railroads) urged upon the Federal court at Lincoln (Nebraska) * * * that the Reed-Bulwinkle Act struck at the heart of the Government's case. In his rebuttal, Government counsel read the statement of Senator REED. The court's comment was 'The court does not need to consider the comparatively nonsensical statement of Senator REED that Public Law 662 does not affect the case. That is not even entitled to respect.' And the court also observed that the Senator's statement was merely designed to get votes for the legislation."

If, because of the stated qualifications in our partial endorsement of "clarifying" legislation, we are regarded as overly cautious, we have only this to say:

We are more than worried over the trend evident in past Congresses, and to some extent in the present Congress, to give antitrust exemptions to giant industrial combinations. We refer specifically to the action of the Seventy-ninth Congress in the matter of insurance and the action of the Eightieth Congress in the matter of the railroads. In both of these cases the Congress effectively overturned existing antitrust law for the benefit of business combinations that were under antitrust attack,. In doing so, we are convinced, after study, the Congress effectively legislated against freedom of economic opportunity, and against independent and small business.

If any doubt exists about the effect of the railroad antitrust exemption legislation, we are prepared to place your committee in contact with one independent businessman who alleges that over a period of years he has been

deprived of his rights to economic opportunity by an alleged coterie of private industrialists working allegedly in collusion with various agencies of Government. This businessman has offered written evidence to us to prove his charges. He says he is prepared to disclose just how the Reed-Bulwinkle bill has further deprived him of his legitimate economic rights to compete in an open and fair market.

Gentlemen, we are shocked over the changes that have been written into present antitrust law, and the changes that have been made in some hard-won, significant, antitrust decisions by the House Judiciary Committee during its capsulated consideration of the so-called O'Mahoney basing-point bill—S. 1008. We are astounded, to put it mildly, over the speed with which the committee reversed decisions which it had taken the United States Senate almost 10 months to arrive at. We firmly believe that these changes will deprive independent and small business of certain key antitrust protections without which they cannot prosper or even have a fair chance to succeed. And we firmly believe that in acting as it has—knowingly or not—the House Judiciary Committee has not only opened the way for an overturning of our antitrust laws, but has prepared to sacrifice independent and small business, free competitive enterprise if you will, on the altar of big, monopoly business. Let us show you the reasoning behind this charge.

In the first place the committee eliminated the so-called Kefauver amendments to the O'Mahoney bill. These amendments would have sustained the rule of the United States Seventh Circuit Court of Appeals in the Detroit Standard case. Here the court ruled that "good faith" meeting of a competitor's price is not a justification for a price discrimination that cannot be sustained by proof of savings from economies in manufacture, sale, or delivery, if the price discrimination results in unfair competitive injuries to some dealers in favor of others, if it results in a substantial lessening of competition.

We call your attention to the fact that these Kefauver amendments were accepted by the Senate and by the sponsor of the present basing-point bill, Senator JOSEPH C. O'MAHONEY, Wyoming, after the need for them had been carefully explained on the Senate floor by Senators ESTES KEFAUVER, Tennessee, a former distinguished member of this House Small Business Committee, and RUSSELL B. LONG, Louisiana (CONGRESSIONAL RECORD, June 1, pp. 7064–7093). During the course of this debate, Senator O'MAHONEY (who in the beginning did not accept the reasoning of Senators KEFAUVER and LONG readily) admitted several times that these amendments were needed to preserve the seventh circuit ruling on "good faith," and so protect the rights of independent and small business to fair competitive opportunity.

In this case Standard was accused of discriminating unfairly in price between various of its dealers. What happened was that Standard had allowed a few of its dealers in the area a price much lower than that it gave its other outlets. The price to the favored few was such that the unfavored dealers declared they were prevented from competing and that they were being forced out of business. When challenged by the Federal Trade Commission, Standard declared that it had offered the price to the favored few in order to meet competition from other suppliers. It said that it had done so in "good faith." As indicated above, the Court declared this defense was inadequate for the requirements of the Clayton Act, as amended by the Robinson-Patman Act, because unfair price discrimination between the favored and the unfavored had been involved.

This decision of the Seventh Circuit Court afforded relief from unfair price discrimination to dealers in the Detroit area, relief to which they were entitled by every norm of fair play and by the terms of the Robinson-Patman Act, but which they wouldn't have received had the Court interpreted the Robinson-Patman provision of the Clayton Act as provided in the House Judiciary approved version of the O'Mahoney bill. We do not ask you to take our word on this. Rather, we refer you to remarks on the Senate floor, May 31, by Senator JOSEPH C. O'MAHONEY (CONGRESSIONAL RECORD, June 1, p. 7068), and by Senator CHARLES TOBEY, New Hampshire (CONGRESSIONAL RECORD, June 1, p. 7071). Statements by both of these gentlemen, as well as by Senators KEFAUVER, LONG, and HUBERT HUMPHREY, Minnesota, without contradiction from Senator HERBERT O'CONOR, Maryland, the floor manager of the earlier moratorium bill from which the O'Mahoney measure substituted.

Let us illustrate our point:

Let us suppose there is a supplier, A, who is dealing with the public through B, C, D, and E. B is a larger, more important outlet than either C, D, or E. This may be because he has been in business longer than his competitors, or it may be because he is a more efficient businessmen. Now, B is enjoying a better buying price than either C, D, or E. But the differential is one that is justified under the Robinson-Patman amendment to the Clayton Act due to economies effected in costs of manufacture, sale, and delivery. Let us suppose the price to B is $5, and the price to C, D, and E is $10 (the figures are used merely for illustration).

Now, along comes supplier Z looking for a place in the market. He offers B a price of $2.50. "To hold the account," A meets the $2.50 price. But since there is no competition for the business of C, D, and E, no price adjustments are made for them.

With the exceptionally favorable buying price he now enjoys, B is able to undersell C, D, and E to the point, perhaps, where they are driven out of business; they are prevented from competing with B for any share of the market.

Now, under the O'Mahoney bill as passed by the House Judiciary Committee these outlets—C, D, and E—would have no recourse to law for protection, for A could easily demonstrate that in allowing B the more favorable price he had merely been meeting competition from Z. Because of this the economic opportunity that C, D, and E supposedly enjoy under our system of life would become nothing more than an idle dream—pleasant but meaningless. And in this way competition would become self-destructive.

But those who agree with the House Judiciary Committee, and the House Judiciary report on its action on the O'Mahoney bill (defining the application of the Federal Trade Commission Act and the Clayton Act to certain pricing practices, Union Calendar No. 353, 81st Cong., 1st sess., H. Rept. 869) contend that retention of the Kefauver amendments would make effective competition impossible, at least under the circumstances cited above. Because the House Judiciary cites such eminent figures as Senator O'MAHONEY, United States Assistant Attorney General Herbert Bergson, and Federal Trade Commissioners Davis, Ayres, and Ferguson in support of its action, the situation is approached with caution.

However, we are almost forced to observe that even if the Kefauver amendments were retained, A could meet the $2.50 price offered to B by Z if at the same time he lowered his price to C, D, and E, so as to create a differential that would reflect only the economies made in costs of manufacture, sale, and delivery to B. In this way economic opportunity would not be foreclosed to any of the participants, yet competition would be met. The Robinson-Patman amendment to the Clayton Act permits such meeting of competition.

It might be argued that such a procedure as that outlined immediately above might for all practical purposes prevent A from meeting Z's offer in the case of B, that the specified conditions would be economically impossible of attainment. However, against this it could be argued that if the price finally allowed B were such that it foreclosed competition, then A would be faced with the problem of supplying the entire market served by B, C, D, and E, at the price allowed B—or, possibly, with B in a monopolistic position A would raise his price to the consumers who would have to pay or else. In any event, it is observed that if the final O'Mahoney bill is approved by the Congress in the form approved by the House Judiciary, then the C's, D's, and E's of this illustration and their customers would be placed in the position of effectively subsidizing the preferentials allowed to B by A. And the C's, D's, and E's would be placed in the position of helping B to put themselves out of business and of helping B to deprive themselves of the right to compete.

As we recall it, a somewhat similar situation was found to be present in the dealings of the Atlantic & Pacific Grocery Co., in its dealing through its subsidiary Atlantic Commission Co. In a decision rendered on a Justice Department antitrust suit brought against A. & P. in the Federal district court at Danville, Ill., Federal Judge Walter C. Lindley condemned this practice in no uncertain terms.

If a supplier can justify a price differential—a price differential that is not justifiable by economies of manufacture, sale, and delivery—on the grounds that he is meeting competition in "good faith" despite the fact that in doing so he may be discriminating most unfairly between his dealers, then the way would be opened for the justification of a whole host of unfair price discriminations with which the Robinson-Patman amendment to the Clayton Act was enacted to cope.

We wonder what would have happened in the famous Federal Trade Commission Goodyear-Sears case, where it was shown that Goodyear had given Sears a $41,000,000 preferential over its independent distributors, where the effect of this discrimination had been to injure severely Goodyear independents and independents representing all other manufacturers, had Goodyear been able to use the "good faith" defense as provided in the House Judiciary version of the O'Mahoney basing-point bill. Certainly Goodyear was at that time in an excellent position to prove that it had given these preferentials to Sears in order to meet competition for the account from another major manufacturer.

In the second place, the House Judiciary Committee changed the rule of the United States Supreme Court in the Morton Salt case. Here the Court held that it is sufficient for the Federal Trade Commission to establish a "reasonable possibility" that a price discrimination has unfairly injured competition in order to prove a violation of the Clayton Act. The House Judiciary would change this rule to one of "reasonable probability," depriving independent and small business of the benefits of the Court's decisions in future price-discrimination cases.

For full understanding of this matter, let us see just what the Court had to say on this point of "reasonable possibility." It said: "The Commission here went much further in receiving evidence than the statute requires. It heard testimony from many witnesses in various parts of the country to show that they had suffered actual financial losses on account of respondent's discriminatory prices. Experts were offered to prove the tendency of injury from such prices. The evidence covers about 2,000 pages, largely devoted to this single issue—injury to competition. It would greatly handicap effec-

tive enforcement of the act to require testimony to show that which we believe to be self-evident, namely, that there is a 'reasonable possibility' that competition may be adversely affected by a practice under which manufacturers and producers sell their goods to some customers substantially cheaper than they sell like goods to the competitors of these customers. This showing in itself is sufficient to justify our conclusion that the Commission's findings of injury to competition were adequately supported by evidence."

Let us emphasize here that the Court stated the Commission had taken upward of 2,000 pages of testimony in this case, that it had heard testimony from many witnesses in various parts of the country, that it had offered experts to prove the tendency of injury from such prices in order to prove the reasonable possibility that competition had been injured. The Court ruled that having established this reasonable possibility, the Commission had done enough to sustain its charge.

Had the Court ruled that the Commission had to establish "reasonable probability" instead of "reasonable possibility," it is entirely likely that the task confronting the Commission would have been much greater than it was. I ad this been the case, then it is entirely likely that the Commission either would have lost the case (and so failed to bring needed relief to independents) or might still be seeking the required proof for its allegations (and so still be in the position of not having remedied the conditions which were unfairly injuring independents). Certainly with the tendencies shown in past Congresses not to appropriate adequate funds for the Federal Trade Commission investigative arms this move by the House Judiciary to make the Commission's work more difficult is no less than amazing.

We will admit that there is seemingly sound argument in favor of the "reasonable probability" rule. However, in face of the every-day realities of the situation—where independent and small business needs protection today, not in the never-never land of 10 years from now—we believe that this argument does not stand up. If the function of the Federal Trade Commission is to afford relief to businessmen from unfair-price discriminations, then the Commission must be given the means to, and permitted to secure this relief where it is clearly needed. If the Federal Trade Commission is to enforce the Robinson-Patman Act, then it must be permitted to enforce it—not barred from enforcing it.

In the third place, the House Judiciary Committee has amended section 2b of the Clayton Act, as amended by the Robinson-Patman Act, to provide that so-called good-faith meeting of a competitor's price is adequate defense against Federal Trade Commission price discrimination charges notwithstanding the possible unfairly injurious effect on competition. We do not deny that in so amending the law the committee is logically following its action in eliminating the Kefauver amendments. For its consistency, the committee is to be commended. But from that standpoint of the effect its recommended changes will likely have on small business, we are far from praising the committee's action.

Let us illustrate our point: In the tire field today independent dealers are in every-day competition with one another, and with mass distributors, chains, and oil company outlets, with department stores, with rubber manufacturer owned and controlled stores (many times an independent will be in competition with a store owned and operated by his own supplier), and with manufacturers selling direct to the consumer. Conditions in the tire field are chaotic. Due to the tremendous price advantages the mass distributors, chains, oil firms, company stores, and manufacturers selling direct have over the dealers, many independents are being driven to the wall.

The Federal Trade Commission presently is trying to bring some justice and fair play into this situation. It is studying the condition with a view toward using section 2b of the Clayton Act for the elimination of the unfair price inequalities that are driving independents to the wall. Under the Clayton Act as now written and interpreted there is hope that some good will come of this action. Unless some good does come, there is strong probability that the system of independent distribution in the tire field may go by the board. If this occurs, then there is probability that some of the smaller manufacturers who depend on independents for their distribution will also go by the board. And unless some good does come of this, there is strong likelihood that there will be little economic opportunity for new little fellows in the tire field.

Now comes the Judiciary Committee with an amendment to this section 2b, providing that firms may justify price discriminations on grounds that they have been made in good faith to meet an equally low price from a competitor, notwithstanding the effect of these discriminations on competition. What is to prevent the tire manufacturers from showing the court or the Commission that the price to mass distributor A, which is causing havoc among independents, has been made and maintained to meet competition in good faith from a competitor? Would this not pull the rug out from under the Commission? And if it were to, then what could we expect to happen to tire independents?

In all this I am not forgetting that the Nation's grocers have for a long time sought action by the Federal Trade Commission under section 2b as a solution to the price discrimination problem that is, and has been, injuring them. I want it known plainly that in commenting on the proposed changes in section 2b of the Clayton Act I am concerned over the possible effects on tire men—but, at the same time, I am equally concerned over the possible effects of all independent and small-business men in all lines of effort.

And, so, present conditions in the tire field would continue. Present conditions in the retail grocery field would continue. The Federal Trade Commission would have to stand by helpless. And people who are now independents in the tire, the grocery, and other fields would, if they were fortunate, go to work selling tires, bread, and the whole host of other items, for chains, mass distributors, oil companies, and for manufacturer-owned stores. Then will come United States Supreme Court Justice Douglas' "Nation of clerks."

On the basis of these three changes in the Robinson-Patman amendment to the Clayton Act we found the charge made earlier that the House Judiciary Committee has prepared to sacrifice independent business, and our antitrust laws themselves, on the altar of big, monopoly business.

Please remember that, according to such responsible and authoritative sources as the Senator from North Dakota, Mr. WILLIAM LANGER, and the former United States Assistant Attorney General Wendel Berge, the reason why we have the business concentration, the monopoly problem—and so the independent and small-business problem—that we have in this Nation today is solely because for the past 50 years our antitrust laws have not been sincerely and adequately enforced. Are we, then, if we are sincerely interested—and is there a Congressman who will say that he is not sincerely interested—in the welfare of independent small business, the preservation and promotion of the free, competitive enterprise system, to step back gingerly when these laws are enforced and quickly move to emasculate them? Are we to cry out warnings against the Devil, and later go to bed with him?

What this country needs today is more—not less—economic opportunity. It needs more fair chance for the laboring and white-collar workers to raise themselves from the status of employees to the status of employers. It needs more fair chance for the independent and small-business people to exercise their glorious God-given skills to serve the people, and serve the people better. It needs more independent business units, competing fairly with one another, in more decentralized locations. It needs more independent, competing business—more producers, and more wholesalers, jobbers, salesmen, and delivery drivers using more shoe leather, gasoline, tires, railroad and air-line tickets, and more and better food and clothes and entertainment to consume the products of industry and keep our economic machinery functioning. It needs more independents with a stake in this great land, and with this stake a deeper spiritual appreciation of that for which our flag flies. It needs all these to solve our pressing problems, to keep our Nation safe and intact, to keep it solvent, a going, prosperous, happy bulwark of democracy and the democratic way of life under God the world over. It needs all these to keep every last citizen who wants to work at work. This is what we of the federation stand for.

Before bringing this testimony to an end I should like to call your attention to a recent study (Technology and Size, Proceedings of the American Economic Review, vol. XXXVIII, No. 2, May 1948) of our business structure, made by Mr. John Blair, of the Federal Trade Commission. In this study Mr. Blair points out clearly that advances in power, machinery, transportation, and other fields have set the stage for a decentralization from monster producing combines and units to smaller, dispersed producing units. He argues forcefully that this change could be accompanied by a switch from concentrated economic control to widespread independent ownership and control with little, if any, loss of efficiency of operation. But—he warns—this change to decentralized, independent ownership and control will never be realized fully if the monopoly controls over American business are not broken. It is interesting, and not a little bit disturbing, to observe that Mr. Blair—a man who has long been close to antitrust enforcement—is not too hopeful that we will have the needed antitrust enforcement. In view of what has happened in the House Judiciary Committee we see he is on firm ground.

Gentlemen, a vote by the Congress in favor of the O'Mahoney bill as passed by the House Judiciary will be a vote against the expansion of economic opportunity this Nation needs. It will be a vote against independent and small business, and a vote to break down our antitrust structure.

A vote for the bill as passed by the Senate (and minus any change in the reasonable possibility rule) will be a vote for the expansion of economic opportunity this Nation needs. It will be a vote for independent and small business, and for the protection of our antitrust laws to reinsert the Kefauver amendment with whatever strengthening additions are necessary. However, I wish to make clear that if the bill, if so enacted, would only serve to open up the courts for the purpose of litigating all over again the issues that have been passed on by the courts in any number of hard-won cases, then the new law would serve no purpose at all except to help big business become bigger and make monopoly the rule of the day.

The issues are clear. And only Congress can decide them.

Shall We Have Private or Public Power, or Both?

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. SHORT. Mr. Speaker, in recent years there has developed, unnecessarily, a bitter battle between public and private power interests in this country. Without doubt both sides have committed mistakes, but there is no reason why they cannot get together if they approach this highly controversial issue in a spirit of cooperation, open and fair mindedness.

It is safe to say that every Member of Congress, regardless of politics, wants more and cheaper power for his constituents. There is no difference in the objective to be reached but only in the means by which it can be achieved. This is no simple problem, but a very complex and intricate one.

In figuring the costs of power to the consumer, many factors must be considered—capital investment, cost of service, tax revenues, and return on honest investment.

Every American citizen is entitled to a fair and just return on an honest investment in a legitimate enterprise. On the other hand every American consumer of electrical power is entitled to reasonable, uninterrupted, and efficient service.

In the past, private power companies perhaps have taken only the cream and neglected the skimmed-milk sections and districts of the country. Today the proponents of public power, in their righteous indignation but overzealous enthusiasm would perhaps destroy the very system that has made our country the greatest of all nations. They would wreck long-established and time-tested methods and take away not only from the Government the revenues necessary to support it but would rob the investors, many of them widows and orphans, of the funds which they have legally and legitimately invested.

We want no monopolies, either private or public, in this country.

Mr. Speaker, I have consistently supported REA from its beginning. In the last Congress, Republican controlled, we voted $400,000,000 for rural electrification—which is $100,000,000 more than the President and his Director of the Budget requested. Having served on the Flood Control, Rivers and Harbors, Irrigation and Reclamation Committees of the House, and having been for 6 years president of the National Rivers and Harbors Congress and now chairman of its board, a Nation-wide, nonpolitical, nonprofit, patriotic organization, which is concerned with the conservation and utilization of all our land and water resources, I am naturally interested and most eager to see that all our people in every section of the country are given the most power at the lowest rate at the earliest possible moment.

Mr. Speaker, we cannot attain this worthy goal by destroying private enterprise and individual initiative. I must represent all my people, and the huge volume of mail which I have received on this subject is about equally divided in the peoples' opinion on this issue.

Never have I straddled an issue and it is now too late for me to side-step, pussyfoot or evade this issue. I shall not carry water on both shoulders but I will say from the arguments I have received from dear and loyal friends on both sides of this issue that I am forced to take a middle-of-the-road course. I believe it is possible for us to get more and cheaper power and better service to more of our citizens, but I do not believe it can be done by destroying the private power companies and turning all of this great industry over to a Federal bureaucracy.

Certainly, there is no justification for the Government to build parallel lines to deliver power to cooperatives when existing lines by private companies have contracted to deliver power at the same cost without additional Federal funds to construct those lines and without enormous loss in Government taxes.

Mr. Speaker, under leave to extend my remarks, I include the editorial which appeared in the Kansas City Star on Wednesday, June 29, 1949. In my opinion it is thoughtful, fair, well balanced, and a most serious and earnest attempt to arrive at a just solution of a very perplexing problem. It follows:

HYDROELECTRIC POWER PRIZE

For several years a public versus private power issue has been sizzling from southern Missouri to Texas. This is the territory in which power from the Government flood-control dams is under the control of the Southwest Power Administration set up by the Department of the Interior. It is an area of vast and rather far-advanced plans for production of hydroelectric power, part of it suggestive of the Tennessee Valley.

The private power companies charge a deliberate program of using public power either to wreck them or force them to sell as in the TVA. Here are the essentials of an issue as far-flung as Government plans for hydroelectric dams throughout the Nation.

In this Congress the issue has come to a head with the Power Administration's request for an appropriation to build a limited number of its own transmission lines and substations. The private power companies see a gigantic plan for the future which would put Government lines into all parts of their Southwest territory now served by private power. Against such a tax-exempt Government operation they say they could face only ruin.

From its headquarters at Tulsa the Southwest Power Administration operates on a comparatively small scale today. Only two plants, Denison, Tex., and Norfolk, Ark., are in operation and they are equipped for only half their future capacity. But six others are under construction. The big dam at Bull Shoals, Ark., near the Missouri line, has a planned power capacity greater than Denison and Norfork together. A half dozen others have been authorized.

This is a region looking to public power as a major factor in its future. It expects more power and cheaper power with a view to expanding rural electrification, developing industries, and all other benefits.

In the face of such a development a decision on a method of handling this power is vital. It not only concerns the Southwest but all the rest of the country where hydroelectric plants are to become part of flood-control dams. Is the lure of cheap public power to be used to undermine private operations and turn the whole country to public power? Or, can a way be found to combine the advantages of cheap hydroelectric power with the vast resources of private companies in steam plants and skilled management?

The answer may come out of this fight in the Southwest. It could and it should produce a pattern for cooperative public and private development.

The private power business of the area sees a gun at its temple and believes it has gone a long way toward a compromise arrangement. Last year the major companies got together to work on a contract by which they would market public power to the rural electrification cooperatives and municipal light plants. The rates were to be low, about what the same kind of consumers pay the TVA. But the companies wanted to handle the business. Last December the contract was turned down.

The Southwest Power Administration went to Congress for the appropriation to start on its own power lines. When the House acted favorably the private companies gathered in prayer and made what they considered a capitulation. They offered to carry the power administration's product on their lines and permit the Government agency to sell directly to existing rural electrification cooperatives and municipally owned plants. They woud not be paid directly for transmitting the Government power.

This offer came so late that there has been no opportunity for the administration and companies to get together on specific parts of the plan. But it is in the direction of the kind of contract the Government has wanted in the past.

Douglas G. Wright, Administrator of the Southwest Power Administration, has told the Star his bid for lines does not contemplate putting the private power companies out of business. He says the public power in the area will never be more than 20 percent of the total power consumed. A working arrangement with the companies would be fine, but he is not convinced that the present effort has more than propaganda value for the Senate committee. And even if it is a firm offer he sees many points of remaining differences. In the meantime the Administration wants authority to build some of its own lines.

For all the mutual suspicions this is plainly a case in which the two sides should be able to get together. They are near enough together to suggest real hope of agreement. Here is a chance for a model working arrangement which might set a national pattern. Hydroelectric power has its greatest value when utilized in conjunction with the steady supply of power from steam plants which are owned by private companies. Cooperation can give the customers what they want, a big supply of low-cost power.

Congress should be able to save the taxpayers' money in this case: Tell the two sides to go home and get together on a contract.

The American Red Cross

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. SHORT. Mr. Speaker, on Wednesday, June 29, 1949, the Honorable Louis Johnson, Secretary of National Defense, delivered a most inspiring address before the annual convention of the American Red Cross in Atlantic City, N. J.

Under leave to extend my remarks, I include this glowing and well-earned tribute to a great American institution by

a great American who fully realizes its need in both peace and war:

The American Red Cross stands out as a symbol of all humanity and serves as an instrument of international good will. Like human mercy and human pain, the Red Cross knows no barrier lines. It is a living human spirit that goes out to all men and women. It sets an example of conduct for all walks of life. If the great quarrelsome family of world nations could get together in their politics and their diplomacy as they do beneath the banner of the Red Cross, we could be confident that there would be no more wars.

The Red Cross has endeared itself to the hearts of the American people—to those in the service and to those on the home front as well. We all remember the magnificent job it did during the war—a job that stands out vividly in our memory, even now, almost 4 years after VJ-day.

Of all the services of the Red Cross during the war—and they are far too many to mention in one speech—the one that perhaps best dramatizes the Red Cross effort and most effectively demonstrates its superb organization is its humanitarian work on the blood line of the American all-out effort for victory. It was the Red Cross that was responsible for the more than 13,000,000 pints of good red American blood that the people of America sent to save the lives of our soldiers, sailors, and marines on the World War II battle places throughout the globe.

I well remember those grim days of sudden emergency after the terrible final drive of Hitler's army known as the Battle of the Bulge. The need for plasma was urgent and vital. The air force was brought into action, loading the big C-54 transports with whole blood gathered by the Red Cross. Quickly they flew their precious cargo to field hospitals in Liege, Antwerp, Namur, and other towns in northern France and Belgium. So effectively had the Red Cross done its sacred work of human mercy that often it was only a matter of a few hours between the time a Red Cross worker had rolled up the sleeve of a donor here in the United States and the moment when that same blood was being injected into the veins of a wounded American boy in a tent hospital in Europe, who without it might have died.

It was the same story on the high seas. When the German and Japanese shells and bombs shattered bone and flesh aboard our Navy battleships and carriers, it was here again that the blood gathered by the Red Cross saved American lives. And similar stories abound of the saving of many thousands of lives among our air force pilots and crewmen. The American people gladly gave their blood for the men and women in the services and it was your organized facilities that made possible its collection and storage against the hour of need. This is but one instance of what the American people owe to your great organization.

Today your work is done in time of peace. As the representative of our American Military Establishment, I am here to tell you that your Red Cross task is needed no less today—and is in its essence no less dramatic—than was the gathering of life blood during war for our heroes on the field of battle.

On the dramatic side, there have—since VJ-day—been two separate and major jobs of wartime caliber which demanded the all-out support of the American Red Cross—the Berlin airlift and the return of Americans from China.

In connection with the Berlin airlift, you met an emergency fully as compelling as war itself. In the emergency withdrawal of American troops and their families from China last fall, you of the Red Cross were confronted in your services with nearly all of the aspects of a military campaign except those pertaining to casualties.

When we set up the Berlin airlift, we had to get going in a hurry. As we moved, we noted with great satisfaction how your field directors, with their communications and recreation facilities, kept coming right along with us. We pulled in our men from all over the world, and we did not give them much notice. Many families were separated. Ties were broken suddenly. Wives and parents and children lost track of men whose pay checks meant their bread and butter and rent. Expectant mothers were stranded. Husbands were gravely concerned.

Commercial communications facilities had no practical means for keeping pace with the fast moving situation. It was then that you of the Red Cross stepped in and did a job. You relaxed your regular policy of utilizing only commercial facilities for transmittal of funds. You handled money transfers yourselves. Many destitute dependents, in that way, received funds for subsistence, hospital expenses, transportation costs—funds desperately needed, which would have been unobtainable but for the Red Cross. In some cases, the money transferred was handed to the Red Cross by a man in uniform. In others it was a loan. In still others, it constituted a grant of Red Cross funds. But no matter how the money got to the Red Cross, time was never lost in dispatching it to the desired destination and getting it delivered.

And this was just the beginning. As the airlift continued, problems mounted and grew in size. Men away from home needed recreation facilities badly. The Red Cross provided them. American Red Cross-trained physical instructors conducted classes in swimming and life-saving. Athletic activities were promoted. When winter came along, volunteer Red Cross chapter workers in the United States knitted woolen sweaters and shipped them over to the troops. These were but a few of the many services performed by the Red Cross for our men serving their country in a trying situation in a foreign land.

A similar major emergency service was contributed by the Red Cross following the decision last November to return servicemen, their dependents, and some civilian workers from China. Again, the Red Cross met a crisis effectively and magnificently. There, in China, Red Cross overseas field men checked in with military commanders, extended assistance needed in the way of messages-to-families, financial aid, advice—in fact, rendered every conceivable kind of help in the circumstances brought on by this critical situation. Then, back in San Francisco and Seattle, your field directors set up units to aid in processing the returning servicemen. Families were assured of the safety of their men in the services. Anxious relatives who had begun assembling at the United States debarkation centers were given comfort and confidence. Nurses aides were supplied by local Red Cross chapters to care for children during the debarkation process. When processing on one Navy ship was delayed unavoidably, with no eating facilities, the Red Cross canteen service quickly went into action. Coffee and doughnuts were wheeled right onto the pier.

I like these stories of Red Cross help to soldiers. They are warm stories, touched with human kindness and neighborly help. There was, for instance, the episode of the sergeant who went to the Red Cross itinerant station field director with a poignant request: At 10 a. m., he inquired how he could obtain a wheel chair for his 11-year-old paralytic son. Before the afternoon was over the boy had his wheel chair. The Red Cross field director got a wonderful sense of inner satisfaction in doing that job of getting that wheel chair forthwith for that American soldier's son.

Sometimes the tasks are not so pleasant. Not so long ago, the wife of a junior officer in Vienna traveled across the United States, by boat to Bremerhaven, and by train to Austria, to join her husband. The eager young officer was killed driving to meet his wife at the station. Red Cross officers found the wife practically without funds; loaned her money for the return trip and helped arrange for shipment of the officer's body back to the United States. But whatever the job, pleasant or grim, it's all part of the day's responsibility for the Red Cross representative and is done with a keen sense of duty.

Many of you Red Cross workers know such stories far better than I do. You did the job. But the important thing today is to recognize that we can't relax, that this vital work must go on—and does go on. Thus right now, Red Cross volunteer aid stands ready to help more than 600,000 servicemen, many of them stationed with their families in foreign lands across all the oceans. It stands ready with the kind of help that only the Red Cross can offer. These servicemen are overseas because our national policy demands the presence of our troops in certain foreign critical areas. These men must be well trained and well disciplined and their morale must be maintained at the highest level.

We here at home can permit no spirit of complacency or indifference toward them to set in. Unresolved personal problems of either the sick man in the hospital or the able man in uniform would mean lowered morale, less efficiency, and would affect adversely that spirit of readiness to face any crisis that is essential in any military body. A big part of Red Cross work—perhaps its most important function in peacetime, so far as our servicemen are concerned—is the maintenance of the fighting man's buoyant spirit.

The National Military Establishment is the product of the American people: and the Red Cross stands and functions as a living link between the man in the service, wherever he is stationed, and the mothers and fathers and wives and children back home who have given him to the service. Both the men in uniform and the people back home have come to expect certain things from the Red Cross.

When a train of troops headed for foreign duty unloads at the embarkation port, the men expect American Red Cross girls to be there waiting for them, ready with the warm cheer and nourishment of coffee and doughnuts. And they expect this same happy sight to greet them when they step off the boat in a foreign country.

Some of these same men hit the beaches in Normandy and the Japanese infested Pacific atolls during World War II and became devoted to the Red Cross when they saw the work of the Red Cross men and women, helping at all points with first aid, with nourishment, and providing strong, broad shoulders for bearing the servicemen's troubles. Our men in service need the same Red Cross aid and the same broad shoulders now.

When Congress adopted legislation creating the Red Cross in 1905, this organization was formally assigned as a medium of communications between the people of the United States and their armed forces. Regulations of all branches of the military service recognize the role of the Red Cross.

We of the National Military Establishment need the work of the Red Cross, as we need a good right arm. We recognize in our military plans the place for the Red Cross. The location of the Red Cross hut may not on the surface seem as vital to victory as the placement of an artillery battery, but it is an important factor which cannot be overlooked.

The Commander in Chief, the President of the United States, and we of the National Military Establishment, want your Red Cross

president, and your board of governors to continue to work with us in planning the welfare of our armed forces.

We want your hundreds of field directors in the 3,700 Red Cross chapters of the United States to keep on with their level-headed personnel work; with their assistance in communications. We value your reports. We appreciate the wide range of services reflected in 700,000 cases affecting military and naval personnel that you acted upon last year. Our men in uniform have come to rely on the friendly helping hand always extended by the Red Cross: the emergency loan, the messages-to-family, the intercession for emergency leaves, the kindly and thoughtful advice always ready for the asking.

These are the things we want from you in peace—the hundred and one services which contribute so greatly to the human and social welfare of our men and their families. And I hope and pray with you that the Red Cross will always be serving in time of peace. But should war come, we of the military will again want from the Red Cross not only these service, but also those which were performed so ably in the last war—such as medical aid, help to prisoners of war, morale work, and the maintenance of a warm and understanding link between troops in the field and the folks back home.

The Red Cross is a nonmilitary, civilian, voluntary organization, supported by individual voluntary funds. Its employed personnel is paid by these funds. It is organized to go anywhere in the world in case of disaster to the aid of suffering mortals, with medicine, surgery, food, clothing—with everything needed.

The Red Cross is the heart of America—generous, sympathetic, and understanding. More than the brains that give us our industrial and economic supremacy, more than the brawn that gives us our strength, in war and peace, on land and sea and in the air, it is our heart touching the affections of all of our people, in every section of the community.

And it is this great American heart expressed through deeds such as those of the Red Cross that has won for us the friendship of people everywhere and that understanding of the ideals of America upon which the peace of the world ultimately rests.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 5, 1949

Mr. LEMKE. Mr. Speaker, among my remarks I include part 3 and part 4 of the Valley of the Dammed by Bigelow Neal. In these articles Mr. Neal describes the actions of the Army Engineer Corps in connection with the Garrison Dam in North Dakota.

Until I had some experience with the Federal Government in the taking of private property for public use, I had been of the firm conviction that the Government would observe the constitutional mandate that private property shall not be taken for public use without just compensation.

However, I soon learned that the Government, and especially the real estate division of the Army Engineers Corps, did not understand what was meant by just compensation. In place of decency and justice, I discovered that they used the bulldozing and threat methods.

Until I had some experience with the real estate division of the Army Engineer Corps, I felt that the Government would be as fair and honest with its people as it expected them to be with it. Up to that time, I thought the constitutional provision "just compensation" protected the home owners, but to my amazement, I discovered that that was not the case. I discovered that the Government is out to take and take by threats and by using its great power in the courts if necessary.

Below are part 3 and part 4 of the articles by Bigelow Neal entitled "Valley of the Dammed":

VALLEY OF THE DAMMED

(By Bigelow Neal)

PART III

Some part of the tragedy which has come to the people of the Missouri Valley is due to lack of information concerning the agencies with whom they are forced to deal. For that reason, even though it is a bit dry and academic, I had intended to start out with the Army Engineer Corps, the real estate division of the Army Engineer Corps, the Department of Justice, and the United States district court—somewhat in that order.

But an interruption of my own narrative seems imperative, and I am going to talk about these negotiators in a way that I shall elaborate later on.

The "negotiator" appears

When the "negotiator" first came to see me, I judged there had been a death in his family. Apparently he was very sad. It had even affected his viewpoint, for he looked on the scene about us with a jaundiced eye. The trees were not green enough, the grass was not tall enough, and even the hills seemed guilty of immodesty, because there were places where bare clay showed through their overalls.

He was depressed, too. He saw no future for the country and all he could think about were things like crop failures in the past and more to come. Honestly, he nearly had me blubbering, too.

And then when both of us were pretty well down in the dumps, he made me an offer for my home. I shook my head, evidently in the wrong way, for his sadness became even more acute.

A week later he was back again. When he drove into the yard, I knew that the loss of one loved one couldn't explain his state of mind. Nothing less than half of his family dead could justify his depression. He made me another offer. Again I shook my head. Again he drove away.

Upon his third appearance he began to excite a trace of genuine sympathy in me. By that time I was sure has family had been wiped out. But I shook my head yet again.

Another week and another visit from the apostle of gloom. He had a fourth offer and it met the identical reception I had accorded its three sisters. I suggested then that we quit talking business altogether. Why should both of us continue to suffer when we progressed nowhere but in the wrong direction? Finally he agreed and admitted that he was fond of cherry pie and had a special weakness for fried bullheads and mashed potatoes.

Thus we reached the end of our business relationship and it had a remarkable effect on him. He seemed to forget the loss of his family and developed a remarkable appetite, With that came a general building up of his health and finally his tail feathers began to flutter like a meadow lark on a fence post and he burst into song. Queer that a man could recover so soon from such a terrible loss but when I say he burst into song, I mean every word of it. Somewhat abetted by another "Negotiator" who had been a band leader in happier days and reinforced by the voices of my children, he would sit in the middle of my living room, wave his hands in the air and sing until the roosters took over where he left off. And so divested of his professional atmosphere, we became exceedingly fond of his better part.

Meanwhile, true to his duty, he had handed my case over to the Department of Justice. And all that followed for many months was nothing at all.

An "invitation" to court

Finally a deputy United States marshal drove into my yard, got out of his car and began to tug at a summons. It seemed that the United States District Court wanted me to pay it a visit and the court had sent the marshal out to see that the invitation was delivered. The trouble was that the invitation (or summons, if you want to be rude about it) was so long and so wide it would come through the car door only when stood on edge. One look at that document and I thought Sears, Roebuck, Montgomery Ward, Spiegel, and Webster's unabridged dictionary had gone into partnership. I never saw so many words traveling together in all my life.

I tried to read it. I got in two or three paragraphs and stuck. Glancing over the headlines, I judged the rest of it to be as Huckleberry Finn once said, "Interesting but tough." To claim to have read it would be equal to Gene Tunney's claim that he had read Gibbon's Decline and Fall of the Roman Empire.

The serial number I sent to my attorney, together with the date of the service. I knew that my attorney had 15 days in which to answer it. He filed his answer with the United States district court and I was proud to find that I had a man on my side who could say just as much meaning just as little as anything the United States marshal could haul in here with a truck.

So after another period of some 8 months, we all got together in United States district court. Much more of this later but right here I want to make a point. Every time I shook my head at that funeral-director negotiator, I made a thousand dollars in cold cash. And in addition to that, the jury decided I had $500 coming, maybe, for the bullheads. Four thousand five hundred dollars for refusing to believe that my home was as worthless as the negotiator would have me believe. And my nearest neighbor made $9,000 without investing even a piece of pie or a squashed potato.

Please don't mistake the foregoing for humor. It isn't even funny. In every line of it, there's pure tragedy.

Now, we've been up long enough for a breath of fresh air, we'll dive again to introduce some of the characters and institutions with whom the landowners along the Missouri must deal.

The Army Engineer Corps

I find there is much misunderstanding about the Army engineers. It will be helpful, I believe, for some of my readers to know more about them. Not long ago I promised Colonel Seybold, commanding officer of the Garrison district that, when I came to write about it, I would devote a little space to clearing up a part of this misunderstanding.

Because the engineers have been blamed for everything that went wrong among us, let's see what an engineer is and, to that end, we might as well use this same Col. John S. Seybold as an example.

Many years ago Colonel Seybold wanted to be a soldier. He got an appointment to West Point. And the fact that he graduated tells us that he is an able man. Only the finest and strongest of American youth have what

it takes to graduate from that institution. It shares with the Naval Academy the honor of offering the longest, hardest, toughest course offered by any school in the United States or anywhere else.

It so happens that among its graduates those men—maybe 25 or so in number out of probably 700 men in the class who attain the highest scholarship of all—may, if they wish, enter the Army Engineer Corps. And then they have literally jumped out of the frying pan into the fire, because they are sent to another Army school to specialize in engineering problems, where only the cream of the crop ever makes a passing grade. Colonel Seybold did all of these things and so the standard by which we measure both his physical endurance and his mental ability is the highest of any scale we know.

At West Point they teach other things: If a man has any false pride or prudishness, they literally kick it out of him. No matter how high his opinion of himself in the beginning, he soon comes to realize that he is made only of common clay.

They teach a man that there is no more sacred thing than a soldier's word. To these professional soldiers of ours honor comes ahead of all else. And lastly, but not least by any means, they teach that a real soldier is a gentleman and that mercy is a quality that he must never lay aside.

Knowing the above, we have a right to deduce that Colonel Seybold, like all other engineers of the Army school, is an able man, an honorable man, a just man, and a merciful man. If he isn't, it follows that he is an exception to the rule.

In view of the above you will ask, "How could a whole community be turned into a graveyard of crushed hopes and a monument to disappointment and human misery when the program was directed by this same Colonel Seybold?"

There are several answers. Or rather, there are several partial answers, which, taken together, make the whole:

First, Colonel Seybold has a job far too big for any one man.

Second, his knowledge of North Dakota real estate is extremely limited.

Third, owing to the fact that he commands a rather unruly crew, he often doesn't know what is taking place on the lower decks of his own ship.

Fourth, he often has, and sometimes does, make the mistake of believing the wrong man.

Fifth, he came to his position taught to believe that every man who must sacrifice his home to the building of this dam, was a chiseler of the first water, that nothing they would say, in court or out, would be true and that his citizenship or patriotism never could rise to equal his sense of personal loss.

Sixth, like a first sergeant in the Army, Colonel Seybold must carry out every order that comes to him from above, receiving none of the credit and all of the blame.

PART IV

Because many landowners have alleged that they signed away their homes through fear of the Department of Justice and because the greatest fears we meet in life are fears of things we do not understand, it seems worth while to define that Department and tell something of its powers and functions as they apply to land condemnation under the Act of Eminent Domain. This, of course, is for those among us who are not too well posted on American judicial systems.

The Department of Justice

In our cities we have a man we call the city attorney. His business, primarily, is to conduct the city's legal business and to prosecute violation of city ordinances.

In each county we have a county attorney or State's attorney, as we usually call him, who handles the county's legal business and prosecutes violations of State laws.

At Bismarck we have an official we call the attorney general who is to the State exactly what the city attorney is to the city and the county attorney is to the county.

Because we vote for these men, and frequently know them well, none of us who has a clean conscience fears them in any way.

Now in Washington we have a man who conducts the legal affairs of the Government and prosecutes violations of laws that are national in scope. He is a Cabinet member, appointed by the President of the United States, and we call him the Attorney General of the United States.

Conducting a tremendous amount of business the Attorney General of the United States must have a lot of help and somehow, sometime in the forgotten past, his Department adopted a rather high-sounding name for itself—the Department of Justice.

But after all is said and done, the Department of Justice is nothing more or less than a group of good solid citizens like the rest of us. It is human all the way through and while it must enforce the laws of the United States, its intent is to operate without any cruelty at all and with a considerable degree of sympathy as well. As I said a moment ago, if you have a clean conscience, you have no more to fear of the Department of Justice than you have to fear of your State's attorney at your county seat, or the city attorney in your home town.

If you refuse to sell your home at the bidding of a negotiator, all he can do is to certify your case to the Department of Justice. That Department will then start condemnation proceedings against your land. After many months of delay, the title to your land will pass from you to the Government in spite of all you can do but—no matter what you may have been told—the Department of Justice is not engaged in a business of kicking families into the snowdrifts and it is not going to avenge itself upon you merely because you have taken advantage of the right given you by Congress, to have your case arbitrated by the United States district court.

The United States district court

Just as we have courts of our own to handle State business, the Federal Government has a court system to handle business in which it is interested. These are known as United States District Courts. Some States of large population have several United States District Courts but because fewer people live in our State, North Dakota has been made into a district by itself and we have one United States District Court with jurisdiction over the entire State. For its own convenience and for the convenience of you and me, our court has divided the State into districts and sometimes it holds terms of Court in Fargo, sometimes in Bismarck and sometimes in Minot.

The judge of the United States District Court, in our case, Judge Charles Vogel, is appointed by the President of the United States and confirmed by the United States Senate. Once in office, he holds that position for life. He cannot be removed, unless he is guilty of great wrong himself. In short he becomes one of the most powerful men in the United States because no President, no Congress, no branch of our Government and no man or men can tell him what to do. Needless so say the Department of Justice has no authority over him whatever.

Some of my neighbors went into court, with their land cases, somewhat misinformed. They thought that the judge of that court represented the Government and so the Department of Justice and the real estate division of the Army Engineer Corps, only to learn that he represented nobody but himself and nothing but justice and courtesy and mercy. In other words, he represented the finest part of this thing which we call America. Not only was there nothing to be afraid of but they were actually under his protection every minute they were in his court room.

The United States district attorney

Attached to each United States district court is a United States district attorney. He is the man who actually does represent the Government, in these cases, the Department of Justice. But as a man to be afraid of, he's not much of a success either. Our own district attorney, Mr. P. L. Lanier, is a North Dakota man just like the rest of us. If you tell the truth when you go on the stand and then stick to it, there's very little he can do about it. I understand he is fair and not at all abusive.

In these last cases, apparently somebody wasn't satisfied with the work of Mr. Lanier. The juries had been giving too much money to my neighbors, so the Department of Justice imported a high-pressure attorney from Minnesota, a Mr. Gus Landrum from Detroit Lakes. I imagine Mr. Landrum made a lot of friends among us. He certainly made one of me. But as far as the jury was concerned, he evidently came in too highly publicized. A newspaper story to the effect that he came with more than 20 years of experience in land condemnation suits and had been highly successful, probably, acted like telling your listeners you're going to tell them the funniest story they ever heard. Immediately you've got to prove it to a prejudiced audience. Having done exactly no better and no worse than Mr. Lanier, he retired to go fishing in his own lake. And the only thing I'm peeved about is that he forgot to invite me to go with him.

The United States marshal

This gentleman is what you might call the sheriff of the United States District Court. As a means of scaring people his title is good but his personality is not so successful. In our case he's Deputy United States Marshal Thomas O'Leary, who can arrest you for selling whisky to the Indians but actually does nothing but drive around distributing these summonses. He's nothing more dangerous than a warm-hearted Irishman. He came to my place last spring. After leaving me loaded down with papers, he said he had a long way to go before dark. I voiced the wish that he get stuck before he had gone a mile. He made the first mile all right but the second landed him in a mud hole, tore the whole transmission out of his car and one of my irate neighbors charged him $8 for pulling him to town. That's one way of getting a share of prosperity out of the dam.

Your conduct in court

There are two people in the courtroom to whom you may go when you are puzzled and can't find your own attorney. One of them is a lady with two personalities. In the courtroom, sitting just below the judge and administering oaths, she is a bit solemn and not the type you would think of first in hunting up a partner for a basket social. But this same lady—Beatrice McMichael—is another person in her office. There she is very friendly and sympathetic and helpful. While it is not good form for you to try for a private talk with the judge when your case is before his court, there is no reason why you can't talk with Beatrice McMichael, the clerk of court. And if she takes you to the judge, well, that's not your fault.

The bailiff

There's another man in the courtroom, a Mr. Page. He also is troubled with a rather stern countenance, but, like beauty, it's only skin deep. While he has authority to throw you out on your ear or even put you in jail if you become disorderly, his principal business, as he told me, was "making people comfortable." I have a strong suspicion that he would do most any favor asked of him.

Lastly there are guards at each door. Once, as I entered the courtroom, I felt a firm

grip on my wrist and a voice something like this, "Sorry sir, but I'll have to take that cigarette."

It made me sorry for him. So I pulled a package out of my vest pocket. "Here," I said, "take a new one, that's pretty well smoked up." The way things turned out, he had the cigarette and I went on into the courtroom with nothing but a pair of red ears. But I'll know better next time.

Next week, I'll introduce the real heroes of my story, the Real Estate Division of the United States Army Engineer Corps, and I shall tell you how the cold grip of a policy shut down on the valley of the Missouri.

Fourth of July Thought—Tories of Every Age in American History Afraid of Too Much Democracy

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Thomas L. Stokes that appeared in the Washington Star of July 4:

FOURTH OF JULY THOUGHT—TORIES OF EVERY AGE IN AMERICAN HISTORY AFRAID OF TOO MUCH DEMOCRACY

(By Thomas L. Stokes)

Perhaps a subject worthy of a bit of contemplation today is the present status of civil liberties that we acquire along with our freedom as an independent Nation.

The battle to preserve them gets mixed up today, as it has all through our history, with the battle of the forces of economic privilege against real democracy. The former—Tories they called them in 1776—recurrently build up scarecrows, when their special privileges are threatened, to try to frighten officials against passing laws in the interest of the public and to stop too much free talk and free thinking, which means, of course, our civil liberties.

The Tories of that other age were afraid of too much democracy. So are the Tories of today.

SOON HAD SUCCESSORS

The most influential Tories of the Revolutionary era fled the country. But they soon had their successors who, in the early days of our struggling democracy, got terribly wrought up by the French Revolution and, in 1790 in the John Adam's administration, got the Alien and Sedition laws on the books to protect our folks against infiltration of French ideas and threw into jail editors and others who spoke out.

We survived that.

After the First World War there was another foreign idea ready for exploitation—the Russian revolution and communism. And, sure enough, the Tories of that day moved in, according to schedule, waving before them the fiendish figure of the Bolshevik, with his whiskers and the sizzling bomb in his claw fingers. There were the Red raids of the early postwar period ordered by a panicky Attorney General. Also, there was the Ku Klux Klan, which spread from the South eventually into national politics.

We survived that, too.

The Second World War brought another repeat performance—more communism scares, more Ku Klux Klan. The hooded order seems localized in the South thus far, and decent people and officials seem aroused to squelch it there before it spreads.

But the communism fright is much worse this time than before. Then the vigilante forces were open, noisy, blatant, and rough. This is more insidious, like a paralysis creeping into men's minds, and the alien and sedition laws are moving forward in Congress, potent enough to restrict our liberties and invade our private lives.

PEOPLE'S INSTINCT SURE

When the 1946 congressional elections came around the Tories whipped up communism into a frenzied issue to win the election and thus assure the end of reform threats. President Truman lost the election. That seemed a sure sign that he would lose the White House in 1948. The people refused to swallow the scare stories in the 1948 campaign. Their instinct was sure, as always in the final test.

Inauguration of the Fair Deal with his second term aroused the President's enemies to another frenzy. We are in the midst of that, with the ghastly circus whirling to a climax in a proposed investigation of textbooks by the Un-American Activities Committee, which comes dangerously close to the nazism that we fought only so recently.

This is a good day to reassert ourselves for our basic freedoms.

Need Federal Aid To Maintain Proper Educational Standards

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Brooklyn Eagle of July 2, 1949:

NEED FEDERAL AID TO MAINTAIN PROPER EDUCATIONAL STANDARDS

Whether Congress can rescue the bill to lend Federal assistance to the common schools of the country from the cross currents of violent controversy in which it has become involved seems doubtful. Failure to do so will mean the defeat of a purpose which is vital to the educational interests of the Nation. Developments in this issue have taken an unfortunate turn. The conflict over this bill is now marked by heavy overtones of religious differences, creating a condition which does not lend itself to understanding and adjustment.

There is no basis for dispute as to the need of financial aid to local school districts if adequate educational standards are to be maintained on a Nation-wide basis. In some States, principally in the South, illiteracy is prevalent to a shocking degree, due to lack of sufficient schools, poorly trained teachers and to general inability to meet the costs of modern education. This extreme condition does not exist in all States or even in most of them. But education is nevertheless a heavy burden even for those States in a relatively strong position.

A heavy blow has been delivered to pending legislation by the opposition of former President Hoover, General Eisenhower, as president of Columbia University, and President Stassen, of Pennsylvania. They would restrict Federal assistance to those States whose financial need has been clearly established and would withhold help from others.

This opposition, which comes from respected leaders in national life, weakens the position of the legislation substantially.

Maintenance of acceptable standards of education throughout the Nation is a cause in which President Truman has shown a deep and sincere interest. These standards have been deteriorating and the process can be stopped only with Federal aid. The snarl in which this legislation has been caught is both unpleasant and difficult and it is urgently important that the President intervene to the best of his ability in an effort to clear the way for passage of a fair bill which is not marred by the element of discrimination.

Address by Assistant Secretary of the Interior at St. Croix National Monument

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "A Talisman of International Accord," delivered by Assistant Secretary of the Interior C. Girard Davidson at the St. Croix National Monument, St. Croix Island, Maine, on July 2, 1949. This island, where the great French explorer Champlain spent the winter of 1604, was accepted on July 2 as a symbol of international accord.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A TALISMAN OF INTERNATIONAL ACCORD

St. Croix Island, on which we stand, has been called approximately "a talisman of international accord."

It is entirely fitting that representatives of the governments of France, Canada, and the United States should join here today in commemoration of this historic site. On this island more than 300 years ago pioneers from the Old World established the first French settlement in the New World. From here, the intrepid explorer Samuel de Champlain set out on his voyages of discovery, on one of which he founded Quebec, the capital of New France, in what is now Canada. From here, the French settlers spread out to Acadia, through New England, and even to my own birthplace far south in Louisiana, exerting their influence on the history and culture of the United States.

Appropriately, this island almost straddles the junction of Canada and the United States, a joining which from this point continues 3,000 miles westward to the Pacific Ocean. This junction of two great nations is usually referred to as the greatest undefended frontier in the world, becaues neither guns nor soldiers are stationed on either side along its great length.

I prefer to think of it as a jointly defended frontier. To me, it is tangible evidence of the union of our two nations in defense of human freedom—a philosophy for which we are much indebted to the freedom-loving people of France—and in defense of the use of the immense natural wealth of this land mass for the well-being and enjoyment of all our peoples.

Today Canada and the United States have further concrete evidence of our determination to open up for the use of all our citizens the natural resources of the country. Today we are welcoming St. Croix Island National Monument—a small but significant natural resource—into our national park system which is dedicated to enjoyment of nature and to understanding of our historic traditions. The preservation of national historic sites such as this for the edification and enjoyment of the people is an important use of natural resources.

St. Croix will become the focal point from which to relate the story of French colonization in North America. As such, it takes its rightful place in the national park system, alongside Fort Raleigh and Jamestown, the early English colonies, and St. Augustine's Castillo de San Marcos, the site of the first Spanish settlement.

I pay tribute to our neighbor, Canada, which has shown us the way in this instance. Some years ago the Canadian Government took steps to erect a memorial at Port Royal, Nova Scotia, to which the St. Croix settlers removed after the first insufferable winter.

Along this jointly defended frontier, Canada and the United States have joined in many projects designed to conserve and develop the natural resources—unified in nature, undivided by the imaginary line of the mapmakers.

Only recently parallel steps have been taken by both Canada and the United States to restudy under joint auspices the possibilities for further work on the gigantic power project in Passamaquoddy Bay right here in your front yard. All of you, of course, are familiar with the tremendous potentialities for industrial growth and new employment which this man-made miracle could realize for this region if it were brought to pass. Senators BREWSTER and SMITH and others in the congressional delegation from this State have joined in obtaining appropriations for this new study.

Joint plans have been developed for harnessing the magnificent St. Lawrence River for both navigation and power. Along it, from the new iron-ore deposits of Labrador to the steel plants on the Lower Lakes, someday may ply the freighters which now bring the ore from the expiring fields in upper Minnesota. From it, eastern Canada, New York, and much of New England may derive the low-cost hydroelectric power which will turn the wheels for new industries bringing more goods and needed employment to the region.

At the western end of this jointly defended frontier, another mighty river, the Columbia, awaits fuller development by both nations so that water and electric power will be supplied cheaply to industry and agriculture, and they in turn will be better able to provide jobs and food for a growing population.

Carrying out these gigantic plans to control the rivers and other resources for the good of man requires and will require long years of effort by a host of determined technicians, statesmen, and citizens. Securing even this tiny natural resource as a historical heritage for posterity required years of effort.

The area to be included in the St. Croix Island National Monument has been dear to the heart of Senator BREWSTER. For many years he worked assiduously for its inclusion in the National Park System and this year Congress passed the bill for that purpose which he introduced in the Senate. I extend to him hearty congratulations on his achievement. Congressman FELLOWS also is due our gratitude for introducing into the House of Representatives and securing the passage by that great body of a companion bill to that of Senator BREWSTER.

Our thanks are gratefully given likewise to such men as Barrett Parker, for whom today's celebration is a triumphant climax to years of campaigning; and Newton B. Parker and Charles E. Barnard, who offered to donate their property to the national monument. It is through such unselfish devotion and generosity that many of our national monuments have been created.

In this, its centennial year, the Department of the Interior is proud to accept the St. Croix Island National Monument into the National Park System. For the Department, this acceptance means shouldering the responsibility for developing and maintaining this area in a manner suitable to its dignified status as a national shrine. It is a responsibiiity which includes making it easy for visitors to come here, making it comfortable, educational, and enjoyable for visitors to spend time here, and always making sure that we preserve the original historical atmosphere which gives the shrine its value.

It is with considerable humility—as well as with great pride—that the Department accepts this responsibility. We are very conscious of the present inadequacies of our National Park System and of our inability with present facilities to care for properly the millions of persons who visit us annually. Last year our national parks and monuments entertained 30,000,000 visitors, almost twice as many as came in the last year before the war, and almost 10 times as many as visited in 1931.

During the war years, moneys available for management of the parks were curtailed, as they had to be so that we could devote our full energies to winning the war. Since the war, however, we have been unable to catch up with the backlog of repair and maintenance work which we had to let slide for lack of funds. Likewise, we have been unable to build new eating places, cabins and lodges, roads, even sanitary facilities to accommodate the millions of visitors each year who more than strained the facilities designed for half that number. Our funds, although doubled, are in 1949 dollars which go only half as far as they did in 1940.

Many of you from Maine are familiar with our problems at nearby Acadia National Park, where almost 500,000 visitors last year far outstripped the capacities of the road system, the campgrounds, and the beaches, and where a disastrous fire last year destroyed almost 9,000 acres of forestland and cost us $500,000 for fire fighting and rehabilitation.

These problems are multiplied throughout the park system. In Yosemite National Park last year, because we lacked $1,000 to do repair work on a fire-fighting communication system, it took almost an entire day for a courier on foot to bring reinforcements after a fire was discovered. For lack of $1,000, we lost 11,840 acres of forests, and $95,000 spent in fighting the fire for 28 days.

We are also concerned with getting people to scenic and historic areas, many of which are remote from the large centers of population. You will agree, for instance, that it is even more important that those living far distant from this spot be able to partake of the spirit of the St. Croix settlers than it is for you who live in the shadow of its traditions. The small private plane can make our isolated parks accessible to distant visitors with short vacations, if there are places to land when the flyers arrive. To meet this problem, the Senate, after a favorable report by the committee of which Senator BREWSTER is an influential member, recently passed a bill providing a sound method for building airports adjacent to the parks without encroaching on their natural beauty.

These and other examples serve to show that the responsibility for caring for and developing our natural resources does not fall on the Federal Government alone. As many persons worked together to achieve the creation of this St. Croix Island National Monument, so many will have to continue their efforts to maintain it. The National Park System will, as charged by law, take the leadership in the maintenance of this area. But it will need the help of all like-minded citizens.

In my view, nothing less than a continuation of cooperative effort—local people working together with their government—would be suitable to this area. Its historical significance comes from the remarkable cooperative determination of those first settlers who braved starvation, exposure, isolation, and disease.

I am honored to be able to join with our French and Canadian friends in saluting them. And I am happy that in accepting this monument we are preserving for our children and their children this additional page of American history so that they shall never forget the struggle and the hardship of the many different contributors to our Nation's greatness.

Dr. Will W. Alexander

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. HAYS of Arkansas. Mr. Speaker, during the debate on the housing bill reference has been made by some of the Members to the history of the Farmers Home Administration which will be charged with the administration of the rural housing features of the measure. In two instances the name of Will W. Alexander was identified with the old Resettlement Administration in such a manner as to discredit him, the implication being that Dr. Alexander favored a wasteful and socialized program for rural housing. I am sure that the Members would not knowingly do him an injustice and I make this statement solely for the purpose of placing in the RECORD my own appraisal of his public service and to express appreciation of his efforts in a most difficult situation to launch a sound program for aiding low-income farmers.

I can assure the House that Dr. Alexander does not deserve the thrusts that have entered the Housing bill debate. It would serve no purpose to pursue some of the ideological implications in the statements which contained Dr. Alexander's name. He is not now and never has been primarily concerned with politics. His interests are sociological and he brought to his task in the Department of Agriculture a sincere devotion to the principles upon which our Nation has made progress. He believed that low-income farmers, as well as the more favored group, should share in the monumental farm program and he knew that special exertions were needed to accomplish that result. The homestead projects—the community ideas—of resettlement did not succeed. Dr. Alexander did not originate those plans and he was certainly not to blame for their exorbitant costs.

LAW LIBRARY
FEDERAL WORKS AGENCY

One obstruction could not be removed. Construction of homes was geared to WPA work relief and that program was inherently expensive. Some day the full history of the recovery program will be written and it will not be uncomplimentary to Will Alexander.

Often overlooked is the success of two other phases of the FSA program under his supervision—the tenant-purchase program authorized by the historic Bankhead-Jones Act of 1937 and the rural rehabilitation loan program under which almost 1,000,000 farmers, renters and owners, including thousands of World War II veterans have been enabled to carry on farm operations right at home. These programs bear the impress of Will Alexander's idealism and his administrative skill. His name is known to only a few of those who benefited from his fine leadership but those of us who were privileged to be associated with him in a great movement know him to be a real American, sound to the core, and a useful public servant.

Text of Letter From Gov. Alfred E. Driscoll, of New Jersey, to Metuchen, N. J., Chapter of United World Federalists

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. CASE of New Jersey. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following letter written by the Honorable Alfred E. Driscoll, Governor of New Jersey, to the president of the Metuchen (N. J.) Chapter of United World Federalists:

TEXT OF LETTER FROM GOV. ALFRED E. DRISCOLL, OF NEW JERSEY, TO METUCHEN (N. J.) CHAPTER, UWF

Miss JULIA T. BOGERT,
President, Metuchen Chapter, United World Federalists,
Metuchen, N. J.

DEAR MISS BOGERT: I have just received your letter of May 27, requesting a statement from me on the movement toward world federation which the United World Federalists are so ably representing.

There is, I think, no more significant cause before the world today. No matter which way we turn in our research for permanent world peace, we must inevitably come back to the proposition that without world government there can be no world peace. In seeking the form this government should take, we naturally turn to that form which throughout history has proved most useful in bringing diverse groups into political unity without a loss of their political identity.

This is the great achievement of American federalism and it is the great promise of world federalism. The United Nations represent an environment within which this principle may well seek ever-increasing expression; and although it may develop slowly, as all great institutional transitions do, and assume modifications peculiar to its world-wide application, there seems to me no other road to permanent peace.

May I extend my best wishes for a successful meeting, and my profound respects to those who are so ably carrying the message of this great cause.

Sincerely yours,

ALFRED E. DRISCOLL,
Governor.

Address by Former Senator Mead, of New York, at Oswego State Teachers' College, Oswego, N. Y.

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting address delivered by our former colleague, Hon. James M. Mead, of New York.

This speech was delivered at the Oswego State Teachers' College, Oswego, N. Y., alumni day program, June 11, 1949. Among other matters, it contains a timely discussion of the Marshall plan and the Atlantic Pact, as well as our obligations in the present world struggle against communism.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, my unfamiliarity with subjects inherent in the atmosphere of the campus prompts me to follow an old adage, which calls for the cobbler to stick to his last, therefore, I have chosen to speak to you today on a subject that is political though bipartisan, and one that readily commands the interest and support of every American citizen.

Our political problems of today are more stupendous, more critical, and more complex than ever affected the minds and hearts of the statesmen of any generation. Never since the dawn of civilization has man been confronted with problems of such far-reaching magnitude—atomic control, Marxian domination, world government, to mention a few of them. Of those mentioned Marxian domination is the most obstinate and holds the key to the solution of the other two.

In the solutions of these problems the teacher, the educator, must help to lay the foundations upon which the statesmen may build the superstructure of the new world order of the future.

In their haste for achievement of the goals set by the advocates of Marxian philosophy, we witness their strategy which includes the pillage of conquered states, the blackout of freedom behind the iron curtain, the obstinate refusal to reach agreement on any proposed treaty of peace, the isolation of Berlin from western Germany, the Red conquest of China, and the attempted sabotage of the Marshall plan.

In the wicked enterprise to enslave the populations of two continents we have witnessed rioting in Italy and France, guerrilla warfare in Greece, rebellion in China, and the black-out of democratic government in Czechoslovakia, Poland, and neighboring states.

The remaining free nations of the world, driven by this communistic onslaught and spurred on by the laws of self-preservation, have, in defense of their right to survive, approved a program which they believe will lead to ultimate peace, peace with the freedoms proclaimed by the Atlantic charter and now approved by the fundamental law of the United Nations.

To reach this goal and to remove obstacles set up by the Politburo, the Marshall plan, the Atlantic Pact, and its lend-lease military supplement have been advanced by our Congress and approved or favorably recommended by the representatives of the participating nations. From all indications the program in its entirety will be approved very quickly.

Although our generation is faced with dangers, devastating beyond description, and by problems of such magnitude as to dwarf those of earlier generations, we can find encouragement in the slow, tedious progress thus far accomplished through the medium of the United Nations.

The resurgence of democracy in Italy and in France after an all-out attack, reaching violent proportions by fanatical Red forces, gives hope and faith to free men the world over.

The stiffening opposition to Communist aggression in Greece and Turkey, attributed to the Truman Doctrine, stopped the progress of the iron curtain in its drive toward the Mediterranean.

The United Nations' organization, sabotaged at every turn by those that follow Moscow's line, has nevertheless kept aloft man's high hope for peace in our time.

The United Nations has brought peace to the Holy Land. It forced the Netherlands to cease firing in far off Indonesia. It prepared the plan for settlement of the Kashmir problem between Pakistan and India.

Its mediations have softened numerous embryonic controversies. It remains today our one best hope for world order.

The United Nations will grow in strength, and in authority, in direct proportion to the economic and political stability of its loyal member nations.

This leads, logically, to our grave concern with the success of the Marshall plan. Marshall plan countries represent a population of 275,000,000 people. Next to our own people, they are the most advanced, the highest skilled and the most productive people on earth. Before the war they accounted for more than 50 percent of our foreign trade. They produced 60 percent of the world's shipping. Unless they are prosperous, we cannot hope to be.

Since the cessation of hostilities, and more especially since the coming of the Marshall plan, the progress of western European nations toward economic recovery has been noteworthy—and all this, while Soviet Russia has stripped shops and factories, removed the means of transportation, and slowed recovery with sabotaging strikes and slow-downs. Today, these free nations are beyond the possibility of discouragement: they are well on the road to economic health. It has proven according to Mr. Hoffman the director of the ECA, to be one of our very best investments. It leads to economic stability—the first step on the long road to world order.

The international control of atomic energy, so generously proposed by our own Government and so willingly accepted by the free nations of the world, will have to wait until a change of hearts occurs to the Politburo, and that may very well take place when the nations of the Atlantic community develop in strength and unity to command the respect

and co-operation of the powers within the Russian orbit.

The Atlantic Pact and its lend-lease supplement brings the signatory nations together within the framework of the United Nations as a great and powerful force for peace. It will serve, and serve well, as a warning to any future aggressor who might attempt to violate the peace of the world by military operations.

This collective program, which beams toward world government, will bring to an end the terrifying armament race, in which the nations are presently engaged. This program is America's "operation peace with honor."

The educator, the teacher, and especially those in nations where education, like the press and the people, are free, has a grave responsibility. Education, which thrives on progress, becomes a mockery when retrogression and censorship are the tools of the totalitarian bureaucrats.

In Soviet Russia education is subject to the whims of a Politburo which insists upon rewriting history to mislead the student and to vindicate its evil machinations.

In America education must mobilize its collective strength to protect our way of life, to preserve our freedoms, and to further the bipartisan foreign policy of our democratic Government.

With cold war in the near West and a hot war in the Far East, with our ideals and our traditions at stake, we must close ranks around our leadership until victory crowns our efforts. This is no time for disunity to assert its weakening influence.

While the great and overwhelming majority of the Nation's educators are numbered among the most loyal, the most patriotic, and most devoted of our citizenship, there are some who, unfortunately and regrettably, have become the advocates of communism and the enemies of our own democratic system.

While the right of free speech, the right of opposition, while every right granted by the Constitution, including the right of debate, appeal, and amendment, must be zealously guarded, and must remain the right of every citizen, nevertheless, the right to sabotage our institutions by methods that do violence to procedures laid down by the Constitution cannot be tolerated and should never be advocated by one who calls himself an educator. Here in America we can effect changes in the organic laws of the land, but we must follow the methods prescribed to bring about such changes.

The right of our choice of economic or political institutions, as long as they are not opposed to the dictates of natural law, will always remain within the realm of debate.

Our American system grew out of a revolutionary experience, but that revolution upheld the sanctity of the human personality and the laws of God. It placed reasonable limitations upon the tenets of Government and of the States.

Unlike atheistic communism, the American system did not introduce the totalitarianism of the state, the disorganizing idea of the class struggle, nor the destructive intolerance of a program of hate.

The difference between communism and our American system is one of kind, not one of degree. The future of our system, subject to such modification or adjustment as changing economic and social factors warrant, should be assured by our pride, by our devotion, by our loyalty to it in both thought and deed.

It should never be abrogated by a positive act in favor of atheistic communism, for communism can only exist in derogation to our American system.

There is no middle ground.

There is no possibility of one system evolving into the other, or vice versa.

There is no question of appeasement.

There is no third possibility; it's the American system or it's communism.

There is an inherent conflict of ideology, of political temperament, of spiritual outlook, and of historic approval, and of the procedures of implementation.

A real American will foster and advance the living ideals of the political philosophy contained in the declarations of 1776 and 1787.

A Communist will sabotage them.

Freedom of education must always be defended, but freedom to destroy education and freedom to commit political hara-kiri cannot be tolerated. The educational organizations of these United States, like our great labor organizations, must purge their ranks of those who advocate the violent overthrow of the American system.

The educational systems of the Nation, therefore, and especially in this world crisis, must make clear the undeniable values of the American system. They must warn the student of the dangers of atheistic communism.

American tradition and American ideals, neglected at times, must now become a more important part of the curriculum.

The real values of democracy in this world conflict with totalitarianism cannot be overemphasized.

While the teaching of our American heritage might very well include controversial and partisan issues, there is little possibility of criticism of the educator at a time like this when the Nation unites on a foreign-policy program, a program that has for its purpose the protection of our democratic way of life and the ultimate peace of the world.

Record of the Present Congress

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Six Months of Congress," published in the New York Times of July 6, 1949. I should like to read one sentence of the editorial into the RECORD. Commenting on the record and legislative achievements of this Congress, as compared with its predecessor, the editorial states:

That Eighteith, in fact, now looks like something of a champion.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIX MONTHS OF CONGRESS

Congress has now been in session for 6 months, and its statisticians have come up with some figures regarding its performance to date. Senate and House Members have introduced a total of 8,605 bills. Of these, 1,589, or more than 1 out of 6, have been acted upon by the various committees. The House has passed 821 bills and resolutions, the Senate 522. About one-fifth of these, 291, have reached the stage of law.

The record is a lively one, so far as numbers go. It is less impressive when the numbers are sifted in a search for major measures. In fact, 6 months of work on the part of Congress have produced just two new laws of outstanding public importance, and one of these has still to be agreed upon finally in conference. These two are the bill giving the President broad powers to reorganize the Executive Departments of the Government and the new housing bill, which has not yet reached the White House. For the rest, there is little in the half-year record of the Eighty-first Congress that can be classed as important public business, except for the extension of various measures—rent control, export control, European recovery aid, and so forth—originally enacted by its predecessor, the much-maligned Eightieth.

That Eightieth, in fact, now looks like something of a champion. By this time in 1947, and at the end of its own first 6 months of work, it had adopted the Greek-Turkish aid program; ratified peace treaties with Italy and the Axis satellites; approved a constitutional amendment limiting the Presidency to two terms; created the Hoover Commission on reorganization of the Government; passed the Taft-Hartley Act and the portal-to-portal pay law; and enacted a new tax law. Yes, this was a Republican Congress, facing the difficulty of cooperating successfully with a Democratic President.

Its successor, though Democratic, has apparently found that this same difficulty still prevails. One reason is that the President and a large section of his own party do not agree on the interpretation, the timing, and the emphasis of the Democratic platform.

What's Good About the National Debt?

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "What's Good About the National Debt?" written by a distinguished editor of my State, Robert K. Pepper.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DEFENSE OF DEFICIT FINANCING—WHAT'S GOOD ABOUT THE NATIONAL DEBT?

(By Robert K. Pepper)

When the announcement was made recently that the United States Government was operating within the budget and a modest surplus would be available for retirement of the public debt, cheers rang out throughout the land.

But now, when the Treasury dolefully discloses that the Government will be back in the red again this year, sad faces are everywhere, especially in Congress, and the clamor is rising to cut, trim, and hack in the interests of economy. There is also talk of boosting taxes to cover the prospective deficit.

Although this goes contrary to the accepted notions of 99 percent of the American people, it can be stated that the economic benefits in increasing the national debt far outweigh its disadvantages, and the dangers seen in its increase are mythical.

Let us consider this: In 1938 the debt stood at around $50,000,000,000, today it is $250,000,000,000. The debt has increased five times and yet the country is rolling along

with record employment, record national income, and record peacetime production. And instead of the wild inflation many sage economists forecast with the ballooning of the national debt, with its resulting sharp increase in the Nation's liquid monetary wealth, we are now mapping plans, not against inflation, but a business recession.

The widely accepted theory that if a Nation doubles its money supply, prices will double also, does not correspond with the facts. It is impossible, in peacetime at least, to establish any statistical ratio between an increase in money supply and prices, if we carefully review the economic history of the past 20 years.

For here are some notations taken from official Government reports: In 1929 the consumers' price index, compiled by the Department of labor, stood at 122.5. In 1939, after a decade of Government deficit financing, the price index had dropped to 99.4.

Or again: In 1939 the Nation's monetary wealth (including demand deposits, time deposits, and currency outside banks) totaled $64,000,000,000. This year the figure stands at around $170,000,000,000, almost three times the 1939 mark. And yet prices, as measured by the consumer index, have increased only from 99.4 to 172.2, a gain of slightly more than two-thirds. And much of this increase can be attributed to the scarcities and dislocations caused by the war and wage increases granted to labor.

And while the debt has increased five times and monetary wealth three times in the past decade, one can still buy the same soft drink for a nickel.

Prices are established by directly operating factors, and in America today the volume of money available is an exceedingly slight one. Prices are fundamentally determined by the costs of production and distribution and are now being shaded downward by increasing competition. Scarcity is the most compelling factor in any inflationary price increase, and the era of scarcity has definitely ended. No one now has the slightest notion of bidding up the price of cigarettes, or steaks, or even new cars.

For those who insist that the volume of money around is a controlling factor in prices, let them figure out this problem: Just how is the selling price of a package of cigarettes, a gallon of gasoline, or any other commodity determined? Is it higher in a comparatively wealthy city like Miami or Hartford than in neighboring towns? If the New York Times increases its subscription price, isn't it because of the increased cost of labor and supplies rather than any national monetary factor? Do grocery stores check the Treasury reports before posting the price of pork chops and canned corn?

If it cannot be established that increasing the national debt has any undesirable effect on prices, what else can be said against it? A reply, of course, is that if it continues to climb it will some day get so large that the Government will be taxed to pay the mounting interest, much less start retiring it.

It may be recalled that nearly a billion of the Government's profits on the 1934 gold revaluation was dumped into the General Treasury fund and used to pay Government debts. Nothing of the slightest consequences happened from an inflationary standpoint.

Now, let us assume that the Government (this is not advocated here but merely propounded as an economic problem) again assumes its constitutional right to issue new money and pays off the entire $250,000,000,000 debt.

Here we immediately assume an era of "wheelbarrow" money similar to the distressing incidents in China today, in post-World War I Germany, in the Confederacy, and our Revolutionary War when the issue of the 13 States was "not worth a continental." But these examples are totally different from present-day America. In these times and places there were extreme scarcities of goods, no strong central government, and no legislative controls over the issuance of money such as we have now.

But this is what would happen here: The Government would deposit this newly issued currency in its checking account, to flow into the Nation's banking system as needed, and proceed to call in the Government bonds which represent the $250,000,000,000 debt. Checks would be issued in return for the bonds, which like all Treasury paper could be cashed or deposited at local banks throughout the country.

With the transactions completed, not one American would be 1 cent richer than he is now, for Treasury bonds are as valuable as cash. The idle and spendthrifty, who presumably would throw money away in bidding up prices and going on wild buying sprees, would not get any because they do not hold any Government bonds in the first place.

In the Treasury's report on the estimated ownership of Federal securities at the end of 1948, the breakdown is as follows: Held by United States Government agencies and trust funds, $37,000,000,000; commercial banks, $62,000,000,000; Federal Reserve banks, $23,000,000,000; private corporations and associations, $53,000,000,000; individuals including partnerships and personal trust accounts, $67,000,000,000.

As to the $37,000,000,000 held by Government trust funds and agencies, this can be written off immediately as to any inflationary effect through immediate spending. These include the invested money in the vast social security fund and similar accounts, with regular and orderly distribution governed by inflexible regulations.

The modest funds held by State and local governments are of somewhat similar character, and having the cash instead of Federal securities would not impel the spending for public works, fire stations, unemployment compensation or whatever else the funds were set up for. More than a third of the Government securities are held by banks. While payment would greatly increase their liquid assets, it would not necessarily mean a great expansion in bank loans. Regardless of how much money banks hold they do not make unsound or unbusinesslike loans, and they already have more deposits than can be profitably invested. By their nature banks do not go in for speculation, or for bidding up prices on anything.

Likewise the $53,000,000,000 held by corporations and associations, including the vast life insurance company holdings would not be flung to the winds. The reserves of corporations are earmarked for definite purposes such as research, pension funds, and improvements. Life insurance companies use their funds almost solely for investment purposes, and not for bidding up prices on any commodities.

This leaves a total of $67,000,000,000 reportedly owned by individuals, partnerships and personal trust funds to be dealt with from the inflationary standpoint. But it should be pointed out that individuals now holding Government bonds wanting money can get a loan at any bank for approximately the face value, or the securities could be sold in the open market at prices currently above par. If they had the cash instead of the equally valuable bonds, it does not necessarily mean they would spend it.

If the Government chose to increase the national debt by $10,000,000,000, or $20,000,000,000, or even $50,000,000,000 now or in the next few years, there would be immediate buyers for whatever securities were offered. The profits of banks and insurance companies depend on holding interest-bearing securities, and there is considerable idle investment money now in the country seeking just such outlets. It may be recalled that in the major war financing banks were assigned a quota and limited to the amount they could buy on many issues. Banks, insurance companies, and trust funds would, in fact, be exceedingly unhappy if the Government should call in its bonds and force them to accept in return non-interest-bearing cash.

It is again emphasized that this article does not recommend the immediate abolition of the national debt, but seeks to point out that all or part of it could be retired at any time at the will of Congress without harrowing consequences.

If it would be so easy to clear up the national debt, some will ask, why doesn't the Government go a step further, abolish all taxes and issue new money for current expenses?

To draw the dividing line, any increase in the national debt, or the Nation's monetary wealth, should be confined to a small fraction of the total outstanding each year. During the wartime peak, the increase in the Nation's monetary wealth was about 20 percent annually. It stood at $99,000,000,000 at the end of 1942, $122,000,000,000 in 1943, $151,000,000,000 in 1944, and $175,000,000,000 in 1945. This, conceivably, was too rapid an increase to be assimilated smoothly. The limit should possibly be 10 percent or less.

As to the Government debt, the figures are as follows: 1942, $112,000,000,000; 1943, $170,000,000,000; 1944, $232,000,000,000, and 1945, $278,000,000,000. The need for no such increase, which averaged around $50,000,000,000 a year, can be envisioned in peacetime. In fact the current total Government budget is considerably less than the average rise during wartime.

If America weathered this amazing climb in the national debt without any serious difficulties, nothing alarming is in sight if an orderly and continuous increase marks the peacetime years ahead.

The danger line in increasing the monetary supply would come if the volume rose to a point where Americans decided that they did not have to work for a living and production would decline. Here the scarcity factor would enter, and prices climb as citizens contested for a diminishing supply of goods. But we should consider the vastness of America, and the fact that billion dollars spread among 150,000,000 citizens amounts to less than $7 each, and $10,000,000,000 less than $70. This is an infinitesimal amount, and with the opportunities that this Nation affords in travel, education, automobiles, and homes, few Americans would quit work and attempt to retire on $7, or $70, or even $700 more a year.

The "danger" is that we will be saddled with increasingly higher taxes in an effort to meet this imaginatory crisis. High taxes on income and profits, which are still near the point of confiscation, do little to encourage ingenuity and enterprise. The belief that it is somehow wrong for an American to make a million dollars and keep a good share of it (the Government now takes about $840,000 of it) is contrary to the surging spirit that made this great Nation. Ford used his wealth to give America a better and cheaper automobile; Carnegie's profits went into libraries, and the Rockefeller millions were wisely converted into charities and scientific research. And suppose Edison's royalties which he used for new inventions and experiments, had been swallowed up by a Federal income tax? Likewise it cannot be said that taxes on commodities are entirely desirable, for levies on sales, cigarettes, and gasoline result in an automatic increase in prices.

To sum up: The national debt is beneficial in that Government bonds provide investment opportunities, profits, and financial stability for banks, insurance companies, trust funds, and individuals. As the national

debt increases, more money flows into the streams of industry than is withdrawn. And a Nation, with a steadily increasing population and hopes for rising production, needs the constant inflow of new money. If the debt is retired through taxation, it means that more money is withdrawn from circulation than is replaced by the Government.

Our monetary system ought always be a facilitation, never a bottleneck, to progress and prosperity.

All this goes counter to everything we have been taught. But economics is a new science, and the repetition of old theories does not necessarily make them true, especially when they conflict with the factual record of what has actually happened.

If we regard America, as we rightly should, as a trillion dollar Nation, in goods and resources, in mines, farms, factories, real estate, and opportunities, a gradual and orderly increase in the national debt should be no cause for concern.

And why should a Nation which blithely tossed hundreds of billions into warfare suddenly decide that we "can't afford" schools and highways and all the other alluring possibilities which this twentieth century offers?

Library Demonstration

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Library Demonstration," published in the Washington Star of July 5, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIBRARY DEMONSTRATION

For millions of Americans, the library card has always been a passport to a whole world of pleasure and information through reading. The public library has served countless other patrons in a highly practical way. Many a young couple starting a home or a family has found guidance from library books on interior decorating or baby care. City dwellers who have availed themselves of the joys of browsing and borrowing since they first marched home with Grimm's Fairy Tales firmly in hand are inclined to take library service for granted, and to assume that it is part of every citizen's life. The sad truth of the matter, however, is that 35,000,000 Americans, mostly in rural areas, have no library service at all, and another 35,000,000 have inadequate facilities.

The library demonstration bill, currently stalled in a House committee, is intended to remedy this situation, to provide the advantages of self-education through reading to these people. Under terms of this measure, which is before Congress for the third time, all States, Territories, and the District of Columbia would receive from the Federal Government an annual grant of $40,000 over a period of 5 years for a demonstration of library service. During that time, the Government would also match State appropriations up to $100,000 for library funds. After the demonstration—and the bill is aimed at stimulation of State programs, not indefinite subsidy—the people of the localities who had been introduced to library service would be obliged to assume responsibility for its continuation. Backers of the bill have maintained that once people have enjoyed library service they refuse to be without it. Their contention is borne out in the case of Louisiana, where 21 out of 22 parishes which became acquainted with book-borrowing through bookmobiles voted local taxes to make the experiment permanent.

The American Library Association, chief sponsor of the library demonstration bill, has polled Members of both Houses of Congress as to their sentiments about the measure and found a majority in favor of it. It is to be hoped that the bill will be given a hearing by the House Labor and Education Committee, and then passed, for an extension of library service would be a sound investment in democracy.

Communist Penetration of the Hawaiian Islands

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Butler Has Something," published in the Omaha World-Herald of June 30, 1949; also an editorial entitled "Hawaii Beckons," published in the Omaha World-Herald of July 3, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Omaha World-Herald of June 30, 1949]

BUTLER HAS SOMETHING

Senator BUTLER's report last week on Communist penetration of the Hawaiian Islands has raised a storm across the country.

The most violent reaction, naturally, has been in Hawaii itself, where the press currently looks upon Mr. BUTLER as a sort of public enemy and breathes hard over the alleged insult.

"No citizen of Hawaii," says the Honolulu Star-Bulletin, "can remain untouched by this report and its sweeping charges. No citizen who believes in Hawaii and the patriotism, loyalty, and capacity for self-government of its people can be silent when such charges are made by a Senator of the United States."

The charges are that the Longshoremen's Union, which now has Hawaii in the grip of a paralyzing strike, is Communist dominated; that the Communists control the Democratic Party in Hawaii; and that Hawaii is the main basis of international Communist activity against the United States. Mr. BUTLER's conclusion is that statehood for Hawaii should not be considered until communism has been brought under control there.

Here on the mainland the response to the Butler report is less emotional. The consensus seems to be that Senator BUTLER has something, even though he does not fully establish his case.

The New York Herald Tribune finds the statement "startling * * * too startling fully to accept," but it hopes "the implications it carries may be enough to shock the Hawaiian Government and both disputants (in the dock strike) into a settlement."

The Chicago Tribune believes that "more than statehood is involved in the present strike" and that the people of the Territory are entitled to the protection of the Federal laws, including Taft-Hartley, which Mr. Truman has so far refused to invoke. The Tribune notes that Senator BUTLER has made the Bridges strike an argument for deferring any consideration of statehood now, but it neither opposes nor supports Mr. BUTLER's conclusion.

The Los Angeles Times, nearer to the Hawaiian scene and better informed on political matters there than most mainland newspapers, is inclined to be severely critical of the American people for what is going on in Hawaii.

Political editor Kyle Palmer writes that "the country's mainlanders are sitting by complacently while more than a half million of their fellow citizens are experiencing an ordeal—the strike, now in its second month—which would not be tolerated overnight by public opinion within the continental United States * * *. The important thing from the standpoint of any citizen who has due regard for his own rights, freedom, and welfare is that Bridges has been able to accomplish his objective; that he has been permitted to accomplish it, first, by an unaroused public opinion and, second, by a remarkably and inexplicably indulgent national administration."

The strike, then, is more important than immediate debate over the statehood issue. It is no ordinary strike but a political instrument designed to further the political and economic control of Hawaii by Mr. Bridges and his Communist friends. The strike is believed to be—and we think the evidence is impressive—an instrument of Communist policy rather than a fight for workingmen's rights.

In Hawaii Mr. BUTLER is being abused for taking advantage of the strike in the timing of the release of his report.

If the Senator did so, he is to be congratulated. His report has spotlighted Bridges and directed national attention to the shameful blockade of Hawaii by a numerically insignificant minority.

Mr. BUTLER has raised some pertinent points: Is Communist-ridden Hawaii ready for statehood? Will it or can it control the subversives in its midst?

The situation calls for more than expressions of wounded feelings and cries of dismay from Hawaii. Mr. BUTLER has something.

[From the Omaha World-Herald of July 3, 1949]

HAWAII BECKONS

We suggest that President Truman take another trip. He has always enjoyed his junkets, and is at his best when swapping viewpoints with the people in an atmosphere of shirt-sleeve informality. He has said that it clears up his thinking.

Which is precisely why we propose this trip—to Hawaii. In a matter of hours the *Independence* could waft him to the islands, and there a half million American citizens no doubt would outdo themselves to show him around.

They could show him their waterfront—the modern, expansive docks and piers that befit a land dependent on the sea. They could drive him through their vast sugar plantations—source of a $100,000,000 industry. They could dine him on the sweet pineapples that mean $70,000,000 more each year. And they could point out with pride the swank tourist hotels that annually lure $35,000,000 from the mainland.

Then they might say to the President:

"Mr. Truman, what you have seen is the backbone of our economy. It is paralyzed by the will of one man. The stench at the piers comes from rotting food. The crowded ships are heavy with fuels and medicines—desperately needed and utterly useless. The sugar refineries and the pineapple canneries

are bursting with processed exports, but the children of the workers do not have milk to drink. Already our farmers are slaughtering their starving cattle. Our hospitals are threatened with closure. Our fine hotels are empty.

"Mr. President, you know that this is one man's doing. We have no hysteria, if we may quote you. But we do have hunger and sickness and fear. What do you intend to do about it?"

Two months have passed since Harry Bridges first laid siege to Hawaii with his waterfront strike.

Senator HUGH BUTLER says the Communists run the islands. This may be so, because twice Harry Bridges has been ordered deported on evidence of his subversive alien activity. He is under indictment even today for perjury connected with his citizenship application. Yet Harry Bridges remains in command of his union—and of Hawaii.

It is ironical, indeed, that this Nation should pour out its treasure on an air lift to break the Communist blockade of Berlin, only to sit idly by while Bridges employs his Communist strategy to strangle 500,000 American citizens.

This second Pearl Harbor should have immediate attention.

The Economic Policy of Great Britain

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Economic Yalta," published in the Wall Street Journal of July 6, 1949. I call attention particularly to the last paragraph of the editorial, which states:

American dollars have been and are financing a British regime whose ideas of world organization are contrary to American conceptions; furthermore, a regime which to carry out its purposes does not hesitate to do things injurious to American interests.

* * * * *

Further than that, this country is financing a regime which now reveals itself as determined to make a large part of the world conform to its own poverty-stricken standards.

That, we say, is immoral; just as was the Yalta consignment of 100,000,000 eastern Europeans to Russian serfdom.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ECONOMIC YALTA

Two Washington correspondents of this newspaper report that Great Britain—while solemnly engaging in conversations looking to freer international trade—is contemplating a series of steps which would vastly increase the network of trade restrictions.

The only surprise that this piece of news should occasion is surprise that anyone should be surprised. However, our State Department seems in that unhappy position.

When Britain launched an experiment in the controlled and managed economy under a Socialist government, the sort of thing now under way was inevitable.

The British Government is apparently ready to face the inevitable end to which its economic policy leads; namely, a situation in which a dictated economy, in order to survive, must leap its own borders and control the trade of much of the world as well.

The economy that Britain is trying to set up is totalitarian in nature; witness the statement of Prime Minister Attlee that in economic matters the British were looking to Russia rather than to the United States.

The totalitarian regime begins by controlling its own citizens. Then it finds that its rigid and artificial structure must be protected against impacts from without. So it proceeds to extend its control beyond its borders. Hitler did this in a very crude and brutal way. The present Government of Russia constantly shows its inability to brook any compromise in political or economic affairs, all "friendly" governments must do as Russia wants.

The British are undergoing the same process. In recent talks with American and European officials, Sir Stafford Cripps, Britain's economic dictator, fought any moves to make British currency transferable or convertible into dollars. If that were done, Sir Stafford argued, the converted sterling might be spent by others—the Italians, for instance—for things that were luxuries and not essential to recovery. And since the British were not allowed to have these things, neither ought the Italians. In other words, Sir Stafford was avowedly "guiding" the lives of the Italian people.

It is foolish for American officials to talk to the British about any currency convertibility. Removal of restrictions would be followed by a flight of British capital out of the country; in fact it is taking place through and around the restrictions.

It is equally foolish to talk about Britain consenting to international competition, which is the basis of free trade. Britain's structure of the welfare state demands that her goods be high priced, that the foreigner pay for the benefits to Britain.

Neither the British officials nor the British press make any bones about what Britain is attempting. The only pretense that she is attempting something else is confined to American officials.

When our officials are faced with these circumstances they ask, "Well, what can we do? Britain is in a crisis." Of course Britain is. And this crisis will be followed by another and that in turn by another. And each recurring crisis will be made the excuse for more and increasingly drastic restrictions.

American dollars have been and are financing a British regime whose ideas of world organization are contrary to American conception; furthermore, a regime which to carry out its purposes does not hesitate to do things injurious to American interests.

That is idiotic.

Further than that, this country is financing a regime which now reveals itself as determined to make a large part of the world conform to its own poverty-stricken standards.

That, we say, is immoral; just as was the Yalta consignment of 100,000,000 eastern Europeans to Russian serfdom.

Freedom Under God

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered by Rev. Edward L. R. Elson, at the National Presbyterian Church, Washington, D. C., on July 3, 1949:

FREEDOM UNDER GOD

(By the Reverend Edward L. R. Elson, D. D.)

"Where the spirit of the Lord is, there is liberty" (II Corinthians 3:17).

I

The signing of the Declaration of Independence was the crowning moment in a tremendous political revolution emanating from a spiritual emancipation. It came out of a vast and noble courage and is the result of a lofty and invincible religious spirit. The great British statesman, Gladstone, referred to it as "the greatest piece of work ever struck off at a given time by the brain of man."

It was in 1660 that the oppression began when the mother country passed and attempted to enforce the despised Navigation Acts. One hundred years later, at 22 years of age, George the Third, dull, uneducated, intolerant, bigoted, and finally crazy, came to the throne. He accepted the then common European idea that a colony existed only to enrich the mother country. Oppression followed oppression, insult was heaped upon insult, injustice was added to injustice, until the elemental power of intelligence, character, and feeling in the Americans erupted like a volcano. When Patrick Henry cried, "Is life so dear, or peace so sweet, as to be purchased at the price of chains or slavery?" he simply made articulate the throb in many an American breast. The event which we commemorate tomorrow was the explosive termination of a universal discontent in the Thirteen Colonies.

A Continental Congress was called in 1774 to meet in Philadelphia, "to consult on the present state of the Colonies; and to deliberate upon wise and proper measures for the recovery of their just rights and liberties; and the restoration of union and harmony between Great Britain and the Colonies, most ardently desired by all good men." The colonists were proposing to stand upon their rights as Englishmen. They sent a petition to the King which he refused to receive. The Second Congress was called to meet in May 1775, within a month after the Battles of Lexington and Concord. The war was on. The Americans began to defend what they believed to be "their ancient rights," but soon discovered there were new rights to be acquired. The Declaration of Independence crystallized the sentiment of the day. On June 11, 1776, a committee was appointed to prepare a Declaration of Independence. The members consisted of Mr. Jefferson, Mr. J. Adams, Mr. Franklin, Mr. Sherman, and Mr. R. R. Livingston. The committee met several times, and after full discussion designated the 33-year-old Virginian, Thomas Jefferson, to prepare a draft of the declarations. Jefferson, tall, charming, red-headed lawyer, a horseman, a scientist, philosopher, man of wealth and social position, an aristocrat of aristocrats, and a Democrat among Democrats, was chosen because, as John Adams said, "He had a reputation of literature, science, and a happy talent of composition." Jefferson sat in the parlor of his second-floor lodging at the corner of Seventh and Market Streets, Philadelphia, and without consulting a book or pamphlet wrote in a half day's time our great national symbol, the rough draft of which may now be seen in the Library of Congress. After preparing this draft, Jefferson submitted it to John Adams, who made two corrections, and Benjamin Franklin, who made five minor revisions. It was then submitted to the committee of five and approved without change. Jefferson's draft was reported to Congress on June 28 and laid on the table until July 1. On the 2d of July the resolution declaring independence from Great Britain was voted, but it

was not until July 4, 1776, that this Declaration of Independence was adopted.

The adoption of the Declaration had an instant and epochal effect. It enkindled joy and quickened zeal for freedom. It united the Colonies as nothing else could have done. It changed a defensive war for the redress of wrongs into a war for the establishment of a separate government. It separated colonial patriots from loyalists; it encouraged people to endure hardship and privation for the cause of freedom; it prompted the soldiers to plunge with new and dauntless pride and determination into the fight. From that July Fourth to the present hour this document has been the inspiration of new hope for the oppressed of every tribe and nation.

The 56 signers of this noble document represented every stratum of society. They were men full of vitality and strength and almost all of them well educated. They were neither old men in their dotage or foolish radical youth. Samuel Adams was 53; John Hancock, 39; R. H. Lee, 44; Benjamin Harrison, 36; John Adams, 40; Thomas Jefferson, 33; Benjamin Franklin, 70; Roger Sherman, 55; R. R. Livingston, 29. The president of the College of New Jersey, the Reverend John Witherspoon was the only clergyman to sign it, and nine of the signers were graduates of the little college over which he presided. It seems that in the providential economy of God, the time had been appointed for the fulfillment of this event.

II

The signing of the Declaration of Independence and what followed was basicly a spiritual event. You cannot understand America any other way. The core of our tradition is a spiritual reality. God in the most concrete sense was the heritage of the founding fathers. The American people covenanted with God, not as a local, continental, or racial diety, but as the living universal God who, while being the God of all people, becomes in a special sense the God of all those who accept his purpose in human life. Apart from faith in God, American history has no meaning. "In the name of God. Amen" was written above the first governmental document drawn up in the *Mayflower* cabin. "In God We trust" confronts us on our copper coins. From the very beginning until yesterday's prayers in Congress, our national life has been undergirded by this faith. In this faith our institutions were created, our culture promoted, our philanthropic endeavors initiated, and our liberties secured. Christian missionaries were the first American internationalists and this country's greatest ambassadors of good will to all parts of the globe.

Whether we think of the English Puritans in New England, or the Anglicans of Virginia, or the Irish and Scotch and the Germans of Pennsylvania, the Dutch, or the Scandinavians, faith in God was common to them all. The fact is that you have not gone through the first sentence of the Declaration of Independence until you come to this reference, the reference to nature's God. One of the great Harvard scholars making inquiry into our origins has concluded, "No one who has delved deeply into the origin and history of the Colonies can by any fair application of the rules of evidence, deny that the dynamic force in settling New England was English puritanism desiring to realize itself. The leaders whom the people followed proposed like Milton to make over a portion of the earth in the spirit of Christian philosophy: A new church and state, family and school, ethic and conduct. They might and did differ among themselves as to the realization of these high and holy aims, but a new city of God was their aim. Religion should permeate every phase of living. Man belongs to God alone, his only purpose in life was to enhance God's glory and to do God's will; and every variety of human activity, every sort of human conduct presumably unpleasing to God must be discouraged if not suppressed." [Samuel E. Morison.] They taught the sinfulness of man but also the corollary of man's redemption and man's high dignity under the grace of God.

This religious spirit nurtured our colleges. As Dr. John Mackay has pointed out, one can count upon the fingers of one hand the institutions of higher learning of frontline caliber interested in the humanities which have not had a religious origin. Harvard and Yale were founded by Congregationalists, the University of Columbia and the University of Pennsylvania by Episcopalians, Princeton by Presbyterians, Duke and Northwestern by Methodists, the University of Chicago by Baptists, Fordham and Notre Dame by Catholics, while the great University of California, now a State institution, was founded by two clergymen, one a Presbyterian, the other a Congregationalist.

III

The spirit of the Protestant Reformation, mediated to the life of America by a variety of denominations, promoted a sense of religious vocation in civic and business life. Private initiative was encouraged. All work was made honorable. Eventually when the products of toil accumulated, they were in many cases not horded or selfishly used, but to an extent unparalleled in all history, were devoted to great causes, civic, cultural, philanthropic, and missionary. All this was derived from a sense of spiritual origin and spiritual destiny, of a sense of mission derived from faith in a sovereign God.

Reflect on colonial life where at the center of each community was a minister of religion called the parson, a term derived from the Anglo-Saxon words, "the person," and so characterized because he was deemed the chief citizen in culture and in learning. In these days when the pew is often wiser than the pulpit, it is comforting to remind ourselves that the democratic life with its broad privileges of education, library, music, culture, came very largely from this source of inspiration.

It was because of our religious origins and foundations that the spirit of democratic freedom was fostered. There were struggles at the beginning as we see in the movement of Roger Williams. Men accustomed to freedom in their personal approach to God insisted upon freedom in the public expression of their ideas and the ordering of their lives. Men of the reformation tradition nurtured in the spirit of freedom believed that men who had faith in God and human dignity would build a worthy nation.

I have called this sermon, Freedom Under God, for this is the only way true freedom can be had. Outside of God, man is in rebellion and anarchy. Where men do not have faith in God they follow their own willfulness and become captive to their own sins, slaves to evil and without an inner light and center of power. Such men cannot readily be trusted with their own destiny. When men do not have faith in God and become lawless and sinful, you have great epidemics of crime. Men without faith require external power and force to control them. The New Testament is full of these convictions and it was this concept which led to the reformation and American democracy, as originally conceived, is the logical culmination of the Protestant reformation. Men who are obedient to God and who are submissive to His sovereign will are less in need of the laws of man and are more likely to be obedient to whatever laws exist. For men under God, not only possess a higher sense of moral and ethical discrimination but are more likely to be morally responsible. "Where the spirit of the Lord is, there is liberty"—true liberty, because the soul is only captive to God Himself. Guizot in speaking to James Russell Lowell asked, "How long do you think the American Republic will endure?" and Lowell replied, "So long as the ideas of its founding fathers continue to be dominant." The whole concept of our life at the beginning was permeated with Christian concepts. Although Jefferson is claimed by both Episcopalians and Unitarians, it must be remembered that his Declaration composed in that half-day was not so much his own expression of faith as the beliefs and convictions commonly held at that time and he so stated. "We hold these truths to be self-evident, that all men are created equal. That they are endowed by their Creator with certain unalienable rights." Then the document goes on to assert a basic faith in God. It is well for us to have this day and tomorrow if it turns us back to our early faith. For the truth of the matter is you can only have our kind of democracy where a substantial proportion of people believe in and act under faith in God as the sovereign Lord of Life. We do an ill thing if we try to have the fruits of our democracy and neglect the roots. One of the most patriotic acts a man can do in these days is to be a member of a church in the tradition of emancipated living. And God calls us back to this base that we may be able to go forward to nobler achievements in the future.

IV

When asked the meaning of the famous picture, The Spirit of '76, a little boy said, "Well in it there is one man with a fife, there is another man with a drum, and a third man with an awful headache." That is America today. The fife and drum spirit and zest and ardor are there, but there is also a headache. There is the headache which constantly concerns us about the stability of our own life and whether or not we have sufficient character and individual resourcefulness for the new day. We are looked upon as the Messiah of nations and are expected to perform a special mission on behalf of freedom. The question we are called upon to answer is whether or not we have the kind of life worth exporting. If it is worth exporting, this democracy of ours must have at its heart an invincible faith in God.

If we have the challenge to export a democracy based upon freedom under God, we also have the privilege of importing others who believe in our kind of democracy and can contribute to it. For example, we can receive a fair share of displaced persons of sturdy character and personal industry. Many of these folk are robust Protestants, while others are Roman Catholics and Hebrew in their religious adherence. Thousands of vigorous Protestants, many in the Calvinian tradition, await sponsorship that they might enter this land in which their own idealism has found fullest expression. Several of our church officers have set a laudable example in sponsoring worthy emigrants from among the displaced persons. I have had enough experience in the American Legion and other patriotic organizations to know that some of our most zealous and grateful Americans are those who haven't been here very long. Would that more of us who are able and in need of certain kinds of talent would assist these strong Protestant families in becoming the new American Pilgrims. In another generation these latter day pilgrims may become leaders among our citizenry. God, in His providence has imposed upon us very heavy obligations. Our land has developed great leaders in the past and we have in recent years become the asylum for the great of other lands. We have become a microcosm of human greatness. We will remain such and be adequate for these demanding days if we keep faith in God and have Him at the center of our national life. "Where the spirit of the Lord is, there is liberty."

"He drew a circle and shut me out,
Heretic, rebel, a thing to flout.
But love and I had the wit to win:
We drew a circle and took him in."

Crotched Mountain Restoration Hospital

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the address delivered by the Honorable James A. Farley, chairman of the board, the Coca-Cola Export Corp., at the Crotched Mountain Restoration Hospital dinner, Hotel Carpenter, Manchester, N. H., June 30, 1949:

Your New Hampshire history, filled with names like Stark, Pierce, and Webster is a book on the American way of life. Your heroes, who are the Nation's heroes, built the American way of living—they built for their tomorrow which is our today.

Yet in planning, designing, building for us, neither they nor the rest of the people who made this country great meant for us to believe that all things had been accomplished. They meant for you and me to take upon ourselves the tasks to which they had committed their efforts. They intended that those of us who came after them should plan and build and develop for our tomorrow—for the benefit of those who will succeed us. That is our guiding purpose in the never-ending work to better the American way of life.

In the campaign which you inaugurate tonight you are doing just that. You are planning a great benefit for future citizens of your State. You are starting to build so that your future New Hampshire citizens will be healthy and whole as well as happy and prosperous residents of the Granite State.

You are developing the principle by which your heroes lived and to which they rigidly adhered—that man's God-given duty is to help his neighbor, that man was meant to lend a helping hand to those less fortunate than himself.

Those of us who are here tonight know what the Crotched Mountain Restoration Hospital will mean to little American citizens who have had the misfortune to suffer some physical malady which prevents them from helping themselves. We know full well that it is our duty to shoulder their burden, to treat them and to teach them to the best of our ability, so that they may take full advantage of our way of life.

Let us resolve that they will not be left to fend for themselves. Let us accept the responsibility of our heritage. We can give thanks for the good things we have received from those who have gone before us by extending a helping hand to those who are to succeed us.

The Crotched Mountain Hospital, as you know, is under construction. But a newly built restoration hospital, skillfully designed, accurately planned and well constructed, will mean nothing unless it is able to offer its services to all those in need of its assistance, and unless its facilities are available to every child who is so afflicted as to benefit by its treatment.

That is why the endowment fund will be raised—must be raised, so that the hospital, which is New Hampshire's hospital, your hospital, may be truly operated according to the great Christian principle of helping others regardless of recompense. When this campaign is successfully completed, the income accruing to the Crotched Mountain Hospital will be sufficient to provide for its operating expenses. When that goal is attained, its doors will be opened with a welcome to all crippled children, regardless of the condition of a family pocketbook.

You should decide here that the work you plan to do is a part of you and a part of your neighbor. You should understand that this effort is a part of good living, of the American way of living.

We have heard a great deal in these past few years about the American way of life. I certainly have no quarrel with those who have so ably and elcquently discussed that subject. But I have wondered sometimes if, in our glorification of the American way of life, we have not forgotten that a way of life is, in the last analysis, the product of human beings. It is not a social or a political philosophy that someone has thought out and handed to other people as a guide for their activities. It is rather a name that we give to the habits and methods and characteristics of men acting in their relation to other men. In short, the American way of life is the product of a human being which we call an American.

I would like to consider for a moment that average American who has created the American way of life; who, in doing so, has built a great nation, and, in the name of that nation, is impressing his character upon a wide and distracted world.

It took a good many things to create the average American. In the first place, he was the product of a problem that may be with us as long as men live upon this earth. He was the product of a continent called Europe, which has suffered for centuries from the fact that it could produce more people than it could feed. In these days, as we get into the habit of looking at the map of the world, we see in true perspective exactly what Europe is. It is a peninsula thrust out to the west and the south of a great continent. In many places its land is poor and its capacity for the production of food is low. Its natural resources are, and have always been, scarce and of doubtful value. For the most part, its coast line, especially in the north, is forbidding and in many months of the year almost inaccessible. Its rivers, in spite of the exalted songs and stories that have been written about them, are not great rivers. Its mountains, with a few exceptions, are not supremely great mountains. But its population has, at least in modern times, been excessively great. That population has been stricken time and again with indescribable calamities. It has been ravaged by disease; it has been beset by hunger; and because of these factors of inadequate resources and superabundant population, it has been cursed with the most bloody and continuous wars that have marked the history of the earth.

Those who made America were the product of that background. They left that barren and unfruitful continent for many reasons—some because they were hungry, some because they sought religious consolation, some because they disagreed with the political life of Europe, others because they sought adventure, and still others because for many reasons they were persecuted and injured at home. They came to America at various times, in various ways, and for various purposes. Here they found the answer to the bitter necessities that they had experienced in Europe. They found that while there were hardships in the wilderness, those hardships were, nevertheless, capable of being surmounted by courage and hard work and fortitude and patience. Unlike those of Europe, our hardships in America were not manmade. Nature in America, while it exacted a price, was an honest merchant, because when men invested their labor and their courage nature paid them a fair and ample wage. This was all early Americans asked for, and this they were able to get. They brought with them the elements of culture and constitutional government and the instinct of workmanship and technical skills, for, in spite of its limitations, Europe at least provided that much for its children.

But Americans found it possible because they were in the land of promise to build upon these beginnings and to build better than they had known before. The culture that they imported expanded in America. Constitutional government found new ways of enabling men and women to live together. They multiplied their technical skills because they found ample resources to which they might apply that skill. And in the long years after they had founded a civilization upon the narrow ledge of this continent they discovered that whenever the curse of overcrowding impeded their movements they could move farther into the continent and find freedom all over again. And so the growth of America for four centuries was a process of endless new discovery. They went west because the West eternally satisfied their necessities.

It is out of great experience that great men are born, and it is out of great enterprise that a great people is born. As the boundless vistas of American opportunity opened and the population grew and prospered, so did each individual expand in his own views. For, in the last analysis, America was built upon individual men and women. They found in the beginning, as they struggled for self-determination and independence, that, in spite of the fact that they had sought refuge from the jealousies and conflicts of Europe, the source of those jealousies and conflicts had, like evil angels, preceded them to this continent. They found, even before national independence was created, that greedy empires had sought through military power to preempt the great American dominion, and that on the south and the west and the north and in the great sea at the east they were surrounded by the encircling armies of European imperialism.

One of the most heartening things that we can recall, as in World War II we were beset by aggression on the east and aggression on the west, is that when we were, so far as population is concerned, only a fraction of what we are now, we were beset by the same dangers. In spite of our precarious position, we fought and won a war for independence. We established ourselves as a Nation, 13 States, in total area only a fraction of what we are now, by uniting in a desire to be free. By the courage of our men and women, by our enterprise, by our power to expand, by purchase, by diplomacy, and when all else failed, by war, we set about the task of freeing this country of the threat of foreign dangers. From the Thirteen Colonies, Americans moved to the west and created new States out of the wilderness. They skillfully played the ambitions of the French, the Spanish, and the English in such a manner as to acquire a vast territory beyond the Mississippi. And as they acquired territory, unlike the practice of imperial Rome, they made each acquisition of territory truly their own by settlement and development. These were not men who made compromises with forces that threatened them. They were men who destroyed those threats by their own indomitable strength and courage.

If the American Nation has, in its resources, in its political institutions, and in its culture preeminence in the world today, it is because strong men found three circumstances that favored the growth of a great Nation.

The first of these circumstances was the great area of the country and the richness of its resources. No nation, truly great in every way, can be created without natural circumstances that favor its growth. There have been nations great in a spiritual sense which have grown in a small area and with a small population, but from time to time they have been the prey of physically stronger neighbors. The United States avoided that eternal threat of danger by the

happy circumstance of its own position and size.

The second circumstance that favored our growth was the wise policy, inherent in the pioneers who settled this country, of creating, as they grew, political institutions that preserve individual freedom while they offer the broadest protection from selfish influences. They created a constitution sufficiently flexible to afford for all generations to come the possibility of change and growth.

The third circumstance that favored the growth of a great civilization was the fact that America was a meeting place of many cultures, many ideals, and many diversified points of view. It has been the genius of Americans to accept immigrants of many sorts, to permit them to make their contribution to our common life, and at the same time to assimilate them and their descendants in a truly unified American tradition. We have stretched out our hands to the unhappy people of Europe. We have offered them opportunity for a better life than they had at home, and all we have asked is that they have strong hands and loyal hearts.

In the course of our growth we have, in general, avoided interference in the affairs of other countries. We have not been anxious to make others as we are. We have generously contributed whenever we could to permit other countries to live their own lives, to be free of oppression, and to grow as God and nature intended that they should. But we have not sought to impress our own culture upon others. We have learned this hard lesson from our own experience, because as we grew as a nation, we asked no help from others; we merely wanted the privilege of freedom to grow as we could.

A few years after the establishment of this Nation as an independent Republic, our statesmen conceived that our duty, in fact, that our safety, demanded that we, as the strongest Nation in the Americas, should assert leadership in the two Americas in permitting other small republics to grow as we had grown. Out of this arose the most specific American statement of foreign policy that we have ever created—the Monroe Doctrine. The development of this policy with reference to the Western Hemisphere requires, on our part, not only great strength but great forbearance, for we did not conceive it to be the destiny of the United States to create an empire in the Western Hemisphere. The wisdom of our policy of living at peace with our neighbors, while at the same time we offer them the broad protection of our power, is witnessed by the fact that in the recent war we had the friendship and solid support of almost all those countries.

But all of this national greatness comes back fundamentally to the American as an individual. Only sound men can make a sound nation. It has been the habit of pessimistic people to speak of the disintegration of American character. When at times we have seen evidence here and there that wealth and security have made people careless and pleasure loving, there have been those who have claimed that the fiber of America has become soft and that the inner integrity of our people has been destroyed. But these evidences of weakness were, after all, superficial and passing. Fundamentally, the American remains as he has always been. In the recent war we had the proof of this inherent soundness. It is not alone that Americans in uniform upheld in every corner of the world the finest traditions of courage and skill. It was also a fact that on the home front Americans maintained order, willingly accepted supervision, and turned with incredible industry and skill to the task of production.

There have been nations, like Germany and Japan, that exalted their efficiency. But the tests of 1943, 1944 and 1945 showed that efficiency is not created by the mere proclamation of an intention to be efficient. Efficiency rises from the strength of free people. In spite of many unfortunate failures of foresight, our American industrial life added glories to its achievement. American women in the homes, on the farms, in the factories, in the hospitals and in the armed forces proved themselves to be the worthy successors of those women who stood loyally beside their kin in Washington's army. American States and cities made their contribution to the national effort. Everywhere we found a spirit of cooperation and loyalty.

Our task, as we look to the future will be, in spite of the suggestions of those who have formulas for security and happiness, to bear in mind that the United States was not built upon formulas; it was built upon the individual. We shall retain the power that is essential to the maintenance of America's responsibilities in the world only so far as we retain the spirit of the pioneer in each individual American. The door of opportunity must be kept open. The American boy must be taught from experience that whatever he attains depends upon his own inner integrity. We have won the past by hard work and honesty and self-reliance. There is no better formula through which we can win the future. The greatness of the past, in its achievements, lights the way for progress that is assured if no man-made shadows blur the road. It is for us to preerve for our posterity what our forefathers created for us, a nation of free people, ever helpful to others, but always selfish for the continuance, within our own domain, of the American way of life.

Despite our errors of omission and commission we remain steadfast in our Americanism. This is a great country. The greatness of our people today indicates the greatness we can attain in the future if we keep our feet on the ground and our eyes straight ahead toward the victory that is inevitable and the harvest it must produce.

Today America is confronted with one of its darkest peacetime hours, which is testing its very endurance. Hardly are we safely out of one war when we are confronted with the foreboding shadow of a struggle even more terrible and deadly. Our prayers of thanks for victory are mingled with appeals for deliverance from more war. This threat to peace is none of our making, but springs from the unholy ambition of one power—Soviet Russia—to dominate every way of life in every place in the world. We escaped one form of totalitarianism, fascism, to be confronted with another, Red fascism, perhaps more dangerous than the vanquished form.

It is my solemn conviction that the world will survive as a family of nations. The family bonds may be tightened in four corners of the world after the manner of our sisterhood States or within a world-wide family. The framework is not as important as cooperative achievement of law, justice and peace. The alternative in this atomic age is an ever-increasing race for armaments with its constant threat of common ruin. Without the shadow of a question, our civilization is indeed on trial.

In this dark hour, I am supremely confident that the destiny of this great Republic still lies before us, that our horizon is not a whit less limitless and not a shade less promising than that which lay before our forefathers in the blackness which followed the war for independence. We must not forget we are still a youthful nation, as the world goes. Our strength and our talents will stand us in good stead. We are the hope of ourselves and of the world. We are certain to survive to bring lasting peace.

It is not for me to tell you that the drive should be a success; you appreciate that fact. It is not for me to urge you to contribute funds for this purpose; your record in past appeals stands for itself.

I merely want to stress that this institution, this Crotched Mountain Hospital, is part of your way of living, it is part of you, it is you. This restoration hospital will be doing what you and your neighbor would do as Americans, as New Hampshire citizens, to help an unfortunate child if only you had the time, if only you had the skill, if only you had the money.

Individually you are unable to offer these necessary components to the aid which they seek and need. But together, as New Hampshire has always worked, that unfortunate youngster can be assisted. Together, you can take that child and make him what he should be—a healthy and happy citizen. Together, you can give him a helping hand through the Crotched Mountain Hospital.

That hospital will, I predict, become a symbol of the efforts of New Hampshire citizens—a symbol of efforts to build and develop in peacetime a principle your sons and daughters so wholeheartedly defended in war—that the American way of life is for everyone, everywhere, at all times.

That hospital will, I believe, mean just that type of symbol to the residents of this State. And when you go to them for contributions to this drive, you who are the leaders of the campaign should bear that thought in mind.

Remember, New Hampshire has helped to carve the American way of life from virgin forest land. This State contributed its share in developing a young nation. It has done its share in defending that Nation and in preserving and developing that way of life over the years of our country's history.

New Hampshire still has contributions to make; its citizens are still like their forebears—proud and strong and self-reliant. They still are determined to leave better opportunities for their sons and daughters, for all of the succeeding generations. It is still a great and powerful tradition with New Hampshire people that you help yourself when you help your neighbor.

You have an opportunity to join your fellow citizens in carrying on this tradition. You have an opportunity to assist in raising still further the ideals of your way of life. You have an opportunity to put the real meaning of the American way of life into the hearts of some little folks who are not able to reach out and grasp a full life by themselves.

Make the most of those opportunities and I know that you will find that your country and your own life will mean just a bit more to you, which is the real American way of life.

I wish you success and may God bless your efforts.

The Maritime Contracts

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Maritime Contracts," published in the New York Times of June 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MARITIME CONTRACTS

East coast shipping now faces the welcome possibility of genuine stability over a longer

period than it has enjoyed in many years. The recent and pending settlements of major maritime disputes indicate that sea labor negotiations have entered a new and more amicable era. A far wider field of the American economy than the shipping industry will see a good augury in this development.

Shipping volume is steadily declining and job availability for the unions is suffering a corollary reduction. But the National Maritime Union and the American Radio Association, both CIO affiliates, brought to the mediation conferences something more than the realization that they could not afford to make unreasonable demands. Like the operators, headed by Frank J. Taylor, and the mediation panel headed by William N. Margolis, they were cognizant of the urgent need for sustained mutual cooperation to keep the merchant fleet as strong as possible. Honors in this demonstration of sensible labor-management negotiations are shared with these two men by Joseph Curran, president of the powerful NMU. For him it may be seen as the fruit of a personal victory in his battle to free the union of leftist troublemakers who seemed more intent on political control than on the improvement of maritime labor conditions.

This is the first time the employers and the NMU have signed a 2-year contract. Operators may now estimate what their operating costs are likely to be over a long period. The single wage reopening for the term of the contract is another stabilizing feature. Perhaps most important of all, as an element bearing on future labor-management relations, was the easily won agreement on the hiring hall, which was extended pending a Supreme Court decision on its legality. Both the unions and the operators want the hiring hall to stay in this industry, and Congress will err if it does not give a full hearing to those seeking an exemption for the shipping industry in any hiring-hall ban.

Address to Graduating Class of Clinton High School

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. PHILBIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a speech which I recently made at the graduation exercises of the Clinton (Mass.) High School, as reported in a recent edition of the illustrious Clinton Daily Item:

EXERCISES ON FRIDAY—133 HIGH SCHOOL STUDENTS RECEIVE DIPLOMAS; CONGRESSMAN PHILBIN, SPEAKER

The annual commencement exercises of the Clinton High School graduating class were held on Friday evening at Fallon Memorial Auditorium, with 133 students receiving their diplomas.

In a notable and eloquent address Congressman PHILIP J. PHILBIN, a distinguished alumnus of the local high school and the father of Miss Bamby Philbin, a member of the senior class who received her diploma with her classmates, made a contribution to the history of Clinton such as has never before been heard at graduation exercises of any preceding class.

The occasion marked the first time that a parent has been given the honor of delivering a message to a class of which a member of his family was a graduate.

Congressman PHILBIN's address, in full, was as follows:

"This is a night of fulfillment, of vital tasks successfully finished, a night mingled with feelings of the joy of achievement and the sorrow of parting. I am greatly honored to be with you. I come as a fellow-alumnus of Clinton High School and a personal friend, and also as a parent.

"First, let me congratulate each and every one of you upon your graduation. It marks a long important step in your personal advancement. It is an accomplishment of which you can justly be proud. If you had not worked sincerely and intelligently you would not have been able to reach the cherished goal which we celebrate in these fitting and impressive exercises and which bring to this happy ending your high school careers. But actually it is just the beginning. The wide world opens before you. Boundless opportunities of a promising and successful future await the impact of your aspiration, energy, and ability.

"You are the beneficiaries of a noble tradition. You were blessed by Providence with the favored destiny of being raised and educated in this great free country of ours—the most powerful, the richest, the most advanced, the most prosperous and the happiest democracy the sun has ever shone upon.

"It has been your happy privilege and good fortune to be sons and daughters of our peerless town of Clinton which is steeped in such an abundance of patriotism, idealism, constructively balanced living, and genuine American culture. You have been fortunate enough to live in an atmosphere of tolerance where men and women are judged for what they are, what they achieve, and what they strive for, and not for the circumstance of their birth, their race, their religion or national origin.

"TRIBUTE TO CLINTON

"You may travel the whole world and you will not find another town like Clinton. Time forbids that I should recite its merits, the virtues of its people, and the brilliant achievements of its sons and daughters. The vital thing to recall tonight and to remember henceforth is the wonderful atmosphere of freedom, opportunity, tolerance, pride in accomplishment, incentive, and inspiration which has been engendered here and in which you have been so fortunate to live and work.

"This atmosphere did not develop overnight. It took more than a century to fuse the basic elements of our Clinton culture, outlook, and institutions into a comprehensive tradition. Many individuals, many groups, and many people contributed unselfishly and tirelessly and magnificently to establish the morale and motivation of Clinton and its citizenry.

"The deep spirituality of the early American founders, combining with their sound practical vision and love of free institutions merging with the enthusiasm, unbounded energy, driving ambition, and willingness to sacrifice for advancement under personal liberty which typified the several races of peoples who came afterward, was mainly responsible for the dynamic and stimulating atmosphere of our town.

"As years go by, you will place higher and higher value upon the advantage of living here during your formative years, and you will increasingly appreciate the tolerant spiritual and religious life of your home town which has formed the secure foundation for so many of its other favorable characteristics.

"FORTUNATE STUDENTS

"You have been fortunate in the extreme in having your high school and your teachers. There is background and patient development and rich tradition associated with your school. Its contemporary leaders and teachers are admirably carrying out and implanting the ideals of the great leaders and teachers of the past and when history is written the names of Thomas F. Gibbons, John J. Mitchell, and Eben S. Cobb as well as your own individual teachers will be ranked with those of Charles L. Hunt, Fred Clerk, Andrew E. Ford, Lawrence O'Toole, and others of past generations whose great talents, progressive outlook, and devoted service helped so immeasurably in laying the groundwork for our present school and high-school system.

"I know that tonight as you meet with your teachers officially for the last time that your hearts are filled with deepest gratitude for all they have done for you. Future years, let me assure you, will serve only to heighten your feelings of appreciation for their labors in your behalf, and they will serve to bring into focus as an inspiring force in your lives the many unparalleled advantages and benefits you have enjoyed under their leadership as students of Clinton High School and as residents of the town of Clinton.

"THE ROLE OF PARENTS

"There is another group tonight to whom you owe an undefinable debt for your present success. I know you will recognize that as a parent myself I speak in a very personal sense and like all the other parents here feel exceedingly proud at this time for the events which transpire here and the part my own daughter takes in these proceedings as one of the graduates. I am, therefore, somewhat handicapped by this personal relationship in dealing with this particular subject.

"If I were not in the role of a parent who has a fine and good daughter of whom I am very proud graduating with this class, I know that I should be much more anxious to emphasize to the members of the class the unmeasurable value of the love, devotion, loyalty, and in all so many instances, the real sacrifice, which your parents have displayed in furthering your interest and welfare without which this happy result probably would never have materialized.

"As parents we are, of course, totally unconscious of any particular debt of gratitude which may have accrued. We seek no encomiums. We are patient and long-suffering. I think I can speak for all of you parents, however, when I say that what we have done, we have done gladly and willingly, yes eagerly, and we seek no reward or commendation of any sort save continued goodness of character, renewed devotion to duty, and future contributions in the form of good living, good works, and constructive activities by our graduates for and in behalf of their families, their community, their Nation, and their Creator.

"We ask nothing more of them than that they adhere to the ideals which they have been taught in their homes, their churches, and their schools; that they continue honestly and wholeheartedly to do the best they can in whatever work they undertake; that they recognize their responsibilities to their families, to the people as a whole, and to the country; that they work, live, and strive as good industrious, God-fearing, self-respecting Americans contributing in every way they can to the building of good citizenship, wholesome family life, loyal friendships, and the building of a better Clinton and a better America.

"PRIDE AND HAPPINESS

"For us parents, tonight, there is pride and happiness for your success up to this time, but this occasion also brings to some of us remembrance and reminiscence. Some of us have come this very path years ago. We know the joys and the sorrows of life, the trials, adversities, and problems.

"From personal experience we know the obstacles, the pitfalls, the difficulties which you will have to face. Yes, my friends, we came this way ourselves. And if we were to close our eyes tonight we would find our-

selves again in the bright sunlight and flower-decked fields of other years.

"We see before us the smiling faces of dear loved ones now departed into that land from whose bourne no traveler ever returns who made our way easier, who made our progress possible. We feel again the affectionate touch of their hand upon our shoulder, we hear their words of counsel and advice and

"We recall the love and help they so unselfishly gave us; their look of disappointment when we lost; their unrestrained joy when we won; their never-failing, never-ending concern for us; their loyalty and steadfastness to the end of their days. These are precious memories which will always live in our minds. Because those were days when family ties bound us together like hoops of steel, more tightly perhaps than in this modern day.

"And now the vision dims, the bright sunlight of those happy years fades, the faces of those dear ones disappear and we are back again in this prosaic world of the present.

"And so it will be with you, my young friends. Opportunity is beckoning. It knocks on your door. It may knock but once. It is up to you to embrace it. It is up to you to remember your noble heritage, to treasure and sustain your high ideals and let nothing swerve you from them. We will be pulling for you in your every undertaking.

"ALL FACE THE SAME PROBLEM

"Many of you will go out into the realistic practical everyday world of work. Some of you will go to higher institutions of learning to seek further training for higher fields of endeavor. But all of you will have to face the same essential problem—how can you fulfill your highest destiny, how can you meet the responsibilities you have as educated men and women living in this fast-moving, rapidly changing atomic age?

"You are finishing the happiest but at once a most vital and important period of your lives. You have made a fine start. As a class and as individuals you have made a great record here. Your class has distinguished itself in the classroom, on the athletic field, and in every other high school activity. You have all recorded a significant accomplishment in your high school work. By your training and character you are well equipped for the future. If you have the will, ambition, and determination you can go on to finer achievements.

"You can go on to service to your own aims but service also to the Nation and humanity, to the task which faces every one of us today more than ever before of protecting, preserving, maintaining, and enriching the great institutions of our country which have given you, and so many others priceless incomparable advantage of 'life, liberty, and the pursuit of happiness.'

"If you but will it, if you courageously persevere in your aims, you can reach your goal and you can make your contribution. Whatever that contribution is, make sure that it is your very best. Make sure that it represents the very best effort of which you are capable. Make sure that it is sincere and earnest and conscientious. Make sure that you work seriously at the tasks at hand. But no matter what your gains in material wealth or position, never take yourself too seriously.

"Remember that you are human and finite. Never let failure deter you from another and still another try. Remember the words of a great philosopher: 'There is no such word as failure in the lexicon of a bright youth.' Keep your courage high because you may score a touchdown on the next play. Be humble of your talents and accomplishments and never gloat over the reverses or misfortunes of others. Tomorrow they may rise to success.

"LEND A HELPING HAND

"Distinguish between confidence in yourself and vainglory. Keep it in mind that pride goeth before a fall' and that vanity casts doubt upon your real worth. Be generous and kindly and just—always ready to lend a helping hand, particularly to your less-favored brethren. Respect the judgments of your elders because their experience can guide you safely from the shoals. One is wise who learns from his own mistakes. It is a genius who learns from the mistakes of others.

"Be interested in the civic and political affairs of your town, your State, and your Government. Democracy can be destroyed by nonparticipation of the average citizen and the activity of minority pressure groups. The Nation and the world are faced by many grave problems. Your generation will necessarily have to play a large part in solving them. They cannot be solved without your help.

"You and those who will work with you will be the leaders of the future. What kind of a future—slave or free? Upon you the nation will depend for its freedom and security. To you and other young Americans the whole world will one day look for guidance, and inspiration in the struggle for peace and democracy. It will be your major task and duty to defend our freedoms and save them from destruction by tyrants who are, if the facts were known, case problems for the psychologists but who are preaching poisonous class hatred and seeking by force or stealth the destruction of individual liberty and the enslavement of man.

"NO MAGIC FORMULA

"There is no magic formula to prepare you for these great tasks, no open sesame to success. But there are some guides and signposts you can follow. First, remember that there is no substitute for hard work in the life of an individual or a nation. The able-bodied individual who strives to avoid or evade his responsibilities, who turns to the Government at some level to solve his personal problems, or to provide him with the means of livelihood, is foredoomed to failure. Similarly, that nation which turns its back on the dignity and worth of the individual and pursues the wraths of collectivism and socialism will soon suffer the same fate as all the other nations throughout history which have departed from the basic free way of life ordained to us by the Almighty and exemplified so brilliantly by the unmatched glories and achievements of our own Nation.

"Remember that this Nation is not a static organism. To stand still is to retrogress. We must work for a dynamic, forward-looking, forward-moving democracy. But at the same time we cannot ignore or discard the solid constructive values of the past. Industry, thrift, preparation for rainy days, all the deep spiritual values of wholesome home and family life are the enduring basis of any worth-while, well-ordered government.

"Do not be led astray or swerved from your chosen course by current despotic doctrines as old as Methuselah or the Corn laws of Rome that there is an easy road to personal success, governmental stability, or national prosperity. A nation, like an individual, must zealously protect its freedom or it will crumble through soft living, inertia, moral decay and spiritual degeneration into the dust of oblivion. All the experience of mankind and all the lessons of recorded history indisputably prove that fact.

"STAND BY PRINCIPLES

"Let me reemphasize: Be true to yourselves and the ideals you have learned in our own homes, your churches and this school. Be confident of your abilities and aim high. Remember the words of the poet—'not failure, but low aim, is crime.' Be proud of your heritage and never betray it. Stand by your principles and your convictions. Respect yourselves and others will respect you.

"Live like your fathers and mothers have tried to live—loyal to God and country, loyal to every worthy institution, loyal to your friends. Strive to advance yourself and live not by selfishness or vanity or materialism. 'To thine own self be true and it must follow as the night and day, Thou canst not then be false to any man', is something to remember if you place beside it, 'Love thy neighbor as thyself' and the injunction of the Golden Rule 'Do unto others as you would have others do unto you.' And when you are right, fear no one but God, because the truth will make you free, and freedom will make you strong.

"It is always a source of sadness to do accustomed and cherished things for the last time. It always tugs at the heart to leave dear friends—the young and the old. But time waits for no one. You must move forward—always forward—to the broader opportunities and achievements of the future. You part tonight but you will be together again I know, together in these fine warm friendships you have formed here, together in the spirit of these noble teachings and ideals, together in the company of all those who strive to keep our high faith in America and all she stands for, the eternal faith which by the blood and sacrifice of her sons we have sworn to uphold to the end.

"Years ago, on this very platform, in a setting like this, on a night and occasion like this, I had the honor of joining with my own Clinton High School class in singing the class song.

One verse went something like this:

" 'June time with its fragrant roses
E'er will bring a tearful sigh
For a class that once departed
From the halls of Clinton High.

But now as we start on life's battle
Let us be brave and heed
The words of our own class motto
Of "every day some nobler deed."

"And I think, tonight, my friends, that the last line of that song may well be kept in mind by all of us. Let me again congratulate you and your parents and teachers upon this great memorable unforgettable night in your lives, so full of deep meaning for them and for you.

"And let me wish you all the very best of health, success, prosperity and happiness in the future whatever your chosen way of life. Try to remember in the time to come, whether in storm or in sunshine, those words which symbolize so well and so beautifully the spirit which animates Clinton and the Clinton High School: 'Every day some nobler deed.' "

The students, in caps and gowns and the girls carrying old-fashioned bouquets, marched into the hall to the strains of Pomp and Circumstance, played by Miss Dolores Mercier, highest honor student in the class, and Francis X. Howard, high honor student.

The entire class then joined in singing a group of Victor Herbert favorites directed by Miss Elinor Driscoll, music supervisor.

The class gift, a check for $50 to purchase music for the school, was presented to Superintendent John J. Mitchell by Michael A. Pizza, class president.

Following the acceptance of the gift, Miss Dolores Mercier and Francis X. Howard, pianists, offered Gavotte and Musette after which La Spagnola was sung by Miss Jean F. O'Brien, Miss Virginia M. Imbimbo and chorus.

The following awards were presented by Principal Eben S. Cobb of the high school: DAR Medal, Miss Dolores Mercier; Washington-Franklin Medal, Miss Ann E. Noon; Rensselaer Polytechnic Medal, Raymond F. Dyer, Jr.; Becker College Medal, Miss Jean O'Brien; Harvard University prize book award, Leo F.

McNamara; Police Association award to best student athlete, John C. Polymeros.

The diplomas were awarded by Francis P. Murphy, chairman of the school committee.

Break-Down of Yalta Agreements

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "After Yalta: Why the FDR-Stalin Pacts Broke Down," written by Edward R. Stettinius, Jr., and published in Look magazine for July 5, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFTER YALTA: WHY THE F. D. R.-STALIN PACTS BROKE DOWN

(By Edward R. Stettinius, Jr.)

Roosevelt, Churchill, and Stalin achieved at Yalta the closest cooperation the Big Three ever knew.

Then a series of events began to shatter that unity almost as soon as the conference ended, on February 11, 1945. Big Three relations reached a dangerous impasse that still exists today.

What caused the break-up?

President Roosevelt died on April 12. And Winston Churchill was defeated as Prime Minister in July. But the high tide of Big Three unity began to ebb even before either of those two events.

The opinion of some of the State Department group on Roosevelt's staff at the conference was this:

When Marshal Stalin returned to Moscow after the conference, he ran into difficulties with the Politburo. He was accused, it was said, of having been too friendly and having made too many concessions to the two capitalist nations. Such nations, in dogmatic Marxist eyes, could never be really trusted by Communist Russia.

According to this thinking, certain members of the Politburo may well have felt that the Soviet Union had been virtually "sold out" at Yalta.

Anthony Eden told me at the San Francisco Conference he was convinced something had happened in Moscow after the Yalta meeting.

The workings of the Politburo have never been even partially revealed. And I do not pretend to know what took place in Moscow after the conference at Yalta. But there are several things I know, as Secretary of State at the time of the conference, that may cast some light on the mystery.

Averell Harriman, then Ambassador to Russia, cabled the State Department on September 19, 1944. He said it seemed clear that powerful elements close to Stalin were unwilling to see the security of the Soviet Union rest solely on an untried world organization. Harriman suggested that Russia might go along with the UN but, at the same time, build its own sphere of influence.

STALIN FEARED FREE ELECTIONS

It is possible that Stalin's advisers told him that free elections in eastern Europe, agreed on at Yalta, would destroy Communist control on this region. Stalin himself said as much at the Potsdam Conference. I understand that Stalin at Potsdam actually wanted the United States to recognize the various governments in eastern Europe before the elections had been held.

Another explanation for what happened after Yalta may be that Roosevelt's death strengthened the hands of the anti-American group in the Politburo.

It is also possible that the Politburo after Yalta reviewed its policy. It may have decided that the United States was soon going to withdraw from Europe, to concentrate all its troops against Japan.

UNITED STATES OCCUPATION A FACTOR

The Politburo may also have been influenced in this line of thinking by a statement President Roosevelt made at the plenary session of February 5 at Yalta. He said that United States troops probably could not be kept in Europe more than 2 years after the war. Although this now may sound astounding, it must be remembered that there was a ground swell of public opinion demanding that our forces be returned home as soon as the war was over.

Whatever the reason, the Soviet Union began to hedge on some of its agreements shortly after the Yalta Conference had closed.

The Russians delayed on certain military agreement. They impeded the formation of the German Control Commission. They failed to live up to the Declaration on Liberated Europe as applied to Rumania. And they greatly impeded the carrying out of the Polish agreement.

The Soviet Union did allow Air Force representatives to survey possible air bases near Budapest as agreed. Then it delayed the granting of the bases. The Air Force finally dropped the issue because, after the delays, the bases were no longer needed.

MILITARY PACT IGNORED

At Yalta, too, a military agreement called for each nation to allow the others to send a mission behind its respective lines to deal with their own liberated prisoners. After Yalta, however, the Soviet Union would not allow a United States mission to function behind Soviet lines, as agreed.

In London the Soviet shift in policy was evident to the American representatives on the European Advisory Commission. One week after Yalta the Soviet member announced that representatives were coming from Moscow to join with the British and Americans to form a nucleus of the Control Commission for Germany. Two weeks later the Soviet representative stated with great embarrassment that the Russians were not sending a group to London after all.

In the case of Rumania, as well as in the rest of liberated Europe, the three Governments had made definite pledges in the Declaration on Liberated Europe. They had promised to help form interim governments—regimes representing all democratic elements and pledged to early, free elections.

In spite of this, 13 days after the Yalta meeting had adjourned the Soviet member of the Allied Control Commission for Rumania refused to call a meeting of the Commission. Three days later Foreign Vice Commissar Vishinsky arrived in Bucharest. He demanded the dismissal of the Radescu government and the formation of a new regime. The King was forced to appoint a government formed by pro-Communist leader Petru Groza.

RUSSIA REJECTS PROTESTS

The United States lodged protests that the principles of the Declaration on Liberated Europe were being ignored. But Russia bluntly rejected them.

Another development in Soviet-American relations irritated President Roosevelt.

Marshal Stalin sent the President a note protesting that negotiations were taking place at Bern among the Germans, British, and Americans for the surrender of the German Army in Italy.

The President had advised the Soviet Union before Stalin's note that the Germans had requested a meeting. But Mr. Roosevelt had assured Stalin that no negotiations actually had taken place.

Stalin's note asserted the President was not being informed by his own military leaders. Negotiations, he said, had been completed and the Germans were allowing the American Army to advance in return for easier peace terms.

STALIN ANGERS F. D. R.

The President was angered by this note. He replied sharply that General Eisenhower would not have undertaken negotiations without informing him. Furthermore, he said, the Soviet Union had been fully advised as to all the developments. The President remarked that he resented the "vile misrepresentations" of the Marshal's informants and that such information indicated a belief that certain of Stalin's informants desired to destroy friendly relations between the United States and the Soviet Union.

Marshall Stalin replied that he did not question the President's honesty, but he still believed that he had received accurate information. The tone of Stalin's message was, however, more conciliatory than his previous ones.

Meanwhile, the Polish agreement was being jeopardized.

Early in March, Ambassador Harriman sent a warning to the State Department. He said that Foreign Commissar Molotov was insisting that only Polish leaders acceptable to the Lublin Government be invited to consult with the commission appointed at Yalta.

This commission, it had been agreed at Yalta, was to consult with Polish democratic leaders from within Poland and from abroad with a view to reorganizing the Lublin Government. The Lublin regime had been set up originally as a Soviet puppet government. Roosevelt's and Churchill's purpose at Yalta had been to reorganize it so it would represent other Polish elements, including factions of the Polish Government-in-exile in London.

But Molotov now disregarded the agreement on Poland.

F. D. R. PROTESTS TO STALIN

On April 1, President Roosevelt sent an urgent cable on the Polish issue to Marshal Stalin. Both the President and the Prime Minister had communicated with each other late in March. Both agreed that the Yalta agreement was in grave danger. Roosevelt told Stalin that "a thinly disguised continuation of the present government would be entirely unacceptable."

On April 7, the Marshal answered and charged that the British and American Ambassadors had violated the Yalta agreement. They did so, he asserted, by insisting on the complete liquidation of the Lublin Government and the formation of an entirely new government.

The President died while officers of the British Foreign Office and the State Department were drafting parallel replies to Marshal Stalin.

Just before he died, the President received a message from the Prime Minister. Churchill asked for advice on what to say to the House of Commons on the Polish question. The day he died, on April 12, the President, at the little White House at Warm Springs, Ga., sent the following message:

"I would minimize the general Soviet problem as much as possible because these problems, in one form or another, seem to arise every day and most of them straighten out as in the case of the Bern meeting.

"We must be firm, however, and our course thus far is correct."

END OF LEND-LEASE UNTIMELY

Later, however, an incredible order issued in Washington after VE-day, May 8, disturbed Soviet-American relations still further. The

order abruptly ended the lend-lease program to the Soviet Union so far as the European war was concerned.

The order was particularly untimely and revealed a lack of coordination between military and civilian agencies.

It was issued without any warning whatsoever to the Soviet Union and other European countries not involved in the Japanese war. It caught the State Department completely by surprise.

At my urging, President Truman wisely modified the order. But the psychological damage had been done in our relations with a nation as suspicious as the Soviet Union.

On May 23, President Truman sent Harry Hopkins to Moscow to assure Marshal Stalin that the death of Mr. Roosevelt would not alter the United States policy of cooperation with the Soviet Union.

Stalin, however, seemed to think otherwise. He told Hopkins that the manner in which lend-lease had been curtailed was unfortunate and even brutal. He said if the order was designed as pressure to soften up the Russians it was a fundamental mistake. He said he must tell Hopkins frankly that if the Russians were approached frankly on a friendly basis much could be done. But reprisals in any form, he said, would bring about the exact opposite effect.

The San Francisco Conference, meanwhile, reached an impasse that threatened failure in our attempt to build a world organization.

RUSSIA TRIES TO HEDGE ON UN

On instructions from Molotov, Soviet Ambassador Gromyko insisted that a dispute could not even be discussed by the Security Council without the unanimous vote of the five permanent members, unless the situation was one that could be settled by peaceful means.

This violated the Yalta agreement limiting the veto. I advised Gromyko that if the Soviet Union continued to insist on its new view, the United States would refuse to join the world organization.

President Truman approved a proposal I made to send a cable to Ambassador Harriman instructing him to discuss the question with Marshal Stalin, accompanied by Hopkins if possible.

The two met with Stalin and pointed out to him how the United States interpreted the Yalta agreement; that it safeguarded freedom of discussion and the right of any member to bring before the Security Council for discussion any situation affecting the peace and security of the world.

Molotov attempted to defend the instructions he had sent to Gromyko. But the Marshal told him, I heard later, not to be ridiculous and that the Soviet Union should accept the American position.

The entire incident reveals that Marshal Stalin could reach a quick decision, even though it meant publicly repudiating the position of his Foreign Commissar.

Its significance is, too, that it saved the United Nations from collapse before it started. By doing so, it saved perhaps the most important concession that President Roosevelt and Prime Minister Churchill won from Stalin at Yalta—Soviet membership in a world peace organization.

It was essential that Churchill and Roosevelt make an honest attempt at Yalta to work with the Russians. For the world's peace they had to make every effort to test the Soviet Union's good faith. Until agreements were made and tested the world could not clearly know of the difficulties of securing Russian compliance with agreements.

The western nations could not be following their present policy toward the Soviet Union unless they had behind them the record of Roosevelt and Prime Minister Churchill in their joint effort to deal with Russian leaders in an honest, honorable manner at Yalta.

Hoover Plan Called Reassuring

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, which appeared in the New York Herald Tribune on Wednesday, July 6, 1949:

HOOVER PLAN CALLED REASSURING IN MIDST OF ECONOMIC DISQUIET—MARK SULLIVAN ASKS WHY FORMER PRESIDENT WAS LEFT OUT OF UNITED STATES COUNCILS FOR 17 YEARS

(By Mark Sullivan)

As we experience the disquiet caused by an unbalanced budget and other disturbing aspects of government one development stands out as indisputably constructive and assuring. This is the Hoover Commission report and plan for organization of the executive branch of government, the near-unanimous passage of it by Congress, and the beginning of putting it in effect by President Truman.

About this there is no misgiving and no partisan contention. The authorizing of it more than a year ago was by a Republican Congress and a Democratic President. The objective, efficiency in government and reduction of its cost, is likewise nonpartisan. The plan would apply to any administration, Democratic or Republican. It is administration of government as a science and art. The talent that went into it was of the highest quality. Mr. Hoover set up some 48 "task forces" with an aggregate of some 300 men especially adapted by experience and ability.

This was the first such survey of government in the country's history. Admitting that this survey was limited to the executive branch of government, and that it was a survey for reorganization of a going concern, and not a blueprint for something not before in existence—admitting these qualifications, there remains a relation between the work of this commission and that of the Constitutional Convention of 1789. That convention set up the original pattern of a government of divided powers, later adopted by many countries besides our own.

SYSTEM UNDER ATTACK

What the Constitutional Convention created the Hoover Commission now helps to make workable and vital. This takes place at a time when, in many parts of the world, the conception of government through a system of divided powers is under attack, on the ground that it is not workable under modern conditions, that it must be replaced by totalitarian government.

For what Mr. Hoover brought about wide praise has been given. Much of it includes regret and a question. Why has it been that, during the 17 years after Mr. Hoover left the Presidency, the country did not have the benefit of services he could have given? With that question goes another. What accounts for the harshly demeaning picture of Mr. Hoover which the public was led to see during his administration and afterward, and which is now coming to be seen as false?

The answer goes deep. It is not only that Mr. Hoover's administration coincided with a devastating economic collapse and depression that have occasion and impetus for the demeaning picture of Mr. Hoover. But for the deeper source of it we must turn to the broad history of the time.

There was under way throughout the world, and had been for 12 years before Mr. Hoover become President, beginning with the Communist revolution in Russia in 1917, one of the great ideological struggles in history. It was between collectivism and individualism, the latter called by the Communists "capitalism." In that struggle Mr. Hoover was, by a combination of several conditions, a supreme and unique symbol of what communism and other shades of collectivism wished to destroy or see end.

SYMBOL OF INDIVIDUALISM

Mr. Hoover was the head of the leading capitalist country in the world. Within that country he was head of the conservative one of the two parties. In his own person he was an outstanding example of individualism as a system in operation. In the American way he had risen from the status of a son of a country blacksmith to eminence in private business and public service. Communists knew that American youth would have belief in the system of which their President was a fruit, would resist collectivist argument against it. Finally, Mr. Hoover as a man of thought knew what the struggle was about. Precise intellectual understanding of the contending principles was in a book he had written in 1922, American Individualism.

That combination of conditions made Mr. Hoover perhaps the outstanding man in all the world whose reduction in public esteem would most serve those schools of thought which wished capitalism to end. When, during Mr. Hoover's administration, economic forces generated during the First World War came to a crisis, opportunity was given for heaping blame and ignominy jointly upon capitalism and Mr. Hoover. It was kept up through the years when there was questioning whether capitalism would recover.

Flag Day Address of Hon. David L. Lawrence

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. CORBETT. Mr. Speaker, on behalf of many patriotic citizens of Pittsburgh, and myself, I am pleased to cause to be spread on the pages of the CONGRESSIONAL RECORD a Flag Day speech delivered by the honorable mayor of our city, David L. Lawrence. I am sure that this speech delivered before the Pittsburgh Chapter of the Sons of the American Revolution will prove inspiring to all those who read it.

The address follows:

There is something in the nature of mankind that requires a symbol—a point of concentration for the deep emotions which swell within our hearts.

That is why we honor our country's flag.

It is the symbol, changing as the Nation changed, growing as the Nation grew, which embodies our love for America.

The flag is more than a design, more than bunting, more than the colors of the country.

It expresses for us the thoughts for which we can scarcely find words, the unshakable loyalty, the unquestioning devotion, we give this land which gives us liberty.

In the flag is written our history.

With the flag goes our heritage.

The flag is the cord which binds the trials and the bravery and the great achievements of each generation of Americans. The flag speaks the immortal language of the Declaration of Independence and the Bill of Rights—our instruments of freedom. The flag tells

of the conquest of a continent—the pioneering of this country from sea to sea. The flag reminds us of a war fought to save the Union and to make all men, free and equal in the United States.

The flag calls to our memories the names of far places and distant shores where Americans fought for liberty in two world wars—where only the courage and the genius and the power of Americans saved the world from complete conquest by power-mad dictatorships.

It was often said that the war against the Japanese and the Nazis was a war without heroics—that it was mechanical combat, machine against machine, grim, grimy, deadly. The Stars and Stripes were not often seen on the battlefields of France and Germany and the Pacific Islands. There was no time nor place for colors and the trappings of military pride.

And yet, what incident in the war so captured the minds of men or so inspired the people of America as the picture of that little group of American marines who brought the colors to the peak of Mount Surabachi and planted them firmly never to be dislodged, on the bloodied lava rocks of Iwo Jima.

They symbolized for the world the American fighting for his country, unromantic, sometimes cynical, ashamed of sentiment, but deep in his heart fiercely patriotic and with burning pride in his country, its power, and its glory of accomplishment.

We are a people who have never been defeated.

We have gained every objective we have set for ourselves.

In each generation, we have advanced in material wealth and comfort, and yet in each generation we have increased our ability to govern ourselves in the interest of all of our people.

The story is written in the flag.

A great orator and champion of freedom for all men, Charles Sumner, said of our flag, 2 years after the Civil War was won:

"White is for purity; red, for valor; blue, for justice. And all together, bunting, stripes, stars, and colors blazing in the sky, make the flag of our country to be cherished by all of our hearts, to be upheld by all of our hands."

We have had added many a star to our flag since Sumner spoke in 1867. Great States have come into the Union; perhaps more will come, as the people of our last frontier, Alaska, and our island Territory, Hawaii, seek and gain statehood.

There are 140,000,000 people living under our flag as American citizens. And it floats in Tokyo and Berlin, while we undertake to make the world safe for peace-loving peoples. Throughout the world the American flag is a symbol of purity, valor, and justice—the hope of the peoples whose only desire is to be free and independent; to be, like our own country, a land where a man and a woman are free to worship, free to earn their bread, free to live the life their conscience dictates, without oppression, without robbery, without terror.

We will not find the millenium come in our day or in many a day beyond our own.

The struggle for world peace and world freedom was not over when we smashed Hitler and secured the surrender of Japan. Our responsibilities are greater than ever before. We have achieved world power, and with power comes responsibility.

The foes of freedom, those who seek discord and upheaval throughout the world, believe we will tire of our burdens, believe we will abandon our responsibilities.

That we must not do.

Our history proves we will not do it.

Our flag tells the story of our own struggles, our own growth, for a century and a half.

And we are by no means perfect yet.

But under the American flag we have made the greatest strides toward freedom and opportunity that the world has ever seen.

The flag of our country is a living flag. It symbolizes a country that will not rest, that will not consent to things as they are, that will always fight for a better life for all of its people.

That is why we have faith in our country.

That is why we love its flag.

It is an accident of birth that makes us residents.

It is the glow in our hearts and the courage in our wills that makes us citizens.

Let no man or woman be ashamed of the forms of patriotism. They are the expression of our love of country, and our gratitude for its service to us.

The flag is the symbol of America.

Let us honor it, not only on Flag Day, but for 365 days each year. Let us be careful to render it the ceremonial respect which is due our Nation. Let us confess, proudly and joyfully, to the stirring in our hearts when the flag is passing by.

Patriotism is not an emotion reserved for wartime.

It is the ever-present devotion we bear our country.

It is why the flag, when we see it float above us in companionship in the Nation, and country itself, with all that that means to us.

I was in London before the war.

One of the things that struck me was the way the bands played God Save the King at the close of every performance in the theaters, and the sincerity with which the people heard their national anthem. I am sure that when the bombs were falling on London, that same deep-seated patriotism kept up the morale of the people, and gave them confidence that, no matter how black the outlook, their country would find the strength to hold on and see it through.

We need that kind of ingrained confidence in America today.

This is a sorely troubled world.

We have been an island of relative plenty in a sea of hunger and despair. We have been fortunate above all others.

We must maintain our strength.

We must be bold.

We must have the courage to lead the way.

It is no task for a weak-kneed people or for a faltering country.

It is a time to look to the flag, to draw inspiration from our past, to preserve our faith, to maintain our confidence, to be strong.

All will be well, if we keep to the traditions of America.

We will prosper, and the world will prosper with us, if we follow the path of our flag—the path that leads to expanding liberty, to continued progress, to the best hopes of all mankind.

George J. Burger

EXTENSION OF REMARKS

OF

HON. JOSEPH P. O'HARA

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. O'HARA of Minnesota. Mr. Speaker, those of my colleagues who, from time to time, have had problems affecting small business, will gladly testify to the worth of the Small Business Committees of both the House and the Senate. Over the years the committees have worked with problems affecting the small-business man, and the scope of their investigations, and the results which have been achieved, have certainly justified their continuation.

Practically every Member of Congress knows George J. Burger, vice president of the National Federation of Independent Business, Inc. He and his organization, among others, have likewise done some very excellent and effective work in behalf of the problems of the small-business group.

In this connection, Tris Coffin, who writes a column for the Washington Times-Herald entitled "Washington Daybook," has a most interesting article in the edition of Sunday, July 3, on our friend, George J. Burger, which I would like to bring to the attention of my colleagues.

The article follows:

WASHINGTON DAYBOOK

(By Tris Coffin)

A gruff-voiced never-say-die lobbyist with all of the gall of the Irish did the impossible.

George J. Burger, the vice president of the National Federation of Independent Business, brought the dead back to life. He's pulled the defunct Senate Small-Business Committee back from the grave where a Democrat caucus buried it.

With a jab of an accurate forefinger at his listener's chest, George barks modestly, "No wine, women or song—no fancy tricks. I just rang doorbells and counted noses in the Senate." Then with a sly grin he concedes, "Well, I did mention to a few Senators that small-business men will vote in 1950."

An independent, free-wheeling Senate Small-Business Committee is Burger's baby. This one-man army of energy has been storming Republican and Democratic national conventions, battering on doors on Capitol Hill, and waylaying unsuspecting Senators ever since he's been in Washington.

This committee has been the daunciest, nose-thumbing committee on Capitol Hill. It didn't abide by the old rules of bowing low three times before big shots. It got into David and Goliath scraps and it tore some fancy britches.

But its goose was finally cooked last fall when a well-organized campaign started to kill it under the pious policy of "legislative reorganization." SCOTT LUCAS, the handsome Democratic majority leader, snapped there wasn't any need for a separate Small-Business Committee. Another standing committee could handle the problem. (LUCAS had a private run-in with the committee during the 80th Cong.)

JIM MURRAY, the lanky, graying Democrat from Montana, tried to revive the committee. But LUCAS said in the caucus, "Nothing doing."

Under the prodding of Burger, MURRAY and a few dissidents defied the caucus and introduced a resolution recreating the committee. It moldered and moldered in the Rules Committee until it was green and gone.

Then Brother Burger tore in again. Letters from indignant small-business men poured in, snarling, "You don't love us now as you did before the 1948 campaign. But wait; 1950 is not far away."

After an appropriate period of fermentation, Burger tackled one of the sagest souls in Congress, the quiet chairman of the Rules Committee, CARL HAYDEN. The Senator said, tersely, "You'd better go count noses."

Burger and company counted noses and poured words in ears. The result was one of the biggest upsets in Congress for years. The resolution recreating the committee came out

by a vote of 6 to 2, completely reversing the Democrat caucus. HAYDEN himself voted for the resolution.

The next step is to force a roll-call vote, to get the tally on the record. If that's done, Burger gloats, "we're in, fellows. The committee will be poking around again. Ah, good times are on the way."

Independence Day Address of Rev. C. A. Cooper

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD I am pleased to include an Independence Day address by the Reverend C. A. Cooper, of Spokane's Church of the Air.

At a time when our glorious Fourth of July anniversary has become too much of an occasion for firecrackers, sunburn, automobile wrecks, drownings, fires, arrests, and such, it is perhaps well to reflect on some of the more serious and fundamental aspects of the true foundations of our national beginnings:

WAKE UP AMERICA

It is high time the Christian forces everywhere arouse themselves and petition the Lord for a spiritual awakening as the greatest guaranty to our national independence. During all the eventful years of more than a century and a half, godly leaders have, without exception, found applicable the scriptural text, "The throne is established by righteousness." Proverbs 16: 12.

I think of George Washington, at Valley Forge, prayerfully kneeling in the snow seeking God for help. There came to him by divine revelatiotn the future of this great Republic. If the infant nation would be properly established, it must be by righteousness. Not by appeasement on the one hand, not by evil alliances with wicked nations on the other. Not by total reliance upon huge armies, navies, or military might, for of these he had none. Nay, "Not by might nor by power, but by my spirit," saith the Lord.

Then look at Abraham Lincoln as he steered the Ship of State through troubled waters. After so glorious a beginning, she was now threatened with destruction upon the sea of civil war. His biographers tell us that kneeling until the morning hours, some nights never retiring at all, Lincoln sought God. When the worse had come to the worst, he proclaimed April 30, 1863, as a day of "National repentance, fasting and prayer, that the united cry of the Nation might be heard on high, and answered with blessings no less than the pardon of our national sins." This attitude did not go unrewarded. Victory came, and the "Nation was established by righteousness."

In this atomic age when civilization itself is threatened, what is our prime need? Is ours an economic, or a military, or an atomic problem only? Or is ours a moral and spiritual problem wherein the hope of survival lies not solely in the possession of a larger stockpile of atomic bombs than Russia possesses, but in God. "In God we trust" not "In bombs we trust." "Righteousness exalteth a nation" declares the Bible. This is our and the world's only hope. Only by lifting high the blood-stained banner of the cross, can America hope to keep the Stars and Stripes aloft. A return to God now on a national scale throughout America, as I see it, could well provide the solution, not only to ours, but to the world's ills.

Let's reminisce. How can you explain the rise of our Nation to such prominence while so young? Is it not traceable to the righteousness of its founders? Our Pilgrim fathers prayed at Plymouth Rock. After so perilous a crossing of the Atlantic, what was their first act but to kneel and worship. Observe their sacred, puritanical regard for the Lord's Day and righteousness. Now, amidst all our efforts to preserve and extend the blessings of democracy, it is well to remember, it was from the soil of religious conviction that democracy sprang. Moreover, the right to worship God was the sole actuating motive for colonizing the new world, and only a return to the God of our fathers now, and faith of our fathers, can justify its perpetuation.

Again, when framing the "greatest document ever struck off by human hand" the Constitution, what did our forebears do but hold a daily prayer meeting by joint resolution. At the Constitutional Convention in Philadelphia, Benjamin Franklin made the motion, adding, "I have lived a long time and the longer I live the more convincing proof I see that God governs in the affairs of men; and if a sparrow cannot fall without His notice, is it probable that an empire can rise without His aid? Except the Lord build the house, they labor in vain who build it. Without His concurring aid," said Franklin, "we shall proceed no better than the builders of Babel." The stymied Convention then moved on smoothly and prayer became the very foundation stone in the Nation's building.

The Father of our Country once said, "It is impossible to rightly govern the world without God and the Bible," and Andrew Jackson later remarked, "That book, sir, is the rock upon which our Republic rests." Less than 100 years ago Daniel Webster uttered a solemn warning and prophecy. Said he, "If we abide by the principles taught in the Bible, we will go on prospering, but if we do not, catastrophe may suddenly overwhelm us."

Wake up, America. No nation ever relegated the Bible to the background and survived. What happened to Chorazin, to Bethsaida who rejected the claims of Christ? Did not sin bring ancient Capernaum down to hell? From the very pinnacle of glory she sank into oblivion according to the warning of Christ, and no trace of her can be found today. What contributed to the recent downfall of France, but the decay of the moral and spiritual fiber of her people. France excluded the Bible from her schools, much as we are doing now, banished the name of God from her legal documents, removed the phrase "God protects France" from her coins and went merrily on her way—to destruction. "Righteousness exalteth a nation, but sin is a reproach to any people." This is our greatest enemy. Sin is America's national liability, far exceeding her national debt. If righteousness will exalt a nation and merit God's blessing, sin will inevitably prove its ruin. Sin is the stigma.

Here is the ancient and the modern, by way of comparison. Gibbon in his "Rise and Fall of the Roman Empire," lists five contributing factors to the debacle. I give you these causes. "Rapid increase of divorce with the undermining of the home—the mad craze for pleasure—the building of gigantic armaments when the real enemy is within, the decadence of the people and the decay of religion." This conclusion, coming from an unbeliever, causes one to think. Are not our national conditions comparable to those of that period immediately preceding the fall of the Roman Empire?

There is our morals decline and breakdown of the home. Licentiousness and adultery have swept nation after nation out of existence. Did it not bring fire and brimstone upon Sodom and Gomorrah? What carried ancient Rome to ruin? The obscene frescoes of Pompeii and Naples tell the tale. Are not we too lovers of pleasure more than lovers of God? Is there not now a decay of religion? Less than 2 percent of the citizenry of our land frequented any place of worship last Lord's day evening with a slightly higher percentage in the morning.

Our deplorable crime situation, our economic problems, our domestic strife are but effects. What is the cause? J. Edgar Hoover speaks, "These conditions are secondary in importance to the disastrous decay of religion. Over 60,000,000 of our fellow citizens profess no religion, many of them no belief in God. This is America's gravest peril." On this Independence Day these facts present a challenge to the professing Christian church of all faiths, and to the praying constituency of our Nation.

To safeguard our democracy and preserve the true American way of life, we need, we must have a revival of genuine old-fashioned religion, deep, wide-spread, if our land is to be healed. It is this or the dissolution of the home, church, and Nation. Let us all make a spiritual contribution to the generation by a personal and national return to God with repentance for our sins and with faith in the Lord Jesus Christ. Amen.

Mirage Flats Irrigation Project

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I desire to advise the House of a memorable occasion in my district on Thursday, June 23, 1949. I refer to the dedication of the Mirage Flats irrigation project located near Hay Springs, Sheridan County, in the northwest section of Nebraska near the headwaters of the Niobrara River. This project was constructed by the Bureau of Reclamation, with the land development and related factors handled by the Soil Conservation Service of the Department of Agriculture. Both of these agencies have done an excellent job on the Mirage Flats project.

The importance of this occasion was attested by the designation, by Chairman J. HARDIN PETERSON of the House Public Lands Committee, of a subcommittee to attend the dedication and inspect the Mirage Flats and other Reclamation projects in Nebraska in order that the Committee might have first-hand information and close-up views of important Federal irrigation developments, the legislation for which the Public Lands Committee is responsible. The subcommittee was composed of Representatives COMPTON I. WHITE, of Idaho, former chairman of the committee, FRED CRAWFORD, of Michigan, NORRIS POULSON, of California, and A. L. MILLER, of Nebraska. We were joined at Hay Springs by Representative FRANCIS CASE,

of South Dakota, who was the patron of the original legislation known as the Case-Wheeler Act under which the Mirage Flats project was authorized in 1940.

Our trip to Nebraska was arranged by Commissioner Michael W. Straus of the Bureau of Reclamation who designated the Director of Operation and Maintenance, Goodrich W. Lineweaver, as his representative for this occasion. Through the cooperation of Hoyt S. Vandenberg, Chief of Staff, United States Air Force, an Air Force plane was provided for the use of the committee. The party left Washington at 11 a. m., June 22, and landed that afternoon at Offutt field near Omaha, Nebr., where we were greeted by Brig. Gen. August W. Kissner, representative representing Lt. Gen. Curtis C. Lemay of the Strategic Air Command and members of Lieutenant General Lemay's staff. From Offutt Field, we flew westward through the Platte River Valley inspecting from there existing irrigation developments and the important Platte River project developments being planned by the Bureau of Reclamation under the Missouri Basin project. We landed at Chadron, Nebr., and journeyed to Hay Springs. On the morning of June 23, the party inspected the 9,600 acres of the Mirage Flats project under irrigation as well as Box Butte Reservoir and Dunlap diversion dam. The unanimous view of the subcommittee, I believe, was that the project, on which 100 families have already settled, is one of the outstanding irrigation developments under the Bureau of Reclamation. More than 80 percent of the new settlers are veterans, many of whom have come from the irrigated areas of the Platte River Valley.

The layout of the irrigation system has been pronounced by irrigation engineers as outstanding and we were told that the water loss between the reservoir and the irrigated fields will be less than any other project under the Bureau of Reclamation.

Following a barbecue on the hill overlooking the project, the dedication ceremonies were presided over by Dr. Harry W. Bashore, former Commissioner of Reclamation. Each of the Congressmen present made brief addresses and expressed their interest in western irrigation developments.

Leaving Hay Springs, the party inspected the Wyoming and Nebraska areas of the North Platte reclamation project where more than 150,000 acres are under irrigation. Needless to say, we were highly impressed with the success of this development. Flying southeastward, we had opportunity to observe the Kingsley Dam of the tricounty irrigation district in western Nebraska, and also inspected Enders Dams of the Frenchman-Cambridge project in the Republican River Valley, which is nearing completion. At Offutt Field, on the eastern trip, we were greeted by Brigadier General Sweeney and Colonel Edmonson, of the strategic air base which we had inspected by automobile on the previous day. The Air Force personnel on the trip was made up of First Lt. Melvin J. Killian, pilot; First Lt. Frank Publiese, copilot; Tech. Sgt. Joseph E. Kujalowicz, engineer, of the 1100th Special Air Mission Group, 1111 Special Air Mission Squadron.

I include in my remarks the address prepared for delivery by Operation and Maintenance Director Lineweaver at the dedication of the Mirage Flats project:

June 17—just a few days ago—marked the forty-seventh anniversary of the enactment of the reclamation law under the administration of President Theodore Roosevelt. Today marks another milestone in reclamation history as we dedicate the Mirage Flats project. This day is significant since it gives recognition to the first of a series of irrigation developments in the Niobrara Valley that will come with the expanding of the Missouri River Basin project.

To those of us who are concerned with putting western waters to the best use, the successful launching of the Mirage Flats project carries extensive implications. Born of the drought scourge of the thirties it is insurance for this immediate area against the recurrence of the dry years that are sure to return. Developments in the high plains country such as this project are the salvation of this and future generations.

I am charged by the Secretary of the Interior and the Commissioner of Reclamation to tell you of our objective through irrigation expansion. We propose, through the Missouri Basin project and other developments, to place many scores of these cases where the water is available to stabilize agriculture and anchor the population where it can withstand the ravages of drought. A hundred Mirage Flats projects from the Canadian border down through Kansas and Oklahoma will bulwark the Missouri Basin just as the Columbia Basin project in Washington will stabilize the Pacific northwest and the Central Valley project will protect California.

That this event today and the reclamation program have an important place in the national calendar is evidenced by the presence here today of a group of distinguished Members of the Congress. They have journeyed halfway across the continent to participate in this celebration and we know they will return to the Nation's Capital with renewed allegiance to a program that looks not only to the material things related to reclamation but to the human elements that, after all, are paramount.

America must ever honor those intrepid spirits, who, unwilling to accept the harsh wrongs of an old world, stepped forth boldly into a vast wilderness to carve out a new world in keeping with new principles. So it was, in following the steps of that initial great movement, that other men and women, seeking new fields of opportunity in the 1870's, hazarded the problems of crop failure, of grasshoppers, of possible famine, and of Indians to settle the valley of the Niobrara.

We honor and praise those whose vision and determination fathered this development; and it was those early settlers who, faced by the severe droughts of the 1890's, determined that irrigation must be made a salvation from the ever-recurring catastrophe of drought. It was they, with inadequate tools, with little of the present know-how, and with no outside help, who first built canals and distribution systems and tested the principles of irrigation. The fact that they may have failed, that the old projects were abandoned because of lack of water or loss of irrigation structures by fire or flood, did not thwart their determination to some day accomplish their dream. We dedicate in the name of those early settlers the achievement of their far-sightedness and determination.

Today we have a new group of pioneers, many of them young veterans with their wives and children, who are settling this newly developed project, and who, themselves, under considerable hardship, have determined to make good the promise of those who arrived three geenrations ago in covered wagons.

I am sure these newcomers have not been disappointed, for they have found lands of tremendous productive potential. They have had provided for them a modern system of irrigation facilities and a splendid storage reservoir where they can carry over for the dry periods the waters of high-rainfall years. They have had their lands leveled and made ready for irrigation. They are, however, faced with a challenge, the challenge to make good the faith which a Nation has in their ability to produce food and to build a lasting community based on fine principles and in the highest standards of Americanism. To do this, I believe they must grasp their responsibilities promptly, that they must promptly create a permanent governing organization determined to make this one of the greatest irrigation developments in the West, and to repay to the people of the United States the obligation accrued in making this development possible. I am encouraged to learn that the new landowners have petitioned their county commissioners to form an irrigation district under Nebraska law. Experience has shown that a project will succeed best which is early taken over and operated by the water users. I do not mean to imply that the problems of settling and developing a new project are ever easy, but I am sure that the settlers on the Mirage Flats have a considerable advantage over settlers on many earlier western irrigation developments.

The opportunities I have had to observe irrigation developments throughout the West leads me to suggest to you, the new water users, the results of those observations. First, let me urge that you protect your lands by the most up-to-date farming methods in order that you can retain their present high crop-yielding capacity. I know of the splendid work which the Soil Conservation Service has accomplished in advising and guiding the settlers on the project. Heed well their instructions, for the success of irrigation depends upon maintaining high yields which will assure your ability to met your operating costs and to make good profits from the hard work expended. Irrigated farms, like any other farms, are no better than the soils of which they are composed. Irrigation gives you the opportunity to better utilize those soils in stable production, but it also places upon you a responsibility to maintain high productive capacity.

The great enemy of irrigation is weeds. Start early in their control. This is one of the first projects where the Bureau has assisted the water users by seeding canal banks to control weeds and by helping the settlers to acquire adequate weed-control equipment at the start of irrigation.

Next, I urge you to use your water supply conservatively, to determine accurately the time and frequency of irrigation as well as the amount of water required to produce optimum crop yields, and to leave the balance of your water supply safely stored in your reservoir available for the inevitable periods of drouth. The history of excess use of water is destructive seepage and alkali problems and the leaching of plant foods from the soil. You have an adequate water supply if you will carefully observe the crop requirements and use no more.

Of equal importance is the matter of proper maintenance of the irrigation system. The sure road to ruin on an irrigation project is deferment of needed maintenance work. An irrigation system, like an automobile, re-

sponds to a drop of oil here, a little cleaning there, and a bit of paint as needed. I urge that you never permit deterioration to set in, because to do so will pyramid maintenance work and inevitably result in the water users being unable to meet the accumulated costs. The result will be failure of the system at a time when the need for water is the greatest.

I can assure you that the Bureau of Reclamation will be ever willing to advise with you in matters of operation and maintenance of the irrigation system. This is an obligation we have to you and to the American people who have entrusted their funds in the building of this project.

I wonder if all are fully aware of the benefits which are certain to accrue from this or any other irrigation project in the West. Those who have produced high-priced crops from Mirage Flats lands during the past 3 years are quite well aware of the returns to them as individuals, but in addition there has been and will continue to be great contributions to the economy of the surrounding community. When fully settled, the project will be comprised of 117 full-time farms, supporting a farm population of over 500 persons. That part of the net project income spent annually for family living will total $175,000. Expenditures during the project development for building materials, farm machinery, and the like, will approximate $1,000,000. When all of the farms are fully established, their continuing operating expenses will amount to approximately $345,000 per year, expenditures that will do much to support the business houses in Hay Springs, Hemingford, and other surrounding towns. I want to emphasize again from years of observation that the local businessmen will be the first to benefit in a long chain of groups extending throughout the region and the Nation. And remember—those benefits are permanent. They will come each year as regularly as crops are grown, harvested, and marketed.

Multiply the benefits—local, regional, and national—that are flowing from this 12,000 acres of irrigated land by 350 and you have some real tangible benefits to the Nation at large from 4,500,000 acres served by reclamation developments in the West. Federal income taxes from reclamation project areas annually total a quarter of a billion dollars at present tax rates and level of income. The market for nonwestern manufactured and other products is tremendously expanded, and above all is that insurance for farm homes on irrigated land and the population in towns and villages it supports.

Then there will be other sources of benefit—the benefits which the project will provide in recreation and better living. Although you new settlers will be very busy in the years to come, there will be a need for play and recreation. You have already recognized this in the fine community building that you have constructed, but the reservoir, too, will give you much pleasure. Fishing, boating, and picnicking will be popular pursuits. Perhaps hunting on the flats will not be as exciting as that of the early settlers, but you can enjoy it more, knowing that your future has been insured by irrigation and that it doesn't depend upon a successful hunt and a wet summer.

The 12,000-acre project now completed, as I have indicated, is the forerunner of further irrigation expansion, adjacent to the present project and in other localities along the Niobrara River. In 1946 the Bureau was directed to make a comprehensive investigation of the entire Niobrara Basin to determine the possibilities of irrigation, power, flood control, and other water developments. The first steps in this investigation have been taken. Land classification and topographic surveys, along with surveys of water supply and locations of storage and water distribution facilities, have revealed the possibilities of numerous other developments between the present project and the mouth of the Niobrara River. Our schedule provides that a draft of the comprehensive plan will be completed in 1951, ready for review by the State of Nebraska, and upon the State's approval, for consideration by the Congress. The building of any proposed projects will, of course, depend upon the demands of the local people and the willingness of the Congress to appropriate construction funds.

I am indeed pleased to have had the opportunity to be here today and to participate in this notable occasion. To me it is doubly fitting that we have dedicated this project in the one-hundredth year of conservation attainment on the part of the United States Department of the Interior. We people of the United States cannot, we shall not, we must not, be satisfied until we have fully utilized the waters of the West to meet the expanding needs of a Nation and to make firm this Nation's lofty eminence in a distraught world.

Are We Ready for a New Declaration of Independence?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include an editorial from the July 4 editions of the Detroit Free Press admonishing the people of America that unless they stop leaning on the Government and see that Federal expenditures are slashed, we as a Nation will perish. The editorial, which follows, is in my opinion especially significant inasmuch as the Detroit Free Press has never been regarded in Michigan as anti-New Deal. In fact it has supported editorially many of the New Deal spending projects which now threaten to destroy us.

AFTER 173 YEARS, ARE WE READY FOR A NEW DECLARATION OF INDEPENDENCE?

The United States has come a long way since July 4, 1776.

We have been projected into world leadership at history's most critical juncture.

In the dawning of a new technical age we are caught between the rise of Soviet Russia, as the sponsor of world communism, and the confusion of democracy.

We are engaged in a cold war with Russia.

We are also engaged in a struggle with Great Britain to decide whether world trade shall be freed of artificial barriers or shall continue to be compartmented by economic nationalism for the benefit of nations that can't stand competition in open markets.

We have given Great Britain upward of $5,000,000,000 since 1945.

And a distinguished Oxford economist suggests that "all the rest of the world erect a tariff fence around the United States."

When we embarked upon the Marshall plan for aiding European recovery it was expected that the beneficiaries would take whatever steps they could to help themselves.

The policies the British Government has adopted in the hope of saving its own country are duplicated in nearly every country on the Continent.

We can be bankrupted as easily by the trade wars now being waged against the dollar as by the cold war with Russia.

We now occupy in the British mind the place formerly occupied in turn by Spain, Holland, France, and Germany. With those rivals out of the way, at least temporarily, we take their place.

While we have more in common with our British friends than with any other overseas people, we cannot afford to forget Washington's warning that true friendship is not to be expected between nations.

We are tied up in UN, FAO, WHO, ILO, IRO, ITO, and many other alphabetical chains.

With only 6 percent of the world's population, we produce 60 percent of its goods, but when it comes to these international organizations we don't have equivalent voting strength.

Our job is to put up the money and shut up.

We are now embarking upon a North Atlantic alliance and upon Mr. Truman's "Point Four" program for exporting American technical skill and private capital to underdeveloped areas. They are both full of snares and pitfalls.

The concessions we have had to make to French fears of a resurgent Germany and British fears of German competition in export markets have drastically modified our own policies for getting 45,000,000 Germans off the dole and into production again.

We have also had to modify our traditional anticolonial views in order to provide Great Britain, France, and The Netherlands with funds further to cement their hold on restless and revolting colonies, as justified now as we were on July 4, 1776.

At home we are faced with equally vital problems.

When Thomas Jefferson sent his first message to Congress he noted that "we may well doubt whether our (Federal) organization is not too complicated, too expensive—whether offices and officers have not been multiplied unnecessarily and sometimes injuriously to the service they were meant to promote."

Almost 150 years had to elapse before the Commission on Organization of the Executive Branch of the Government headed by former President Herbert Hoover gave a resounding, affirmative answer to that question.

The haphazard development of our ramshackle Federal establishment has produced more than 1,800 departments, bureaus, sections, divisions, administrations, etc., etc., which overlap and conflict with each other and impose an intolerable cost on the Nation.

This is the first time in our history that a competent group has taken the executive branch apart and put it together as it should be with elasticity provided for future changes. A continuing and overpowering duty of the American people, collectively and individually, is not to let up in their pressure upon the President and Congress until the last recommendation of the Hoover Commission has been put into effect.

The number of civilian employees on the Federal pay roll in 1939 was 920,000. The number in April 1949, was 2,122,710. The number on Federal, State, and local government pay rolls in January 1949, was 6,083,000.

About 1 out of 10 of our working force is now on one or another government pay roll.

They, and their friends and relatives, whom they can influence, constitute what is known as the "pay-roll vote." At election time that vote is cast to preserve those jobs and to create more of the same.

The bait is the promise of more and more bread and circuses, which has been the doom of every once self-reliant people from the ancient Romans down.

The year ended June 30, 1948, saw our national income rise to a new peak. Yet in that same year, according to the Federal Security Agency, a new high in the number of persons receiving public assistance—3,500,000—also was reached.

The Federal Security Agency is the principal bureaucratic promoter of the welfare

state. At the moment it is concentrating on higher benefits for those already insured, wider coverage, and socialized medicine.

Along with this movement to take all risks out of life, and all incentive out of the individual to make provision for age and illness, another drive is on to extend Government ownership—socialization—further into industry. The beginning was made in the Employment Act of 1946, which declared it the policy of the Government to use its resources to sustain employment—that is, to create jobs. The Economic Stabilization Act of 1949, if adopted, would authorize the Government to erect its own plants and go into manufacturing.

The first draft of this bill was presented as an anti-inflation measure. When inflation changed to "disinflation" it was hashed over as an antideflation measure. The bright young men behind it, as will be noted, are not deterred by a change in economic conditions from the pursuit of their goal—which is ultimately to socialize our entire economy and have everybody on the public pay roll.

They press their crusade in face of the failure of socialism in Great Britain. They press it, too, although the demand for steel, which the Government was to build plants to meet, is now so far below the capacity of the privately owned mills as to force them to reduce production.

A third trend is toward the insurance state, which has some of the elements of both the welfare state and the socialized state.

The individual is now insured against unemployment and old age. The bank depositor is insured up to $5,000. The FHA insures mortgages. The RFC insures business by making loans they can't get from banks.

The Brannan plan now proposes to guarantee farmers a fixed income to be determined by the Government.

The bold new program for enticing private American capital into backward areas will insure investors against loss.

Add all this insurance, and much more, to the direct subsidies paid by Government to business and farmers—$15,000,000,000 in 15 years—and it leaves little room for risk outside the race tracks and gambling dens.

This Nation was built on risks.

The early settlers took their chances with the Indians and with nature, with flood, fire and famine in the wilderness.

Those who followed risked their lives and their savings in developing a new continent. They lost a lot of money. They made more. They risked depressions and rose from each stronger than before.

Yet it is now argued by those who have lost faith in the great American experiment that our economy is mature, that there are no more worlds for us to conquer, that the last horizon has been reached and passed.

Working from that false assumption they contend—and find many followers—that we have become so soft that we must be protected from cradle to grave from the risks that made stalwart men and women of our forbears and built up this country to fit Churchill's description of it as the mightiest nation on earth.

A weak America is a danger to itself and no enduring buttress for the world that leans on it.

Yet the effect of all the pap-feeding that is being pressed upon us in return for votes to keep bureaucracy expanding can only be to rob the American people of their stamina and incentive.

Adoption of the Hoover Commission recommendations will strengthen the machinery of our Government.

That is not enough. This Nation will end in bankruptcy and dictatorship if the people do not stop leaning on the Government and stand again on their own feet, as their ancestors did.

That must be our declaration of independence for 1949 or we perish.

What Are We Afraid Of?

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an Independence Day editorial which was carried in the San Francisco Chronicle for July 4, 1949.

I commend the reading of this editorial to the Members of the Congress of the United States. It raises many questions, gives some answers and, most important, it lays bare the whole pattern of fear which seems to be the mode of American opinion today.

Mr. Speaker, the fears of the present are not the factors which have made this country great in the past. The times call for a renewal of the old-time American faith in ourselves and in our institutions. We cannot retain our ideals by building hobgoblins or by making things what they are not. Truth, courage, honesty, and tolerance are the old-time virtues now needed; virtues which should be administered wisely and well.

Mr. Speaker, the editorial follows:

WHAT ARE WE AFRAID OF?

When, in the course of human events, it became necessary for a small group of men and women, living on the fringe of a vast and forbidding jungle, to defy the world's mightiest monarch and cut themselves adrift, they did it, and, to the world's astonishment, made it stick. These were our ancestors who gathered in the Philadelphia Statehouse on this date 173 years ago to seal their independence from Britain. They were already deep in the war for freedom; the odds on their winning the war were short; the odds on the emergence, 173 years later, of this land of freedom and power and glory were infinitesimal. It was far more likely that either they would be slapped down for the upstarts they seemed or the government they pledged should derive its "just powers from the consent of the governed" would collapse upon its own idealistic underpinnings.

Yet they proceeded boldly. And as we can now discern, what they won was won largely because they proceeded thus boldly and heedless of their danger.

Looking back upon the manner in which these men went about the task of wresting their independence from their monarch and taming a wilderness to serve as their homeland, we are struck with the contrast it affords with a spirit that is evident in the same land today. Once more we are faced with a mighty challenge; once more our very national life depends upon the soundness and boldness of our judgment, and not only our lives, but the lives of many nations whose peoples largely think as we think and aspire to those things to which we aspire. Once more there is a magnificent job to be done, and it falls to our lot to be the chief movers in its accomplishment.

But now there is not the same spirit of confidence, the same manifest courage, the same calm and businesslike attachment to fundamentals, as there were with the Continental Congressmen in Philadelphia. We seem to have grown afraid. We cannot exactly say why, but the manifestations of fear are all about us. We are beset by a great bogeyman who haunts us night and day. He seems to be everywhere, now grimacing from behind a Moscow parapet, now leering around a corner of China's Great Wall, now darting at us from a doorway on Main Street. We call him communism, and we fear he will one day seize us, slap us into chains, and carry us off to be his slave.

SOMETIMES OUR PRINCIPLES HAVE BEEN COMPROMISED

Daily his power and ferocity and cunning are magnified in our minds. Billions of words are daily written ascribing to him this or that dark and sinister capacity, speculating which way he will move; pondering how firm a secret hold he has got of our own flesh and blood. Such is our fear that in some cases we have compromised our own principles in our frantic flight. Somewhat in the spirit of a lynch mob we have pilloried innocents in our hysterical quest for security. We have even compromised the spirit of the Declaration of Independence and the Constitution of the United States, and then sought to justify ourselves by declaring such short cuts emergency measures.

What emergency? Why should we be the fearful ones? What is there worth our fear, justifying our terror or our panic?

We are a Nation of 150,000,000 free men, women, and children. We and our fathers and their fathers, with the help of God and our bare hands, built a United States of America which has not only endured for these 173 years, but has become the greatest Nation on earth. Its granite foundation is that clause in the Declaration whose anniversary we celebrate today:

"We hold these truths to be self-evident: that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness; that, to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

What we have gained, we have gained through living by these words.

FREEDOM LIES AT THE BASE OF THE WHOLE STRUCTURE

Living by them, we have contrived a Government that exists to serve the people, not exploit them. Living under such a Government, we have achieved the utmost free interchange of goods, techniques, and ideas. With such a system of interchange, one man and one group has helped the next, and so on, to the ultimate betterment of the whole national life. The automobile sprang from a thousand free minds, harnessed to one problem; developed, it sped to the aid of a thousand groups devoted to a thousand different pursuits, implementing the efficiency of each, increasing the output, augmenting the leisure and the time men could devote to new ideas for better living. This, in barest outline, is the endless, upward spiral of free minds working together in a free land. The productivity enhances the freedom and the freedom enhances the productivity. Following this spiral we have emerged upon a plateau of freedom-born power unapproached elsewhere in the world or in all history.

It has not been an easy course. The progress has never been long without challenge. It is axiomatic in a free world that not all men will agree, indeed, that not all men will abide by the majority will. It is also axiomatic that freedom cannot be put on a shelf and left unguarded. Like anything of great value it will always be the target of greed and envy and hate, and of those who would feed their own lust for power by trampling upon the dignity of others. But from each contest this freedom has emerged stronger. It has never been so well grounded, so well defended, and fortified as now.

Then what are we afraid of? The future looks rugged enough, no doubt about that. The single task of preventing the Communist part of the world from plunging us

into war or imposing slavery upon the free peoples is in itself a tough assignment, calling for new heights of wisdom, courage, diplomacy, and endurance. Beyond that looms the greater, more formidable problem of welding the whole world into an alliance potent enough to defend peace. Beyond that looms the immeasurable problem of harnessing the world's energies to the project of bettering the lot of all mankind—the raising of living standards, the dissemination of skills and knowledge, the gradual elevation of the condition of the whole race.

MAN-SIZED CHALLENGES ARE NOTHING NEW TO THE UNITED STATES

At this moment, it is the first and relatively simplest of these tasks that has so many of our people wringing their hands and crying futility—the matter of turning back the Communist menace. Certainly it's a man-sized challenge—but since when have we been backing away from man-sized challenges?

Grant that the Communist empire is a vast and powerful and strictly disciplined organization dedicated to the destruction of freedom and the ultimate enslavement of the world. Grant that it has nearly 4,000,000 men under arms. Grant that its munitions factories are going full blast, that it is producing tanks and airplanes and guns at top speed. Grant that by guile and brute strength it has made local conquests around its perimeter, and thrust the tentacles of its fifth column rather deep into the western European democracies and even into our own land.

Must we answer this threat with quakings and misgivings and panicky scuttlings for cover? Or may we not calmly take stock of our own resources and proceed, as we have always proceeded, to meet the challenge in the most effective way?

On the physical side we have the most magnificent technological plant of all history, demonstrably capable of producing whatever weapons may be needed, faster and better than any conceivable adversary or combination of adversaries. It is a plant of tremendous vitality, tremendous flexibility. It was the only plant in all the world that could overtake and surpass the mighty Axis war machine in the last war. It remains intact, responsive to our wishes as a Nation.

On the human side we have the incomparable resources of imagination, ingenuity, and skill that made possible the development of this great technological plant. And beyond that—and implementing it—we have our tradition of 173 years of freedom, and all that that implies. Armed with that freedom we have fought our way to the eminence of foremost Nation of the world—the richest, the most powerful, the most dynamic—without surrendering a jot of our people's control over the Nation's destiny. We have furnished proof to the world and to ourselves that freedom and human dignity need not be the price of security, but can be the very foundations of security. Informed and alert, our people have impressively and overwhelmingly rejected totalitarianism at the polls under no other compulsion than that provided by their own common sense. In any and every election test the Communists and the advocates of other totalitarian schemes have succeeded only in proving with what profound zeal Americans are attached to their freedom. And in every test the duly constituted authorities—notably the Federal Bureau of Investigation—have proved their capacity to prevent the wreckers from inflicting any real damage to our Nation.

PANIC HAS PUT US OUT OF TOUCH WITH REALITIES

Then what are we afraid of—why have we parlayed this postwar neurosis into the dimensions of an epidemic? Probably it is because we have grown careless in our thinking, slovenly in our assessment of realities, so preoccupied with the outcries of a neurotic minority that we have neglected to assess the elements of our own great strength.

We may safely grant ourselves a healthy degree of fear—it is a human attribute, an attribute of intelligence, and valuable when it leads to an accurate assessment of the challenge.

But it is insanity itself to let our fear overwhelm our intelligence and judgment—and that is what has happened when a Nation like ours devotes itself to pulling the shades and peering under every bed for witches when it ought to be devoting the bulk of its tremendous strength to the positive job of fulfilling its destiny.

We see that destiny as the shaping of a world as free and decent as the Nation our forefathers shaped for us. They gave us the basic tools and the very blueprints for the task. But the courage to use the tools and the wit to follow the blueprints could not be part of the heritage—that part is up to us.

Religion Fights for Its Life

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. BOGGS of Delaware. Mr. Speaker, a recent Associated Press dispatch stated that behind the iron curtain "organized religion fights for its life." As we read the distressing day-to-day accounts of what is taking place in Czechoslovakia, we realize more fully that religion and the individual's right to believe in and to worship God are being seriously challenged, and that, in fact, their destruction is being sought by the forces of communism.

With each passing day the objectives and strategy of communism become clearer. Until recently, however, our attention to these objectives has been centered to a considerable extent on the economic and political philosophies of that form of totalitarianism. Events in Hungary and now in Czechoslovakia must serve to make unmistakably clear to all of us that another fundamental objective of communism is the destruction of religion and of man's faith in God. Those throughout the world who believe in God now have, therefore, every reason to unite and to fight with all the force available to them against this godless tyranny and persecution.

From time immemorial ambitious men have arrayed themselves against God and the teachings of Christ. In each such case these evil men and evil forces have been resisted, crushed, and ultimately destroyed. So must it be again, as another force seeks to destroy the freedom and dignity of man and his right to have faith in and to worship God.

While it may be true that communism can at least temporarily suppress the manifestations of a man's religious beliefs, it cannot destroy man's love and Christian belief in God, because those things are in the heart of man.

It is our duty and our responsibility, therefore, to do, with God's help, all in our power to fight on to defeat these forces which seek to destroy religion.

The Brannan Farm Bill

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. RAINS. Mr. Speaker, our distinguished colleague, the Honorable GEORGE GRANT, recently wrote a guest editorial for the Montgomery Advertiser, entitled "The Brannan Farm Bill."

The editorial is a clear-cut and concise analysis of the farm program now generally referred to as the Brannan plan. Because of his long and outstanding service as a member of the Committee on Agriculture, Mr. GRANT is well informed on the problems of agriculture, and in my opinion has rendered a real public service in this able discussion of the new farm program proposed by the Secretary of Agriculture.

The editorial follows:

THE BRANNAN FARM FILL

(By Congressman GEORGE GRANT of the Second District)

In response to a request from the House Committee on Agriculture, Secretary of Agriculture Charles F. Brannan last April presented to Congress the proposal for a new farm program that is now generally referred to as the Brannan plan.

The plan proposed by Secretary Brannan contained several new and vastly different approaches to the problem of providing price support for agricultural commodities:

1. A new parity formula based on maintaining adequate over-all farm income rather than on an adequate price for individual farm commodities, as the present parity is computed.

2. Use of production payments as a method of price support. Under this proposal the prices of agricultural commodities would be permitted to fall as far as the supply and demand might take them, the farmers to receive price supports in the form of direct Government payments to make up the difference between the average market price and the parity price of the commodity.

3. Authority to require production and marketing controls for all commodities receiving price support and to make compliance by the farmer in soil conservation and other similar programs a condition of eligibility for price support.

4. Encouraging the development of small and family-size farms by limiting price supports on any one farm to a total of about $25,000 worth of farm products.

As presented to the committee by the Secretary his program would include the use of direct payments as a form of consumer subsidy in the case of some commodities, such as milk, in order to bring down the cost of those commodities to the consumer and thus increase consumption.

The House Agriculture Committee has not been able to approve in its entirety the farm program submitted by Secretary Brannan. Neither the Secretary, nor the Director of the Budget has been able to give any estimate of the cost of the program and it is felt that this might prove to be so high that the whole price support program would be endangered or even destroyed.

There are many new problems in administration and operation presented by the Secretary's proposal—programs of such new and diverse nature from any previous programs administered by the Department of Agriculture that there is little or no experience by

which to guide the operations and to point up the administrative problems to be faced, to say nothing of the tremendous costs involved. In the appearances of the Secretary and his staff before the committee it was made clear that the details of how the programs proposed by the Secretary were to be carried out have not yet been worked out by the Department's experts.

Another important factor that has disturbed members of the committee is the uncertainty that the consumer would actually benefit from the so-called subsidy or direct payment plan of price support proposed by the Secretary. Low prices paid for farm commodities are frequently reflected but little if at all in the price the consumer has to pay for manufactured articles.

This is exemplified at the present time on wheat. Wheat has declined $1 a bushel in the past year but consumers are still paying about as much for their bread today as they paid a year ago. Cotton products are another example with which all readers of the Advertiser are familiar: the price of cotton might drop by 50 percent and yet the price of a cotton shirt remain as high as ever.

Fresh fruits and vegetables constitute another example of the consumer failing to reap the benefits of low farm prices. In most parts of the country the terminal market facilities for handling fresh fruits and vegetables and similar products are so inadequate and inefficient that the costs piled up in handling these commodities are far greater than they should be. It is readily apparent that reduced farm prices are reflected only minutely in lower prices to consumers on such products. In the city of New York, for example, experts estimate that it costs the housewife as much to get her fresh fruits and vegetables from the freight terminal in Hoboken into her kitchen as it does to get them from California, Alabama, or Florida to the Hoboken terminal including the full price paid to the farmer for his products.

The so-called Aiken bill, title II of the Agricultural Act of 1948, is scheduled to go into effect the first of next January. The House Committee on Agriculture is now at work on a modified version of the Brannan farm program to take the place of the Aiken bill.

I think it is fair to say that the Aiken bill does not express the sentiment of this Congress. The bill was never considered by the House Committee on Agriculture and the House of Representatives never had an opportunity to vote on the merits of the bill.

In the Eightieth Congress the House Agriculture Committee realized that the uncertainty of the times and the need for seriously considered long-range farm legislation made additional study of the subject highly advisable. As a sort of interim arrangement the committee reported and obtained passage in the House of a bill extending the wartime level of price supports, with certain modifications.

At the same time the Senate was at work on its long-range agricultural legislation embodied in the Aiken farm bill. The House reported and passed its measure well before the end of the Eightieth Congress. But not until the last week of the session did the Senate pass the Aiken bill and send it to the House for consideration.

There was no time then for the House Committee on Agriculture to hold hearings on the measure or even to give it proper study. Both parties wanted to hold out promises to the farm vote. The platform committee of the Republican Party was in session in Philadelphia during that last week of the Eightieth Congress and word was sent to the Republican-controlled Congress that long-range farm legislation must be enacted.

Under this Republican political pressure a compromise was forced through the House putting the Hope bill which the House had passed into effect for the year 1949 and permitting the Aiken bill which had been pushed through the Senate to go into effect the first of January 1950.

It is my judgment that the Aiken bill would go far toward destroying American agriculture particularly in the South. It would permit the price of many of our basic commodities to fall to levels as low as 60 percent of parity. It could mean a price of around 15 cents a pound for cotton and 6 or 7 cents per pound for peanuts.

Our basic wealth is found in the soil and to have a sound economy in this Nation we must have a prosperous agriculture. The Aiken bill would work in the opposite direction. We need adequate production at fair prices for our 150,000,000 consumers. The Aiken bill would have the effect of limiting production and making both the price to the consumer and the support level to the farmer dependent upon this limited production.

It is my hope that before this session of Congress ends we shall be able to enact a bill that will replace title II of the Agricultural Act of 1948 with a more realistic, constructive, and sound farm program.

Why Freedom Depends on Government Under Law

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues the results of a contest which was conducted throughout the State of Minnesota by the Minnesota State Bar Association early this spring.

This contest was sponsored by the association as a public service to stimulate interest in their government and its basic precept by the young people of the State. The rules were simple. To be eligible, a contestant was required to be a resident of Minnesota not above the twelfth grade in school, and could not be a member of the immediate family of a judge or lawyer. The requirement was to write a statement of not more than 50 words on the subject, Why Freedom Depends on Government Under Law.

The two first winners of this contest were given a free trip to Washington as a reward. It was the pleasure of Senator and Mrs. Edward J. Thye and Mrs. Hagen and myself to assist in entertaining them on that occasion, early this month.

Over 800 entries were received by the judges from high school students throughout the State. Think what this means and how the straight thinking of our young people was stimulated as a result of their participation, whether or not they were among those chosen for the several awards.

The judges also decided to cite four other youngsters for honorable mention. Rather amazingly, one of these four also was a girl from the little town of Kennedy—Della Mae Swanson. The other honorable mentions were Wayne B. Daubs of South St. Paul, a finalist in the Star's world-affairs competition, Marcel Wawzymich—a boy—from Cokato, and Mary Etta Sartain of Park Rapids.

The judges did not know the names or locations of these winners. They judged them from typewritten sheets bearing only numbers.

These four honorable mentions and another girl, who did an especially fine art job—a farm girl named Thelma Linnea Bloomquist from Grand Marais—will receive United States Government savings bonds from the bar association's contest committee as an extra award not promised in the contest promotion.

I should like to tell you something about the background of the two first winners, a boy and a girl, each 17 years of age, who are students in high school in two of the smaller communities of the State, both located in my own congressional district, the Ninth of Minnesota.

The boy is Arland Brusven, a junior in the Barnesville (Minn.) High School, and is a member of the high-school debating team. His father is a farmer.

The girl is Donna Pearson, a senior in the Kennedy (Minn.) High school, near the Canadian border. Her father, Peter Pearson, is a plumber. Her mother accompanied Donna.

Mr. Speaker, I shall now include in the RECORD the winning statements of these two young people, which mark them as having a true knowledge of the basic concept of our Government and our country.

Arland Brusven:

For all things there is a normal habitat. Freedom's habitat is in a democracy. Bondage abides in a dictatorship. There is but one difference between democracies and dictatorship. A dictatorship is above law, a democratic government is under law. Freedom depends on the control of government by the governed.

Donna Pearson:

Our country is a nation of free men. It is so because its citizens believe in a government controlled by all, and not one. Our freedom is dependent on a government controlled by the laws we make; and as long as that government is secure we shall remain—free men.

I congratulate these two young folks on their winning of the State-wide contest. I am especially proud of them, too, as they are constituents of the Ninth District of Minnesota.

Communist Control in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. HERTER. Mr. Speaker, the situation which exists today in Czechoslovakia is certainly a serious one. Russia seems determined to crush and destroy all religion and the free worship of God

in nations behind the iron curtain and substitute in its place the destructive ideology of Communist leadership. From the latest news of Czechoslovakia, it seems clear that Archbishop Beran is to follow the same fate as that of Cardinal Mindszenty, of Hungary—or perhaps even worse.

The Russian-controlled leaders in Czechoslovakia are determined to wipe out the Catholic church in that state. Millions of Czech citizens have worshipped in that church for centuries. If the Catholic church is erased in that country, the next step will be to curtail and control the Protestant faiths in the same way.

Archbishop Beran has demonstrated a type of courage which has earned the plaudits of the entire world. Denouncing the tyranny and persecution of the Czech Government, he has also fought against those powers that seek to destroy free speech, free press, and the subjugation of the Czech people to the will of the Red state. He is making what may be the supreme sacrifice in order to show the world what will be the ultimate fate of all nations which come under the Communist rule.

Southwest Power Administration

EXTENSION OF REMARKS
OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. CHRISTOPHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

JULY 5, 1949.

Mr. WILLIAM C. TUCKER,
Editor, Daily Star-Journal,
Warrensburg, Mo.

DEAR MR. EDITOR: I hope you will allow me space to reply to the editorial appearing in June 29 issue of your paper. The analogy of Mr. Jones' store does not hold because when the Government came on the scene Mr. Jones was serving only 25 percent or less of his customers because there were no roads over which Jones could deliver his merchandise to the other 75 percent of his potential customers. It was likewise impossible for Mr. Jones' customers to come to his store and get the merchandise because there was no way they could transport the merchandise to their homes. Then the REA law was passed which made it possible for those customers that Mr. Jones was not serving to organize into cooperatives and borrow the necessary funds to transport this merchandise to their homes. Mr. Jones was making no effort to take his goods to the other 75 percent of his customers that he was not serving. Jones takes the position that it was not profitable to do so from a financial standpoint. Now that those co-ops have built roads over which this merchandise can come to their homes Mr. Jones wants to be permitted to hang toll gates across these roads that the co-ops have built. Mr. Jones further wants to obtain an absolute monoply on all this merchandise at its source in order that he may control the flow of goods over the roads that the co-ops with the aid of Federal funds have built. In defense of his position, he raises the same old cry of socialism, statism and interference with private industry that has been raised against every piece of liberal legislation that has been passed by the Congress of the United States during the last half century. I am old enough to remember when it was freely predicted that rural free delivery would bankrupt the Nation. I remember when the Federal land bank was going to ruin every loan company in the country and bankrupt all of our great insurance companies. I remember when production credit was going to ruin every country bank in the land. It was also declared to be socialistic for the Government to put any kind of a floor under farm prices. A minimum-wage law was also declared to be socialism. I remember when the first income tax proposal was declared to "out Nero Nero." But getting back to the electrical controversy, all Southwest Power seeks to do is to deliver part of the hydroelectric current generated at the public dams. Southwest Power will be the very heart and soul of REA in Missouri. Anyone who opposes Southwest Power, also opposes REA, in their heart if not openly, and REA is the greatest blessing that has come to the Missouri farmer and his wife and family in the past century, and we all know, whether we are willing to admit it or not, that had the American farmer waited for private power to bring him electric current he would still be in darkness 50 years from now. REA has brought the blessings of electric lights, electric refrigeration, motor for the washing machine and power on the dairy farm to pump water, cool the milk, and drive the milking machine. REA was socialistic too. And only slightly more than 50 percent of Missouri farmers now have electricity. We still have a big job to do. The private power companies would like to take REA over as fast as the lines can be built and they would like to gain and retain control of every bit of electric power being generated in the country so they could rule and dictate. Public hydroelectric dams and public lines to carry the current from those dams to the user is the only defense the people have against these monopolistic controls. As the Representative of the Sixth District in the State of Missouri, I voted for the appropriation for Southwest Power. I am proud of that vote. I also voted for the farmer and the laboring man of the Sixth District in the State of Missouri when I did so. REA lines, hydroelectric dams, and public power lines are not a gift to the people. The cost of these things amortize over a period of years repaying into the Federal Treasury every dollar they got with interest.

Now, let me say in regard to the assertion that private power companies will be put out of business. Let me offer this in evidence. Production Credit not only did nothing to injure the country banker but has in many cases been a great benefit to him by making his customers more prosperous. Our local banks today have more money on deposit, a larger volume of loans, and more customers whose notes are good at the cashier window than even before. Production Credit has made it necessary for the banks to lend money at a reasonable rate of interest. The loan companies have their loans on a firm financial footing and are not having to foreclose and acquire farms by the thousands as they did under the old order and these same loan companies are lending on good farm real estate security at 4 percent, 20 to 32 years time, no commission, no inspection fee, whereas, under the old order the farmer was paying 7 percent interest and a 5 percent commission to secure a loan that was due in 5 years and in many cases he was charged an additional 2½ percent commission every 5 years when he sought a renewal. So, instead of putting banks and loan companies out of business, Production Credit and the Federal Land Bank only made it necessary that they put their house in order and REA and Southwest Power will do just that for the private power companies and will force them to provide electric current at a just and reasonable price and put their house in order as the loan companies have done. Electricity is just in its infancy. The farm that uses 75 to 100 kilowatt-hours per month now will be using 1,000 kilowatt-hours per month when and if they can have abundant power at a reasonable cost.

Knowing you as I do, Mr. Editor, I feel sure that you can write a better editorial yourself than you will ever be able to find in the Joplin Globe.

Yours very truly,

GEORGE H. CHRISTOPHER,
Member of Congress.

[From the Warrensburg (Mo.) Daily Star-Journal of June 30, 1949]

IT CAN'T HAPPEN HERE?

(From the Joplin Globe)

John Jones has a grocery store that serves your community. He has had it a long time. He is a good citizen, pays his taxes, makes reasonable contributions for the community welfare. Also, because the community is growing, he has planned and begun construction of an addititon to his store, the better to serve his patrons.

Then one day comes an announcement from Washington that the Federal Government has decided to put in a grocery store across the street from John Jones' establishment. Why? Well, the real reason is because some of the men in control of the Federal Government believe all grocery stores should be owned and operated by the State. But the explanation given to the press is that Jones' store isn't able to carry everything its patrons may want.

Would you favor that sort of Federal interference with private enterprise?

Well, it is exactly the sort of thing that the SPA (Southwest Power Administration) is trying to do to private electric utilities in Oklahoma, Arkansas, and Texas.

The SPA is an agency of the Department of the Interior created to market hydroelectric power produced at flood-control dams built by the War Department. It is asking Congress to approve a plan for the expenditure of some $30,000,000 as part of a program for a network of transmission lines that would be an unneeded, wasteful duplication of transmission lines already built and owned by private electric companies in this part of the country.

Believe it or not, already the lower House of Congress has passed a resolution appropriating $4,000,000 to start building these duplicate transmission lines and giving contractual authorization for $5,000,000 more. Moreover, amazing and unbelievable as it is, the House authorized another $300,000 for the purchase of electricity from private companies for transmission over SPA's Government-built lines.

Obviously, this is a lethal blow at the 11 private electric utility companies now serving the region in which SPA proposes to build its transmission lines. Metaphorically speaking, they are the John Jones grocery stores of the industry. Most of them have served their areas for a long time. They have been good citizens, paying their taxes and contributing to community welfare projects.

But some of the leaders at Washington believe private enterprise should be scuttled in favor of socialism.

Some of the leaders there not only think Government should use taxpayers' money to put in another grocery store across the street from John Jones' store, but they also would use taxpayers' money to buy goods from the Jones store to sell at a loss to patrons of their store, to convince these patrons that Government can operate more efficiently than

private enterprise. That's the meaning of a $300,000 appropriation to buy private company electricity for transmission over Government-built lines.

The whole SPA program is of a kind with British socialism.

Recently Thurman Sensing, director of the Southern States Industrial Council, visited in England and when he came home reported that many British businessmen said to him: "For God's sake, don't let this thing get started in the United States. Your country is the world's last real bulwark against socialism. Don't let the government-can-do-it-better camel get its nose under the tent over there."

Yet the Lower House of Congress has O. K.'d initial appropriations for these SPA electric transmission lines that are not needed and, if built, will only tend to tear down and ultimately destroy private utility electric companies that already are serving their various communities well.

Can we hope that the United States Senate will sock this grandiose but malicious destructive SPA scheme as it deserves to be socked?

We've Got To Make a Choice

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie (Ind.) Star of July 2, 1949:

WE'VE GOT TO MAKE A CHOICE

If you paid $200 in taxes to the Federal Government last year, $160 of that money was spent on paying for past wars, on preparing for a future war and on trying to prevent communism from engulfing the world. According to Lt. Gen. E. W. Rawlings, Air Force controller, 80 cents out of every dollar spent by the Federal Government last year was spent for national defense or past wars.

On top of this huge amount which runs about $30,000,000,000 a year, Mr. Truman is now trying to pile additional billions for a domestic welfare program to provide what he called "security" for every special group of people in the country except those who want to earn their own living. His "Fair Deal" will run up the Government deficit to around $8,000,000,000 in 1950 if it is enacted. The future costs of this program will more than equal present military expenditures and call for a budget of around $60,000,000,000 a year which is one-third of the national income.

Can America both support huge military expenses and have domestic welfare expenses? We do not believe so. We must choose between military security or domestic welfare or else face huge deficits, impairment of the national credit and inevitable bankruptcy. Who can pay these huge bills? If they are saddled on the taxpayer now by increasing taxes the American people will soon be paying 50 percent of their incomes for government instead of 30 percent. If they are put off by means of incurring additional deficits the present day youth of the country will have to pay them, the veteran and his children who fought to preserve his country's independence will also have to pay the cost of supporting the war, and every special interest group that is now clamoring for more and more and more pork from the Federal barrel.

We need a strong Military Establishment to protect our national independence. Perhaps present military budgets can be cut, but they will still take their preponderant proportion of Federal taxes. We do not need all these welfare, Federal-aid programs. They can and must be cut down or eliminated entirely if the United States is to stay strong. It will do us no good to have a strong Army and Navy and Air Force if we collapse from within, if the Federal Government goes bankrupt, if excessive spending drives us into a disastrous depression. We've got to make a choice now between the welfare state and national security. We cannot have both and remain both free and secure for long.

Big Unions or Big Business—What's the Difference?

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 6, 1949

Mr. MORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Louisville Times:

BIG UNIONS OR BIG BUSINESS—WHAT'S THE DIFFERENCE?—LEWIS' MONOPOLISTIC CONTROL OF MINES IS JUST AS STRANGLING AS EXCESSIVE EMPLOYER POWER

Big unionism's assumption of the right to limit production without fear of governmental interference on the same day that the government begins prosecution of one of our big businesses highlights a peculiar paradox. This paradox consists of the great difference between our legislative approach regarding monopoly in business and that regarding monopoly in labor.

John L. Lewis, for good and sufficient reasons of his own, has ordered most of his soft coal miners to dig three days a week and no more. The reasons behind this move seem fairly obvious. By producing less coal that the Nation needs, Lewis will cause the great above-ground supplies of coal to be depleted and thus strengthen his bargaining position. At the same time his miners will have a steady income, which they greatly need after all the lost work this year. If Lewis can prolong the negotiations until fall he will have put himself in an almost impregnable position, for the Nation simply must have coal—and lots of it—during the winter.

Lewis' power to tell his men how many days a week to work, and thus to limit production, arises from his monopoly over the labor force in the mines. About five sixths of the national soft coal tonnage is produced by members of the United Mine Workers. If a man wants to mine coal, he had better be a member of the United Mine Workers and, once a member, he had better be an obedient one.

If there is any doubt as to the power of the United Mine Workers, take a look at what has been happening this week in western Kentucky. There at least eight nonunion coal mines have been closed down because a mass of union miners, variously estimated at from 1,000 to 4,500 in number, have made visits in the area. There has been no violence or disturbance; there has been no need for any. The mine management, the nonunion workers and law enforcement officials can take a hint.

Yet on the very day that Lewis announces that his men will work only 3 days a week, the Government takes action against E. I. du Pont de Nemours & Co., accusing it of monopolistic practices in its dealings with General Motors and United States Rubber.

We hold no brief for du Pont. If the charges contained in the Government's suit are proved, if the company is demonstrated to be restraining trade, then we believe the practices should be stopped. But we wonder why one monopoly should be prosecuted while another is ignored. The answer, of course, lies at least in part in the fact that there is nothing illegal in what Lewis is doing. But why isn't it illegal?

Earlier in our history such acts would have been considered illegal, either under the Sherman Act or, before that, under the common law. But most of such restraints on union activity have been lifted through the Clayton Act of 1914, the Norris-LaGuardia Act of 1932, and several court decisions interpreting these laws.

In 1908 the Supreme Court rules that the Sherman Antitrust Act prohibited any combination whatever (including labor unions) to secure action which essentially obstructs the free flow of commerce between the States or restricts in that regard the liberty of a trader to engage in business. But 6 years later section 6 of the Clayton Act said labor organizations could not be held to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

The Norris-LaGuardia Act and subsequent court decisions strengthened labor's position. This position has become so strong that in 1945 Justice Roberts, in a dissenting opinion on a labor case, was moved to write: "The workingman has struggled long, the fight has been filled with hatred, and conflict has been dangerous, but now workers may not be deprived of their livelihood merely because their employers oppose and they favor unions. * * * This Court now sustains the claim of a union to the right to deny participation in the economic world to an employer simply because the union dislikes him. This Court permits to employee the same arbitrary dominance over the economic sphere which they control that labor so long, so bitterly, and so rightly asserted should belong to no man."

And there you are. We believe that no man, whether it be Pierre S. du Pont or John L. Lewis; that no organization, whether it be General Motors or the United Automobile Workers, should have the power to strangle our economy.

The Root of China's Woe

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent editorial from the New York Times of June 16, 1949.

The editor discloses that those Americans have been misguided in the past who believed that China's troubles were largely caused by bad government, rather than that bad government was largely caused by her troubles—including an 8-year war and invasion by Japan and a 22-year struggle against Communists.

The editor of the New York Times would better understand why so many

Americans have been thus misled if he had faithfully read the Sunday magazine and the book review sections of his own paper during the last 6 years or so. In dealing with China they have presented almost exclusively the views of the Lattimores, Fairbanks, Snows, Peffers, Whites, Jacobys, et al., which have built up the myth which the editor exposes as a costly blunder.

THE ROOT OF CHINA'S WOE

There is no moral satisfaction to be had out of saying "I told you so" at the expense of the misery of our faithful friends, the good Chinese. Nevertheless the things that are happening in the Yangtze Valley may show us wherein some of our judgments have been at fault. We have apparently based some of our policy on the assumption that when the Communists took over China, China would take over the Communists. The reports of distress and need in Nanking and Shanghai support, superficially, that thesis.

But in the broader sense we are beginning to see that the problem of Chinese rehabilitation is larger than the complexion of the government that is in power. It is significant that the victorious Communists are already hinting at the need for foreign loans and outside assistance. That will eventually necessitate a change of front on the part of some of the analysts of the Chinese scene.

At the heart of the propaganda of the Chinese Communists and their American apologists has been the doctrine that China's difficulties should be attributed primarily to a government that was inept, corrupt, and that lacked popular support. Presumably the problems could be solved if certain officials took a long vacation as one Member of our House of Representatives suggested. and a truly popular regime came into power. To support that argument the Communist apologists gave us a spate of denunciation of the Nationalist Government and a large body of encomium on the people's revolution.

We are now facing, however, what Pandit Nehru once called the hard logic of circumstances. The Communists who have installed themselves in the Yangtze Valley are presumably competent and incorruptible. They have, by their own admission, the full measure of popular support whose lack is supposed to have doomed the Nationalist Government. But they are still up against the problem of inflation, still trying to find the raw materials to rebuild China's industries, still trying to meet the self-same economic instability that undermined the Government of the Republic of China.

They, and we, are now learning the hard way that talk of corruption was not the whole answer to China's problems, that a change of regime did not go to the root of China's woe. We were able, after a fashion, to understand that western Europe had suffered a gigantic dislocation as the result of war and that our assistance was imperative to restore productive capacity, normal economic interchange, and a degree of stability. But we never did quite seem to realize the same thing in respect to China. We overlooked the fact that transport, the key to Chinese recovery, had been gravely impaired by Japanese occupation and finally shattered by Communist tactics. We talked about the integrity of specific individuals in a Chinese cabinet when there were less operating miles of railway track in all of China than there are between New York and Philadelphia. We persisted in overlooking the fact that China had been at war longer than any of the rest of us and had suffered from massive displacement of population, loss of available resources, and disruption of normal channels of trade. We worried about the democracy of a Chinese Government when Tom Paine himself could not have devised a regime that would have met those conditions without substantial assistance from outside. We were persuaded to look so hard at the trees in Nanking that we lost sight of the forest in Manchuria.

China is a casualty not of politics but of war. The Chinese Communists are finding that out now, if they did not know it previously. We also may find it out now and see wherein we have been misguided in the past and so shape our future course for the better.

Phillips Academy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include a copy of the address delivered by the Right Reverend Henry Wise Hobson, D. D., president of the board of trustees, Phillips Academy, Andover, Mass., at the graduation exercises held on June 12, 1949:

THE GIFT OF FREEDOM

I

Amid the turmoil—approaching chaos in certain areas of the world in which we live today, the basic question to be answered is: Will man live in freedom?

The Pollyanna complacency of a few years ago, in which the majority of people thought that man was making sure and steady progress toward the enjoyment of a free and abundant life, has pretty well disappeared. We must face the fact—probably the most significant fact of our age—that the freedom which man thought he had achieved, which he preserved when threatened in World War I, and defended against a far more vicious attack in World War II, is today in even greater danger of being lost.

During the last war Walter Lippmann, in a Freedom House address, said:

"It is a poignant fact that we have seen great nations renounce freedom after they have won it. We have seen peoples in the profoundest doubt whether their historic freedom was in fact worth preserving. We have always said that freedom was indispensable to life itself: Give us liberty, we repeat, or give us death. But here we are, members of a generation which had that freedom which our ancestors won for us, and we find that millions of men thought they preferred other things to freedom, and many more millions were unable, unwilling, or unprepared to defend and preserve it."

Today what Lippmann called a poignant fact has taken on an even darker hue—the threatened tragedy looms before us more ominously. For while the attack of Nazi-Fascist enslavement was turned back and defeated, and we cried out in the moment of our victory that freedom had triumphed, yet actually we're in greater danger of losing freedom than at any time since the common man reached out to embrace it. Looking to the future, there is no question which it is more important for us to ask, and to answer rightly than: Will man live in freedom? Our answer will determine whether man in the decades ahead—and probably for centuries to come—will live as a slave or as a free child of God.

II

Because so much attention is focussed upon the world conflict going on between what we call democracy and totalitarianism, between those we speak of as freedom-loving nations and those which give their allegiance to Marxian communism, there are many who assume that the present threat to man's freedom comes primarily, if not solely, from the battle raging between these two antagonistic ideologies and ways of life. This cold war is very apt to monopolize a good deal of our thinking. I am not blind to, or free from a deep concern about, the attack being made against the foundations of freedom by Marxian communism. I support a policy by our country, and an international policy (including the Atlantic Pact) which will have the best chance of halting the encroachments of the Soviet-Communists before it's too late to prevent a third world war. Nevertheless I am convinced that no mere victory over totalitarian political or economic opponents will make it possible to answer the question: Will man live in freedom?—in the affirmative. We turned back the Kaiser and the militarists in the First World War. We beat the dictators in the Second World War. Repudiation of and triumph over the Communists is an important task for us to achieve. However, successes against such threats from without will not assure freedom. The basic assurance and guaranty must come from within. As Lippmann pointed out the really significant fact of our times is that so many who have had freedom within their reach have not grasped it. Freedom will never be won until you and I, and more and more people everywhere, know what this gift of freedom is and value it so highly that we shall be ready to pay the price for it, and give our allegiance to those ideals and practices which alone can insure it.

III

I have spoken of this condition of life which in theory we have accepted as so essential for man's well-being as that condition which comes from the gift of freedom. If we are going to understand freedom so as to be able to have it and to live by it, I am certain that we must realize its origin, and grasp its nature and quality.

Freedom is a gift to all men—a basic gift which is part of man's very being—a gift from God which the Donor, in His plan for man, would have each one of us possess and enjoy. The founders of our Nation realized this truth when they wrote into the Declaration of Independence that liberty is one of the inalienable rights with which the Creator has endowed all men.

This basic conviction which is so intertwined with the ideals and purposes upon which our whole idea of democracy rests was finely expressed by Theodore Parker about 100 years ago in his great speech on "The American Idea," upon which Lincoln drew so heavily in his interpretation of our Nation's principles: "A democracy," Parker said, "that is a government of all the people, by all the people, for all the people; of course, a government of the principles of eternal justice, the unchanging law of God, for shortness' sake I will call it the idea of freedom." Parker took it for granted, by using the words "of course," that those who had any true conception of the foundations upon which our Nation rests would realize that what he called the "idea of freedom" comes from God. He knew that man's chance for freedom in life springs solely from God's gift to man of a free will which offers man the chance to choose his way—to determine his destiny.

No one has ever expressed this truth better than Milton in those few lines in Paradise Lost:

"I made him just and right,
Sufficient to have stood, though free to fall,
Such I created all the ethereal Powers
And Spirits, both them who stood, and them who failed.
Freely they stood who stood, and fell who fell."

Here we have the primary fact of our being which we must grasp: It was God's way to create man free regardless of what the consequences might be. His gift of freedom was bestowed because it offered the only way along which His ultimate goal could be reached. The goal of a society made up of His children who were not to be machines, not to be pushed around by the compulsion of a dictator, not to be the pawns of any totalitarian regime, but free children who have themselves chosen to give their allegiance to the fulfillment of His purpose. In other words, we can say that God gave man freedom because only when man possesses and exercises freedom of choice can he grow up into the kind of a being God wants him to be.

We must never forget that all of God's gifts can be possessed not by any automatic processes, but as gifts which must be won. They are not unconditionally bestowed, but offered for us to choose by actions which prove we appreciate their value. Keen intellects or strong bodies are given by God—but the keen mind can be dulled or perverted, the strong body can become emaciated or diseased, by neglect or misuse. What we do with a gift from God will always determine whether we shall be allowed to possess it. The gift is ours—but it's up to us to determine whether we shall enjoy it. It's up to us to say whether or not man will live in freedom.

IV

The greatest threat confronting us today is that more and more men are rejecting the gift which is essential for their well-being. This threat has been growing for the past 30 years. During this period, since the end of World War I, we can see the beginnings of this tendency, as Lippmann pointed out in the quotation I used, among the nations of Europe. There the threat has been accelerated through the years, and now it has come much nearer to home and is hanging over our heads in America. Bernard Baruch has spoken of this threat as "the fear of freedom" and points out that "it was this fear of freedom present among the newly liberated peoples of Europe after the First World War that caused them, without a struggle, to surrender their independence." The growing tragedy is that a failure to understand the nature of freedom, and to appreciate its value—which in part spring from a fear of freedom—are so widespread within our own land that we are more and more surrendering our independence—and thereby losing the gift of freedom.

This dangerous and gradually enslaving situation is developing with the growing tendency of those who should be free men to allow government to take over the controls of their lives. More and more men are surrendering to government what man used to consider as his right and responsibility. Programs are being set up, laws are being enacted, in ever greater number, which really seek to provide by automatic process what men in the past, who have attained the greatest degree of freedom, have achieved for themselves. "Security" has become a word to conjure with, and parties and candidates for office vie one with another to offer our citizens the most appealing form of social security program which will guarantee a future of assured ease. We have—or are moving toward—enforced savings plans; enforced medical protection; guaranteed employment; various processes to maintain prices, wages, and parities; limitations of production and subsidies for nonproduction; Government taking over of business and constantly more detailed controls of man's daily existence. All this process has gone very far in certain parts of the world—in England, for instance—and during these recent years it has been a rapidly developing tendency in America. It is time for us to look, with real understanding and high courage, at what it all means. Actually what is happening is that man is less and less capable of using his own freedom to determine his destiny—his efforts to assure man's welfare are not exerted through any choice he may make but by means of laws and programs which carry on, regardless of what he may do, in an automatic way.

You will realize, I hope, that I am ready to give credit to the good intentions of those who are leading or pushing man along this road toward the establishment of the welfare state. I fully recognize that the goals they hold before us are, in many instances, of a lofty nature. Also, I assure you I am not blind to or lacking in concern about many evil conditions of life which deprive man of the freedom God would have him enjoy. My eyes are open to the evidence of a machine age which produced an economic system resulting in the enslavement of many workers; of an agricultural system, in vogue in parts of the United States, under which the share cropper and migrant worker suffered a terrible peonage; of grave harm done to the health and happiness of women and children by working conditions which, until controlled, destroyed physical and mental well-being, of discriminations, prejudices, injustices, segregations, and dishonesties which have denied the inalienable right of liberty to many of the children of God.

These conditions, and others, have, we know, often robbed men of a chance to be free. They can, if not rooted out, make it impossible for many to make even a start toward freedom. Every reasonable person admits that we must have laws which will prevent the evil and the strong from destroying the well-being of others—laws against crimes of violence, laws to protect man against the evil purposes of some who would kill freedom by taking unfair advantage of those who cannot defend or protect themselves. However, there is a very great difference between such valuable laws, and the enactment of laws seeking to provide benefits which man should win for himself.

The growing tendency to develop the welfare state is a long, long way from what Milton described as God's way, "Freely they stood who stood, and fell who fell." For freedom of choice is essential for freedom of life, and the welfare state is bound to more and more deprive man of his freedom of choice. I am deeply concerned about this willingness of man to turn over the directions and controls of his life to government because I cannot reconcile such a philosophy of life with God's way of dealing with us, His children. He could have made and controlled us so that all the variety of benefits—safety, security, provision for our physical needs, guaranty of all sorts of enjoyments—would have been assured. But He didn't. Instead He put it up to us—gave us free wills to use, freedom of choice, freedom from controls—yes, even to the point of being "free to fall," which is being free to go to hell. Why did He do this? There's only one answer. He wanted us to achieve what can be achieved only by free men, exercising their free choice, and He knows that the controlled and directed life can never be the free life. As we look to the future and ask: "Will man live a free life?" the answer can only be: Not if the totalitarian way of a controlled and directed existence wins out either by a victory for Marxian communism, or by the continued and increasing encroachments which the welfare state (which is really just a first step toward Marxian Communism) is making upon the gift of free choice which God wants man to possess.

V

In part the capacity of man to exercise his freedom of choice is either developed or lost by the extent to which he uses it. This is a fact of life which governs all of our endowments. Our minds, muscles, five senses—and every other part of our make-up—become more alert and capable of increased activity as we put them into greater and greater use, and develop an increasing atrophy if they are allowed to remain dormant. Consequently as man surrenders to the welfare state the controls of his life, thereby depriving himself of the right to and need of making choices, he is bound to gradually develop a personality which is more and more incapable of using his freedom of will—his initiative dwindles, his ambition wanes, his courage slackens, his spirit of adventure dims, until finally he becomes a spineless spiritual invalid sitting back in a wheel chair of indecision being pushed around by paternalistic bureaucracies which have taken over his life. Along this road God's plan for man is gradually perverted. No longer do Milton's words: "Freely they stood who stood, and fell who fell" apply—for man slips into a state of supine inaction in which he loses the gift of freedom.

However, the full achievement of this gift of freedom is only, as I have said, in part determined by the extent of its use. Many people—in the past and today—have been fools enough to believe that merely a full use of individual free choice would assure freedom of life. This false philosophy has been to just turn man loose—give him a completely free rein, with no directions or sense of responsibility, thinking that thus will he find freedom. Education has often been tainted with such ideas as a result of the influence of the self-expressionists who have been foolish enough to think that worthy development could be achieved by a system which encourages people to throw off all restraints and do whatever every inclination and urge suggest. A lot of half-baked psychiatry has joined hands today with the faulty theories of self-expression in education to give lots of people the idea that to be free all you have to do is to give full vent to every urge—do whatever it comes into your head you want to do—without any consideration of its consequences to the doer or to society. Thus the essential moral basis for life has been sadly weakened. There's nothing really new about this effort of man to find freedom through undirected self-expression, and a long time ago Tacitus revealed the true nature of such behavior when he said in five words: "License, which fools call freedom."

Now God is no fool, and he hasn't turned man loose in society with free will just to run wild in seeking freedom along the road of license. For coupled with His gift of a free will God has also given man the capacity to know the truth. This brings me to the heart of what I want to say to you about man's capacity to live in freedom, for only as man is eager and willing to use God's gift of a free will and at the same time exercise his capacity to know the truth can he discover a truly free life. For real freedom is the state of a man who has discovered the truth and freely chosen to follow it. The degree of freedom a man enjoys is determined by the degree of truth which he has discovered, and the degree of his loyalty in following it. The child who has no knowledge of truth—the ignorant or badly educated person who has no valid vision of truth—the vicious person who has rejected truth—these are never really free. William Cowper put this fact in a good sentence when he wrote: 'He is the free man whom the truth makes free, and all are slaves besides," which is paraphrase of an even greater sentence which Christ spoke: "Ye shall know the truth, and the truth shall make you free."

VI

My chief word to you who are going out from Andover today can therefore be summed up thus: God offers you His gift of a free will because He wants you to use it—since only by using it can you attain the growth which will lead you ever onward toward the successful achievement of the state of

life which God would have you enjoy—the state of being a truly free child of God. Beware of selling out your birthright by turning over your freedom of choice to any other person or persons. Beware, especially in this day, of yielding to the enticements of surrendering your control of your freedom of choice to the dictations of the welfare state. But beware of thinking you can find freedom by following the road of license along which the directions supplied by a knowledge of the truth are lost. Seek the truth with every effort of your full powers, for only as you more and more grasp the truth—the eternal truth about life which God has established, and which if we seek we shall find—will you have the discernment, the vision, to choose the way which leads to the free life.

It is no easy way which lies before you. For along it you must be ready to join in a firm resistance against the attack from without of totalitarian aggressions and to resist the temptation from within of seeking benefits and privileges by having them handed to you by automatic processes instead of winning them through your own courageous and sacrificial struggles. The enemies who would deprive you of the gift of freedom will be stronger than any man has ever faced before. It will take constant vigilance, unyielding purpose, undaunted courage, and a loyalty which will make you ready to do battle for the highest you have known to make certain that you will be victors through the struggle in which you will engage in the years to come.

My faith in the spirit which you have caught here at Andover, the spirit which has burned here since this school was founded, gives me confidence that as you go forth today you are headed in the right direction along that road which leads to the free life which God has offered to us as the abundant life. Hold fast to your vision, and above all maintain the struggle in which every man must engage in the spiritual adventure through which he wins a knowledge of the truth which alone can make him free. I give you a charge—which you may well take as a guide for each day as you travel the way which stretches before you—and I put this charge in words from Goethe's Faust:

"He only earns his freedom and existence
Who daily conquers them anew."

Thomas Jefferson

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. McCORMACK. Mr. Speaker, one of the great figures of all times, who will always occupy a foremost place in the minds of Americans, is Thomas Jefferson.

When we consider his background and the state of mind of the period in which he lived, admiration for him and respect for his noble mind and what flowed therefrom in the cause and progress in America of the average person grows and grows.

The life of Thomas Jefferson not only leaves a challenge to us but grips the imagination.

The life of Jefferson is well known to students of history. But there is one aspect of his life that has been slightly stressed and which should be emphasized. It shows clearly his devotion to ideals and to principle, and his great courage to fend for the same even against impossible odds.

I have reference to his opposition to slavery. Some decades before anyone else came upon the scene of American life advocating the abolition of slavery Thomas Jefferson was making that fight.

I include herein a memorandum of Thomas Jefferson's views on slavery, and some of his efforts made during his lifetime to meet and solve this inhuman, iniquitous condition here for so long a period of time, both under colonial and constitutional government.

It is only fitting and proper that Jefferson should be given full credit for his courageous efforts during his lifetime to eliminate slavery.

His abhorrence of slavery is completely evidenced by the freeing of five of his slaves after his death.

THOMAS JEFFERSON'S VIEWS ON SLAVERY

His political career began in 1769, when he became a member of the Virginia House of Burgesses. Although the owner of many slaves, his first action in the House was to provide a method by which masters who wished to free their slaves could do so. He met with little success.

Jefferson not only wrote the Declaration, but his original draft included an eloquent denunciation of the slave traffic. Listing the Colonists' causes of complaint against George III, he wrote:

"He has waged cruel war against human nature itself. Violating its most sacred rights of life and liberty in the persons of a distant people, who never offended him, captivating and carrying them into slavery in another hemisphere, or to incur miserable death in their transportation thither, this piratical warfare, the opprobrium of infidel powers, is the warfare of the Christian King of Great Britain. Determined to keep open a market where men should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or restrain this execrable commerce."

In his autobiography, Jefferson relates what happened to this passage from the original draft of the Declaration of Independence:

"The Clause * * * reprobating the enslaving of the inhabitants of Africa was struck out in complaisance to South Carolina and Georgia, who had never attempted to restrain the importation of slaves, and who on the contrary still wished to continue it. Our northern brethren also I believe felt a little tender under these censures; for though their people have very few slaves themselves yet they had been pretty considerable carriers of them to others."

In the summer of 1779, Jefferson was elected Governor of Virginia for a 1-year term and was reelected the following year. During his administration, the British troops invaded Virginia, and under Cornwallis began a campaign of ruthless destruction. As an instance of this policy, Jefferson pointed to what had happened to his own plantation. The description reveals again Jefferson's hatred of slavery:

"He destroyed all my growing crops of corn and tobacco, he burned all my barns containing the same articles of the last year, having first taken what corn he wanted; he used, as was to be expected, all my stock of cattle, sheep, and hogs for the sustenance of his army. * * * He carried off also about 30 slaves. Had this been to give them freedom he would have done right, but it was to consign them to inevitable death from the smallpox and putrid fever, then raging in his camp."

In 1784 Jefferson had another opportunity to put his attitude toward slavery into a public declaration. He was asked by Congress to draw up an ordinance for the government of territories south of the Ohio River, that is Alabama, Mississippi, Tennessee, and Kentucky. In this ordinance, Jefferson expressly provided for the prohibition of slavery, but once again his words were stricken out. Jefferson regarded the failure of the Continental Congress to forbid slavery in the Territories south of the Ohio River as one of the most serious errors any government ever made.

"The voice of a single individual of the State which was divided, or one of those which were in the negative, would have prevented this abominable crime from spreading itself over the new country. Thus we see the fate of millions unborn hanging on the tongue of one man and Heaven was silent in that awful moment. But it is to be hoped that it will not always be silent and that the friends to the rights of human nature will in the end prevail."

In 1787 Thomas Jefferson wrote Notes on Virginia, a model survey of the Government, laws, economy, climate, resources, and people of Virginia—the forerunner of many such treaties on individual States, in which slavery again is denounced:

"There must doubtless be an unhappy influence on the manners of our people produced by the existence of slavery among us. The whole commerce between master and slave is a perpetual exercise of the most boisterous passions, the most unremitting despotism on the one part, and degrading submissions on the other. * * *

"* * * The spirit of the master is abating, that of the slave rising from the dust, his condition mollifying, the way I hope preparing under the auspices of heaven, for a total emancipation, and that this is disposed, in the order of events to be with the consent of the masters, rather than by their extirpation."

Frances Wright, champion of the abolition of slavery, had written Jefferson asking him to endorse her project to establish a colony near Memphis, where slaves could buy their freedom and learn a trade while they worked. Answering August 7, 1825, Jefferson states:

"At the age of 82, with one foot in the grave and the other uplifted to follow it, I do not permit myself to take part in any new enterprises, even for bettering the condition of man, not even in the great one which is the subject of your letter, and which has been through life that of my greatest anxieties. The march of events has not been such as to render its completion practicable within the limits of time allotted to me * * *. The abolition of the evil is not impossible. Every plan should be adopted, every experiment tried, which may do something toward that ultimate object."

In the codicil to his will, Thomas Jefferson bequeathed freedom to five slaves. Due to financial reverses it is questionable whether Jefferson owned more than five slaves at the time of his death.

That part of the codicil to his will relating to the freedom of the five slaves is as follows:

"I give to my good, affectionate, and faithful servant Burwell, his freedom, and the sum of $300, to buy necessaries to commence his trade of painter and glazier, or to use otherwise, as he pleases.

"I give also to my good servants John Hemings and Joe Fosset, their freedom at the end of one year after my death; and each of them respectively, all the tools of their respective shops or callings; and it is my will that a comfortable log-house be built for each of the three servants so emancipated, on some part of my lands convenient to them with respect to the residence of their wives, and to Charlottesville and the University, where they will be mostly employed,

and reasonably convenient also to the interests of the proprietor of the lands, of which houses I give the use of one, with a curtilage of an acre to each, during his life or personal occupation thereof.

"I give also to John Hemings the service of his two apprentices Madison and Eston Hemings, until their respective ages of twenty-one years, at which period respectively, I give them their freedom; and I humbly and earnestly request of the Legislature of Virginia a confirmation of the bequest of freedom to these servants, with permission to remain in the State, where their families and connexions are, as an additional instance of the favour, of which I have received so many other manifestations, in the course of my life, and for which I now give them my last, solemn, and dutiful thanks.

"In testimony that this is a codicil to my will of yesterday's date, and that it is to modify so far the provisions of that will, I have written it all with my own hand in two pages, to each of which I subscribe my name, this seventeenth day of March, one thousand eight hundred and twenty-six.

"TH. JEFFERSON."

Russia Joins in the Genocide Convention of the United Nations—Attempts To Wash Out Murderous Conduct Against Non-Russian Nations

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, it seems quite obvious that when the Russians joined with other nations of the General Assembly in adopting the convention of genocide, it was for the sole purpose of washing its hands of the blood of millions of people whom they have liquidated since 1918. It was a clever trick to fool the people of the world into believing that the Soviet will abide by world law. At the same time it hopes that this convention now limits the law so that Russia cannot be charged with violent acts of genocide against minority groups and nations of which she is guilty. Has it not by this act endeavored to legalize the murders at Katyn and many others?

Mr. Speaker, the theory underlying the genocide convention is laudable but how can we join with a nation like Russia when the facts show that it is an outlaw; that it respects no other nation and much less any agreement? As the matter now stands the Congress of the United States should reject this convention on the ground that it is a travesty against justice. Mr. Speaker, for us to ratify it now would justify the charge that fools run our foreign affairs.

Mr. Speaker, I include at this point an illuminating article by Prof. Roman Stocky, which appears in the spring issue, 1949, of the Ukrainian Quarterly:

THE GENOCIDE CONVENTION

(By Roman Smal Stocky)

I. WHAT IS GENOCIDE?

The General Assembly of the UN in Paris last December accepted the Convention on Genocide. The President of the Assembly, Dr. Evatt, the representative of Australia, described it as an "epoch-making event." But in the rather long negotiations of the Legal Commission of the General Assembly, which drafted the convention, an active and vociferous participant was the Soviet delegate, Platon D. Morozov. That should be sufficient cause for the non-Russian nations, the victims of Soviet Moscow, to analyze this new international convention in order to discover the real reason why Stalin again signed an international treaty.

What is genocide? This new word, a mixture of Greek and Latin, is the newest legal term in international law. It was originated by Prof. R. Lenkin, a noted scholar and international lawyer, in his book, Axis Rule in Occupied Europe, published by the Carnegie Endowment of International Law, Washington, 1944 (pp. 79–95). One of the experts serving with the American judges at the Nuremberg trial, he had his legal concept included in the indictment and acted upon in the verdict. Of course, Soviet "judges" also participated in the proceedings on the side of the righteous, but the report of Robert H. Jackson, United States representative to the Conference on Military Trials, is convincing proof that American and Soviet judges could not establish a common definition even for the term "murder"—the Soviets insisted it be limited to Nazi crimes only.[1]

In brief genocide means "race murder" or "nation murder." The convention defines it as an act which is committed "with intent to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such." (Please note the very important "as such.") Its operative clauses are short. Five acts constitute genocide: (1) Killing members of the group; (2) causing them serious bodily or mental harm; (3) deliberately inflicting conditions of life calculated to bring about their physical destruction; (4) taking measures to prevent birth within the group; and (5) forcibly transferring children of the group to another group.

The convention then says that persons committing any of these acts of genocide are to be punished, not only if they are public officials, but even if they are state rulers; that they are to be tried either by some competent tribunal of the territory in which the act is committed, or alternatively by an international penal tribunal. Furthermore, genocide is not to be treated as a political crime (common usage forbids persons accused of political crimes to be extradited for trial in another state). Each contracting nation is to enact domestic legislation giving effect to the convention. Any party, under the Charter, is to be able to call on the UN to take appropriate action against genocide. There is at present no international tribunal with penal jurisdiction, but the Assembly has asked the new International Law Commission of the UN to consider the desirability and possibility of establishing one.

This brief summary of the Genocide Convention requires the following remarks:

(a) The enumeration of acts constituting genocide is based entirely on atrocities committed by the Nazis before and during the last war.

(b) Soviet atrocities—past and present—are completely disregarded.

(c) The words "as such," to which we have drawn attention, in our opinion, seem from the juridical point of view, clearly intended to limit the law, to exclude from the new legal concept many Soviet crimes committed currently against non-Russian nationalities. Prof. J. L. Brearly, an English authority on international law, believes that the "as such" would probably also exclude from the concept of genocide most of the famous massacres and persecutions of history.[2] In every instance the Soviet Communist dictatorship has tried in the convention to legalize its genocides, saying they are intended not "to destroy, in whole or in part, a national, ethnical, racial, or religious group, as such," but to punish rebels, bandits, saboteurs, etc.

(d) Therefore the non-Russian nationalities should beware of deluding themselves into thinking international law has taken a great step toward perfecting the protection of a nation or a community against genocide. In reality nothing has been changed. The Assembly of the UN produced a document which gave Soviet Moscow an opportunity to evade international responsibility while realizing the aims of Soviet propaganda.

II. HISTORY OF SOVIET GENOCIDE

We must confess that the need for the term "genocide" in international law compels every thinking person to deep and sad reflection on the level of contemporary civilization with its airplanes and atomic energy. Quo vadis, human race? Nearly 2,000 years after Jesus Christ and the Prophets of the Old Testament the simple term "murder" has become insufficient because our progress has developed race murder. And the President, the members of the Assembly, felt neither the shame nor the tragedy of the spiritual and intellectual bankruptcy of our generation implicit in the epoch-making event, the adoption of the Genocide Convention.

What is more, not one of the delegates of the democratic powers realized that behind the loud voice and the humanitarian declarations of the Soviet delegates lay hidden the bad conscience of the Soviet dictatorship, whose cruelty and brutality toward opposing national, ethnical, racial, and religious groups represents a unique, an unsurpassed, peak in modern history. Not one was aware of the propaganda intended by the Soviet Union in participating in the Genocide Convention.

Not one of the non-Communist delegates had the moral courage to question the Soviet delegates about recent events in the Soviet Union. They were passive spectators at a macabre show in which the representative of the greatest murderer of nations in history appeared as a teacher of justice and morality, as a defender of humanity, before the forum of the western democratic world.

Therefore we present for the kind attention and consideration of the United Nations a short survey of Soviet genocide, its roots and its development.

Race-murder is an old Muscovite specialty often practiced by the Tsars. In spite of the unconditional surrender of Novgorod the Tsar ordered the population to be murdered, drowned, or transferred to the suburbs of Moscow. These methods succeeded in killing the nucleus of the fourth eastern Slavic nation, the Novgorodians, who by their language, their Hanseatic mentality, differed completely from the Muscovites. The famous Oprichnina of Ivan the Terrible, a model for Hitler's SS organization, liquidated the whole aristocracy opposed to Tsarist tyranny. Well known also are later Tsarist persecutions of the Old Believers, the Raskolniki, a part of whom even sought refuge in Bukovina in Catholic Austria. Peter I ordered the murder of the whole population, including women and children, of Baturyn, the capital of the Ukranian Hetman Ivan Mazepa. Catherine II ordered 10,000 Crimean Tatars to be expelled and drowned in the Black Sea. Nor is it necessary to describe the methods and the brutalities of Nicholas I and his field marshal, Suvorov, in liquidating the Polish revolutionaries, or exterminating the Ukranian Catholics in the Kholmland.

The Russian Communist Party, soon after establishing its dictatorship, began to glorify Ivan the Terrible and Peter I, ordering novels to be written and, later, producing special

[1] Washington, D. C., U. S. Government Printing Office, 1949.

[2] The Listener, March 10, 1949.

movies about them. During the last war Stalin climaxed this trend by establishing the Suvorov decoration as the highest military award. Thus the past and present of Muscovy and its political methods are inseparably connected. Against these methods the truly great leaders of the Russian nation have fought and protested in vain.[3]

The Russian Communists began very early to use genocide as a political weapon. Let us survey the victims, and prove that the Soviet Union is not only the prison of nations, but also the cemetery.

(1) The Ingrian nation was mercilessly liquidated, 1921–23. The Ingrians, numbering nearly 400,000, occupied Ingermanland, the hinterland of what is now Leningrad. They were a sister nation to the Estonians and the Finns, and thus united the Finno-Ugrian ethnographical territory into one whole. Through this territory Peter I drove his window to the Baltic sea. The Ingrians, a highly civilized people with Scandinavian culture and a well-educated Protestant ministry, became the object of an early Communist attack intended to complete the Russification of the Leningrad hinterland. Mass terror and forced emigration to the north annihilated the Ingrians. Only those few who escaped to Finland still survive.

(2) The annihilation of the Ukrainian Orthodox Autocephalous Church with the Metropolitan Lypkivsky, the clergy and many church leaders from the laity. The church was completely wiped out between 1926 and 1932.

(3) The annihilation of the Ukrainian farmer class. During the NEP policy the Ukrainian peasantry became the driving force behind the Ukrainian national idea.

By forcing the famous collectivization on the farming class, Stalin, in 1932 and 1933, deliberately provoked a famine in the breadbasket of Europe, a famine which brought death by starvation to at least four or five million peasants. By mass exiles to Siberia and the famous trials developed for the Union for the liberation of the Ukraine, Soviet Moscow murdered a large part of the Ukrainian peasantry and intelligensia.[4] Leading Ukrainian Communists Lubchenko, then Prime Minister of Soviet Ukraine; Skrypnyk, Minister of Education and an old friend of Lenin, committed suicide to protest Stalin's policy of extermination.

(4) The annihilation, between 1928 and 1930, of the Cossacks of the Don and Kuban, who considered themselves separate national groups, was affected by most brutal methods. Their officers' corps—their intelligentsia—were systematically killed or deported, and every trace of their old democratic self-government and republican tradition erased.

(5) The annihilation of the Greek population of the Kerch Peninsula. The Communists in order to Russify this strategically important territory, exterminated the entire ethnic group. Some 5,000–8,000 men, women, and children were deported to a forced labor camp in the Arctic.

(6) During World War II Stalin perpetrated the greatest single mass murder known to the civilized world when he exterminated, in the forest of Katyn, more than 10,000 Polish prisoners of war, officially under the protection of the International Red Cross Convention. These included not only professional soldiers, but also officers of the reserve, among them a considerable number of university professors, high-school teachers, eminent doctors, judges, lawyers, engineers, and technicians, who had been mobilized to fight Hitler. This extermination was an integral part of that social engineering designed to deprive a non-Communist nation of its leading intelligentsia for the future.

(7) Before and during World War II, Stalin applied the same method of mass murder to the Ukrainian intelligentsia in Vinnitsa, Lviv, Stanlyslaviv, and Kolomyja, where mass graves of nearly 10,000 victims of the NKVD have been discovered. All the leading personalities of the democratic parties of western Ukraine, including the central committee of the Ukrainian Socialist Party, were liquidated by murder or by deportation to slave-labor camps.

(8) The Soviet Government during World War II admitted having committed the following cases of genocide:

(a) The annihilation of the Volga German Republic, abolished in 1940, when the population of about 800,000 was deported to the Asiatic Arctic;

(b) The annihilation of the Crimean Tartar Republic in 1944 with the deportation of 800,000 people to the Asiatic Arctic;

(c) The annihilation of the Chechen Republic of the Caucasus in 1945 when its population of 600,000 was deported to Soviet Asia.

(d) The annihilation of the "autonomous region" of Karachev, abolished 1945, when the population was scattered in the Asiatic Arctic.[5]

(9) The annihilation of the Ukrainian Catholic Church in western and Carpathian Ukraine. The whole hierarchy was imprisoned and deported. Two bishops died in prison. The MVD forced a part of the clergy to recognize the patriarch of Moscow, the opposing part is partly murdered, partly imprisoned.

(10) The Soviet Government is now committing the crime of genocide in three forcibly annexed Baltic Republics:

(a) Lithuania: Nearly 60 percent of the intelligentsia has been either exterminated or deported to Asia;

(b) Latvia: Nearly 50 percent of the intelligentsia has been either exterminated or deported to Asia;

(c) Esthonia: Nearly 50 percent of the intelligentsia has been deported or murdered.

The farmer-population of 5,000,000 in these Baltic Republics has for 2 years been systematically deprived of its intelligentsia. The Soviet Government has already begun the mass-expulsion of these peasants from their mother countries.[6]

(11) This survey does not include Soviet Moscow's persecutions in White Ruthenia, and in Caucasus and Turkestan. The list is surely not yet complete. All information from Poland, Czechoslovakia, Rumania, Bulgaria, and Hungary proves that the preparation for persecution of the churches, intelligentsia, and peasantry—the necessary lists of leaders, the infiltration into non-Communist organizations—is complete, and the terror is in full swing.[7]

The best picture of what is going on behind the iron curtain is given in a letter by the former Rumanian Prime Minister N. Radescu, published in the New York Times[7] under the headline "Genocide in Rumania," in which is reported the extermination of entire social groups:

"In the case of Rumania, the denial of human rights and fundamental freedoms has reached a point where the right to live is itself being denied to entire sections of the population.

"I refer first of all to over 200,000 victims of political persecution, tortured or dying of starvation in prisons, concentration, and labor camps. The purges effected in the state administration, in the teaching staffs, the clergy and the army, the strangling of free professions, the nationalization of enterprises, the excessive taxation of real property—which amounts to plain confiscation—have deprived several other hundreds of thousands of their livelihood.

"Liquidation of peasants

"The latest victims of this policy of extermination are the group of farmers who owned the top figure of 110 acres of land. The properties of over 17,000 families in this category were recently confiscated by a simple decree. They were evicted with their families from their homes in the middle of the night and transported to distant localities, being allowed to take only the personal belongings which they could carry in their hands. The ferocity of this measure is reflected in its concluding paragraph, which provides the penalty of 3 to 15 years in prison against the officials who failed to enforce it properly.

"The letters from Rumania which secretly reach us describe the utter despair of the population. '* * * No one from the outside can imagine, however well informed he is, the extent of our misery. * * * It is seldom that one finds a family without a member or relative in prison, tortured or disappeared. * * * Many of those who are still "free" commit suicide, die of cold or starvation, of contagious diseases or become insane.'

"These facts go a long way to explain why the Soviet representatives strenuously opposed the inclusion in the list of genocide crimes the physical annihilation of entire racial groups for political and economic motives."

III. THE IDEOLOGICAL BASIS OF SOVIET GENOCIDE, ITS PURPOSE, METHODS, AND RESULTS

The Soviet Government and its Communist Party have a logical, well-developed ideology regarding genocide, or in Communist lingo, the "liquidation of the enemies of the people." Let us discover its roots:

(1) The Russian Communist Party is the only organization among the governments of the world which in its ideology considers terror not only morally admissible but the only effective method of action against the opposition. After 1917 Lenin explicitly approved terror as a weapon against political dissenters and opponents. This principle distinguishes the Soviet government from any other political organization.

(2) Therefore terror in the Soviet Union is legalized for the use of the state by the ruling Communist Party. Terror, open and conspiratorial, is the very foundation of the Soviet government, the basis of the dictatorship of the proletariat. The Communist Party knows that terror alone can keep a small but armed minority in power over a vast but disarmed majority. Therefore constant terror against persons, groups, nations are normal expressions of Communist activity. To the Communist terror means stern

[3] After the establishment of the Communist dictatorship, when wholesale slaughter became the order of the day, Mr. Gorky wrote a tragic warning: "The revolution has overthrown the monarchy. But perhaps it has only forced the external malady deeper into the organism. Evidently killing is easier than persuasion and this very simple method is very easy for people who have been brought up amongst massacres and educated by massacres. All you Russians are still savages, corrupted by your former masters, you in whom they infused their terrible defects and their insane despotism." Those are prophetic words and a prophetic vision of the great Russian writer of the coming era of Soviet-genocide.

[4] About this tragedy there is a large literature in America. Cf. the publications of W. M. Chamberlin, Eugene Lyons, W. C. Krivitsky, etc.

[5] Official statement by P. V. Bachmurov, secretary to the Presidium of the Supreme Soviet of the R. S. F. S. R., June 25, 1946.

[6] Albert Kalma in Soviets Blodstad i Baltikum, Stockholm, 1948, has provided a deeply moving description, authenticated by scores of photostatic proofs.

[7] The New York Times, April 24, 1949.

measures. The declaration of the People's Commissar of Justice is instructive: "In the opinion of liberals and opportunists of all kinds, the stronger the country is the more lenient it can be to its opponent. * * * No; and again no. The stronger the country is, the mightier it is, the more justified are we in taking stern measures against those who disturb our socialist construction." [8]

Last but not least, we should like to introduce into this inquiry an indisputably authoritative witness—Joseph Stalin himself. In 1931, when Lady Astor met Stalin, she asked him rather quickly, "How long are you going to continue killing people?" Taken off guard, Stalin answered, "As long as it is necessary." [9]

(3) This legalization of the use of terror is based on the teaching of Marx ("Law, morality, religon are to him [the proletarian] so many bourgeois prejudices behind which lurk in ambush so many bourgeois interests" (Communist manifesto), and Lenin ("For us morality is subordinated to the interests of the proletarian class struggle," Lenin, in Arnold Lunn's Communism and Socialism).

(4) The use of terror also justifies Lenin's concept of "party," a concept so different from the idea of western political parties. Lenin developed the concept after a careful study of Von Clausewitz On War, and nobody until now has had the courage to state that his concept of the party is a transfer of the basic ideas of Prussian militarism into political party life. The party is a general staff and officers' corps of professional revolutionaries, who command the rank and file, but the rank and file are not permitted to influence the decisions of the staff and the commander in chief. Military discipline and blind obedience is the basis of the ideological army which the Communist calls party. What happens to traitors or opponents of a real army during war? They are shot. In the Communist ideological army they are liquidated. And liquidation is practiced not only inside the Soviet Union, but outside its barriers as well. Petlura, Ramishvili, Kutiepov, Miller, Oskilko—leaders of the opposition of other nations—were murdered, and so were the Communist traitors I. Reiss in Switzerland, Paul Maslov in Cuba, L. Trotsky in Mexico, W. G. Krivitsky in Washington, etc. Lenin teaches: "We have never rejected terror on principle nor can we ever do so. Terror is a form of military operation that may be usefully applied, or may even be essential in certain moments of the battle." [10]

(5) And here is the last Communist justification of terror: According to Communist ideology the party is actually at war—not a cold war, but a shooting war. According to communism history is the record of class war. The Soviet Union is now in a Communist world war against the democratic world. It is engaged in a constant and gigantic battle conducted by Commander in Chief Stalin. How can an army during battle refuse to punish with death all traitors, all persons, or groups who disobey battle orders? The death penalty for persons and groups, from the Communist point of view, is therefore justified since it is necessary for the ultimate victory of communism.

To sum up: The use of genocide against opposing groups and nations is lawful because to the Soviet there is no peacetime. Until the total victory of the Communist World Revolution, for the Soviet Government, inside and outside the Soviet Union, there is wartime.

This explains the ideological basis of the decades-long practice of genocide against the national and religious groups opposing the Soviet Union. From the viewpoint of materialism and the doctrines of Marx and Lenin, there is an iron logic in this way of thought, a logic which western diplomats, unschooled in Communist sciences, cannot grasp.

Thus, inside and outside the Soviet Union, unceasing terror is an essential part of communism and its very atmosphere. Terror is the basis of the dictatorship. Communism can never, never renounce terror, for that would bring the thermidor to the world revolution, the dissolution of the Soviet Union. What does terror mean? It means, and do not forget it, the systematic murder of leading persons and of entire national and religious groups—or what is now in international law called genocide.

What are the methods of Soviet genocide? Communism has also developed a scientific method of genocide. Let us review it briefly.

The method progresses through four stages: (a) the first attack is directed against the intelligentsia, the nation's leaders and distinguished personalties, its brains. A terroristic mass-blow on the head, on the brain, paralyze the whole body of the victim nation; (b) the second stage—often a part of the first—is against the nation's churches. Christianity as a religion, its hierarchy and priests are considered forces most dangerous to communism, and their elimination from the battle front by terroristic measures is necessary before the brain is fully unconscious. This is the attack on the soul of the nation; (c) the third attack uproots the farmers of the nation, the bearers of its traditions, of its folk music and folk literature, of its distinct language. Thus the ethnographical territory of a nation is disrupted, and the way is prepared for the (d) fourth and last stage: the settlement of Russians or Asiatic tribes in order to mix up the nationality in question and create a mixed territory.

An operative instrument for the first three stages of Soviet genocide are the slave labor camps administered by the MVD in the Soviet Union. Their task, before the doomed group dies of starvation, exhaustion from overwork, or by murder, is to squeeze from it all its physical resources for the benefit of the Soviet economy.

The aim of this social engineering is to manufacture and create a new Communist Soviet nation, the "Sovietsky Narod," formed from all the subjugated nationalities in the Soviet Union, a new "amalgam" whose members no longer remember their original religion, tradition, politics, aims, or language.

But this international aim includes as well a purely nationalistic aim. Soviet genocide is put to the service of the Russification (in party lingo, "sovietization") of territories geopolitically important to Soviet Moscow. The action is being carried out according to the principles of the "geopolicy" of General Haushofer, Hitler's famous adviser. The following are its main directions:

(a) The Baltic States, to achieve Haushofer's Zange-principle. One end of the pair of tongs is Leningrad, the other Koenigsberg, already completely Russified including its hinterland. A Russian corridor has thus been cut through Lithuania and White Ruthenia, and the victim nations are already embraced by the Russians.

(b) Ukraine, with the Russian colonization of the Don and Kuban Cossack territories and Crimea, is only half-embraced. Crimea, dominating the mouth of the Dnieper, fills the geopolitical role of Stuetespenkt, key position, for Russia in relation to the Ukraine. Hence the Crimean Tartars have been liquidated. But Russia did not succeed in embracing Ukraine (Russia's "India" and the springboard to the Dardanelles, Balkans, and central Europe), and so Russia had to make satellites of Ukraine's western neighbors: Poland, Czechoslovakia, Hungary, and Rumania. They constitute the western line of defense.

(c) The third direction is the Volga-Caucasus. With the annihilation of the Volga-Germans, the Don and Kuban Cossacks, and the Chechens, Russia achieved substantial gains.

(d) Siberia is not only the geopolitical basis for the domination of Asia, but also a springboard over to Alaska. It is therefore being forcefully developed as a reservoir of manpower and industry. Here under Russian leadership a "Soviet Nation," formed from the unhappy deported groups of all Russian-controlled nations, is in process of creation.

(e) Russification is supported by a mighty propaganda in behalf of Russian as the "world language of the international proletariat" in all spheres of Soviet Russian influence. D. Zaslavsky writes of the Russian language: "The Russian language has become a world language. It has won the recognition of the world's common people. They want to learn more about the building of socialism and the sources of our country's might. The succession of languages runs through the ages. Latin was the language of the ancient world, French of the feudal epoch, English of capitalism. Russian is the world-language of sccialism. French is the fancy language of courtiers, and the English the jargon of traders. They were the tongues of ruling classes and of snobbish intellectuals. The English language corrupted people in foreign lands. Russian is the first language of internationalism. No one can call himself a scholar if he does not know Russian. Russians unquestionably occupy first place in the social sciences. All future progress in these sciences has been determined by the genius of Lenin and Stalin." [11] Propaganda for the "language of internationalism" and "international Soviet genocide" complement and supplement one another. Russian nationalistic and international communistic aims, together with the messianistic master-race emotions are closely merged in the large-scale movement toward the Baltic States, Ukraine, Caucasus, Siberia, and the whole "sphere of influence."

The results of Soviet genocide are tragic, not only for the non-Russian nationalities of the Soviet Union, but also for the Soviet Union, itself, as a state. The best demonstration of this fact are the Soviet statistics. The directors of the 1937 census were "liquidated," and its results have never been published. And 2 years ago, having declared statistics to be "state top secrets," the Soviet Government forbade all foreigners to attempt any kind of statistical research in the U. S. S. R., calling it espionage punishable by law.

Why has Soviet Moscow for more than a decade maintained a statistical iron curtain? It hides from the civilized world the results of Soviet genocide.

According to all careful scholars of population problems in the Soviet Union, including D. V. Dallin, the following approximate figures are true:

In the year 1914 the Russian Empire (with Finland, Bukhara, and Khiva) had a population of about 170,000,000. A quarter of a century later, in 1939, the figure remained 170,000,000. In 1947 the population within the prewar borders was less than 170,000,000, and, adding the 25,000,000 in newly acquired provinces, the total population is only 190,000,000. If the normal development of pre-World War I Tsaristic Russia had continued, the Soviet Union would today have a population of over two hundred and ninety to three hundred million people.[12]

About 300,000,000 in theory and 190,000,000 in present-day reality. This deficiency of over 100,000,000 is due, of course, in part

to the losses of two world wars and the Civil War of 1918–20—but by far the largest portion is the result of Soviet genocide. Soviet genocide produced as well two more results peculiar to the present-day Soviet Union: an acute man-power shortage and an excess of nearly 10,000,000 women over men, an unprecedented development for any country.

IV. AN APPEAL TO THE DEMOCRATIC CHRISTIAN STATES, SIGNATORIES OF THE GENOCIDE CONVENTION

Think of these questions: What have been the aims of the Soviet Government in participating in this work of the UN? What are the reasons for all the pathetic declamations of the Soviet delegates, during the meeting of the Commission, about the protection of national, racial, ethnical and religious groups in the Soviet Union? Why have the Soviets been so eager to sign solemnly the Genocide Convention when they have treated with contempt and boycott the other Commissions and Organizations of the UN?

In our opinion there are three reasons which are worthy of careful analysis for the understanding of Soviet policy and its role in the UN.

(1) The Communist dictatorship with its mystic, Byzantine-like Stalin-worship needs new "prestige-successes" (cf. the policy of Hitler and Mussolini). It needs them badly (a) for interior policy; there is unrest in Ukraine—the Ukrainian Insurgent Army (UPA) is still fighting, there is unrest in the Baltic countries, unrest among the demobilized soldiers who saw "capitalistic Europe," unrest in the rank and file of the party, unrest which has necessitated new purges in all spheres. But (b) the Communist dictatorship also needs successes badly for its foreign relations to keep its prestige and victorious face" before the Communist parties outside the Soviet Union during the current cold war. Stalin's infallible majesty requires a new deep bow from the democratic, Christian powers; he wishes it to be clear, in black and white, that he is an honest, respected man and partner, regarded as an equal even by democrats and Christians. And the Genocide Convention implies:

(a) The recognition of the Soviet regime as an equal partner with equal moral standards by the democratic, Christian powers.

(b) The recognition that this regime has standards for the protection of national, ethnical, racial, and religious groups equal to those of democratic, Christian powers.

(c) The recognition that the justice and courts of this regime have standards equal to those of the democratic, Christian powers.

(d) The recognition in the words "as such" that all former and current acts of genocide committed by the Soviet regime against national, racial, ethnical, and religious groups are legal.

(2) Stalin needs this new prestige, too, until by his order Tito will meet Trotsky. Tito challenged the wisdom and the methods of Stalin in order to protect the nations of Yugoslavia from the penetration of the MVD and Soviet genocide. He stated publicly that "truth is above Stalin's authority" and denounced the doctrine of the end justifies the means. Tito said openly, "No matter how much each of us loves the land of socialism [the Soviet Union], you cannot ask us to love our own country less." Here is a rebel against Stalin's national policy, who publicly condemns Stalin's methods. And to refute Tito, Stalin wanted to show the nations of Yugoslavia that he has been slandered, that even the democratic powers have confirmed that he loves and protects all nations and races as equal and as such.

(3) Above all, the signing of the genocide convention is Stalin's reply to the emigration of displaced persons, who are growing in numbers because anyone who can get away by foot, car, or aeroplane, tries to escape from the Soviet Union and from behind the iron curtain. This mass political emigration from the Soviet Union is the most terrible of the accusations against Stalin and his regime. Living witnesses of his atrocities—prisoners from slave labor camps, bishops and priests, members of the Soviet Academy of Sciences, university professors, intelligentsia, peasants, and workers—in the tongue of all victim-nations, name Stalin and his party, murderers. Murderers of bishops and priests, of Christians, Jews, and Mohammedans, murderers of nations. Greatest mass murderers of all times, of all epochs, of all peoples.

The signing of the Genocide Convention was intended only to realize these propagandistic "defense" and "prestige" aims, and neither Stalin nor the Soviet regime intends to change in the least degree their policy of genocide. Therefore, the signing of the Genocide Convention is the newest fraud with which Stalin has deceived his gullible democratic Christian "enemies." And Stalin's cynical attitude toward the democratic powers is, from the point of view of his principles, fully justified and moral: "The workers' state, surrounded as it is on all sides by hostile capitalistic countries, finds lying very necessary and useful in its foreign policy. Therefore, the attitude of the working class and the Communist Party to the open recognition of the right to lie is quite different from that of the western European Socialists, those God-fearing petit bourgeois, who are systematically deceived and treated as fools by the representatives of capital." [13]

Stalin is an honest man, a man of principle—and we do not accuse the Communist of having signed the convention in order to deceive his enemies. But we do accuse these democratic God-fearing delegates from the Western Powers of again letting Stalin make fools of them, of again betraying the moral principles of the democratic Christian world, and of having stabbed in the back the DP emigrants with whom they are supposedly united in a common front against Stalin.

Have the democratic powers heard nothing of how Stalin respected his obligations under the League of Nations (Geneva) statutes, under the Briand-Kellogg Pact, under the nonaggression treaties with Poland, Finland, Lithuania, Latvia, and Estonia?

Have the democratic powers learned nothing from their own experience of the last 5 years, from Stalin's "solemn" signatures on the Atlantic Charter, the Tehran, Yalta, Potsdam obligations, and especially the Statutes of the United Nations, not one principle of which has remained unviolated by the Soviet Government?

Do not the democratic powers know the fact—clear as the sun—that terror, murder, genocide, have existed from the beginning of the Communist rule in the Soviet Union and that they constitute an integral part of the Communist dictatorship?

How could the democratic powers accept on the Genocide Convention the signature representing a regime which considers terror—meaning the murder of persons and groups—legal?

Do not the democratic powers understand that the legalization of terror and murder in the smallest degree by a state disqualifies it from participation in a Covenant to prevent the murder of national and religious groups?

Do not the democratic powers realize the basic moral difference between them and Stalin's party, whose creed teaches that in promoting the Communist world revolution, to murder, steal, perjure, kill, or dispossess their fellow-human beings, is justified?

Have not the democratic powers heard of the fate of the Ingrians, the Volga-Germans, the Chechens, Kalmuks, the Crimea-Tartars? About the persecutions of the Ukrainians, the nations of the Caucusus and Turkestan? Have they not studied the materials in the archives of the League of Nations in Geneva about this question?

How can the democratic powers accept as cosigner of the Convention for the protection of nations from genocide, the Communist regime, which in its program openly dooms all (non-Russian) nations in the Soviet Union (which recognizes no national values, rejects national feelings as "bourgeois prejudices") and aims at the "liquidation of these nations" in manufacturing the "Soviet Nation"?

Do not democratic powers know Stalin's personal view about nations: "National autonomy is contrary to the whole development of nations, national cultural autonomy is unsuitable." [14] Or his declaration at the sixteenth congress of the Communist Party: "We Communists are the propagators of the amalgamation of the national cultures into one culture with the common language"?

Do not the democratic powers know that on Stalin's order, Marr developed his linguistic theory which attempts to speed up the "fusion" of all non-Russian languages with Russian? That even under the Tsars there was never a program of Russification such as this, in which the Communist dictatorship by systematic "language murder" (linguocide) is hastening the creation of the "Soviet Nation"?

Do not the democratic powers know that in reality Soviet Moscow only reapplied the old Muscovite genocide and that by this method the Soviet regime is realizing the monstrous official program of the Communist "Soviet Nation," a program which implies the "liquidation" of the subjugated nations in the Soviet Union?

Do not the democratic powers know that the official program of Stalin's party includes the annihilation of religion as "the opiate of the people," that no Communist in any country is allowed to be a professing Christian, Jew, or Mohammedan?

How can the democratic Christian powers recognize the terror regime of the Communist Party which officially practices atheism, which in Stalin's constitution does not grant the freedom of religious propaganda, but only the freedom of antireligious propaganda—how can they recognize this open persecutor of all religions, as a protector of religious groups? How can they do it against the background of the present pogrom of the Ukrainian Catholic Church in western Ukraine?

How can the democratic powers accept the point in the convention which states that acts of genocide are to be tried by a "competent tribunal of the territory in which the act is committed?" Do they not know that in the Soviet dictatorship there is no division of power, there is no independent justice or independent courts? Are all of Stalin's famous monstrous processes for the liquidation of his opponents already forgotten? Has the Western World already dismissed the report of the Dewey commission, sitting under the chairmanship of professor Dewey of Columbia University, to consider the Trotsky case with Vishinsky as public prosecutor?

How can the democratic powers permit the juridical monstrosity that allows a genocide murder trial in the Soviet Union to be conducted by a court appointed by the Communist murderers themselves, a court staffed exclusively by the same Communist murderers?

How can the democratic powers recognize justice under Communist terror as equal to

[13] E. Preobrazhensky, Morality and Class Standards, in ABC of Communism, also in Rene Fullop-Miller's Lenin and Gandhi.

[14] Stalin, Marxism and the National Question, pp. 55–61.

the independent and impartial justice of the western civilized world? Have they heard nothing of the principle of ideological complicity, under which thousands of completely innocent human beings were punished, often by liquidation? Have they never heard of the families held hostage for one of their members? Have they heard nothing of the decree which provides that in case of an individual's flight from the Soviet Union even those members of his family who had no knowledge of his act were to be deported for 5 years to the remote regions of Siberia? And that these sentences are served in slave-labor camps and are renewable by administrative decision? Or of the decree published April 7, 1935, with the signatures of Kalinin, Molotov, and Akulov, introducing death as a penalty for children over 12 years old, a decree abolished only after this war? Aren't the trials now being conducted by the Communist dictatorships in Bulgaria, Poland, Rumania, and especially the Mindszenty case in Hungary, sufficiently convincing evidence of the Soviet Union's special kind of justice?

Isn't it a brutal mockery of the very idea of justice to recognize the competence of Soviet justice in a genocide trial? And an insult to reason?

Is not the stipulation "as such" a mockery of justice, since it enables the Soviet Government to deny that the separate stages of its scientific method directed against (1) the intelligentsia, (2) the church, (3) the peasantry are acts of genocide, when the separate stages taken together constitute the murder of a nation?

Do not the democratic powers realize the heavy blow they have administered to the authority and the prestige of the UN and the idea of democracy and international law in signing the genocide convention with Stalin?

When will they at last understand that without common moral values and common good will all treaties with Soviet Moscow are mere scraps of paper?

To sum up: Signing the genocide convention was another moral capitulation of the democracies before Stalin and his Communist terror-regime. In spite of the present ideological war between the east and west, in which the DP emigrants of all nations oppressed by the Soviet Union participate, the democratic and Christian powers have again publicly confirmed that "good old Joe" is an honest man and a respected partner. A terror regime which has developed the "scientific method of genocide," a "genocider" par excellence, has been declared the "protector" of nations and races "as such." Stalin, today's crucifier of Christ, perpetrator of the most brutal religious persecutions of all time, is now "protector" of religions. And Communist terrorists have become the "judges" of those who sin against national, ethical, racial, and religious groups. Stalin's terroristic totalitarianism, Stalin's police-spy and stool-pigeon terror-state has again received from the democratic, Christian powers a place of honor in the family of civilized nations. Congratulations to both sides.

This convention is an insult to the human dignity of all nations oppressed by the Soviet Union and an outrage against human decency and common sense. Stalin is an honest Communist, he never betrays his principles. Can anyone deny that the basic principles of our democratic, Christian world, have been surrendered by the convention's stipulations in regard to the oppressed nationalities and religions in the Soviet Union?

What should the democratic powers have done before signing the Genocide Convention?

The common front of the democratic powers should have established conditions for the participation of the Soviet Union in this international convention.

These conditions should have been: (a) the liquidation of the MVD and a solemn renunciation of terror and murder in interior and foreign policy by the Soviet regime, (b) the establishment of an independent judicial system, (c) the immediate opening of all slave labor camps to investigation by the UN, and the establishment of responsibility for their atrocities by a competent international tribunal, (d) the liquidation of the dictatorship of the Communist Party.

By accepting these conditions the Soviet regime would have demonstrated its good will and its readiness to participate in an International Genocide Convention. By declining them, the Soviet Union would have granted the western powers a great moral victory and would have appeared before the world, self-accused and self-condemned. Without these conditions, the Genocide Convention has become another trick of Soviet propaganda, another lost opportunity for the democratic powers to support democratic ideas behind the iron curtain and in the Soviet Union.

The democratic powers have been morally defeated in consequence of a lack of vision and a lack of courage in defending the basis of the UN by revolutionary democratic ideas against Communist terrorism.

But—if the democratic powers grasp the realities of Soviet policy, and think more of their moral responsibility for the ideas of the Western World, and repudiate their cowardice, they can yet turn the defeat into a victory.

Therefore we appeal to the democratic powers now, after signing the Genocide Convention, to test, at once, the good will of the Soviet Union by demanding under the Charter:

(a) an immediate investigation by an international commission of the attempt, now under way, to liquidate the Catholic Church in western Ukraine, and the production of Metropolitan Slipy and Bishop Charnecky before the Commission;

(b) an immediate investigation by an international commission of the genocide now in progress in the Baltic States;

(c) an immediate investigation of the slave labor camps, the paramount instrument of Soviet genocide and immediate hearings by the commission of DP witnesses;

(d) an immediate investigation of the reasons why the UPA is warring against the Soviet Government, and immediate hearings, before the commission, of witnesses from the UPA.

We limit ourselves to these four cases of genocide, which are being committed now, because the Soviet Government on the basis of juridical reasons the convention provides, will refuse to answer questions about its pre-convention crimes. We believe it is the moral duty of the democratic powers to put these questions to Stalin.

If Stalin refuses to answer—denounce this document, which is nothing but a trap of Soviet propaganda. Do not permit Stalin to use the Genocide Convention as a smoke screen for Soviet genocide. Revoke your participation, in a public declaration explaining that legalized terror in the Soviet Union over national, ethnical, racial, and religious groups makes the honest application of the convention impossible. Revoke your signature in order that Stalin may not use the Genocide Convention as a justification of his crimes against nations and religions.

Therefore we appeal: Act! Only by courageous action can the democratic powers help the democratic underground movements of the oppressed nations and religions within the Soviet Union and behind the iron curtain. Only by this action can the Atlantic Pact gain the moral support of Stalin's victims. Only by this action can you also defend yourselves in your own states, in which Communist conspirators already are preparing to use Soviet terror and genocide against you, the signatories of the Genocide Convention against your nations and your religions. Leninism-Stalinism is already strangling your own throat. Don't forget Chambers and the confession of Budenz.

American friends, have the courage in this gigantic world struggle—in which only the stars are neutral—to proclaim as the historic mission of the Nation of Washington and Lincoln the abolition of slavery, tyranny, and genocide—according to the statutes of the UN—for us the victims of Stalin. And this will be the real epoch-making event for the progress of humanity. And do not fear the genocider in the Kremlin. "Rebellion against tyrants in obedience to God," said Benjamin Franklin. And that is true in foreign policy, too.

Hell Bent for Democracy's Destruction

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, the Honorable Charles A. Stoddard, a former fellow townsman of mine, and the editor of our weekly newspaper, delivered a thought-provoking speech before the Colorado University School of Journalism on May 14, on the subject, Hell Bent for Democracy's Destruction.

I do not go along with Stoddard on all of his frightening conclusions, but his speech does incorporate a serious challenge which we in Congress should not ignore. I ask, therefore, unanimous consent to insert it in the Appendix of the RECORD for all Members of Congress to read.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

HELL BENT FOR DEMOCRACY'S DESTRUCTION

(By C. A. Stoddard, editor of the Craig Empire-Courier, Craig, Colo.)

Even a casual examination of history and literature leads to the conviction that men and women of today are about the same kinds of folks as have peopled the earth through many centuries.

They love and hate; they are proud and humble; they are selfish and generous; they'd share their last crust with a stranger but run him off the highway with a high-powered car; they are jealous of their neighbors' successes but in hours of sorrow, pour out their hearts in sympathy; they give liberally to charity but greedily seek to increase their fortunes; they are lazy and industrious profligate and thrifty.

MODERN MAN IS SMARTER

But the men and women whom we call moderns are smarter than those who have gone before. Using the knowledge of the ages as a springboard they have performed miracles. They have solved many of the secrets of the atom. They have built a flying machine and flown it around the world. They look farther into space than men have ever looked. They have taken matter apart and put it together again and produced a new material. They have explored and examined every portion of the earth. They have mapped the bottom of the sea and probed the stratosphere. They have built gadgets of every sort for almost every con-

ceivable purpose. They have tamed the material universe and made it do their bidding. But in their personal relationships they are still Adams and Eves, Cains and Abels.

Through the centuries, in their quest for control of human relationships, our predecessors have tried many and varied forms of government. Kings and queens, communes, oligarchies, democracies, republics, empires, and limited monarchies in many patterns have been tried and found to be unsatisfactory.

AN IDEAL PLAN

Until this generation we had thought that the American plan of representative democracy was the ideal one.

"Democracy is the control of man's affairs through the combined wills of the majority without infringement on the rights and privileges of minorities." [1]

It depends on "the mature and humane discipline of men who know how to run themselves well, how to respect their own rights and the requirements of their institutions, how to obey those institutions, to run them and to be independent of them."

Such was the concept of democracy when there was a meeting of great minds in America in a previous century and the American representative system of government, with proper and suitable checks against human frailties, was evolved. Those great minds knew the heights to which men and women can rise when challenged and they took into account the depths to which men and women can fall when the divine spark goes out in the minds and hearts of men.

They sought to give free reign to the good in men and they sought with equal diligence to thwart before its inception, too greedy exercise of power, either of individuals or of majorities.

The results of their handiwork need no eulogy. Achievements speak louder than theories. Under its lovely emblem, a great people have prospered, bled, and died for those same ideals for which the Christ bled and died, and attained a preeminence such that all men of good will turn to them now for help and guidance as the sunflower turns its face to the sun through the hours of the day.

The American system was evolved out of a period of revolution which was world-wide, and out of which came these concepts: That governments exist for the people, not the people for governments; that a man's religion and his government are entities and must forever be divorced; that government has a field of operation which is separate and distinct from the field in which a man earns his livelihood.

Today a new revolution in thought about government is sweeping the world. Each of those concepts is under attack in some quarters. One or more is under direct attack in almost every part of the globe.

On a world-wide front, people, confused by the intricate economics of a highly technical industrial organization and buffeted by the disturbances of war, are surrendering their faith in the truth and essentiality that governments are created for the people and that government and industry must be separated. They are surrendering their faith in those concepts in the belief that such surrender is necessary if they are to exist. Communism and a new socialism are on the march throughout the world.

In America, today, there are repercussions from those world-wide trends. In a Nation where the concepts of personal freedom and separation of government and economics have flowered to full fruition in a civilization surpassing anything the world has previously known, the flag representing individual freedom, initiative, self-reliance, and individual responsibility is being lowered from the flagstaff. And men are surrendering to the belief that an all-powerful, all-inclusive state can provide them with more of the goods and services they so much desire, goods and services which they fear they may not otherwise secure.

CENTRALIZED AUTHORITY

That surrender in America is apparent on every hand. With each passing year some new area which has been reserved to the individual is being given over to centralized authority.

We have stretched the Constitution so that the Federal Government can take in a greater scope of authority. We have forced the several States to conform to the Federal conscience. One out of every three dollars earned by the individual is turned over to the central authority for disbursal.

If we need roads, schools, farms, homes, relief for distressed individuals, we now turn to the Federal Government to provide them.

Care for each of us from the cradle to the grave is already advocated and even now we are debating the advisability of centralizing a health program in that authority. Within the year we have heard the threat that if private capital shall fail to expand its production, then it will be necessary for the great central authority to go into the fabrication business—the first outright threat of our Government to actually usurp the place of private enterprise.

The trend is unmistakable and the acceleration with which we are turning to the great father on the Potomac for goods and services is ever increasing. Each year we demand more from him and each year he must demand more from us in taxes so that he can take care of us.

Yes; even in America—the last bright hope for mankind—men have cut loose from their moorings and revolution is afoot in the land. Men are preaching and teaching that we can have the things we want without too much personal effort. They visualize a world in which there shall be plenty without labor, in which there can be wealth without thrift, in which by some hokus pokus of organization within the Government we can produce and distribute all the food, clothing, and gadgets which each of us may want.

GOVERNMENT BY ORGANIZATIONS

The Government which Lincoln characterized as "of the people, for the people, and by the people" is rapidly becoming one of organizations, for organizations, and by the bosses. In those organizations the voice of the people is being drowned by the raucous tones of the demagogues telling them what they must do if they are to reach the promised land of plenty, riding on the cushioned seat of a smart sedan.

An individual who may still hold to the belief that his hope for an increase in a share of goods and services about him can come only if he, as one individual, joins other individuals in greater production of those goods and services, finds that in the councils of the organization to which he belongs he is in hopeless minority.

We vote by blocs—the industrial bloc, the farm bloc, the business bloc, the labor bloc, the veterans' bloc, the pension bloc, the welfare bloc, the school bloc. Almost without exception we are casting our ballots in the hope that our particular bloc representing the combined vote of our organization is going to be in the best position to get the biggest share of the national income when the jackpot is divided, and be in the strongest position to dominate special legislation. If this trend continues we can easily in America foresee the day when we can send the national heads of our organizations to Washington to cast all our votes for us and thus save the expense of holding a national election.

Many of these organizations have already grown from vehicles for a purpose to entities in themselves which in the eyes of millions of their membership make them more important than the Government itself. They have partially usurped the place of the political parties in national affairs and their controlled opinions now dominate much of the thought of the Nation.

So potent have these organizations become that it is conceivable that 25 men in the United States who control their thought and their united action could dominate the results of any national election.

These organizations are an inevitable result of the acceptance of the theory that minute regimentation by government of business, industry, labor, agriculture, and all production and consumption is essential in our complicated economic order. Indeed, they are essential to the people if they are to safeguard themselves against new laws and new regulations which some planning do-gooder conceives to be desirable, and they are essential in many instances if their members are to protect themselves against exploitation.

Through regimentation we have created this oligarchy of organization bosses who are sometimes heedless of the national welfare and who are always interested primarily in their self-preservation.

At the moment a balance between the part of the national income taken by Government and that part permitted to the individual is being maintained. But with the first winds of adversity, winds which may now be foreseen and forecast, the Federal Government must take an increasing portion of the income and as more is taken, the need for taking more will be accelerated. The time must come when the portion of the national income which can safely be taken by the Federal Government will not be sufficient to provide for its contracted services.

Already, our elected officers have advanced the theory that it is an obligation of central authority to guarantee all men and women a job at a return sufficient to provide a high standard of living. Note that this theory is not that central authority is obligated to strive to mitigate the ill effects of unemployment, to relieve human suffering or care for the aged. These are already provided. The theory is now advanced that giving employment is a proper function of Government and that the citizen has among his other rights the right to a good job at high returns. Almost without protest we have seen this theory advanced. Few voices are now raised against it. Few have had the courage to declare that this is a proper obligation of society at large but certainly is not a proper function of Government.

AMERICA'S GRAVEST PERIL

In acceptance of that theory lies America's gravest peril today. Even now private enterprise is permitted to exist only so long as there is universal employment at high wages. When business stagnates through the satisfaction of the demands for goods and services, when there are millions of unemployed and the struggle to maintain a high standard of living becomes universal as it surely will become, then will the demand be made that Government fulfill its promises. With the votes of many blocs to back up this demand, there can be no other course than the assumption of the tools of production by Government. The death knell of private enterprise will be sounded. Government not only will insure a job for every individual, it must become his direct employer.

Such was the course of events in Great Britain and such may be the course of events in America.

That is why it is my apprehension that America is driving, hell-bent for democracy's destruction.

It was about such a situation that the great General Eisenhower warned recently

[1] Quoted from Max Ascoli's The Power of Freedom.

when he referred to a "creeping paralysis of thought" and a "readiness to accept paternalistic measures" as the great dangers of leading us into dictatorship. Such a dictatorship will not be one of guns and a strong leader. It will be the dictatorship born of an ideal. Said he, "This dictatorship will be born of a surrender of our own responsibilities, and therefore, a surrender of our own thought over our own lives and our own right to exercise our vote indicating the policies of this country.

"If we allow this constant drift toward centralized bureaucratic government to continue, finally it will be expressed not only in the practice of laying down the rules and laws governing each of us—our daily actions—to insure that we do not take advantage of our comrades and other citizens, but finally it will be the actual field of operation."

"There will be a swarming of bureaucrats over the land. Ownership of property will gradually drift into the central government and finally you will have to have dictatorship as the only means of operating such a huge organization."

PROPERTY RIGHTS AND HUMAN RIGHTS

Although all men today recognize the constant drift toward the centralization of all authority and its domination through regimentation, many defend that drift and there is no general awareness of its dangers. It is said that human rights must transcend property rights but I bring you this heresy—that if there be no property rights of individuals, then there cannot and will not for long be any human rights unless the right to fawn upon an official of the state for his favor and beg some largess from the resources which he must have at his disposal, can be regarded as a human right. That and obedience to the orders of authority is all that will be left.

With the destruction of the rights of property and when regimentation becomes complete, the citizen becomes a vassal of authority in a feudal system which we thought, until this generation, had been outgrown.

The destruction of property rights in America, as such destruction has already done in other countries, means the inevitable subjugation of the human being, body and soul, to the dictates of authority.

And whether that authority be the fiat of an individual, the decree of a cabinet, or even the will of a majority, it cannot fail to be equally intolerable to the soul of man if it proscribes for him how he shall think, what work he shall pursue, when and where he shall be employed, and what he shall receive for that employment.

I plead for another heresy, one which, to my way of thinking, should be placed among the most cherished of human rights and that is the right of every individual to fail or succeed on his own merits, through the use of his skills, his ingenuity, his initiative, his self-denial, and his singleness of purpose.

When once we accept authoritative regimentation and destroy property rights and the profit motive, we may attain a semblance of security, but we shall deny the right of men and women to try their wings, to soar to great heights through their best efforts.

The regimentation of society, of industry, of agriculture, has for its goal the elimination of the right and opportunity to fail. That is its chief purpose. But when that goal is attained there will remain only two fields where the right to succeed or fail is retained. These will be the field of government where merit and ability have seldom been a determining factor in advancement and in the internal work of organizations where talent is sometimes confused with ruthlessness.

A world so limited in opportunity offers no inducement for growth through effort. It makes life a humdrum routine and not a great adventure.

In defense of the acceptance of the authoritative state, it has been said that America has nothing to fear but fear itself so long as we retain the ballot and the right to choose our officers. Let us never forget that in the heyday of Hitler's Fascist state, the German people retained the right to vote. Think you there were not people among them who revolted inwardly, even as you and I, at what they saw? And the people of Russia and those who are now submerged behind the iron curtain of the authoritarian states, still retain the right to vote but of what value is the ballot if there be no choice in candidates, if the issues are determined in advance by a ruling class?

THE WELFARE STATE

The thought currently being fostered and commonly accepted in presumably enlightened circles is that we must adopt the welfare state, with its regimentation and complete control of economic life. And there are many men who believe that we must eventually sacrifice private enterprise to the good of the whole.

These men tell us that we, the people, can express our democracy by building parks in our communities, by managing our schools which will, of course, be assisted financially by the State which is primarily interested in the welfare of the people, and home community cooperative activities of various kinds.

In other words our only course in America is the acceptance of the authoritarian state with all that implies. Perhaps, it is the course which we will take. But the American people should be made aware of the fact that such is a commonly accepted attitude in enlightened circles.

This course offers no solution but will present only different problems. It is a surrender of freedom, in spite of the fact that it is planned for our good and depends, not upon democratic ideals, but upon authority; for, eventually someone must use force to carry out the decrees of our enlightened leaders, even in a welfare state.

And whether or not the American people will accept such a milk-toast diet for the expression of their democracy, is a grave question. I am convinced that they will not do so for long.

THE PERFECT PLAN

There can be no doubt that if all men were industrious and unselfish, if all men loved their neighbors as themselves, if men did not seek to dominate their fellows, if men would be as careful of the property which belongs to others as their own, if men would work for an ideal as zealously as they will for a dollar, if, in fine, all men and women had changed with their changing world, there could be no better government devised than a democracy in which all shared equally in the ownership of property, of the tools of production and shared in the fruits of their industry through some perfect plan of distribution based on human need and the contribution of the individual to the good of the whole in a welfare state.

But the perusal of any newspaper, observation of events about us, and a glimpse in the pages of history convinces one that even in America, where freedom of opportunity, freedom of education, and comparative freedom from want have, for a century and a half, lent their blessings to the growth and development of the spirit of men, we have failed to keep pace in that growth and development with changes in our economic world.

AMERICA'S GREAT NEEDS

It is obvious that we still need the spur of the profit motive to drive us to production; we need the quirt of fear of want to keep us in our offices or at our stations in factories or mines or on the farm; we still need the curb of Government control to prevent us from exploitation of our fellow men.

It is true that we need work for which we are fitted by temperament and training at wages which will insure a comfortable standard of living but at the same time we need a higher standard of life. We need to realize that if democratic freedom, which is still our high ideal, is to survive, we must as carefully keep the field of government separated from the field of private enterprise as we have maintained the separation of church and state to insure religious liberty.

We could never deny the necessities of life to fellow Americans whatever the cost, but we must hold fast to the conviction that the cost need not be the surrender of democracy, self-reliance, and individual responsibility.

We need to again put our trust in ourselves, our faith in fair dealing and our confidence in thrift and hard work to bring us the satisfaction in life we so much desire.

We must never waver in our belief that free democratic power, the will of the majority, is still the greatest force for good for all men lin the world today and it is the most potent weapon against the evils of greed and domination when justly applied. Democracy will not fail, but we may.

This, above all, we need in America today to fashion better, more enlightened men, just men, men more in the image of God.

We are on the road, driving hell-bent for Democracy's destruction, but we are not going to continue that course and actually exchange our birthright for a mess of pottage.

Even now, the challenge is ringing out to this generation to preserve democracy through the application of courageous intelligence.

Surely the same intelligence which has brought about the subjugation of the material world to its will can lift us up to a standard of life where we may enjoy the fruits of that conquest without surrender of human freedom.

One Hundred and Fiftieth Anniversary Celebration of Founding of Fort Adams, R. I.

EXTENSION OF REMARKS

OF

HON. J. HOWARD McGRATH

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. McGRATH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague, the senior Senator from Rhode Island [Mr. GREEN] at the one hundred and fiftieth anniversary celebration of the founding of Fort Adams, Newport, R. I., July 4, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Colonel Metzger, distinguished guests, and fellow citizens, it is a real gratification to me to be given the privilege of having a part in this interesting celebration. As a small boy, I spent much time in Newport and often was taken to parades and other military exercises here in Fort Adams and was always thrilled. From time to time since, I have come here, following its rather varied career. Though it would be interesting to delve into its history, there is not time now. However, I want to leave one thought with you on this occasion. That

history of 150 years has been so eventful that it seems to me Fort Adams should be made a national monument.

Just before this special celebration of the founding of Fort Adams, July 4, 1799, there was held here by the Rhode Island Society of the Cincinnati and the Rhode Island Society of the Sons of the Revolution their regular annual celebration of the founding of this State of Rhode Island on May 4, 1776, and on the founding of this great Nation, the United States of America, on July 4, 2 months later. As these events we celebrate today occurred only 23 years apart, it seems appropriate to consider them together.

The two Declarations of Independence set forth the principles on which our forefathers based their right to independence, and, as a means of attaining it, justified the duty of revolution. The founding of this fort was a necessary part of the effort to make good the brave words of those two declarations. Our forefathers believed heart and soul in those principles, and they were willing to make every necessary sacrifice of their comfort, of their means, and even of their lives, to give life to those principles, and let them develop and endure.

Were, then, those principles so firmly established that we, the descendants of our victorious forefathers, can now lie back and enjoy the fruits of their sacrifices? No thinking man or woman can look about the world today and say "Yes."

For generations we have applied those principles. We have seen them spread across this continent, and then take root throughout this hemisphere, and affect the thought, and in part the actions, of the peoples of Europe and Asia and the Islands of the Sea. We believed them to be irresistible. We thought that by their own inherent strength they would envelop the world, without the need of any effort on our part.

Then during and after the First World War came a rude awakening. The movement which we thought was self-perpetuating and irresistible, slowly came to a stop. Some good people may have concluded that, though further progress could not be expected for a while, yet our principles would hold what they had already gained, and would later advance still farther. But adverse forces began to form, and undertook, not merely negative defense, but also positive attack. There has developed a struggle for supremacy between two great ideologies.

On the one side stand the democratic principles to which our forefathers gave definite expression in our Declaration of Independence and which their successors carried into practice and developed. On the other side stand the totalitarian principles which are the direct opposite, and find expression in the Fascist, Nazi, and Communist forms of government and ways of life.

These two great forces need not necessarily come into military conflict, or the use of physical force. In fact, such conflict is much more likely to result from extreme nationalism than from differences in form of government. These forces are however already engaged in another kind of conflict—the conflict of ideas.

Are we ready to meet them in this kind of warfare? Are we preparing our defenses? Are we organizing for an offensive?

The test will be—which side is the most likely to use intelligently the resources of this earth for the benefit of mankind generally.

We Americans firmly believe we are the ones selected by the Almighty—but the peoples of the world are not ready to accept our say-so. We must offer them proof—proof they are not too eager to accept.

It is not enough for us to read to them the fine words of our Declaration of Independence and of our Constitution. They ask for deeds not words. They ask us to reconcile the two. "Otherwise" they say "why should not we revolutionize our part of the world, as you did your part? Or better still the whole world?"

We are too apt to assume that a revolution against an existing government means that the people seek to establish one founded on totalitarian principles. That may or may not be the case. The American people did not seek to do that in their revolution, the success of which we celebrate today. A revolution elsewhere may seek likewise to establish a more democratic form of government, or merely to reform the existing government.

The Rhode Island Declaration of Independence begins with the words "Whereas in all States existing by compact protection and allegiance are reciprocal, the latter being only due in consequence of the former." The Federal Declaration of Independence, near its beginning, after reference to unalienable rights states "That to secure more rights governments are instituted among men, deriving their just powers from the consent of the governed; that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and to institute a new government, laying its foundation on such principles and organizing its powers in such forms as to them shall seem most likely to effect their safety and happiness."

Therefore, mindful of our own revolution, we should be careful to learn the facts before we judge the motive of a revolution elsewhere. We certainly should do so before we render aid to a government whose people may have been treated as the American colonists were treated.

We must have the courage of our convictions. Let us admit that we have made some mistakes, which we intend to correct; but let us make clear that, all things considered, the principles our forefathers laid down at the start have been our guiding principles and will lead us nearer the goal than any other set of principles could lead us. We will still press on to that goal.

We must fight as our forefathers fought. We must be ready and willing and eager to make the sacrifices they made. Their success will be ours, as it was theirs.

We read and hear how fearful some people are of the outcome of this conflict. A few Communists stir up some rumpus and a lot of people shake their heads, double-lock their doors and look under their beds. Some few are even willing to sacrifice our hard won rights of individual freedom in order to get even with the traitors actual or suspected.

Why should we be fearful? Why should any American who truly believes in our American institutions doubt the outcome? But we must make ready, we must fight as our forefathers did—not merely make a defensive denial of the charge of our opponents, but maintain an aggressive democracy. As our most potent weapon—our convincing atom bomb—let us maintain in fact, what we declare in principle, that under our American form of government, more than under any other form, men are secure in their unalienable rights of life, liberty and the pursuit of happiness.

Delegation of Executive Authority

REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. McCORMACK. Mr. Speaker, I will introduce today legislation designed to relieve the President of the United States of much time-consuming and burdensome routine duties.

This legislation, which will authorize the President to delegate certain authority to subordinates in the Government, is the result of a personal conversation I had with President Truman earlier in the year.

An exhaustive study of the duties of the President was made. It disclosed that over the year the Chief Executive has to affix his signature to documents, papers, and letters each day an average of 600 times. The study showed that there are more than 100 major categories of papers and documents the President must sign.

The President expends so-called leisure hours working on his papers. On week end trips aboard the yacht *Williamsburg*, while traveling by airplane, and at the White House late at night the President spends hours signing papers which could be signed by subordinates.

The bill I propose has the approval of President Truman. It is supplemental to the recently enacted Government Reorganization Act. The measure also has been approved by the Budget Bureau.

The legislation is unique in that it is written so that any future President may recapture any power delegated to a subordinate by his predecessor.

Furthermore, the President can revoke any delegation of power under this bill at any time in whole or in part.

The legislation also prohibits the delegation of authority of any function vested in the President by law, if such law affirmatively bars delegation of any such function. It does not deprive the President of any inherent rights under the Constitution and statutes, and it holds the President responsible for actions of subordinates to whom authority is delegated.

The problem of relieving the President of routine duties which deprive him of time that could be spent on high policy matters has been studied by experts for a period of years. The measure I am sponsoring, I believe, meets all the previously raised objections.

The work load of the Chief Executive has been expanded tremendously in recent years. Through Executive orders and some new practices, the work load has been reduced, but only in some aspects. They have been increased manyfold otherwise.

It is my belief that this measure will free the President from many routine duties, give him greater flexibility in the conduct of his office, and allow him to devote more time to major questions of policy and administration.

Besides the great demand for the President's time by callers and personal mail, the Chief Executive is required to supervise 74 departments and agencies, besides the White House, the Council of Economic Advisers, and the Bureau of the Budget. More than two-thirds of the total number of obligations of the President are accounted for by matters pertaining to the 10 departments, and of this total of two-thirds, approximately three-quarters are accounted for by the Department of Defense, the Treasury,

and Interior Department. This is so because of the constitutional basis of Presidential power.

Delegation of authority is a matter of good administration. I believe the Chief Executive of the greatest administrative enterprise in the Nation should be able to avail himself of this method of expediting the public business in the interests of economy and efficiency. Such delegation of power does not relieve the Chief Executive of responsibility for the acts performed.

Each new Congress imposes new obligations on the Chief Executive through legislation enacted. The situation has now developed to the point where the President is probably the most overworked man in the country.

I believe this bill will go far in making it possible to relieve the President of burdensome routine and permit him to devote more of his valuable and limited time to major problems of state.

TVA Demonstrates How Man Best Can Utilize Nature's Many Blessings

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I include a statement made by Mr. P. O. Davis, the distinguished and able director of extension at Alabama Polytechnic Institute, entitled "TVA Demonstrates How Man Best Can Utiilze Nature's Many Blessings":

TVA DEMONSTRATES HOW MAN BEST CAN UTILIZE NATURE'S MANY BLESSINGS

(By P. O. Davis, API extension director)

Athens was the first city in Alabama to use electricity from TVA. Their fifteenth anniversary of this was celebrated on June 25 with Hon. SAM RAYBURN, a Texas Congressman and the Speaker of the United States House of Representatives, Washington, as the main speaker. Short talks were made by Senators Lister Hill and John Sparkman, Mayor Cooper Green, of Birmingham, and others. Congressman Bob Jones introduced Mr. Rayburn.

As I observed and listened, I could see and hear a review of the TVA program. Many of the floats in the parade related to electric power from TVA, or from the Tennessee River.

The agricultural floats reminded me of the TVA fertilizer program which has improved and enriched land to the extent of much higher production per acre and per man.

Then I thought of something more important than electric power or fertilizer, although each of these is of great importance. It is the democracy of TVA in its procedure in relation to State, county, and municipal government.

From top to bottom TVA is democracy at heart and in procedure. Instead of being a Federal bureau that competes, or attempts to supplant State and local government, it cooperates heartily with each and all down to and with individuals.

Much good has been accomplished with minimum administrative problems and without duplication of effort. A dollar of public money has accomplished more.

It all reminded me that the prosperity of any area is based upon what nature did in supplying raw materials, plus man's use of these materials.

Nature blessed abundantly the TVA area with land, water, animals, plants, minerals, and other things. TVA, by its procedure and assistance, is a big factor in the wise use of all of these products which nature gave us.

It is, therefore, another demonstration of the fact that wherever people think and work together, wealth is created and they do a good job of living. And they do these things through democracy at the local level.

Valley of the Dammed

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. LEMKE. Mr. Speaker, in the extension of my remarks, I include parts 5 and 6 of the articles entitled "Valley of the Dammed" by Bigelow Neal.

I hope that every Member will take time to read these articles. They are instructive and give first-hand information as to how our Government operates when it takes private property for public use.

Here you get first-hand information as to how the Real Estate Division of the Army Engineer Corps operates. If there were more justice and decency in this Division, then many of the heartbreaks and much of the ill feeling toward the Government on the part of those whose homes are forcibly taken could be avoided.

Here are parts 5 and 6 as they appear in the McLean County Independent. They speak for themselves:

VALLEY OF THE DAMMED

(By Bigelow Neal)

PART V

This morning before coming to my typewriter, I climbed a hill behind what used to be my home. From there I could see for miles up and down the valley of the Missouri and I got to thinking of the first time I climbed that hill, more than half a century ago.

I was pretty small then with a pony, a dog, and a 22 rifle, usually not too effective because of 15 or 20 bullets stuck in its barrel. But I do remember the occasion well because I found a grave, just a hole in the ground roofed over with short poles and a layer of dirt. In one place the poles had rotted and had fallen in and I could look down at a queer, huddled figure wrapped in red and green mosquito netting and pieces of buckskin.

The roof had leaked, the red and green had run pretty much together and the buckskin was fringed with mold. I remember, too, some earthern jars and a pail made of buffalo hide, a rusty old rifle and a bow whose string of deer sinews was too far gone ever to twang again. Then I remember of riding rapidly away, looking back over my shoulder occasionally—just to be sure.

But I came again many times in the years that passed, and I remember the valley at sunrise and noon and sunset and under a yellow moon.

When I saw it first, no one lived there, not for 10 miles or more to the east, 40 miles to the north, and 15 miles to the west where my Arickara Indian neighbors rested in what they hoped would prove to be their last encampment.

With the sunrise I have seen bands of antelope like white and brown banners rippling through the coulees, coyotes by the score bounding high to peer at me over some neighboring ridge and occasionally a black-tailed deer grazing in the shadows of the coulees. At noon tens of thousands of acres of waving grass. At sunset bands of white-tailed deer feeding along the timber; ducks and beavers and splashing fish, sending waves along and across the ponds; prairie chickens whirring in from the prairies to roost in the trees and always the golden eagle who rode the up-draft at one end of the hill or the other, like a black monoplane pinned high against the sky. Then moonlight with the silver ladder on the Missouri, coyotes chattering and singing with great enthusiasm and poor control, the thump of a startled beaver's tail and once in a long, long while the soul-shattering howl of a buffalo wolf. Then nothing but yellow moonlight over the sleeping hills—and silence.

I say no one lived here. That is true. And yet there was nothing of loneliness because of the wild folks and nothing of despair because the valley was filled with promise and the bright sunshine of hope. No one thought of fear then because there were no poisonous snakes, the wolves and coyotes were harmless and the hills were there to give shelter against the storm and over all God had spread a mantle of quiet and peace.

Later, I saw the day when the valley was filled with homes; when with the sunrise, you might see the smoke of many chimneys and, if your ears were very good, you might hear the barking of playing dogs and the laughter of children. God had spoken again and the hills were covered with cattle and horses and sheep, the waving grass of the prairies had given way to the waving grain of the fields. Still it was a good country. Still there was no better place in the world to live.

But this morning the spirals of smoke from the breakfast fires had drifted away forever, the homes were gone, the laughter of children had been silenced for all the centuries to come. Up there on the hill I knew, I stood in a spiritland. With me was the ghost of the old warrior and the ghost of a community and I sometimes think that the cruelty and the stupidity and the hatred I have seen in the past few months have made me somewhat of a ghost of myself.

Granting that the dam must be built, granting that these neighbors of mine must sacrifice their homes, how did it come about that this thing came to pass 5, 6, maybe 10 years before it was necessary? Why was it done through fear when it could have been done in sympathy? Why was it done in cruelty when it could have been done in the spirit of rehabilitation? Why was it done at all when it was wholly unnecessary and until the waters could have come in to cover up the scars?

The answer lies somewhere in the spirit and in the policy of a small group of men. And so, ladies and gentlemen, it becomes my duty to introduce to you—with no feeling of pride whatever: The Real Estate Division of the Army Engineer Corps.

Just a word before I begin the more painful part of my task. Since these articles began to run in the Independent, I have received two communications from men high in the ranks of the Real Estate Division and one from a man very high in the Department of Justice. From each of these communications and in the order given above, I want to select and quote one sentence:

1. "We certainly need a good overhauling. I hope you can bring it about."

2. "This thing we have done here is shameful. It is so shameful it is disgusting."

3. "I think you are doing a very fine work."

My heartfelt thanks to each of you.

And now to business: From the Army point of view, the Real Estate Division of the Army Engineer Corps is the unwanted offspring of a shotgun marriage, bigamous at that, between the Engineer Corps, the Bureau of Reclamation and any other agency of Government which needs land to be taken under the Act of Eminent Domain. Biologically it is a wonder of science because it carries none of the blood of its sire. In other words, it is not of the Army but purely a civil-service organization set up in Washington for the sole object of purchasing lands and of handling the business growing out of such purchase.

The phenomenon we have at Riverdale is a section of this civil-service organization attached to the Army Engineer Corps and theoretically responsible to the district engineer. But that's theory. And is only theory because:

For at least two reasons that perhaps I had better omit from my story, an Army engineer looking down at his own real-estate division bears a startling resemblance to a man on top of the North Dakota capitol building looking down at a flying ant drying his wings on the statute of Sakakawea and looking through a pair of field glasses held wrong end to. The engineer and the engineer's lady have less than nothing in common with these employees, either socially or intellectually.

Now as you might guess, the Real Estate Division has learned all about his state of affairs and so they refer to the engineers as, "the brass," "the military," and even by other terms as unprintable as those they apply to me.

Illustrative of this amicable relationship and filial devotion, one day I put on my best Sunday-go-to-meeting pants and manners and walked into the general offices of the Real Estate Division with my belt tightened to the last notch to hold my shirt down in case of emergencies.

There were about 20 people in the room, sitting at rows of little tables just like bright scholars waiting for their teacher. And evidently they weren't mistaking me for their teacher for nobody offered me an apple. Indeed from their attitude I began to wish I was back in the days of my own youth. The feeling of my old Colts .45 nestling against my hip would have been fortifying to my soul.

In an attempt to stare all of the scholars down one by one, I was about halfway through when one of them got up, stood on one foot a moment to put a shoe on the other and came forward with every appearance of reluctance. Hoping that my chin wouldn't tremble or my knees rattle too loudly against my trousers, I tried a question. "Can you tell me if Colonel Seybold is here today?"

"No, he isn't."

"Is there any chance of his being in later?"

"We never know when he'll be in and what's more we don't care?"

"Fine," I said, "if you don't care, I don't care and I'll bet my shirt the colonel doesn't care either."

In a way this brotherly spirit is amusing. In another way it's tragic. We'll come to the tragedy a little later.

Going back to this organization in Washington, they were set up for the purpose of acquiring lands. In the process and through the years they formed a very high opinion of themselves and also they developed certain rules to guide their conduct:

1. That they were superior to the Congress of the United States and that when the Congress said the owners of lands condemned under the act of eminent domain should have fair and just treatment, Congress simply didn't know what it was talking about.

2. That when the Supreme Court of the United States said that fair and just treatment meant that the owner of the condemned land should be put back in the exact position he occupied before—financially, of course—this ruling was not to be taken seriously.

3. That in spite of Congress and the Supreme Court of the United States, they had a right to purchase this land as cheaply as possible.

4. That they had a right to appraise lands but that the landowner had no right to know the amount at which his land was appraised.

5. That all is fair in love, war, and land acquisition.

6. That a home owner who doesn't sign their option the first day is unpatriotic.

7. That a home owner who refuses to sign the option the second day is a chiseler.

8. That a home owner who doesn't sign on the third day is a d____ chiseler.

9. That a home owner who doesn't sign on the fourth day is a ____ well, if you know anything about what they call me, you can guess what President Truman was thinking about when he said what he said when he said it.

10. That it isn't necessary to obey the orders of the Army Engineer Corps.

11. That such trivial things as brotherly love Christian fellowship, justice, mercy, and gentleness have nothing to do with the land acquisition business.

The odd and paradoxical and inexplicable thing about the Real Estate Division is that its shortcomings are not a matter of men but of policy. In this division there are many fine men and women, people you would be happy and proud to list among your friends. But because they have homes to support and children away at school and because they know of no other way to make a living, they go on month after month and year after year doing things of which, according to their own confessions, they are ashamed.

And so we come next week to the question, how do they do it?

PART VI

This week I want to start with what, from here on, will amount to my creed and my text for every line that is to follow. If you are fair minded, and I hope you are, I ask you to read the following lines taken from a unanimous opinion of the Supreme Court of the United States and written by Justice Butler in a case referred to by lawyers as *Campbell* v. *United States* (266 U. S. 368, 45 Supreme Court Reporter 115).

I quote—"Thereupon he became entitled to have the just compensation safeguarded by the fifth amendment of the Constitution; that is the value of the land taken, and the damages inflicted by the taking—was a sum as would put him in as good a position pecuniarily as he would have been had his property not been taken."

From this you will see that the Supreme Court has ruled that a man who must sacrifice his home to a work of public welfare must lose nothing financially by the taking of his land. Obviously it means that he must be paid enough to reestablish himself in a home of equal value and in the same community and that he is entitled to whatever damages he may suffer incidental to his moving and reestablishing himself. Please don't forget this. And bear it in mind as I tell you how the real-estate division of the Army Engineer Corps has disregarded the will of Congress in passing the fifth amendment to the Constitution of the United States and also this ruling of the highest and greatest Court in our land.

And if you think this the worst that could happen to a community in these United States of America, you are in error. As yet, we haven't ever touched bottom. Not only do they disregard these clear mandates but they appraise our land with their own figures, manipulated by their own paid employees and then try to buy the land at figures far below their own appraisal. All too often they are successful and the land actually passes to the Government at a figure below the appraised valuation.

What next? Is there no limit to this thing? Apparently not. Their rental program is founded on the same principles, the same policy and the same business ethics.

So we have an organization known as the Real Estate Division—or the Land Acquisition Branch—or whatever it chooses to call itself at the moment, an organization built up in Washington and imbued with the idea that it is its business to "buy" lands at the lowest possible figure, unfettered by any idea of justice, fair play, sympathy, or common sense. And here we have a section of that organization attached to the Army Engineer Corps, depopulating township after township of the best land in western North Dakota when everyone admits that the land should be kept under cultivation and raising stock until it is actually needed for a bottom to one of the biggest man-made lakes this world has ever seen.

If you ask a real engineer when the dam will need these lands, he will say 5 years, 6 years, 7 years, and even longer. The fact is that he doesn't know.

Not the least of these injustices then is forcing people from their homes when the dam has no immediate use for the lands and when the dollars with which they so grudgingly pay for the land are worth less than 50 cents a piece. Why not leave them alone until the price of building material comes down?

Out of the dislike and jealousy which has grown up between the Army Engineer Corps and its Real Estate Division has come more hardship for the landowners. I can't imagine the Army Engineer Corps being cruel or unjust. I can't believe they would stoop to doubtful business ethics and I am not going to believe until they confess their guilt. But it is clear that they have lost all control of their own Real Estate Division. Out of this comes the paradoxical situation where, when you talk with an engineer, he will say what is right and when you deal with his subordinates, you will get only what is wrong.

Here in my home not very long ago, Colonel Seybold delivered certain orders to one of his employees. Those orders were delivered with "wim, wigor, and witality." Had they been carried out they would have done a vast amount of good. But much later when I checked with the men to whom the orders were to be transmitted, I found that they never had heard of them. In other words, the best range the colonel's broadside could reach was less than 3 feet from the end of his nose.

Colonel Seybold told me that he not only had no desire to drive my neighbors from their homes but he hoped they would remain on their lands and be happy there. He promised to do all that he could to aid them and to cooperate with them. He said clearly that aside from clearing timber and making last-minute preparation for the rising water, he had no use for the lands and would not annoy the landowners in any way. I am certain he meant it. And, yet, this valley has—so far as human life is concerned—been turned into a desert.

By the way, it has come to my attention that the good colonel has begun to worry a little about my citizenship. Somebody has told him I'm really a wild-eyed radical. Knowing that the colonel reads this copy faithfully, I've a suggestion and an offer to make. I suggest that, as long as he lives so near the State capitol, he drop in someday to the chambers of the North Dakota Supreme Court; the decisions of the men who live there are supposed to be final on local matters. All five have been my personal friends for many years. If any one of them says I'm a poor citizen even by the colonel's own standards, then, if the colonel will

bundle up and send me all of his old shoes, I'll shine them for him—and no charge for the service.

The appraisal

There was a time when I believed in Santa Claus. I also believed in fairies. And along about that time my mother taught me about the flag of our country and how, under its starry folds, rippling up there against the sky, there could be nothing but things that were nice like freedom and justice and generosity and mercy. And above all I came to believe that such a thing as deceit in the name of that flag was not only unthinkable but an impossibility. I clung to that belief a good many years.

And then one morning two young men came to my farm. They drove a long, low black car with something about the United States Army on its sides and a license plate beginning with the letter, "W." They said they had come to appraise my home and, although it was a sad moment to me and to mine, I had no feeling other than trust in these young men.

Everything started out fine. Indeed, as far as those young men were concerned, I believe it would have been still going fine today. They were nice. They were just as I expected them to be.

Of course, they were a bit young, I doubted whether either knew much about practical farming and, when I questioned them, I found my suspicions were fairly correct. Both had lived on farms but neither had ever tried to wrest from a farm a living for a family. They had been boys on farms and fine lads at that, but they never had known responsibility in connection with farming.

As to their fair mindedness, however, there could be no question. In one instance I suspected them of leaning over backward in my favor. It was when I pointed out a piece of clay wash and gumbo and told them it was no good. One of the young men got out of the car with an auger and bored a hole in a place that hadn't raised anything but a lone gumbo lily in 1800 years. He took some of the soil from the auger and smelled of it, he stuck out his tongue and took just a teeny-weeny taste. Then he rubbed a little on the end of his nose and looked at it cross-eyed. "You're mistaken," he said cheerfully, "that's good soil."

Well—I had told them the truth, as the gumbo weeds and I saw it, why go on and rub it in. "Fine," I said, "that proves that a man is never too old to learn."

So then they asked me how many fence posts there were in a patch of timber. I told them I thought there were about a hundred and fifty. They said they'd check my figures. They did. They came back and told me the correct number was 490. Fine again. Business was picking up. At that stage things looked mighty hopeful.

I showed them 2 acres of land under irrigation and asked them what it was worth. Now whether one of them said $500 an acre or $500 for the 2 acres, I'm not sure. And really it isn't worth arguing about because I never got the money anyway.

Then there was a coal mine about 500 yards from my kitchen range. They thought that was worth $500 to any man. I did too. So they wrote some more figures down in the book.

Finally they got out a camera outfit and went to work in earnest. I had a pile of old hen's nests and boxes that had been piled up to furnish sort of a windbreak for some broody hens. I told them it was nothing. They said it was a building and worth money. So they took the pictures and wrote more figures down in the books. What are you going to do with a pair like that?

They came to my barn. I told them it was a straw shed and wasn't worth a nickel. But they took the pictures just the same and wrote more figures in the book.

Finally they came around to my house. It's nothing but a shack at best and I told them it wasn't even finished—in the orthodox manner—on the inside. But listen. They said it didn't make a particle of difference because they figured the value of houses by the cubic content. Was I happy about that? Why not? All of a sudden I had found that my shack was a real residence and worth about ten times what I thought it was.

And so, after a while, when they had tasted and sniffed and looked cross-eyed and photographed to their heart's content, they came to the time when they couldn't think of more to do, except to add up a lot of figures. When they said they were all through and we'd had a cup of coffee and everybody was in a happy frame of mind, I asked them if they'd leave me a copy of their appraisal.

Well, since then I haven't believed in fairies. They said, "We're not allowed to tell."

It seems that Rip Van Winkle was only a piker after all. Where he slept 20 years, I had been snoozing half a century and more. And after the boys had gone, I sat down and felt pretty bad, not so much because I was to lose my home as because they had taken my faith in something beautiful. Never again could the stars and stripes stand for quite so much as before.

There you are. That's the beginning of the tragedy.

Next week it will be worse.

Why I Support Senate Joint Resolution 108

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. POULSON. Mr. Speaker, it is absolutely essential that we curtail Federal expenditures. I would much prefer that Congress make these cuts. However, I find that Congress is handicapped to ascertain where reductions should be made. In some cases, they even lack the courage. Therefore, I believe we should pass a law similar to Senate Joint Resolution 108 to compel the administration, namely the President, to make percentage cuts in all items except those which are fixed, such as interest on the debt.

It is true that we are again abdicating our powers to the executive branch of Government, but when we find our Nation in such a financial crisis as exists today, we have to accomplish results, namely, cut expenses.

Since we find "the chickens are coming home to roost" in that Congress is helpless, let us analyze the cause: We know that during the past 13 years the executive branch of the Government has gradually usurped the rights of the legislative branch of the Government until today the executive department definitely and unequivocally dominates and controls the Government of the United States.

Let me call to your attention one specific incident. In the Reorganization Act of 1946, Congress realized its helplessness in coping with the executive branch in scrutinizing the budget and set up a provision for obtaining this necessary technical and specialized assistance. The Eightieth Congress of which I am proud to have been a Member obtained for the Appropriations Committee the services of 8 permanent experts and approximately 50 top-notch consultants taken from a cross-section of private business and strictly on a nonpartisan basis. These men were all authorities in their particular field. As a result, we were intelligently able to cut the budget over $9,800,000,000 in 2 years.

Now, let me quote from a statement made by Representative WIGGLESWORTH, of Massachusetts, one of the top members on the Appropriations Committee, on the floor of the House on February 15, 1949, in telling what the committee had accomplished through the use of these experts:

> The over-all result was that the committee was able to effect savings on rescissions detailed in the CONGRESSIONAL RECORD of some $9,800,000,000 in 2 years, making possible a balanced budget for the first time in 16 years, making possible a reduction in our national debt of some $7,000,000,000, making possible a reduction in our tax burden of $4,800,000,000, 71 percent of which went to those with incomes of less than $5,000, some 7,000,000 persons being removed from tax rolls entirely.

Now, what did the Democratic leadership in control this year do? Quoting Representative WIGGLESWORTH on the same date, he said:

> Now, Mr. Chairman, you may be surprised, in view of this record, to know that this staff has been completely abolished. It has been abolished despite the experience of years, despite the intent of the Reorganization Act, despite the splendid record that it made.
>
> The staff has not only been abolished, it is not only a question of relieving those who served on the staff, the whole theory of a staff responsible only to the Appropriations Committee has been, for the time being, abandoned, and we have gone back to the old idea of asking one executive agency to please investigate the actions of another executive agency, whenever an investigation seems necessary.
>
> Mr. Chairman, that plan has been tried. It is better than nothing. But as long as human nature remains what it is, it will never, in my opinion, get fundamental results. In fact it may tend at times to conceal rather than to disclose.
>
> Real results depend on a permanent, nonpolitical skilled staff, responsible to the Appropriations Committee and to that committee alone.

The result of this action of the Democrats in Congress has made it impossible to find the padded portions of the budget. To add to this handicap, the Democrats with their preponderant majority at the first of this session rammed through the House the appropriations bills, most of them without a roll call, and today they are in the Senate. Therefore, our only alternative is to pass a bill such as Senate Joint Resolution 108 which will compel these necessary percentage cuts.

Problems of Small Business

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. HILL. Mr. Speaker, the Select Committee To Conduct a Study and In-

vestigation of the Problems of Small Business, in their proceedings, volume 7, House of Representatives, in a meeting held June 30, 1949, we find the following statement which is a conversation between myself and the chief counsel, Mr. Joseph W. Kaufman and Mr. Walter B. Wooden, senior associate general counsel, Federal Trade Commission. I quote—hearings, June 30, 1949, pages 438–440:

Mr. KAUFMAN. Think how much worse it would be, and I think it would undoubtedly be worse if we had a basing-point system continued where there is no control whatever by the Government or any regulatory commission.

Mr. HILL. You do not mean to tell me this morning that is what this O'Mahoney bill means?

Mr. KAUFMAN. Yes.

Mr. HILL. It does? You surprise me. If I read correctly—I am a hardware merchant, not a lawyer—you mean to say that the report published by the subcommittee of the Judiciary Committee of which Congressman WALTER is chairman is entirely wrong. I quote:

"The Department of Justice has advised the committee that it has no objection to the enactment of this bill, but recommends three amendments."

And as I understand it, they put them in. Keep in mind I know nothing about law. Do you mean to say I am to think Mr. WALTER does not know what he is talking about?

Mr. KAUFMAN. Answering the first question you asked me, whether this bill contemplates any regulatory commission as in the case of freight rates, no; this bill purports to make it possible, as I see it, for rates to be fixed more or less artificially. I do not mean completely but irrespective of actual freight costs, and all this arrangement will be done without any governmental supervision by any commission. In railroad rates we do have some commission. If it does not work too well, the commission ought to be strengthened. Congress ought to pass a law giving more mandate. But at least there is a commission which can sit down on the railroads if they act vigorously enough or have enough power. The proposal here would have no such regulatory commission and none is set up.

Mr. HILL. Did you read the paragraph on page 4 of the same report? You know you lawyers have a way of getting me mixed up, so that if I knew how to swim I would drown just the same. On page 4 is what the smart lawyers in the Judiciary Committee say about this bill. You are going to tell me this morning they are all full of "bushwa"? They are talking about the very section the witness is speaking about. Read that on page 4. "An amendment proposed by the committee strikes from the bill a Senate amendment which would deny sellers the right to absorb freight to meet the equally low price of a competitor in good faith when the effect of the freight absorption would substantially lessen competition."

Mr. KAUFMAN. Yes.

Mr. HILL. That 's not true according to what you say.

Mr. KAUFMAN. No, that is another point.

Hearings, pages 443 to 445:

Mr. KAUFMAN. There is a difference of opinion, and that difference of opinion is found within agencies.

Mr. HILL. You heard what I read there.

Mr. KAUFMAN. On the differential, yes. I can answer that one, I think. That one is something absolutely new which was inserted right here in the House. And what it says is not only will it be possible from now on for competitors to meet the price of some other competitors exactly right at the point, but if in the past their practice and custom has been to beat their competitors, in other words, to maintain a price which is always 2 points less than their competitors, or 5 points less, this amendment—and I am sure the people who put it in had motives of the best—believe it or not says they shall be allowed to continue to maintain that differential permanently. That might seem very reasonable to the people who have been underselling their competitors, for some large concern which has been underselling its competitors.

Mr. WOODEN. Underselling by discrimination.

Mr. KAUFMAN. Absolutely; or any other way. There is no qualification on this. That might seem very reasonable to a big concern which has been so in the habit of having its way, which may have been doing it for 40 years, and perhaps doing it in violation of the law, and perhaps doing it under the basing-point system, and perhaps they thought it was legal all that time but now it has been declared illegal. But under this section, as I read it, and although I am a lawyer I try to look at this like a layman as well, under this section he is guaranteed the right to continue to maintain that differential. It is just like a grandfather clause. He gets a vested right in that differential. I am sure the people who wrote this in never intended that really and honestly, but it was done so quickly, without hearings, they did not realize the full implication.

Mr. RIEHLMAN. Mr. Chairman?

Mr. HILL. You are prejudging this committee, though. When they get on the floor, we will ask that kind of a question, and will read your testimony to them. Then what are they going to say to me when I read your words which I hope I do.

Mr. KAUFMAN. I hope you do not.

Mr. HILL. I do not know who to believe.

Mr. KEOGH. Mr. Riehlman.

Mr. RIEHLMAN. Could I ask the gentleman testifying here if the so-called Kefauver amendment were reinstated in the bill, would you be satisfied with the rest of the provisions in the bill?

Mr. WOODEN. No, indeed.

Mr. RIEHLMAN. There are other things you object to?

Mr. WOODEN. Yes, indeed. I would favor the Kefauver amendment as such. But even if it were incorporated in the bill, the remainder of the bill, in my judgment, is so bad I would oppose it as a whole.

Evils of Communism

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. GWINN. Mr. Speaker, the Honorable Hamilton Fish, formerly a Member of the House, is now, and has been, a crusader against the evils of communism.

Under leave to extend my remarks, I include in the RECORD his speech entitled "The Red Scourge Menaces Christian Civilization," delivered on Sunday morning, June 19, before Loretto Council, No. 536, Knights of Columbus, Cold Spring, N. Y., at a communion breakfast held at the Highland Country Club, Garrison, N. Y.:

The Red tidal wave of communism is engulfing large parts of the globe, destroying Christianity, democracy, freedom, and threatening western civilization. World communism is the most powerful and evil force in the world today. It brings with it hatred of religion, human slavery, and a ruthless dictatorship, supported by brutal suppression and the terrorism of the secret police. Its main weapon is fear, and its tools are concentration camps, mass deportation to the mines and forests of Siberia, bread tickets, forced labor, and sudden death.

There can be no compromise between freedom and the slavery of communism. The world cannot long exist half free and half enslaved. As Clare Luce once said, the question is, "Will mankind eventually stand in the light of freedom or crawl in the darkness of slavery?" It is my purpose to arouse all Americans, whether they be Catholic, Protestant, or Jew, to the menace of international revolutionary communism. No "red herring," dragged across the Communist trail, must be permitted to divide loyal Americans on the basis of race, color, or creed in the fight to defend our country against the evils of totalitarian communism.

Pope Pius XI was right when he said, "No one who would save Christian civilization may collaborate with communism in any undertaking whatsoever. Those who permit themselves to be deceived into lending their aid toward the triumph of communism in their own country will be the first to fall victims of their error." I believe in giving credit where credit belongs.

The Catholic Church has stood fearlessly in the very forefront of battle against communism for the past 30 years. Cardinal Spellman has been one of the most outspoken. He warned, "To help save America you must constantly and loyally labor to unmask traitors who give lip loyalty to the language of democracy while anarchy and tyranny seethe in their hearts."

By birth and profession I am an Episcopalian, but I confess that to me the difference in the various religious beliefs should not, in any way prevent a united stand in the fight against world communism. It is not differences in creed, but what we have in common that enables us to work together. I am convinced, as indeed all of us must be, that religion is the chief moral force left in the world. If it is wiped out or destroyed in accordance with the program set forth by Karl Marx in the Communist Manifesto, the world will be set back a thousand years into barbarism and paganism.

Religion, as such, is under the fiercest attack in many centuries from radical, atheistic, and communistic sources. Therefore Christians of all denominations, and others who feel the same way, should unite in a crusade in defense of religion, of priests and clergymen, of the cross, and, above all, of the right to believe in God and practice religion in accordance with the dictates of one's conscience.

There is an irrepressible conflict between religion and the communism of Karl Marx. Communists are not only atheists the world over, but enemies of all religion. Stalin and the Politburo are willing to permit certain Sovietized Russian churches to remain open provided the priests take an oath of obedience to Stalin and communism. It is an effective propaganda for use in foreign nations. The dangers ahead from atheistic communism must be obvious now to all priests, clergymen, and rabbis; Red signs are everywhere, and the hammer and sickle is triumphant over large parts of the world. Protestants, Catholics, and Jews are beginning to realize the meaning of the Red danger signals and to know it is God or communism. It is the cross or the hammer and sickle. The Red revolution is on the march, making converts by force and violence.

The trial of Cardinal Mindszenty in Hungary shocked the Christian world. It was a mockery of justice and the rape of religious liberty. The same pattern is raising its ugly head of terrorism in Czechoslovakia by threats of violence and imprisonment of Archbishop Joseph Beran and numerous priests. It happened to the Protestant clergymen in Bulgaria. It is part and parcel

of the Communist plan to liquidate all religion. The Communists are experts in the use of camouflage and propaganda. They make use of the so-called Protestant, a New York pro-Communist magazine, to spread their evil doctrines of bigotry and Marxist hate. All Protestants should disavow this malicious sheet, filled with hate and intolerance.

It would be no great surprise if within a decade of years there will either be a coalition in the United States between Republicans and Democrats against Communists, radicals, and a leftist front; or the formation of two parties, one professing faith in God and religion and composed of all faiths, regardless of race or color, and the other Communist, Marxist, radical, anti-God and antireligious. The situation has virtually reached that stage in Europe; we are bound to be affected.

In face of the common danger to Christianity, instead of unity, there is a fluctuating tide of conflict and dissension which splits the Christian world wide open, and leaves it powerless before its enemies. This is no time for intolerance. Christians should forget their differences of dogma, unite in a truce of God and present a united front for Christianity, democracy, humanity, and peace on earth.

We did not go to war and win a complete victory to oppress, but rather to free the oppressed, and to extend Christian and moral ideals and leadership throughout the world. What is happening behind the iron wall of secrecy in those so-called liberated countries, to Christians, patriots, and all anti-Communist elements should be exposed from every pulpit in America. What has happened to Christians in the Baltic and Balkan Nations, in Poland and Hungary, must not be permitted in silence. The price of civil and religious liberty is eternal vigilance and the turning of the pitiless searchlight of truth upon the Red machinations, conspiracies, and hidden forces that are undermining the foundations of Christianity and of all religion.

Let all creeds and denominations combine their moral influence to expose the human slavery, degradation, terrorism, destruction of freedom and religion under Communist dictatorship, to the end that Christianity and all religions may survive. The leadership should come right from the pulpits of every faith and creed.

There can be no more appeasement of communism.

Basing-Point Bill

EXTENSION OF REMARKS
OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. PHILBIN. Mr. Speaker, I have been actively interested in the settlement of the questions presented by this bill for some time past. In response to many appeals made to me by business interests in my own district and in the State of Massachusetts, early in this session of the Congress I introduced H. R. 1001 and a revision of that bill, H. R. 2907. The purpose of these measures was to clarify existing confusion by formulating a consistent, coordinated national policy with respect to transportation costs in interstate commerce, to strengthen the antitrust laws and provide for their more effective enforcement, and to promote competition by permitting sellers to have access to distant markets. In a speech on the floor of the House on January 6 of this year I discussed the basing-point question in some detail and urged the House to give early attention to dispelling the tremendous uncertainty and conflict aroused in business and labor circles by the conflicting opinions of Federal officials and certain decisions of the Supreme Court.

The legal questions involved in this legislation have been very ably handled in this debate. The gentleman from Pennsylvania [Mr. WALTER], the gentleman from New Jersey [Mr. CASE], and other able lawyers of this body, have carefully and brilliantly analyzed the legal effects and implications involved in this measure. I will, therefore, make no extended reference to these legal questions except to state that I am fully convinced from my own studies and from the arguments presented here that instead of weakening the antitrust laws and permitting agreements in restraint of trade, monopoly, and unfair trade practice, as has been alleged by some opponents, that this bill contains absolute safeguards against illegal conspiracies, combinations, and agreements by selfish interests which would effect unreasonable and illegal restraints of trade.

I have been a strong supporter and proponent of all the antimonopoly and fair trade laws because I believe that they constitute a reasonable and necessary regulation of business in the interests of the American consumers. At the same time I am opposed to any ruling by administrative officials of the Government, or by the courts, which place undue and restrictive burdens upon legitimate business. I believe in the American competitive system and competition just as free and unfettered as possible without introducing or permitting methods and practices harmful to honest businessmen and detrimental to a sound economy and the interests of the consuming public.

It is true that basing points and delivered price systems which have been used by some American industries and businessmen for some time past, present difficult and complex economic questions. These systems have been in effect, generally recognized and generally utilized by many American businesses for a long period of time. Their purpose and objective is to promote fair competition and provide for uniformity of price and stability of markets throughout the Nation. The evidence is overwhelming that recent administrative and judicial events have caused great concern and no inconsiderable confusion among those businessmen who have occasion to utilize these systems.

Many individual businessmen and some groups have expressed their disapproval, uncertainty, and concern over rulings of the Supreme Court which they construe would in effect eliminate these time-honored systems and substitute therefore Nation-wide f. o. b. pricing. The New England Council, for example, a reputable and influential organization of businessmen, have deplored the situation produced by these decisions in throwing doubt upon the practice of manufactureers in absorbing freight charges where this is done without illegal agreements on conspiracy. That group has expressed to me its belief in the need for greatest possible freedom in arranging bases and terms of sale as being particularly important to both buyers and sellers in New England, pointing to the unusually large variety of manufacturing enterprises, many of them small, which must be served with raw materials from sources at varying distances and must sell their products in other areas and also at varying distances. They declare that freedom to determine pricing policies, including freight absorbtion, is essential if New England industries are to compete as buyers and as sellers. They conclude that if New England industries are not free to purchase certain of their requirements with freight absorbtion by the supplier, or to sell certain of their products in a similar manner, they will find themselves at severe competitive disadvantage with manufacturers in areas located more closely to supplies and markets. They point out that some decline of offerings by more distant suppliers, and of orders from more distant customers is already occurring and that this trend may be expected to accelerate to the great disadvantage of the country as a whole and New England in particular.

Surely no one in this body wants to be responsible for working havoc with the business prosperity of any section of the Nation. Individual businessmen have sent me similar views in opposition to the elimination of delivered price systems and point to the fact that this situation is not only causing increased costs in raw materials but also causing very substantial sales losses which have already displaced and will continue to displace many employees. These groups are disturbed by official action of Government bureaus to declare delivered pricing methods illegal, conspiracies, unfair methods of competition, and price discrimination.

I think it can be fairly said that until the Cement Institute case the business of the Nation was progressing smoothly and efficiently and for the most part prosperously along principles evolved out of a free competitive system. In a very practical sense businessmen were in accord as to how and where to sell so that goods were moving and cost elements were in the main equitably and satisfactorily distributed. American producers of steel, cement, lumber, plumbing material, tools, machinery, textiles, and so forth, were free to pay freight charges whenever that would seem necessary to meet competition and were likewise free to sell f. o. b. at the producer's plant whenever that policy could be maintained. These methods have been in existence for many years, have stood the test of competition, and have promoted business prosperity and maximum employment. With the injection of new concepts revising previous interpretations of the antitrust laws and the Robinson-Patman Act, systematic freight absorption would be outlawed even though there is a total absence of combination or conspiracy.

Testimony of businessmen is conclusive on the point that the elimination of the basing point and delivered pricing system has had, and will continue to have, extremely unfavorable effect upon their volume of business. If strictly adhered to, some say their sales would be restricted to their "back yard" and in some cases they would have to go out of business. They point out that under the new rules, competition is not being encouraged but destroyed.

A prominent business expert who is well known and highly regarded as director of research in one of the outstanding business schools in the country, Prof. Melvin T. Copeland, of Harvard, states that legislation provided for by this bill is of urgent, vital importance. He states:

As is amply demonstrated in the report of the Johnson committee, uncertainty exists as to whether any manufacturer may legally sell on other than a uniform f. o. b. mill price. That uncertainty works against the maintenance of sound, economic prosperity in this country. Continuation of that uncertainty right now is particularly untimely.

For 30 years I have been observing the use of such marketing procedures as are involved in competitive freight absorption. I am convinced that freight absorption is a natural competitive device which works to the advantage of consumers and employees and, therefore, is in the general public interest.

In this country a manufacturer or merchant always has been privileged to pay part or all the costs of delivering his merchandise in order to meet competition. That right now seems to be in danger of abrogation through the promulgation of unsound theories and misleading propaganda. It cannot be abrogated, however, without causing great disruption and economic hardship for which there will be no compensating gain to the public. Officious interference by Government employees with such commonplace rights as freedom to compete in delivery service, furthermore, is not far removed from the tactics of a police state.

I should like to see the enactment at this time of permanent legislation. The least that Congress can do now is to mitigate the confusion which has arisen out of court dictums and conflicting Federal Trade Commission pronouncements.

I do not see how anyone can fail to be deeply impressed by the conclusions of this eminent business expert. I think that efforts to interfere with traditional pricing methods of American business, where these methods do not violate the antimonopoly statutes and fair trade practices laws, are a serious blow to American free enterprise and will be destructive to employers and employees alike.

Let me reemphasize that this bill contains explicit safeguards, written in and spelled out, protecting all pertinent laws directed against monopolies, conspiracies, combinations, restraints of trade, and unfair trade practices. I compliment the committee upon its consideration, action, and management of this bill and hope that the House will pass it by an overwhelming vote in order that American businessmen and American workers will no longer be harried and harassed and so very deeply concerned about the prospects of their future business and employment.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. TAURIELLO. Mr. Speaker, I have studied all phases of proposals to extend Federal aid to education in the States and communities. There have been many bills introduced, but I believe that, while the Barden bill, H. R. 4643, was drawn in a good spirit, it is not in the real sense of the word a Federal aid to education bill. It is a Federal aid to education for one segment of our American children.

Parochial and private school children were counted as members of the national school population when advocates of the Barden bill were asking for funds but now the proposal is to exclude them rigidly when distribution of these funds is to be made.

I appreciate the difficulties of many to evaluate the proposal and the potential effect of the Barden bill because it undoubtedly contains emotional and traditional concepts of what the functions of the Federal Government should be in education in the localities. I fully appreciate also that these feelings are explosives in American political and social thinking.

However, I appreciate also that if we are to maintain our American tradition of fairness and equal justice regardless of race, color or creed, the Barden bill is lamentably lacking in fairness for all American school children regardless of race, color, or creed.

I oppose the bill strongly because I believe in the fundamental right of any American parent or guardian to entrust the education of their children to any system of education they deem adequate or desirable.

I believe that in some of its features the Barden bill attempts to draw a sharp division between Americans on racial and creedal affiliations. Education is the basic right of parents and not the State and I believe that this must be recognized by all Americans if we are to maintain our democratic way of life.

Even more important than the issue of public versus private school aid is the issue of whether one American is willing to concede to another his basic rights as a parent and an American citizen, even though the other American differs from him in matters as profound as religious belief. The regrettable thing to me in this whole issue is that some American citizens, which I am glad to discover are a minority, are willing to sacrifice the splendid American idealism to petty prejudice.

I will not support any proposal such as the Barden bill which would discriminate against nonpublic schools. Further, I intend to campaign actively for the defeat of this most objectionable and inequitable bill.

Anthracite Research at Pennsylvania State College

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Anthracite Institute Bulletin of June 29, 1949:

ANTHRACITE RESEARCH AT PENNSYLVANIA STATE COLLEGE

The Anthracite Institute in cooperation with the Commonwealth of Pennsylvania is continuing its sponsorship of research on new and improved uses for anthracite at the Mineral Industries Experiment Station of the Pennsylvania State College. During the past year, problems associated with the recovery, upgrading and utilization of fine sizes and fundamental investigations in long-range problems on utilizations of the larger sizes have been stressed.

Field studies on established and proposed processes for the recovery and cleaning of fines are in progress. The initial objective of this study is to evaluate and compare various performances with respect to recovery, size limitations for effective cleaning and over-all efficiency. The merits of central testing of uniformity in methods of sampling and of determining recovery are also being examined. Preliminary reports on the spiral concentrator and froth flotation processes have been released and table plants are now being studied. The ultimate objective of this investigation is to furnish factual data by which improved recovery and cleaning efficiencies can be obtained with existing processes. This information will also serve as a basis for the development of new processes, if shown to be required.

Studies have been continued in several phases of the blending of anthrafines in coke manufacture and these studies included: (1) The determination of the strength and size degradation of commercial cokes made with anthrafines, (2) methods of reducing pressures developed during carbonization, and (3) investigation of the blending compatibility of anthrafines.

Investigations on the use of anthracite as cupola fuel were extended during the summer months to obtain new information on the best conditions for the use of the larger sizes in high speed melting operations.

With the increased use of both the fine and large sizes of anthracite for industrial processes, the need for detailed information on the physical properties of anthracite has become apparent. Accordingly, a preliminary study on this subject, originally started in 1943, has been completely revised for publication in the near future.

Penn State has also continued fundamental studies on the mechanism of anthracite combustion with particular emphasis placed upon the determination of the effect of the ash surrounding a piece of burning anthracite upon its combustion rate. It is felt that this study will tend to a better understanding of the factors that influence anthracite's rate of combustion. Combustion and gasification studies with regard to the flow of gases through beds of anthracite of various sizes were also completed during the year.

The basic and applied anthracite research at Penn State is coordinated with the industry's own research program at the institute. The large amount of research being sponsored by the anthracite industry is proof of its determination to find new and expanded markets for its product.

Electrical Roll-Call System

EXTENSION OF REMARKS
OF
HON. JAMES E. NOLAND
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. NOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication from a recent issue of the New York Times:

SPEEDING UP LEGISLATION—USE OF ELECTRICAL ROLL-CALL SYSTEM FAVORED AS TIMESAVER

To the EDITOR OF THE NEW YORK TIMES:

Recently a fist fight broke out in the House of Representatives. The cause of the demonstration was whether a Member of Congress should be allowed to debate on the controversial housing bill for 7 minutes or 10 minutes; at first glance this appears to be nothing more than a picayune squabble which had best be forgotten. It points up, however, an inequitable situation that exists today in the lower Chamber of our National Legislature which is detrimental to our theory of representative government.

The House of Representatives with its 435 Members functions basically the same way as did the First Congress in 1789. At that time there were 65 Members. In 1910 the Thirteenth Census established the total of 435, which has been decided upon as the maximum figure; this represents a sixfold increase in the membership of the House. Needless to say, the business of the Congress has more than proportionately increased over the span of years since the inception of the First Congress.

Today debate in the House of Representatives is a mockery; Members usually request permission to speak for 1 minute on matters not immediately pending on the House floor. During general debate, when the House resolves into the Committee of the Whole House on the State of the Union, debate time is allotted by floor managers, which gave rise to the COX-SABATH bout.

Several suggestions have been proposed to cut down the myriad of time-wasting chores that clog the House Chamber. The most practicable of these proposals calls for an electrical roll-call system which, it is believed, if placed into operation would save as much as 25 legislative days per session. The sponsor of the resolution to install such a system, the Honorable JAMES E. NOLAND, of Indiana, points out that as many as 20 State legislatures have electrical roll-call systems. He believes that, "in the days of the jet plane, the atomic bomb, and strato-rocket, is there any reason why we should cling to the antiquated roll-call system of 1789?"

Whether the House sees fit to revise its rules of procedure to allow for more floor discussion is a matter of grave concern to the Nation. The Senate on the one hand is faced with the problem of too much debate; Senators have been known to speak for hours on end (Senator CAIN spoke almost a full day to prevent the Senate from confirming the nomination of former Gov. Mon Wallgren—and succeeded) if necessary to defeat a piece of legislation. On the other hand is the House, where debate is stilted and unduly formalized. Surely neither situation is perfect, and if a mere mechanical change in determining the presence of a quorum or recording a roll-call vote will save a month of legislative time it should be adopted without hesitation.

The little recognized faults of the House of Representatives should be corrected if a truly democratic system of representation is to be enjoyed in our National Legislature.

HOWARD N. MANTEL.

BROOKLYN, *June 24, 1949.*

Minnesota Rail Carman Proves Great Hit On Tour of Europe

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. MARSHALL. Mr. Speaker, I would like to call to the attention of the Members of the House a recent news story in Labor concerning a trip to Europe made by Mayor Math Malisheski, of St. Cloud, Minn. It is noteworthy that a public-spirited citizen like Mayor Malisheski should assume the responsibility of building a better understanding between the people of the United States and Europeans by carrying to them an explanation of the workings of our democracy.

MINNESOTA RAIL CARMAN PROVES GREAT HIT ON TOUR OF EUROPE

Europe has seen and heard many Americans, but none more unique and persuasive than Matt J. Malisheski, who returned from overseas this week after a month's "mission for democracy."

Labor has written about Malisheski before. He's a veteran member of the Railway Carmen and former local chairman of the brotherhood at the Great Northern shops in St. Cloud, Minn. Over a year ago the citizens of St. Cloud elected this gentleman in overalls as their mayor.

He still toils in the shops about half time and carries on his mayoralty duties the other half. He has done a great job, but one of the efforts he is particularly proud of is a hands-across-the-sea project to build better understanding between the plain people of our country and those abroad.

"ADOPTED" BAVARIAN TOWN

Citizens of St. Cloud "adopted" the town of Mellrichstadt in Bavaria and regularly sent relief shipments to the children and grown-ups of that community. So pleased were the townspeople that they officially invited Mayor Malisheski to come for a visit. A similar invitation was received from the mayor of St. Cloud, France, from which the Minnesota city derives its name.

The invitations stirred intense interest. Citizens of St. Cloud raised a "pot" to send their mayor overseas. Other community leaders became excited over the project, too, and 23 of them—businessmen, professional men, farmers, and others—arranged to go along.

They flew abroad May 30, and have just returned. Mayor Malisheski stopped off in Washington for 2 days before proceeding home, and this gave Labor an opportunity to interview him.

TELLS OF DEMOCRACY

Malisheski was royally received in Mellrichstadt. "At a public reception the whole town turned out, with bands and children's choruses," he said. "They treated us as though we had come as liberators."

Having been raised among Germans in St. Cloud—though he himself is the son of a Polish immigrant—Malisheski was able to speak to the Bavarians in the native tongue. In his earnest way he told them of democracy.

"I said to them I felt democracy rests on a religious base—on the divine precept that men are created equal," Malisheski explained. "I defined what we regard as liberty—the right to think, speak, and write as one's conscience dictates. Any state which denies such right is grounded in slavery, I insisted."

ADDRESSED MANY FORUMS

Malisheski made a great hit. Listeners applauded everywhere. In fact, because of the fine reaction, authorities in the American zone asked him to go on a "road tour"—that is, to address forums on democracy in communities throughout the area.

"I feel these forums were a great success," he said. "People asked many questions about democracy, and I was glad to answer. From what I observed, I feel confident that the Germans can be placed back on the path to peace and democracy. They have had their fill of totalitarianism. They want freedom."

AN AMERICAN MELTING POT

Many questions were asked about how people of many racial and national backgrounds can live harmoniously in America.

"I answered by describing my own home city," he said. "I told them St. Cloud, a town with a French name, was founded by Swedes, ruled mostly by the Irish, but has almost every nationality represented in its population, 50 percent of which is German. To top that, it has a Pole as its mayor, though Poles are in a small minority.

"Also, I said that if all races and creeds can live in peace in St. Cloud, why not in the rest of the world?"

What made the deepest impression on him were the refugees from behind the iron curtain. Mellrichstadt was near the border of the Soviet zone, and almost every day men, women, and childen by the score came out of the forests in flight from communism.

CITES TERROR OF REFUGEES

"Fear and terror were written over their faces because they had braved death to escape," Malisheski said. "They told pitiful stories of suffering and repression. They revealed that many refugees never got through—they were shot in flight by Red guards.

"Those who came had little more than the clothes on their backs. It took them a long time before they could shed their fears and realize they were out of danger."

MANY RECEPTIONS IN FRANCE

Malisheski later went to St. Cloud, France, and there, too, he received a splendid welcome. Receptions were also held for him by the city officials of Paris and surrounding communities. He met many notables of the French Government, and at one of these affairs he greeted the Duke and Duchess of Windsor.

"The Duke was very much interested in the future of American railroads, and he asked me questions about that," Malisheski said. "He has investments in some of our railroads."

In Rome the mayor of St. Cloud shook hands with the Pope. "It was amazing to note how easily and graciously this remarkable man greeted the crowds—a few words and a smile for everyone."

Summing up, Malisheski said he felt the trip "was very much worth while."

"If I helped plant a greater interest in democracy and freedom—and I believe I did—then I feel more than repaid for my effort," the mayor declared.

Democrats' Labor Legislation Upheld

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James A. Farley:

INSIDE LABOR—DEMOCRATS' LABOR LEGISLATION UPHELD

(By James A. Farley)

(Today's guest columnist for Victor Riesel, who is on vacation, is the former Postmaster General and national chairman of the Democratic Party.)

It has been said, and not unkindly, that the Democratic Party is the party of labor. Happily this is not literally true. No party can become the captive of any class and remain in power.

Political graveyards are filled with parties which served special interest and died of what they fed upon.

The Democratic Party is the party of liberalism. It has lived because it has served. Woodrow Wilson said of the party, in commenting on its long life, that it "had a heart under its jacket."

Perhaps this has never been more true than in the last 16 years, which have been notable for the adoption of a vast program of social and economic welfare while fighting despotism.

Not the least item in that program is labor legislation.

I am particularly happy that the Democrats of my State led the way toward national legislation. I refer to former Surrogate James A. Foley, former Mayor James J. Walker, former Gov. Alfred E. Smith, former Gov. Franklin D. Roosevelt, ex-Senator Robert F. Wagner, and ex-Secretary of Labor Frances E. Perkins, whose great contribution is being recognized more with the passing of every year.

The domestic developments of these years have stirred the political consciousness more than in any similar period since the founding of the Republic. Actually, we are all in politics today—the great industrial magnate, the financial chieftains of Wall Street, the farmer, the mechanic, the laborer, and the office workers.

They are all in politics and to some extent they are all politicians. This is as it should be, since we all suffer when any group of people is too busy to be interested in their own government, except when that government adopts a policy that they deem hurtful to their particular interest or withholds a privilege they have previously enjoyed.

It is when all groups work within a party, as they do in the Democratic Party, that political progress is achieved.

Differences of opinion are healthy when a party is moving forward resolutely and honestly to do those things which must be done to protect the economic interests of the workingman, the farmer, and the businessman. There is room within the Democratic Party for every man and woman who believes sincerely in the ideals and objectives of the American way of life.

While I am a firm believer in party government, I am happy that no party has a dictatorship over our country. I am pleased that no group has dictatorship over my party.

INDEPENDENT VOTER'S ROLE

The actual power that makes or unmakes an administration resides in the great army that is independent in politics, that votes for what is best for the people regardless of the label on the ticket.

For some years now my party has attracted independent voters.

A measure of this attraction is due to the party's labor program and the work of labor leaders for the party. No party and no administration can please everybody; I suppose it will always be so. Strong men and strong policies provoke resistance and hostility. This has been true of labor participation.

Although the next congressional elections are still more than a year off, there are signs of unusual and extraordinary activity.

This is as it should be. In the give and take within the party, a program will be resolved. Labor must make known its wants and must flex its strength in the ballot box.

Other groups may offer cautions or encouragement. The bitter controversies of history books of tomorrow, so that it behooves all groups to give an ear to one another and not ride roughshod for the moment, lest they have nothing to ride tomorrow.

Our country goes on ever greater and ever advancing and I hope that it will do so under an ever-greater and ever-advancing Democratic Party.

History May Be Repeating

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. HALE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Press of July 5, 1949:

HISTORY MAY BE REPEATING

In an interview in Formosa, Chiang Kai-shek told Scripps-Howard reporter Clyde Farnsworth that he would continue the fight against communism until the end of his days, because his life is dedicated to the cause of freedom and independence of the Chinese people.

Chiang dismissed as Communist progaganda the impression abroad that China's situation is hopeless. He was considerate enough not to include the fact that many Americans were saying that about China as late as the summer of 1944.

Is it too late now? Not to a people given to thinking in terms of centuries. Chiang's is the philosophical view that all struggles for human freedom against foreign tyranny must succeed in the end. He fights on, because he considers that his destiny.

Hopeless? The area and population in China under Communist control are less than under the Japanese occupation in 1938 after 1 year of war. That war went on for seven more years until victory was won. The present war has been in progress only since 1945.

But the Generalissimo warned that if China does not get timely help in the fight against communism, the eventual price democracy will pay may be beyond present comprehension. He believes the conquest of all China would set the stage for a third world war.

Chiang's warning cannot easily be shrugged aside. He voiced a similar one when the Japanese started to overrun his country. History may be repeating.

Then, as now, there was a disposition to treat China's problems as none of our affair. Few foresaw that within 4 years the same invaders would be striking at us. That could happen again. The Communists are committed to world conquest. The conquest of Asia would bring them face to face with us across the Pacific.

When China was left to stand alone against the Jap invader, Chiang Kai-shek withdrew to Chungking, and fought on from that mountain stronghold until eventual victory.

Preparations are being made for a second stand at Chungking, if Canton falls to the Communists.

President Truman has asked Congress for $150,000,000 to save Korea from communism, when half of that small country is under Russian control, as it has been since the Japanese surrender.

It is not suggested that amount will do the job. A similar appropriation can be anticipated for 1950, if the south Koreans haven't been gobbled up in the meantime. No one knows what stomach they have for a fight, for they haven't been tested in battle.

China, for the moment, is asking only that the $90,000,000 remaining to her credit in the Marshall plan fund be converted into silver dollars to strengthen the Nationalist government's economic position.

China is a better risk than Korea, and infinitely more important. Moreover, if China is lost, it is absurd to think that Korea could hold out. No area in Asia will be safe if China falls.

The Kaiser-Permanente Medical-Care Plan

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 6 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I had intended to address the Senate concerning a letter just sent me by Mr. Henry J. Kaiser. In that letter Mr. Kaiser, in no uncertain terms, replies to a baseless attack on the quality of medical care offered by the Kaiser-Permanente medical-care plan. Mr. Kaiser proves that not only is that care of the very highest quality, but is much more comprehensive and much cheaper than that offered by the medical society-controlled plans whence the attack originated.

However, in view of the momentous international problem now before the Senate, I ask instead that the remarks I had intended to make, together with Mr. Kaiser's letter, be placed in the Appendix to the RECORD. I commend them to the attention of the entire Congress.

An estimate from the Government Printing Office indicates that the manuscript will exceed by 1¾ pages the 2 printed pages allowed under the rule without a statement of cost, and that the cost will be $281.25.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

REMARKS OF HON. JAMES E. MURRAY, OF MONTANA

THE KAISER-PERMANENTE MEDICAL CARE PLAN—HENRY KAISER, ANSWERING HAWLEY CHALLENGE, PROVES QUALITY OF CARE BEST IN COUNTRY

Mr. President, as the Senate knows, the Subcommittee on Health, of which I am

chairman, has concluded its hearings on many of the measures referred to us. I regret that during the course of those hearings, a representative of the voluntary medical care plans controlled by State medical societies testified that the quality of medical care given at the Henry Kaiser-Permanente plant by salaried physicians, working on a group basis, was not such as you or I would want.

Those of you who may have seen this statement in our record or in the press may have shared my sense of shock at this challenge to the Kaiser-sponsored program. I had believed that the best and most efficient medical care was that provided by doctors in group practice as at Mayos, the Lahey Clinic, Kaiser-Permanente, or our great teaching hospitals. I had believed that we in the Congress were getting the best type of medical care and ours is given by salaried physicians working on a group-practice basis. Moreover, we have been told time and time again that, as regards voluntary prepaid medical plans, it is only those controlled by consumers or operated on a group practice basis which can prove their guaranties of quality or assure the consumer that high standards of medical care will be maintained. Plans controlled by medical societies act only as financial exchanges; they pool the subscribers' money and pay it out to participating physicians for services rendered. They set no standards of quality. They keep no records which would show whether participating physicians had ever gone back to school to learn the new techniques developed after their graduation. They cannot or will not tell potential subscribers which of their doctors to go to for the best type of service for a particular ailment.

In short, medical society health plans offer absolutely no assurances of quality medical care. Yet it was the representative of those plans who challenged the quality of care being rendered at the Permanente Hospital in California to a hundred thousand workers and their families by an outstanding group of doctors brought together by Dr. Sydney Garfield under a plan initially sponsored and financed by Henry J. Kaiser.

I am happy to report to you that the challenge has not gone unanswered. I have here an eight-page letter from Henry Kaiser which, with the consent of the Senate, I should like to have placed in the record at the conclusion of my remarks. I intend to see to it that it appears in the record of our health hearings as well. I commend it to the attention of every Member of this body.

In those eight pages, Mr. Kaiser proves conclusively that the quality of medical care offered by the Permanente Foundation is at least equal to the very best in the country and is far superior to that available in most communities. Not only does Mr. Kaiser document his case with statements from outstanding authorities in no way connected with his program, but he proves with facts and figures that the record of successful operations at Permanente equals that of the very best hospitals in the country and in some fields has been matched by none. Moreover, Mr. Kaiser proves that the care given members of the Permanente plan is not only of the highest quality but is much more comprehensive and costs much less than that offered by the medical society controlled plan in the same area, the California Physicians' Service.

I regret that the representatives of organized medicine have in this instance again seen fit to attack the sort of program they should be supporting wholeheartedly. I am happy that once again the result has been to let more and more people learn the value of that which the AMA opposes. I sincerely hope the time will come when the AMA, instead of spending millions in the dissemination of childish propaganda opposing new developments in medical economics, will begin to spend thousands encouraging the development of such excellent programs as that carried on at Permanente. When that time comes I predict that the gulf which now separates the rulers of the medical machine from those in the Congress who believe that every American is entitled to a chance at health as well as happiness will disappear.

If the Senate will permit, I should like to make one more statement in closing in order to obviate a possible misunderstanding. You all know of my advocacy of national health insurance as a measure essential to the Nation's security and to the well-being of its people. I would not have it understood by any of the remarks I have made above that Mr. Kaiser champions national health insurance. I believe the fact is that he is opposed to it. He believes that if doctors throughout the country would organize their services on a group basis and make them available through prepayment plans centered around modern facilities and stressing preventive care, as at Permanente, many of our medical care problems would disappear. I am inclined to agree. But I would point out to Mr. Kaiser and to our doctors that the Permanente plan, excellent as it is, won out over considerable opposition and only because of a combination of wartime emergency and the well-known Kaiser benevolence. To initially finance and to guarantee the funds needed to maintain similar developments throughout the country, I firmly believe that national health insurance is essential. Only with the guaranty of regular and adequate financing thus provided every community in the land will people and their doctors be able to develop local community programs in which, as is true of Permanente, every doctor can say of his patient, "What treatment does he need to make him well?" instead of "What treatment can he afford?"

THE PERMANENTE FOUNDATION,
Oakland, Calif., June 27, 1949.

Senator JAMES E. MURRAY,
Committee on Labor and Public Welfare, United States Senate, Washington, D. C.

DEAR SENATOR MURRAY: I deeply appreciate your recent challenging letter inviting me to inform the senatorial hearings on health legislation as to our experiences in conducting prepaid medical, surgical, and hospital services through the Permanente hospitals.

You ask searching questions, after stating: "I had understood that the combination of prepaid insurance, rational and integrated provision of facilities, and the group practice of physicians, all under skilled and imaginative medical and lay administration, had resulted in making available to your employees some of the highest quality medical care to be found in the world." Your challenge seems to be, Is the Permanente health plan living up to that description?

First as to what the Permanente health plan is:

Approximately 100,000 west coast people at the present time are receiving their hospital, medical, and surgical care through the Permanente plan by voluntary monthly payments.

They are served by Permanente hospitals and clinics at Oakland, San Francisco, Richmond, Vallejo, and Fontana, Calif.; Portland, Oreg.; and Vancouver, Wash.

Performing the medical and surgical services at these various centers are doctors practicing as a group under a partnership system.

The objective of the plan is to provide at low cost that can be afforded by families and individuals of moderate and low incomes, a high type of care by physicians and specialists who can minister expertly to the illnesses and diseases that afflict mankind. The monthly payments open up to the patients all the facilities of well-equipped hospitals—surgical—X-ray and laboratory services. The prepayments spread the cost of illness so that a major illness or operation need not mean terrible hardship and bankruptcy to a family.

The group practice of medicine and surgery has proved by our experiences to offer the greatest hope yet found to efforts to provide the most possible for the patient's money in doctor and hospital care. There always will be those who will prefer to go to their individual physicians and specialists. Yet millions of Americans require ways of spreading the high cost of illness and hospitalization. Our group practice plan provides private enterprise medical and hospital care. A partnership of doctors directs the system.

Advantages of group practice and prepaid health program include:

1. Since no single doctor can cover today's vast knowledge of medical science, the most effective way to pool the talents and wisdom of general practitioners and specialists in the many fields is by their working together in a center. Doctors working as a group, a team or partnership are a stimulation and aid to each other. They can consult with each other immediately. They can provide high quality and diversification of services to their patients.

2. The patient does not have to be sent from one specialist's office to another—nor to scattered X-ray, laboratory and hospital facilities. His health needs can be met by general practitioners or specialists and hospital facilities, all brought together under one roof.

3. Economies that permit giving the patient higher quality care at a lower cost are achieved by the cooperative use of surgical, X-ray, laboratory and hospital facilities; by the doctors jointly using a unified office staff, accounting system, managerial services and centralized offices.

Each doctor does not duplicate records, phone and secretarial services and many of the items of overhead that make individual practice necessarily more expensive. The savings from group practice, especially when combined under one hospital roof and with full hospitalization services, can enable the health plan subscriber to get better quality and a great deal more services for each dollar he pays.

4. A new economics of medicine and hospitalization is developed under the Permanente pattern Since the subscribers' prepaid funds go directly to the Permanente physicians and hospitals—not as a fee for services as required by patients, but in toto as a prepayment, the medical group and hospitals are in the position of benefiting by keeping patients from getting ill. This reverses the usual economics of medicine whereby doctors and hospitals obtain their income from persons becoming ill. Under the Permanente plan, the well person is an asset, the sick person an expense. Thus there is a definite incentive for the Permanente system putting greater emphasis on preventive medicine, on encouraging patients to come to the medical centers at the early stages of trouble, on detecting and treating disease and illness before it becomes acute.

The quality of service provided by the Permanente health plan, about which you make specific inquiry, Senator, can best be testified to by authoritative, impartial judgments that have been made.

The American College of Surgeons surveyed the Permanente Foundation Hospital, Oakland, and accorded the hospital full approval, which placed it in the highest bracket of American and Canadian hospitals inspected. Among Permanente Hospital's features favorably commented upon in the American College of Surgeons' report were:

Building adequate and well maintained.
Administration competent.
Records are complete and satisfactory.
Laboratory and X-ray well equipped and managed by full-time certified specialists.
Nursing and dietary services adequate.

Large medical and surgical staffs with many certified men and fellows.

Obstetrical department active and well conducted.

Physical therapy a large and well-equipped department.

The out-patient clinic is huge, well-organized, and equipped, with a large staff of nurses and physicians.

The American Medical Association Council on Medical Education and Hospitals has approved Permanente Hospital for intern and resident training and the hospital also has been approved for specialty-board training in surgery, internal medicine, orthopedics, obstetrics, and gynecology, roentgenology, and pathology.

Metropolitan Life Insurance Co.'s William P. Shepard, M. D., third vice president, wrote of having examined Permanente Hospitals at Oakland, Richmond, and Vancouver, Wash., as follows: "I have seldom seen higher quality of medical work in any institution. Your staff if able, interested, and alert; evidently enjoying the greatest possible professional freedom, together with opportunities to advance in their specialty. I have talked with your interns as well as resident and staff members, your chiefs of service and chiefs of staff. You are certainly to be congratulated on handling the well-known temperaments of medical personnel so skillfully and on producing so high a grade of medical service for all your employees."

University of California's professor of medicine, William J. Kerr, M. D., reported to the American Medical Association: "For the last few years I have had an opportunity to observe the development of this hospital and the other services pertinent to the care of the sick coming under the supervision of the staff there. I am prepared to state that the quality of service to the sick is of a very high order. The members of the staff are for the most part young and energetic and they are able clinicians. Most of them are interested in the recent advances in medical science and practice. Their group contribution in our community is inspiring * * *. This situation has made it possible for them to assemble a group of men whose abilities and capacities are outstanding."

Hooper Foundation, University of California, by the director, Dr. Karl S. Meyer: "I am highly enthusiastic over possibilities to provide prepaid medical care of the highest quality at low cost through a group organized like the Permanente Foundation, under the superb direction and honest leadership of Dr. Sidney Garfield. Last Wednesday I saw the ultramodern hospital with all its excellent facilities and its staff of sincere and capable young physicians guided by the highest motive of service and research. Every possible assistance should be given to this undertaking."

International Harvester Co., Dr. Will F. Lyon, Chicago, head of medical service for the company nationally, wrote: "We are awfully proud of the fine job you are doing in this, the most complete medical service the Harvester Co. is offering or has ever offered to its employees.

Stanford University School of Medicine's Dr. Windsor C. Cutting of the department of pharmacology and therapeutics: "I have followed the course of Permanente Hospital with friendly interest since its organization, and have been a frequent visitor there. My impression is that the type and quality of care is excellent. In fact, it seems very much like that practiced in the university hospitals with which I have been associated, which I believe to be medicine of the highest order."

University of California Medical School's Assistant Clinical Professor of Medicine Harold Rosenblum, M. D.: "Since early 1946, I have had frequent occasions, through medical consultations at your hospital, to observe the quality of medical care given to patients there. In my opinion, the important medical features of the hospital are excellent both from the standpoint of the care of the patient and the teaching of young physicians. Permanente compares favorably with other teaching hospitals I am acquainted with both in this area and throughout the country generally."

American Board of Surgery has certified three surgeons on the staff of Permanente Hospital, Oakland, which becomes significant from the fact that out of more than 1,000 physicians in this community, in July 1948, there were a total of 12 reported certified by the Board in surgery. Permanente's full time attending staff of surgeons consists of six men, one of whom is completing his training as an attending surgeon, and two others of whom satisfy the requirements of the American Board of Surgery. One of the senior surgeons remains on duty at all times—nights, week ends, and holidays, on call in the hospital for emergencies every hour of every day.

Quality of care: You asked that our medical staff prepare facts and figures to show the quality of Permanente care. Accordingly, the director of the Permanente Department of General Surgery complied published mortality rates in surgical cases for various hospitals and compared them to Permanente's experiences, in order to answer the question: "Are the mortality risks of the operative procedures carried out at Permanente comparable to the best?" Briefly, the findings are as follows:

"There have been 1,900 patients operated for various types of hernia in the hospital, including bilateral repairs as one. There has been not a single hospital death in this group of patients.

"Perforated peptic ulcer: 124 patients operated for this acute illness with only 3 deaths, a mortality rate of 2.4 percent. This is an outstanding record which has never been equaled. M. de Bakey collected all reported groups of such patients and found the average mortality rate to be 22.4 percent. More recent reports average 10 to 15 percent.

"Appendectomies: 1,000 operations for acute appendicitis, not perforated, with no deaths whatever—a record which cannot be surpassed. About 150 patients have been operated for appendicitis with perforation and peritonitis, of whom 3 or 2 percent died. Most reports run much higher, but this figure was approximated by University of Pennsylvania group which had 2.6 percent mortality.

"Colon resections and abdominal perineal resections: 40 without a death; 105 gastric resections with but 2 deaths, including resections for gastric cancer, which usually carries a risk of about 10 percent.

"Biliary tract operations: 139, including complex and difficult work on the common bile duct and all instances of acute and ruptured gall bladders, with but 1 death. Most reported mortality rates for simple cholecystectomy alone run 2 to 4 percent.

"Operative procedures which are extensive or ordinarily carry a high risk, but which have been done without a hospital death, include 6 pancreatico-duodenectomies (whipple operations), 16 subphrenic abscesses, a hip disarticulation, a hemi pelvectomy."

Acceptance of the health plan depends upon the public: When groups of employees inquire about enrolling in the Permanente plan it is our practice to ask them to investigate all types of prepaid medical and hospital services, make comparisons, and choose the best plan available and most fitting their needs.

Enclosed is a copy of the services and fees offered subscribing members. Your committee staff can compare this plan with other voluntary health plans and ascertain impartially how various plans compare for cost and amount of services provided.

Out of 100,000 served by the Permanente system, not more than 12 percent at present are Kaiser employees.

The present program had its earliest beginning around 1933, when Dr. Sidney Garfield went into a sun-baked, thinly populated area of California and set up a clean little hospital to bring medical and hospital care to construction workers on their remote jobs. The plan subsequently was carried to the scene of construction of great dams in the West. During the war, when upward of 180,000 workers poured into our shipyards in the San Francisco Bay and Portland, Oreg., areas, and other workers were assembled to produce steel at Fontana, Calif., the Permanente hospitals were set up to provide critically needed services.

The plan grew up directly and simply out of great human needs that had to be filled—first, on remote construction projects, and, later, when tremendous war jobs were to be done and the workers doing them had to have emergency services of doctors and hospitals to care for their injuries and ills. It was not originally conceived for extension to the public.

Then after the war, considerable interest arose in seeing the plan and the available facilities continued being utilized for the public welfare. A serious shortage of hospital beds existed in the Oakland area. Many former shipyard employees and others who had become interested in the wartime health services made inquiries or made requests for continuation of the Permanente plan. It became apparent to the doctors and personnel who had worked together in the wartime operation that Permanente could fulfill peacetime services for which there was a real demand. As a result, the health plan was broadened to accept not only our own employees, but individuals and groups of other employees who desired the benefits of this voluntary plan.

Several labor organizations and such groups as University of California faculty members have made thorough studies of various prepaid medical-hospital plans, in order to obtain the greatest value for their members.

Alameda County Central Labor Council, composed of American Federation of Labor unions, endorsed the Permanente plan. Its official newspaper, the East Bay Labor Journal, in reporting the endorsement, stated:

"A number of the unions affiliated with the council are already participating in the health plan. These include the Milk Wagon Drivers, Oakland Typographical Union, Office Employees' International Union, Carmen's Union, Division 182, Building Service Employees, and the Cleaning and Dye House Workers.

"This health plan is based on several principles which made good sense to a union man. These principles are:

"1. Prepayment: Members of this plan pay weekly or monthly dues which make them eligible to all the services of the plan. The prepayment coupled with a comprehensive coverage makes it important for Permanente to exert all its efforts in the direction of keeping the members well. In other words, the economic relationship of Permanente with the patient is entirely different than that of the outside practitioner with his patient. Normally, a doctor makes his money from people who are sick. Permanente saves money when its members are well. Once you are a member of the health plan, you are encouraged to come in and see a doctor when you do not feel well. It is far cheaper to treat you for your cold than it is to hospitalize you for pneumonia.

"2. Group practice of medicine: Permanente has under one roof some 50 doctors representing all the specialties in medicine. Medical science is a vast and complicated field and no one man can be master of all the phases of this science. By having all the specialists under one roof, the members

receive the benefit of specialist service not only when they are very sick and their condition is critical but as a matter of regular routine.

"3. Adequate facilities: As a result of a large prepaid membership and a large group of doctors all practicing together, Permanente has the very best equipment that science has devised in order to find out what is wrong with people and to cure them. They also have highly qualified technicians to operate this equipment."

The California CIO Council, in State convention, adopted a resolution endorsing the Permanente plan and issuing a statement to its affiliated councils and locals, reporting: "There are at the present time in the State of California a number of privately operated voluntary hospital and medical care plans. The only plan, in our opinion, which merits consideration and support by the CIO is the medical and hospitalization plan of the Permanente Foundation. This plan provides the participants with excellent medical care at a premium which is cheaper for the services rendered than any existing plan. The costs of the Permanente plan are within the financial ability of our members. The California CIO Council endorses the Permanente plan and recommends it to the membership of its affiliated organizations as a means of meeting medical and hospital costs on a prepaid basis."

Growth of Permanente plan membership is a concrete evidence of public demand and need for it. The average net growth of membership in the Permanente plan is 2,000 persons a month.

A number of members of the California Physicians Service and Blue Cross plans select Permanente doctors and hospitals to supply them the services provided under their respective plans.

The Permanente physicians operate as an independent partnership in private enterprise, using the medical center facilities of the nonprofit foundation. A large percentage of Permanente physicians are partner owners of their own practices. New additions to the staff of physicians and surgeons become eligible to join the partnership after a period of service with the organization.

The prepaid funds are divided between Permanente hospitals and the medical group on an actuarial basis in relation to the services provided by each. The group partnership of physicians employs its own assistants, nurses, receptionists, etc. The doctors lease space in the medical centers. The hospitals pay their expenses out of their share of the funds.

The doctors prosper under the arrangement. On the basis of surveys by Medical Economics, it is found that Permanente doctors receive earnings at least equal to or better than the averages for individual practicing doctors in their various fields.

Not only do the hospitals become self-sustaining and provide funds for amortizing their property and equipment, but the Permanente Foundation, which owns the medical center facilities in which the Permanente health plan is operated, is a charitable trust. Any surplus funds of the foundation must be used to carry on its purposes—namely, to create medical centers and provide high quality medical and hospital care—and beyond that, to provide hospital care for the needy, for the teaching and training of doctors and nurses, and for research.

An example of how the foundation is able to foster the extension of needed health services is this: The Permanente Foundation is assisting financially toward providing facilities for the Kabat-Kaiser Institute, which operates rehabilitation centers for the disabled in Washington, D. C., Vallejo, and Santa Monica, Calif. These Kabat-Kaiser Institutes supply treatment aimed at restoring to useful lives persons who have been disabled by the various neuro-muscular illnesses such as multiple-sclerosis (of whom there are 300,000 estimated sufferers in the United States), poliomyelitis, cerebral palsy, cerebral hemorrhage and paraplegia.

The Permanente Foundation feels that the plan which has been evolved is economically sound for all concerned—first, for the patients who can spread the risks of the high cost of illness as they would through insurance and who obtain a maximum of high-quality medical, surgical and hospital protection for their monthly payments; second, for the hospitals, which can operate without the deficits which so often plague private hospitals, yet provide fully adequate facilities and services; third, for the doctors, since their earnings are sufficient to attract top grade men to their group.

What contribution to the future can be made? This is a time when great attention is being given to offering the American people a wider and better distribution of medical care at the lowest possible cost. Several different prepayment plans are in operation and each plan, including the Permanente plan, as it is tested, changed, and improved, should be able to make a definite contribution toward finding the best answer.

Meantime, a heated controversy rages between advocates and foes of so-called compulsory Government or socialized medicine. I unequivocably believe in the American tradition of private enterprise, which has been responsible for tremendous advances in this country and which can continue working for the good of the people. Americans turn to Government for new services only when a democratic majority of the people and their leaders or officials demonstrate a conviction that the Government should fill certain human needs that are not being met or that cannot be met as well in other ways.

It is my faith that the medical profession, which has made giant strides in the science of diagnosing ills and healing people, will demonstrate the enlightenment, courage, cooperation and practical gumption to protect the people against the costs of illness within the framework of private enterprise. The Permanente plan represents one development of private practice and of free enterprise. Certainly private enterprise, whether in business, industry or medicine, can keep on always doing a better job than it has done before. So I feel confident that the doctors can show that their segment of the private enterprise system is able to rise to the challenge and make rapid and constructive progress toward spreading the burden of illness.

Looking upon the Permanente plan as a pilot operation, can some worth-while experiences and guideposts be obtained from its success? Does it have something unique to offer?

The distinct experience to be gleaned from the Permanente plan is that it has combined three successful practices that are well recognized in the work of American doctors and hospitals, namely:

1. Prepayment: The National, State, and County Medical Associations have indorsed the principle of prepaid medical care. The physicians operate their own blue-shield plans of medical service, which are now estimated to have nearly 10,000,000 members. The Blue Cross hospitalization plans are reported to have some 33,000,000 persons now enrolled. Prepayment is an essential feature of these plans.

2. Group practice: The success of group practice of medicine is exemplified by Mayo Clinic at Rochester, Minn.; the Lahey Clinic at Boston; and Crile Clinic in Cleveland. The achievements of group practice are notable at the great university hospitals like those of the universities of Chicago, California, Stanford, and Iowa.

3. Medical centers: Combine the prepayment plan with group practice and then the natural development is the medical center, where the physicians, surgeons, specialists, nurses, and administrative personnel are brought together under one roof in a well-equipped hospital. Through the medical center, the patient can obtain both medical and hospital care, attended by the finest physical facilities and scientific developments.

These three combined—prepayment, group practice, and the hospital medical center—offer a real approach to providing the patient the most for his money.

Any good group of doctors could carry out a similar combined program of working together in a hospital center and providing their services, as well as hospitalization, through a prepayment plan.

Respectfully yours,

HENRY J. KAISER,
President, the Permanente Foundation.

THE PERMANENTE HEALTH PLAN (GROUP PLAN)
HOSPITAL, MEDICAL AND SURGICAL CARE AT THE PERMANENTE HOSPITALS—SUBSCRIBERS ONLY

1. Subscribers are entitled to 111 days hospital care for each illness or injury arising while a member of the plan. No charges are made for any of the following services:

All services of physicians and surgeons while hospitalized, including all operations, (with the exception of removal of tonsils). Room and board. Private room and special diet as required. Nursing service. Private nurses as required. Use of operating rooms. Services of anesthetist. Anesthetics. Drugs and medicines. Blood transfusions provided blood is replaced. Ambulance service within 30 miles of hospital.

Consultations and treatment at the Permanente medical centers

2. Subscribers are entitled to consultation and a full year's treatment for any condition at a charge of $1 per office call. The following services are included:

Visits to the doctor's office. Specialists' consultations and treatment. Eye examinations for glasses. Emergency service 24 hours a day.

Care at your home

3. Subscribers are entitled to all necessary house calls by physicians or visiting nurses. A charge of $2 is made for the first house call by a doctor for each illness or injury; no charge is made for succeeding calls; or for calls by visiting nurses.

Emergency service 24 hours per day.

Drugs and medicines

4. Subscribers are entitled to all drugs and medicines without charge while hospitalized under the plan. A reasonable charge is made for drugs and medicines furnished to patients receiving treatment at the medical centers or at their homes.

An efficient pharmacy to fill all prescriptions.

X-rays and laboratory work

5. Subscribers are entitled to all required X-rays and tests, up to a full year's treatment, for any illness or injury arising while a member of the plan. This service includes X-rays; X-ray therapy; fluoroscopy; dental X-rays if required by a dentist; laboratory tests, such as blood counts, blood chemistries, urine checks, electrocardiograms, basal metabolism, etc.

Physical therapy

6. Subscribers are entitled to all required physical therapy, up to a full year's treatment, at a charge of $1 per treatment.

Maternity care

7. Subscribers (women) are entitled to full maternity care at an additional charge of $60 if confinement occurs after 10 months' membership, $140 if before 10 months' membership. In the event pregnancy is interrupted or terminated, a reasonable charge will be made for obstetrical services rendered. Such charge shall in no event exceed the charge above specified for obstetrical services.

Care of mother and child during mother's confinement, including hospitalization as provided above; care of mother before and after confinement; X-rays and tests; special procedures, such as Caesarean sections, if required.

FAMILY DEPENDENTS

1. Family dependents of subscribers are entitled to 30 days' full hospital care, plus 81 days immediately following, for each illness or injury arising while a member of the plan at a charge of one-half regular rates. One exception: Drugs provided while hospitalized during this 81-day period will be charged for at regular private rates.

All services of physicians and surgeons while hospitalized, including all operations (with the exception of removal of tonsils). Room and board. Private room and special diet as required. Nursing service. Private nurses as required. Use of operating rooms. Services anesthetist. Anesthetics. Drugs and medicines. Blood transfusions, provided blood is replaced. Ambulance service within 30 miles of hospital.

Consultations and treatment at the Permanente medical centers

2. Family dependents of subscribers are entitled to consultation and a full year's treatment for any condition at a charge of $1 per office call. The following services are included:

Visits to the doctor's office. Specialists' consultations and treatment. Eye examinations for glasses. Emergency service 24 hours a day.

Care at your home

3. Family dependents of subscribers are entitled to all necessary house calls by physicians or visiting nurses. A charge or $2 is made for each house call by doctor; no charge is made for house calls by visiting nurses.

Emergency services 24 hours per day.

Drugs and medicines

4. Family dependents are entitled to all drugs and medicines without charge while entitled to 30 days' hospitalization. Drugs and medicines provided during the 81 days will be charged for at full private rates. A reasonable charge is made for drugs and medicines furnished to patients receiving treatment at the medical centers or at their homes.

An efficient pharmacy to fill all prescriptions.

X-rays, laboratory work, and physical therapy

5. Family dependents are entitled to all required X-rays, tests, and physical therapy, up to a full year's treatment of any illness or injury arising while a member of the plan, at one-half regular rates. This service includes X-rays, X-ray therapy, fluoroscopy, dental X-rays if required by a dentist. Laboratory tests, such as blood counts, blood chemistries, urine checks, electrocardiograms, basal metabolism, etc., physical therapy, such as ultraviolent treatments, massage, heat treatments, diathermy, and whirlpool baths, etc.

Maternity care

6. Family dependents are entitled to full maternity care at an additional charge of $95 if confinement occurs after 10 months' membership. In the event pregnancy is interrupted or terminated, a reasonable charge will be made for obstetrical services rendered. Such charge shall in no event exceed the charge above specified for obstetrical services.

Care of mother and child during mother's confinement, including hospitalization as provided above. Care of mother before and after confinement. All X-rays and tests. Special procedures, such as caesarean sections, if required.

SPECIAL PROVISIONS

Preexisting conditions

Any illness or injury present at the time of joining the plan will receive the same services of physicians and surgeons as are provided for illnesses arising while a member of the plan. Other services such as hospitalization will be provided at one-half regular rates. Two exceptions: In-patient drugs and ambulance service will be charged for at private rates.

Who can be included

The subscriber to the plan may subscribe for himself alone, or for himself and his entire family. He may not subscribe for himself and part of his family. Family includes husband or wife, and dependent children under 18 only. If the spouse of subscriber is over 60 years of age, a physical examination is required before acceptance as a family dependent member.

New-born children become eligible for membership on the first day of the month following discharge from the hospital.

Dependent children who reach the age of 18 must apply for separate membership if they wish to enjoy further benefits under the plan.

Registration fee

An initial registration fee of $2 is added to the first month's membership fee.

Exclusions

Insanity or attempts at suicide; tuberculosis, conditions covered by workmen's compensation; dental care; corrective appliances; conditions resulting from a major disaster or epidemic. Congenital conditions of infants considered preexisting.

Hospitalization will not be provided for contagious diseases.

Conversion membership

If membership through a group is terminated, a member may apply within 30 days for conversion membership under an individual account. Any person who has had continuous membership in the plan for 2 years is entitled to such conversion without medical review or physical examination. Full details concerning conversion membership may be secured at any of the medical centers.

Monthly membership fees

Individual subscriber	$3.00
Subscriber and 1 family member	4.85
Subscriber and 2 or more family members	5.65

BENEFITS AND COSTS OF VARIOUS PREPAYMENT PLANS

The San Francisco News of June 23, 1949, analyzed the cost of various prepayment medical and hospitalization plans, and specific benefits obtained under each of the plans.

The actual bills of a woman, identified only as "Mrs. M.", were listed for all expenses in connection with an operation for removal of a tumor and the thyroid gland. Her bills for the operation totaled $917.83.

Had her family been covered by a plan for families of three or more, the San Francisco News concluded that this would have been the situation as to the cost of this same operation:

	Yearly payments	Amount of Mrs. M's. bill that would be paid by plan	Percent of bill paid by plan
1. Permanente plan	$67.80	$888.00	96
2. California physicians service plan	94.80	550.35	60
3. Blue Cross plan (hospital service of California)	76.80	495.85	54
4. California Farm Bureau Federation plan, carried by 3 private insurance companies	83.53	370.00	40
5. Individual health insurance policy carried by Mrs. M	35.76	181.00	20

Dr. Dean Clark of the University of California School of Public Health, reported on the percent of "average total expenditures for medical care actually paid by plans of various types," as follows:

	Percent
1. Typical group practice	46.0
2. Typical Blue Cross-Blue Shield plan	21.5
3. Typical commercial group insurance	16.2

Business Conditions in Casper, Wyo.

EXTENSION OF REMARKS

OF

HON. LESTER C. HUNT

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. HUNT. Mr. President, I send to the desk for the purpose of having printed in the Appendix of the RECORD a brief statement with reference to business conditions covering the last 9 months in the city of Casper, my State of Wyoming.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

CASPER LEADS NATION 9 MONTHS

Casper is the high-spot city of the Nation for the ninth consecutive month, according to sales forecasts for July released by Sales Management magazine. Casper first topped the Nation last September.

The magazine's figures show Casper leading the Nation in July with retail sales of 115.3 percent over the same month a year ago.

Retail sales here will hit $3,730,000 next month, according to the estimates compiled by the magazine's research department.

The retail survey shows that Austin, Tex., is Casper's closest competitor. There, July sales are estimated to reach 112.9 percent of the same month a year ago. Next in line is Reno, Nev., with sales at 111.1 of a year ago.

The only other Wyoming city in the ratings is Cheyenne, with sales estimated at 102 percent of a year ago.

Other cities in the magazine's survey with 105 percent or higher ratings are:

Houston, Tex., 105.8; Wichita Falls, Tex., 106; Baton Rouge, La., 113; Austin, Tex., 112.9; Butte, Mont., 108.2; Albuquerque, N. Mex., 109.7; Hempstead Township, N. Y., 106.2; Bartlesville, Okla., 107.5; Charleston, S. C., 107.2; Aberdeen, S. Dak., 106.3; and Roanoke, Va., 105.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in a recent issue of the Nebraska Farmer, dealing with the Brannan plan for stabilizing prices and making agriculture more secure.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Under the guise of a program—the Brannan plan—for stabilizing prices and making agriculture more secure, a partisan political pow-wow was held in Des Moines June 13. A good day for it.

Ostensibly it was to be a gathering of representative farmers and ranchers from 16 States, and an open discussion of how best to assure adequate prices for agricultural commodities. Actually it was a premeditated and well-organized assembly of Democrat Party officials and committeemen and women with the high "brass" prominently in the foreground to lend color and insure enthusiasm.

Nothing like it ever has been done before in the alleged interest and welfare of the farmer. But even more astounding and alarming was the bold promotion and acceptance by the management of a special labor group, the CIO, as an essential factor in assuring the permanent prosperity and stability of agriculture.

Well, the design of the Brannan plan has come sufficiently to light by now that its alleged purposes are somewhat understood. It would guarantee parity income—not prices—for the farmer, and lower food prices for the consumer. How? With Government subsidies, and production controls by the United States Department of Agriculture. How much would it cost? The answer—???. No one, not even Mr. Brannan has ventured a specific guess. And how would the Treasury be reimbursed? Taxes, of course. And who would pay them? Only those in the top income brackets, we would be led to believe, but actually by all—and really more by the farmer than the average consumer.

No one who understands the first principles of the national economy will question the prime necessity for a prosperous and stable agriculture. The basis for that is parity in exchange values between agricultural and nonagricultural commodities and services. That has been done and can continue to be without subsidizing both the producer and the consumer. In fact, it cannot be done by the latter.

But let's get away from the purely mercenary side of it. America is at the crossroads. Which means more? Our immediate, individual financial interests, selfish as they may be, or the perpetuation and preservation of the principles of government upon which this greatest of all Nations was built? That is the issue. And it is vital.

I leave the answer to a great American—one in whom more people have unselfish confidence, perhaps, than any other living man. A man who never has affiliated with any political party; a man who probably would have been President today had he been willing to accept the nomination; a man who in the supreme emergency led our forces in battle, and conquered. Dwight Eisenhower.

Hear him!

He warned against letting the Government become too strong—"believers in paternalism, if not outright socialism" gaining "still additional powers for the central Government." And in words weighted with fear of hazards for the future he declared "the army of persons [those formerly implied] are really more dangerous to our form of government than any external threat that can possibly be arrayed against us."

On the very day, June 13, when the aforementioned partisan forces concentrated on a deceptive theme to promote their interests, those words by Dwight Eisenhower in behalf of his country as a whole were given to the public. They will resound throughout the ages.

Will we hearken to them?

SAM R. MCKELVIE.

Failure of State Socialism in Britain

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Britain Sends Financial S O S to United States To Save Failing State Socialism," written by Constantine Brown and published in the Washington Evening Star of July 6, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITAIN SENDS FINANCIAL S O S TO UNITED STATES TO SAVE FAILING STATE SOCIALISM

(By Constantine Brown)

The British Government has sent an S O S to Washington for immediate financial assistance to save state socialism, the great experiment of the British Labor Party, which has proved a dismal failure.

Sir Stafford Cripps, its chief advocate who was given more extensive powers by the government and Parliament than any other peacetime administrator, realizes that this failure may deal a death blow to the cherished Utopian doctrines of those who insist that the only solution to our troubles lies in government paternalism. He is stubbornly fighting on, but his only hope of surviving, even temporarily, lies in assistance from the American Government.

Since 1946 the British Government has received more help from America than has any other western nation. We have financed the Labor government to the tune of more than $4,750,000,000 within a period of 3 years. Britain got a $3,750,000,000 loan from us in 1946 and has received more than $1,000,000,000 under the European recovery program.

LAGS IN RECOVERY

Yet, compared to continental European countries like Belgium, France, Holland, and Norway, Britain is a long way behind in its recovery.

According to economic reports, Belgium not only has recovered but is enjoying a small wave of prosperity. The reason is to be found in the fact that while Paul-Henri Spaak, Belgium's former Premier, was a Socialist, he practiced political rather than economic socialism.

Although Belgium has the densest population in Europe, and although she has suffered from the war, she has managed her affairs so well with modest help from the United States that today she is probably the most prosperous country in Europe. Socialists did not attempt to nationalize anything, but adopted a policy of live and let live in its economic affairs.

Holland, which suffered from Nazi invasion of her home territory and Japanese occupation of her colonies, also is on a fair way to recovery, in spite of serious set-backs from Indonesian political troubles. The Dutch Government, realizing that socialism is still some time away, has refused to experiment with any form of state paternalism, and today, in spite of the Nazi devastation, is in a far better way than the British Isles.

Even France, where the political turmoil always has interfered with its economies, the situation is much better than in Britain. After the fall of the De Gaulle regime the frequently changing Government, was composed of a mixture of Socialists and Communists, with Maurice Thorez, Moscow's principal stooge in France, as Vice Premier. Under such administrations nationalization of some important industries and financial establishments was undertaken with devastating effects on the public finances.

NEW GROUPS IN POWER

Since the spring of 1947 a new administration, composed of political—not economic—Socialists has been in power, with the Communists excluded. As is usual in France, the administration changed three times in 2 years, but the drive toward nationalization and paternalism received a serious set-back. The result has been that France, while still in serious political difficulties, is better off and less dependent on immediate American financial help than Britain.

A similar situation exists in Italy, where the Christian Socialists, headed by Premier Alcide de Gasperi, who also removed the Communists from the Government, are doing a good recovery job. Italy, much poorer in raw materials and food than Britain, is far better off today than the United Kingdom is. State socialism and paternalism have not been seriously attempted in Italy.

Much of the $4,750,000,000 received by the British Government from the United States was wasted in admirable ideological experiments such as nationalization of industries, state medicine, and other measures still considered utopian, with the result that Britain today is on the verge of bankruptcy. Bankruptcy will become a fact unless additional and immediate support is received from the United States at once.

In the last 4 years, during which Britain's Labor Government has had every opportunity to prove that socialism in our time is not a mere dream, it has managed to place the most powerful industrial and financial country in Europe behind all other countries on that Continent.

Comparison Between British Labor Government and Fair Deal Government

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a very timely article entitled "Two Say 'Enough,'" published in the Boston Herald of June 25, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO SAY "ENOUGH"

Baron Milverton, who was raised to the peerage in 1947 after a long and distinguished career in British colonial administration, has been a member of the Labor Party. The other day he solemnly left the Labor benches in the House of Lords, crossed the narrow chamber, and took his place with the Liberals. He had had enough.

James F. Byrnes, who has had a long and distinguished career in Washington and served in high advisory and administrative capacities to President Roosevelt and President Truman, has similarly left the benches of the Deals, Fair and New. His transition was not formalized by any march, but it was made no less evident by his words. At the bicentennial of Washington and Lee University, he said this:

"We are going down the road to statism. Where we will wind up no one can tell. But if some new programs seriously proposed should be adopted, there is danger that the individual—whether farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of state."

Now note what Lord Milverton pronounced to a hushed gathering of peers in reference to the bill to nationalize the steel industry:

"I have for some time felt, with growing apprehension, that this bill, for lovers of freedom, marks the parting of the way. * * * The road on which we are traveling leads to a precipice at the foot of which clearly emerges the totalitarian state."

There is a striking parallelism here, just as there is a striking parallelism between what the British Labor Government is doing and what the Fair Deal government in this country is doing.

"Some of the proposals now suggested which would curtail the liberties of the people are offered in the name of public welfare and are to be made possible by Federal aid," Mr. Byrnes warned. "That phrase is an opiate. It is deceptive. It leads people to believe that Federal aid funds come from a Christmas tree. * * * Beware of those who promise you something which does not belong to them and which can be given to you only at your own expense or the expense of another who may not produce to make the promise good."

Mr. Byrnes, like Lord Milverton, has had enough.

Democratic Party's Legislative Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. I ask unanimous consent to have printed in the Appendix of the RECORD a report on the program of the Democratic Party together with recommendations adopted at a mass meeting at Chattanooga, Tenn., on May 28 which was held under the sponsorship of the Americans for Democratic Action.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

"NOW IS THE TIME FOR ALL GOOD MEN TO COME TO THE AID OF THEIR PARTY"

(A report of the conference on the pending legislative program of the Democratic Party, held in the Hamilton County courthouse, Chattanooga, Tenn., May 28, 1949)

A program for marshaling support of the Democratic Party's legislative program, including an invitation to President Harry S. Truman to speak in Chattanooga, was advanced by those attending a legislative conference in Chattanooga May 28, 1949.

Prompted by the slowness of the Eighty-first Congress to achieve a record of accomplishment on the issues of last November, leaders of the Democratic Party here, of organized labor, farmers, Americans for Democratic Action, and other organizations attended the afternoon session which had as its two purposes:

1. To hear reports and to discuss the status of pending legislation.

2. To discuss means of marshaling support for the legislative program of the Democratic Party.

Explaining the purpose of the meeting, George Hull, president of the Chattanooga ADA chapter, which organized the conference, said:

"Fulfillment in Congress of the program of the Democratic Party has been slow, and continued failure to achieve a program of actual accomplishment based on the issues that won the victory last November may well handicap the effectiveness of the party in the future."

After the meeting, he said, "Organizations and individuals attending this conference clearly showed their appreciation of the need of marshaling support of the Democratic Party's legislative program.

"Support for the party's legislation, which is designed to implement the party's platform, is just as important now as support of the party's candidates was last November."

It was emphasized through the meeting that the party won power last November on its platform, and that supporters of the program should back its major points, not merely the parts in which individual groups might be interested.

The following reports were made to the conference:

Housing, Will Allen Wilkerson, attorney for the Chattanooga Housing Authority.

Federal Aid to Education, Willard Millsaps, president of the Chattanooga-Hamilton County Teachers' Union.

TVA and Regional Authorities, Ken Whitaker and S. R. Finley, of the Chattanooga Electric Power Board.

Foreign Policy, Mrs. W. B. Richardson, PTA, and League of Women Voters leader.

Farm Legislation, Frank Kelley, Jr., of the Hamilton County Farm Bureau.

Civil Rights, C. B. Robinson, principal, Calvin Donaldson School.

Labor Legislation, Stanton E. Smith, president, Tennessee Federation of Labor; J. C. Stafford, president, Chattanooga Industrial Union Council; J. C. Cox, chairman, political committee, Brotherhood of Railroad Trainmen.

Health Insurance, Dr. Curtis Page, University of Chattanooga.

Economic Stabilization, Tom Ragland, president, Mountain City Mill Co., Inc.

Participating in the conference, in addition to those already named as speakers, were:

Lee Allen and Mrs. R. L. Howard, chairman and vice chairman, Hamilton County Democratic Executive Committee.

Clyde Russell and Harry Mansfield, president and vice president of the Young Democrats.

Mrs. Nancy Lea Smith, president, and Mrs. Hubert Pless, past president and board member, Democratic Women's Club.

T. R. Cuthbert, editor, the Labor World.

CIO Industrial Union Council.

Chattanooga League for Political Education.

Chattanooga Central Labor Union (AFL).

Americans for Democratic Action, Chattanooga chapter.

The decisions of the conference did not commit groups whose leaders were present to participate in activities suggested by the meeting, but most of those present indicated that they thought their groups would cooperate in future activities to gain support for the Democratic program.

The major suggestions for building support for the Democratic Party's program were:

1. Invite President Truman to address a mass rally in Chattanooga.

2. Neighborhood or precinct meetings to inform voters of the party's program.

3. A list of qualified speakers willing to address meetings of all types of organizations on the issues involved in carrying out the party's program.

4. Contact affiliated organizations throughout the country to create a ground swell of support for the program.

5. Send a report of this conference to Senators KEFAUVER and MCKELLAR, the Tennessee House delegation, other officials, individuals, and interested organizations.

Room for Private Builders

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Room for Private Builders," published in the New York Times on July 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROOM FOR PRIVATE BUILDERS

Analysis of the possible effects of the housing bill agreed upon last night by a House-Senate conference committee fails to show justification for the fears expressed by opponents of the measure that it might stifle private home and apartment building in the country. A few important elements in the industry appear to be overly impressed with the arguments to that effect, presented by the "antis" during the heated debate. They are reported to be pessimistic about the prospects of their business and the possible threat of competition from Federal housing enterprises, and are ready to curtail their operations. They would be ill-advised to do so.

While the over-all goal of 810,000 new Government housing units in 6 years is no minor undertaking, and the possible maximum subsidy of more than $300,000,000 annually is quite a substantial investment in improvement of standards of shelter for a major segment of our people, this outlay of funds will not "kill" the private home market. If properly applied, it will go to

meet a demand never touched by the speculative or operative builder, and should serve to stimulate a desire for better housing even among those economically able to pay their own way. The whole program involves a production of dwelling units somewhat less than 15 percent of the capacity of the industry, which built last year nearly 1,000,000 homes. Moreover, the subsidized houses will be concentrated in the larger centers of population, and many communities will get none of them. Even in cities like New York a vast field will remain open for private home ownership if adequate value is provided in homes put up and sold by traditional methods.

A great obligation rests upon the Federal and local housing authorities to supply the low-rent apartments only to worthy families of low income, and to prevent encroachment on the legitimate field of private building activity. No less of an obligation faces the industry, which must redouble its efforts to tap the still unfilled demand for modern dwellings to match the pocketbook of the average family. The extent to which it meets this challenge will be the measure of the future pressure for more public housing. It is up to the builders themselves to keep this need down to a minimum.

Helen Rembert Carloss

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. STENNIS. Mr. President, Helen Rembert Carloss, who passed away in December 1948, was widely recognized throughout the legal profession as one of the outstanding tax authorities in the country. Few lawyers in any field have ever received such praise from Justices of the Supreme Court.

Miss Carloss was a native of Yazoo City, Miss. After graduating from Mississippi State College for Women she taught for several years in the public schools of Mississippi. Ambitious to become a lawyer at a time when few members of her sex were active in the profession anywhere in the country, she went to the late Senator John Sharp Williams for advice. At his suggestion, she secured a position as a clerk with the Bureau of Internal Revenue, and attended the law school of George Washington University at night.

Graduating from that institution with a fine record, Miss Carloss became a member of the legal staff of the Department of Justice, and before many years was known as one of the outstanding attorneys in its Tax Division, where her special field was gift taxes.

By nature a quiet and unassuming person, Miss Carloss never sought fame or honors, but her abilities were widely recognized by all who came in contact with her work. She was given the George Washington University alumni award for distinguished attainments, and on one occasion was honored as the alumnae speaker at Mississippi State College for Women.

I ask unanimous consent that the following article in regard to her career be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A memorial service was held in the conference room of the Supreme Court on May 25, 1949, by the Women's Bar Association of the District of Columbia, in tribute to Miss Helen Rembert Carloss. Miss Carloss was from Yazoo City, Miss., and graduated from Mississippi State College for Women. She came to Washington at the suggestion of the late Senator John Sharp Williams and was employed at the Bureau of Internal Revenue as a clerk. She studied law at George Washington University and, after admission to the Bar, was employed in the Department of Justice as a tax attorney. She became a recognized authority on the subject and at the memorial service Attorney General Tom Clark stated that Miss Carloss had argued 27 cases before the Supreme Court, a record for any attorney in the Department. He also stated that the late Chief Justice Stone had said to him that the court considered it had had an intellectual treat when Miss Carloss made an argument before it. A personal tribute was paid to Miss Carloss by Judge Nadine L. Gallagher of the Municipal Court of the District, and there follows the remarks made by Judge James W. Morris of the United States District Court of the District of Columbia.

"Helen R. Carloss is deserving of tribute. She was an outstanding lawyer and reflected great credit upon her profession. I have not the slightest hesitation in saying that, in her own field of tax law, she achieved an eminence shared by few and surpassed by none.

"I value highly the friendship and association which it was my privilege to have with her. She came to the Department of Justice in the early part of 1928, years before I did, at the instance of another outstanding lawyer, Mabel Walker Willebrandt, responsible for such tax litigation as was then handled by the Department of Justice. Miss Carloss was, therefore, one of the few who constituted the nucleus around which the newly created Tax Division was organized in 1934, with Assistant Attorney General Frank J. Wideman in charge. It was then I first came to know her as one of the stalwarts who was depended upon when the highest order of ability and devotion to duty were required. During the period that I was associated with her—first as an assistant to Mr. Wideman and later as Assistant Attorney General in charge of the division—she carried on litigation of the highest importance in practically every Circuit Court of Appeals in the country, and did it so well that, among other encomiums, I recall the expression of Judge Learned Hand, of the Second Circuit, that 'Miss Carloss is one of the best men who appears before our court.' She also undertook the still more arduous and dubious tasking of trying to drill into me the principles and intricacies of tax law so that I could, without too much reflection upon the Tax Division, argue the cases in the Supreme Court which had been delegated by the Solicitor General to me to present. I am glad to say that together we did pretty well. I was, however, delighted when the Solicitor General, upon my recommendation, designated Miss Carloss to present personally in the Supreme Court many cases of a most difficult nature. Her presentation of such cases excited well-deserved commendation, displaying there, as she had in other forums, her exceptional ability to state issues clearly, to make persuasive application of authorities, and to present with complete sincerity and candor such analysis of competing principles that her conclusions and contentions demanded sympathetic consideration.

"From one who has had association with Miss Carloss in the Tax Division, as Solicitor General, and as a member of the Supreme Court before which she has argued, I quote Mr. Justice Jackson, who said to me:

" 'I had the highest regard for Miss Carloss. Her knowledge of the record was perfect; she mastered the facts. On the law, she not only had research, which many people have, but she had a balance of judgment as to what should be advanced. She had a candor that made you feel, when she had finished, that you had the entire story.'

"I am also permitted to quote another who had association with her as Solicitor General and later as a member of the Supreme Court, Mr. Justice Reed:

" 'I had a great admiration for Miss Carloss. She became one of the foremost advocates in the field of internal-revenue law.'

"There can be no doubt that Helen Carloss' ability and competence, on equal footing with the best legal talent in the country, have been an important factor in today's acceptance and recognition of women in high places of the legal profession. She employed in her work those qualities which are demanded of lawyers of the highest type, whether man or woman: keenness and alertness of mind, untiring energy, intensive training, intellectual honesty, forthrightness, and courage. It is needless to say that she found great pleasure and satisfaction in her work, without which she could not have achieved the success as a lawyer which she did.

"I can think of no more fitting way to conclude this brief tribute to one for whom I have such admiration than to give to you a beautiful and appropriate expression by Mr. Justice Frankfurter:

" 'One of my earliest experiences on the Court has remained one of the most vivid. It was the sight of a frail lady through whose countenance shone nobility of spirit. It seemed almost incongruous to have her open a tax case involving the most technical issues. I had never even heard of Helen Carloss. But at the end of less than 5 minutes of her argument, she left no doubt in my mind that I was listening to a lawyer of distinction. During the course of the years, no lawyer whom I heard often so consistently confirmed that first impression. In her, reason and art and character were fused; advocacy at its best resulted. Our profession should cherish the memory of one who adorned it.' "

Civil-Rights Legislation—The Great Failure

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. JAVITS. Mr. Speaker, the true function of the minority in the Congress requires a vigorous effort to bring about legislation where the majority, despite the promises of its leadership, has been remiss. Nowhere is this more evident than in the field of civil-rights legislation. It is in this field that the majority has been torn or completely frustrated by its own divisions. The responsibility for inaction rests with the majority and the majority cannot escape the responsi-

bility or blame it on anyone else. It is in exactly this field that the minority should press for action. The appended editorial from the New York Herald Tribune of June 22, 1949, eloquently sets this forth:

THE GREAT FAILURE

The failure of the present Democratic administration is nowhere more striking than in the field of civil rights. After all the brilliant promises held out, the only legislation being seriously considered for action at this session involves two innocuous proposals for the creation of a civil rights commission and a joint congressional committee on civil rights. These are study groups and nothing more, lacking any authority beyond that of recommendation; and the commission would be without even the power to subpena. Such a strategy is not a retreat but an abandonment of all the essential positions. To call this pitiful remnant a "civil-rights program" is to be guilty of something worse than mere overstatement.

It is all very well for the Democrats to point to the difficult rule on cloture passed at the beginning of the session; but they have a responsibility to the country to go beyond defeatism. Senator WHERRY has challenged the majority party to bring out even the least controversial of their original civil-rights measures—the antilynching or the anti-poll-tax bill—and has given assurance that from the Republicans will come at least 35 votes to break a filibuster. The Democrats have then to muster barely more than half of their 54 Senate Members to assure cloture. But the faction-ridden party, torn between liberal and reactionary elements as well as broken geographically, is apparently not confident that it can meet even such a test. It prefers, at any rate, to play safe. After brief and desultory hearings on an omnibus civil-rights measure, it focuses its efforts on what is at best a face-saving device.

In the circumstances the Commission and the joint congressional committee are a sham; and it seems impossible that Democrats who have cared earnestly for civil-rights reforms will not recognize and condemn them as such.

The American Lumber Industry and the Marshall Plan

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a United Press dispatch, datelined Washington, July 4, 1949, which appeared in the Savannah (Ga.) Evening Press of that date. Also, two articles from the Southern Lumberman, of Nashville, Tenn., dated June 15, 1949. We Members of Congress who represent lumber-producing areas of the United States are receiving scores of pleas from our lumber manufacturers that the situation described in these articles be immediately rectified and that the markets which the American lumber industry established in Europe before the war be restored to them, and certainly that at least 50 percent of the lumber purchases under the Marshall plan be made from American lumber manufacturers. Certainly it was never intended that the money of the American taxpayer be used to purchase commodities in countries behind the iron curtain.

I also include an article appearing in a weekly newsletter concerning some United Kingdom lumber business.

[From the Savannah (Ga.) Evening Press of July 4, 1949]

SOUND OUT ERP NATIONS ON THEIR LUMBER NEEDS—UNITED STATES HARDWOOD PRODUCERS CLAIM RECOVERY PROGRAM HURTING THEM

(By James C. Austin)

WASHINGTON, July 4.—A high foreign recovery official is now in Europe sounding out the Marshall plan countries on how much lumber they will need in this new fiscal year.

He is Mathias Niewenhous, chief of the lumber branch of the Economic Cooperation Administration's industry division. His mission is urgent because:

1. The Marshall plan countries have given a low recovery priority to lumber for housing and other construction, preferring to spend their ECA dollars elsewhere.

2. United States hardwood producers have charged that their export business, a mainstay of the industry for 50 years, has been ruined by the recovery program.

ECA officials decline to comment on the Niewenhous tour other than to say that one of its purposes is "to discuss with the various nations the possible magnitude of their lumber imports next year."

Their reticence is understandable. ECA is not in the business of promoting United States industry abroad. At the same time, it is charged by law with seeing to it that its recovery program does not upset the domestic economy. It is, officials say, a ticklish job.

Niewenhous has an ace in his hand. It is new ECA policy laid down last April 29 governing recovery authorizations for the purchase of lumber and plywood.

This provides that before ECA writes an authorization for dollar purchases of lumber it will determine why a country other than the United States has been selected, and whether firm bids were sought and received from the American industry.

On dollar purchases not made with ECA funds, ECA is committed to requesting the Marshall plan nations to make their purchase at the cheapest source, to canvass all possible dollar sources, and to make certain that the price paid is not above that quoted by American lumber men.

Niewenhous' visit followed close on the heels of vigorous attack on ECA by Senator KENNETH D. MCKELLAR (Democrat, Tennessee) during Appropriation Committee hearings on the agency's funds for the new fiscal year.

MCKELLAR agreed with arguments of his hardwood constituents that ECA has provided recovery dollars for Europe which the ERP nations are using for commodities other than lumber. This kind of buying frees local currencies—pounds, francs, lira, and the like—to buy lumber inside Europe, sometimes from behind the iron curtain.

Statistics appear to bear this argument out. In its weekly summary of authorizations for June 26, ECA showed that it had authorized only $115,000 for lumber and lumber products for Europe.

But for the week ending June 25, 1948, lumber authorizations totaled $5,500,000. It must be emphasized, however, that this was the biggest authorization listed to that time for lumber; that all previous lumber authorizations to that date had totaled only $400,000.

ECA disputes many of the arguments put forth by the hardwood industry. Exports of hardwood to the United Kingdom—formerly the major export market—did not decline with the advent of ECA, the agency says, but much earlier.

"A large part of the lumber financed by ECA in 1948 was in the way of reimbursement for lumber ordered back in 1947, before ECA was born," an official said.

He added that Great Britain has not been authorized to spend ECA dollars for lumber except in the United States and Canada.

Nevertheless, two countries—Greece and Austria—have been given recovery dollars to make lumber purchases from behind the iron curtain, in Yugoslavia.

"Greece this year was authorized to spend $705,000 to buy urgently needed construction materials from Yugoslavia," an ECA official said. "It was cheap, ungraded softwood needed in a hurry for construction purposes.

"Austria likewise was authorized to buy $182,000 worth of lumber from that country. The greater part of this purchase was for logs used for veneers and plywood. There was urgent need for this material and it was available close by."

Important indexes tell the story of Europe's declining lumber imports.

With 1935–38 as a base of 100, the United Kingdom is shown to have imported from the United States in 1947 about 134 percent, but in 1948 this declined to 39.

The rest of Europe in 1947 imported 90 percent of the prewar average, but only 22 percent in 1948. Other sections of the world likewise declined. In 1947, their imports from the United States stood at 77 percent of prewar. Last year these had declined to 50.

ECA's financing of lumber to date have produced no price kickbacks. Under the law, ECA can recover any overcharges on any commodity on the basis of a post-audit.

"We have made no recoveries on lumber authorizations," Clark L. Simpson, assistant ECA controller, said. "However, we are now making a study of the lumber authorizations to see if any such action is justified."

[From the Southern Lumberman of June 15, 1949]

HARDWOOD EXPORTS

American lumber exporters, especially the exporters of hardwoods, should be encouraged by the recent development in Congress of a tendency to scrutinize the expenditures and policies of the Economic Cooperation Administration. Administrator Hoffman, in his report to Congress, admitted that the ECA is asking a tremendous sum (more than $4,000,000,000) from the American taxpayers, and stated that the request for further funds should be judged on the basis of the record. This is, of course, entirely logical; although it appears that Mr. Hoffman is personally offended when the Congress examines the record and begins to wonder whether the tremendous sum asked by him might not be reduced.

The hardwood exporters ask nothing better than that their plight be viewed by Congress in the light of the record. That record will show that, whatever the ECA may have done for the needy nations of Europe, it has just about destroyed the hardwood export trade of the United States of America. There are still some old-fashioned Americans—including Members of Congress—who feel that charity should begin at home, and that there is something cockeyed about a foreign policy which builds up the industries of far-away foreign countries at the expense of American industry.

The Economic Cooperation Administration, to be sure, is not at a loss for explanations and so-called clarifications of its policies affecting lumber; but after all the cobwebs

of these clarifications are swept away, the fact remains that American taxpayers' dollars are being used abroad to release funds for the purchase of lumber from unfriendly countries and the production of lumber in those countries to be sold in competition with American lumber. Every American lumberman is familiar with the practical effects of this policy, since the shutting off of the foreign markets has resulted in the dumping of this excess lumber on the domestic market, with a visibly demoralizing and depressing effect. These are facts which no amount of official explanation can gloss over.

It is gratifying to observe, however, that the Members of Congress, especially those from the South, are giving evidence of a desire to find out more about what the ECA is doing with the billions of dollars it is spending; and those who have been told of the effect of ECA policies on the lumber business have been shocked and disturbed. Representative COLMER, for example, personally appeared before the House subcommittee considering the ECA appropriation and specifically urged an investigation of the situation where a traditional export market has been practically destroyed in the course of a single year's operation of the recovery program.

For a long period of years the Members of Congress have been open-handed and lavish in appropriations for any apparently well-meaning cause. Now, however, more and more of them are showing an inclination to investigate and find out whether the money so appropriated is being used for the purpose for which the Congress thought it was to be used. It seems safe to say that a majority of the Members of Congress would not vote to spend our money to destroy any American industry; and unless there is forthcoming some assurance that the ECA money will not be so used in the future, it is possible that the ECA appropriation might not be so generously supported as it was when the idea was first advanced.

[From the Southern Lumberman of June 15, 1949]

S. W. Anderson, Director of the Industry Division, ECA: "We have had to be quite blunt and tell them (United States producers) frankly that European recovery—not American trade expansion—is our job." In address June 8 before Canadian Manufacturers Association.

The fir manufacturers, especially those located on tidewater, have just had a most exasperating experience in connection with the widely publicized United Kingdom business, which has been handled in such a weird way that it actually stinks. It seems that under the Marshall plan, $10,000,000 of American taxpayers' money was earmarked for placement of west coast woods. Since the British Columbia mills have been getting the bulk of that business for some time, as proved by records which we recently quoted, and the American mills are suffering such a demoralized domestic market this was very desirable and eagerly sought. When the bids, which were originally scheduled to be opened in May, apparently found American manufacturers likely to get the bulk of it, some very strange things began to happen, following a hurried trip to England by some of the export distributing heads of British Columbia, after which the releasing of this business was unceremoniously postponed. In the meantime the specifications were obviously changed so as to make it extremely difficult, if not impossible, for most American mills to entertain the business. Later the bids were reopened and after a long waiting period it was announced that the British Columbia bidders were to receive 75,000,000 feet of the estimated 120,000,000 feet to be placed, while a few small lots were doled out to American bidders under specifications which it remains to be seen whether some of them can handle. Another feature of this is that the orders provide for supplying this stock partly in odd widths and also hemlock. This means that American money will provide the British Columbia mills with a good market for their hemlock, which American manufacturers now find almost impossible to sell. If the British Columbia manufacturers so choose they may retain their desirable fir and put that into American markets, as they have done in a big footage so far this year both by water and rail. The details of this whole deal, which Crow's Weekly Letter is not privileged to publish, are brazen almost beyond description and leave distinct tracks of high-handed manipulation and discrimination. It emphasizes clearly how America, through its Marshall plan benevolence, is being played for the world's No. 1 sucker, as we hand England more and more money which no one ever expects will be repaid, to be spent in other countries for commodities that are greatly in need of a market here at home. Certainly the folks who put over this deal must have had a good laugh when it was completed, a laugh at the expense of American manufacturers of lumber on the Pacific coast.

American Freedom Versus Russian Slavery

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. TEAGUE. Mr. Speaker, in Texas many people are very much concerned about our country. One fine Texan and a fine American, Mr. Allin Fowler Mitchell, of Corsicana, Tex.; a member of the Texas Highway Commission of Texas, made an address on July 4 to the people of Navasota, Tex., which I consider one of the finest addresses I have ever read. I wish to include this address in the CONGRESSIONAL RECORD in order that other people may read and know some of the thinking that is going on in Texas. It is as follows:

AMERICAN FREEDOM VERSUS RUSSIAN SLAVERY

My fellow Texans and Americans, it affords me great pleasure to unite with you here today in celebration of so great an occasion. As we gather in this fertile spot of our great State, and as I cast my eyes in all directions, I see evidences of progress and prosperity. I shall call them blessings. And these blessings are not limited to Montgomery County, Tex.—they extend the length and breadth of our land. We here in the United States of America possess more material wealth and have a higher standard of living than any nation on earth. Yet are we happy? Are we not plagued with fears and uncertainties? As we think together for a few minutes on my chosen theme—American freedom versus Russian slavery—perhaps we may discover some reasons for the shaky, unstable feeling that is plaguing us.

I can think of no more fitting way to observe the one hundred and seventy-third anniversary of our independence than to stop and for a short time on this Fourth of July 1949 and let our minds dwell on the privileges we enjoy as American citizens as a result of the emphasis that is placed on liberty and freedom of the individual in our Declaration of Independence and our Constitution.

"We hold these truths to be self-evident, that all men are created equal; that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men deriving their just powers from the consent of the governed."

These very familiar words from the Declaration of Independence together with our Constitution—its preamble and its Bill of Rights place the utmost emphasis on liberty and freedom. This Creator, our God, who gave us life, gave us liberty at the same time. To unfetter the world, to dignify man, and to save him, God sent His Son. This grand ennobling force—the only hope of the world—we call Christianity. One of the greatest exponents of Christianity, the Apostle Paul, wrote—

"Where the spirit of the Lord is,
There is liberty."

What is this "spirit of the Lord"? Henry Drummond calls it "the spectrum of love" and says it has nine ingredients: patience, kindness, generosity, humility, courtesy, unselfishness, good temper, guilelessness, sincerity. Thus it follows, where these ingredients are found, there is liberty.

Because Christianity is the only hope of the world today; and because it reached our country by a marvelously interesting series of historical events which took place from the beginning of the Christian era, through Asia Minor, to Greece, Italy, England, Switzerland, and Scotland and on across the Atlantic; I want you to pause with me on this anniversary and give it the place it deserves in our American way of life.

Because I have always felt that the freedom and liberty of the individual as embodied in the democratic principles of our system of free enterprise; and the three freedoms for which Thomas Jefferson asked to be remembered—freedom of the body as expressed in his Declaration of Independence, freedom of the mind as expressed in his University of Virginia, and freedom of religion as expressed in his Virginia Statute for Religious Liberty, are the forces that have made America great; I wish to attempt to contrast these forces with other forces that are in our midst striving to undermine them.

I believe that a consideration of the demerits of these undermining forces can best cause us to stop and reevaluate the merits of our American system, and in the words of Mr. Harvey S. Firestone, Jr., "cause us to sing out in praise of the U. S. A."

Our country has long been called "the melting pot of the world." An appropriate designation since we are 60,000,000 Anglo-Saxon, 15,000,000 Teutonic, 13,000,000 Negro, 10,000,000 Irish, 9,000,000 Slavic, 5,000,000 Italian, 4,000,000 Scandinavian, 2,000,000 French, 1,000,000 each Finn, Lithuanian, Greek, one-third million Indian, one-third million combined, Oriental, Filipino, Mexican. In addition we are 40,000,000 Evangelical Protestants, 22,000,000 Roman Catholics, 4,500,000 Jew, 2,000,000 Anglican Episcopalian, 1,000,000 Greek Catholic, two-thirds million Mormon, one-half million Christian Scientist, one-tenth million Quaker. From these, we intend, in the words of Theodore Roosevelt, "to see that the crucible turns our people out as Americans of American nationality and not as dwellers in a polyglot boarding house." This vicious force we know as communism is seeking to destroy our nationality, our liberty, and our freedom; to take away from the individual his right for self-ex-

pression; to trample in the dust man's dignity.

Let us see something of this communistic conspiracy and its influence in this country as a whole, on religion, on education, on labor, and on our government.

Forty years ago communism was just a plot in the minds of a few peculiar people. Today it is a world force governing millions of the human race and threatening to govern all of it. Right here I would tell you that the facts I shall give concerning this communistic conspiracy were prepared and released by the Committee on Un-American Activities, United States House of Representatives, Washington, D. C.

We shall begin with some things you should know about communism and religion. I think this fitting since religion is the first thing mentioned in the Bill of Rights of our Constitution; and in all the Communists' plans and actions religion is marked down as enemy No. 1. Why? Because religion in some form is always the basic influence in the life and thinking of any people.

Where Communists dominate they attack religion head on. Where they do not dominate they try to deceive and to corrupt from within just as they do in government, in education, in labor unions, and throughout a nation's life in general. The aim and object of communism is always the same—complete control over the human mind and body, asleep and awake, in sickness and health, from birth to death. This communism is a religion—a faith—Marxism-Leninism—as operated by Joe Stalin. It is also a plan and method to rule the world. The man who drew up this plan was Karl Marx (German Jew) who lived in the nineteenth century. The man who put this plan into action was Vladimir Ilich Ulyanov, alias Nikolai Lenin, who lived from 1870–1924, and who led the world Communists to capture Russia in 1917–18. The man who made the plan a world force was Josif Vissarionovich Djugushvili—alias Joe Stalin, who is now living and is 67 years old. Notice I said "alias Lenin" and "alias Stalin," because those are not the real names of the men involved. Remember, the present Stalin started out in life to destroy the government of his own country and rebuild it on communistic lines through bloody revolution—and that's how it actually was done. He was against all law except Communist ideas laid down by Karl Marx. He used the alias Stalin to hide his real identity just as Ulyanov used Lenin.

Karl Marx' idea of a Communist world was everything contrary to American world concepts. He believed that the world as we know it must be destroyed—religion, family, laws, rights, everything. Anybody opposing was to be destroyed, too. Marx wanted a world where people owned no property, took orders from the government without question, let their family life be without religion, morals, or ideals as we know them. His idea was that anything is moral—even lying, stealing, and murder—if it brings on communism; that women should have children for the Communist state to educate, train, and use, but parents should not have any say in the training; that there is no need to fear God because He does not exist. Marx had the idea that people could never be happy, have enough to eat, make enough money, or have success in the kind of world we know.

The United States of America is living proof that Marx was as wrong as a man can be. This reminds me of Fred Waring's song I heard recently on one of his radio programs. The thought was that where else but in America can men sing about liberty? Perhaps you may be asking, "Was Marx crazy?" Perhaps he was. But he was not the first evil and crazy man to start a terrible world upheaval, nor was he the last. Look at Hitler and what he did. Some people overlooked Marx's craziness because he was one of the most effective propagandists who ever lived. His preaching of destruction appealed—and still does—especially to people who wanted to rule others and didn't know how. It appealed to and captured Lenin, who had a terrible thirst for power, and, as has been said, who led the Communists to capture Russia in 1917–18. When the Czarist Government fell in the war of 1914–18, a republic was organized along the lines of our Government, but before this government could really take hold, Lenin's Communists came out from under cover, confused the public mind by propaganda, stirred a military revolt, slaughtered all opposition, and set up by force of arms a Communist dictatorship. All the Russian people did not turn Communist—only a few trained and disciplined favorites were allowed to be Communists. Right here let me stress the fact that no nation has ever gone Communist in a free election.

Some people fall for Communist propaganda because it promises all the things that people have always sought—an easier life and an end to trouble. Of course, these Communists do not deliver the goods. Once they get control, they reduce a nation to horror and slavery. Just look at their record, not only in Russia but in all other countries captured by communism—Latvia, Lithuania, Estonia, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria, Yugoslavia, Austria, Germany, and now China. The secret of their drive is the dream of total power for Communists—loss of power for all others. That's the story in a nutshell.

You may be asking, "Are Communists trying to corrupt religion here in the United States of America?" The answer is "Yes." The Communist Party of the United States assigns members to join churches and church organizations, in order to take control where possible, and in any case to influence thought and action toward Communist ends.

The Communist Party forms front organizations designed to attract fellow travelers with religious interests. A front organization is communism's greatest weapon in this country. It is an organization created or captured by the Communist to do the party's work in special fields. In the United States they go among people and get their names on membership lists—peoples who would never willingly act as party agents. You understand all this is done under cover—subversively—by the alias method. A fellow traveler is one who sympathizes with the party's aims and serves the party's purpose without actually holding a party card. See your daily newspaper and you may read of the doings of these fellow travelers.

The Communist Party tries to get prominent religious leaders to support Communist policies disguised as welfare work for minorities or oppressed groups. In the words of Earl Browder, former head of the Communist Party in the United States of America "* * * by going among the religious masses, we are for the first time able to bring our antireligious ideas to them."

At this point, I should like to give you some testimony of Mr. J. Edgar Hoover, that great American who heads our Federal Bureau of Investigation. There are approximately 80,000 Communists in the United States today out of a population of 145,00,000. "In 1917 when the Communists overthrew the Russian Government there was 1 Communist for every 2,277 persons in Russia. In the United States today there is 1 Communist for every 1,814 persons in the country. There would be more, but the Communist Party does not rely upon actual party membership for its strength. What is important is the claim of the Communists themselves that for every party member there are 10 others ready, willing, and able to do the party's work. Herein lies the greatest menace of communism. For these are the people who infiltrate and corrupt various spheres of American life. So rather than the size of the Communist Party the way to weigh its true importance is by testing its influence—its ability to infiltrate.

If there is any doubt in your mind as to the vicious and blasphemous propaganda Communists are using against religion in our country, then go to your public library and read a typical example of it entitled "Goodbye Christ" by Langston Hughes. Atrocious as this is, it is mild compared to the atheist propaganda in Moscow.

Article I of the Bill of Rights of our Constitution reads: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." Quite a contrast.

We could go on and on in this field of religion, but time does not permit. With labor unions, Communists use the same subversive tactics. Remember communism is not a working-class movement. It is a revolutionary movement. It is true that Communists promise that when they get power they will hand it over to the workers. But you cannot point to one place in the world where they have lived up to that promise.

The standard of living in Russia is barely above that of India or China. The people live in abject poverty—four families to one room. The bigwigs among the Communists live better than most millionaires do in this country. We in America have at least four rooms for one family. Listen closely to some figures. In Russia as of 1947, a Russian had to work 22 days for money enough to buy a suit of clothes. In America a man could get a much better suit for 20½ hours work. Even today in Russia a man works 32 hours to buy a cotton dress for his wife. In America a man works only 4 hours to buy his wife a better dress. In Russia it takes a worker 103 hours to earn a pair of shoes. An American can do it in 9 hours. In Russia a man must work 1 hour and 40 minutes to buy a bottle of beer. In America he needs to work only 6 minutes. This same contrast works out all along the line for food, shelter, and other necessities of life.

Under communism there are no luxuries, comforts, and conveniences such as we know these things in free-enterprise America. In Communist Russia there is 1 automobile for every 252 citizens. America has 1 for every 4 of its citizens. Under communism there is 1 radio for every 45 Russians. Under free enterprise there is 1 radio for every 3 Americans. One out of every 188 people has a telephone in Russia. One out of every 5 people in our free-enterprise system in America has a telephone.

Mr. Firestone reminds us that even more startling contrasts could be made in such commodities as washing machines, refrigerators, vacuum cleaners, electric lights, food, and clothing.

President William Green of the American Federation of Labor says "no labor organization can be free under communism because it is compelled to subordinate the interests of the workers to those of the Communist Party."

And now let me tell you that our Government is under attack. The enemy is communism. If communism were to win, there would be no United States Constitution, courts, President, or Congress. Communists are loyal to Stalin. They take orders from Moscow, and they are spies any time they are ordered to be by the party. It is the sworn testimony of their leader in this country, William Z. Foster, that they would not support our Government in war with Russia. American Communists uphold our Government when it suits Moscow's purposes. For instance, from 1939 to 1941, while Germany and Russia were on the same side in the European War, American Communists sabotaged our arms factories, spied on our Government for Hitler as well as for Russia. They even tried to stir sedition and rebellion

in the armed forces. But when Germany attacked Russia, they wrapped themselves with the United States flag overnight and immediately demanded that we go to war—for Russia's sake.

Nobody knows how many Communists there are in our Government today. They began to invade it in 1933 when the Government of the United States granted diplomatic recognition to the Soviet Government of Russia. Communists, fellow travelers, and front agents promptly flooded Washington and began to worm their way into the Government of the United States. The real Communist program for capturing our Government begins with spying and infiltration of the sort now going on. Then follows confusion and chaos caused by sudden paralysis of our communications, transportation, money system, and law enforcement. Finally there comes direct seizure of power.

Communists have spent the last 15 years hiding their keymen in our Army, Navy, diplomatic corps, Treasury, State, and other control points of our Government—not the least of which is the Atomic Energy Commission. The Un-American Affairs Committee has found out plenty about communism within our atomic energy program. They have espionage rings which have been operating at least since 1942, using American science and money to inform the Soviet Government of Russia on how to make the atom bomb. The most recent case to reach the eruption stage was that of Hans Freistadt, immigrant, Communist graduate student, the son of a Communist, who was granted a $1,600 a year fellowship for study at the University of North Carolina. Hans Friedstadt conducts the Karl Marx Study Club there. He bombards the student body with subversive articles in the campus newspaper. And you, Mr. Taxpayer—you pay the bill. Thanks to free speech in free-enterprise America, this outrageous situation was brought to light by one of our well-known radio commentators. But all the time David Lilienthal, director of the AEC, has consistently insisted that student-candidates for scholarships awarded by the AEC be not questioned in respect to loyalty to the United States lest their intellectual freedom be impaired. He has stoutly defended the awarding of scholarships to known Communists.

I want to tell you here and now Communists must be forced out of power by loyal, liberty-loving Americans using means of detection, exposure, and prosecution. It's interesting that when they are prosecuted they howl that their liberty is being encroached upon; they refuse to testify, saying that they might incriminate themselves. All the time they are enjoying the protection of American freedom and our Bill of Rights. For the same offense in Communist Russia they would be shot at sunrise or sent to hard labor in Siberia for the remainder of their lives. I say we should send all Communists back to their heaven—Communist Russia.

Wake up Americans! Guard your liberty. Don't take it for granted.

I said in the beginning that an atmosphere of uncertainty prevails here in our country even in the midst of prosperity and plenty. I have been trying to show you that the reason for this condition may be our own complacence and indifference to these evils that come from without to work and grow from within.

I remember reading of Abraham Lincoln's once saying, "that if our Nation is ever destroyed, it will not be from without, but from within."

We are hoping to arrive at a solution of our problems and thus obtain peace by means of the blueprint.

That is not the way!

Peace comes from within.

"Where the Spirit of the Lord is, there is liberty."

There is peace.

I have endeavored to point out that the conflict is shaping up in the world between those who profess faith in God and those who profess faith in Stalin. Those who profess faith in God far outnumber the other group, but they lack the zeal and the willingness to sacrifice that the followers of Stalin have

Our God-given liberty that we in Texas and the United States of America enjoy has a condition attached—that condition is eternal vigilance. We must not be indifferent. We must not take our liberty and freedom for granted. We must be ready at all times to zealously guard and defend it. We must be willing to say—and mean it—as did Patrick Henry, when he proclaimed—

"Give me liberty or give me death."

Many fine American boys did just that for liberty and freedom only recently.

But remember, that Benjamin Franklin once said:

"Those who would give up essential liberty to purchase a little temporary safety, deserve neither safety, nor liberty."

This is history, and history repeats itself so often that the accuracy of Benjamin Franklin's statement cannot be denied.

While reading a recent issue of the CONGRESSIONAL RECORD, I was stirred by an address delivered by the Honorable DEWEY SHORT, in which he quoted the poet, Edwin Markham.

"I fear the vermin that shall undermine Senate and school and citadel and shrine;"

"I fear the vermin that shall honeycomb the walls and towers of state in unsuspecting hours."

Mr. SHORT assures us that we have vermin in our midst; that we have rats in this country who are undermining the Senate, the school, the citadel, and the shrine. They are gnawing at the very foundations of this Republic, and the trials which are going on in Washington and New York now, with all of the ramifications of which the public knows nothing about, are sufficient warning to put us on guard.

And now in conclusion, let us think of our national motto: E pluribus unum—from many, one. We want our Anglo-Saxons, Italians, Teutons, Negroes, Irish, Slavs, Scandinavians, French, and all the others, to become one loyal citizenship enjoying the liberty and freedom of democratic America. Let us take a look at our coins and pray, using the words of the now immortal chaplain of the United States Senate, Dr. Peter Marshall, "May it ever be in our minds as upon our coins, 'In God we trust'."

I thank you.

The Tennessee-Tombigbee Canal

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose an editorial from the Mobile Register, Mobile, Ala., under date of May 11, 1949, entitled "Entire Congress Should Support This Subcommittee on Tenn-Tom":

ENTIRE CONGRESS SHOULD SUPPORT THIS SUBCOMMITTEE ON TENN-TOM

When a Senate Subcommittee on Appropriations approved a fund of $2,500,000 the other day to get work started on the Tennessee-Tombigbee waterway in the fiscal year beginning July 1, it took an action which deserves the unhesitating support of the whole Congress.

For this improvement—which contemplates connecting the Tennessee and Tombigbee Rivers by canal to open a new navigable route between the Gulf coast at Mobile and the interior country—is so abundantly justified that it should have been carried out long ago.

It has been said, in fact, that nowhere else on the inland waterway systems of the world is the opportunity apparent to reap so great benefits in proportion to the effort. In other words, the Tennessee-Tombigbee waterway is unequaled in its promise of dividends on the investment.

The high estimate placed on the project was illustrated at the recent convention of the National Rivers and Harbors Congress. Out of a list of 38 projects before it, the waterways association endorsed 8 for construction. The Tennessee-Tombigbee waterway was among the eight.

This, of course, is only one of many examples of the recognition the project has received for outstanding merit. It has the approval of the Army engineers, and has been authorized by Congress itself.

What is sought now—and what the Senate subcommittee proposes—is not a fund of the size required to complete the improvement, but a fund to start the job. The $2,500,000 (m) item approved by the subcommittee is a modest figure indeed and the purpose for which it has been earmarked is exceedingly worthy.

Careful studies have shown beyond refutation that the Tennessee-Tombigbee waterway—the navigable linking of these two rivers by canal—would mean continuing important savings in time, distance, and cost in the field of water transportation.

These advantages and benefits would extend far and wide. A broad region of the middle United States could readily be served by this new navigation route. Thus, from the Tennessee-Tombigbee waterway would flow far-flung profitable results in the form of time, distance, and money saved in the transportation of commerce.

A start on the Tennessee-Tombigbee waterway should be made without further postponement. We appeal to the whole Congress to support the action taken by the Senate subcommittee on appropriations. It will make no mistake to do so. The mistake would lie in failing to support the action of the subcommittee.

Construction of the Tennessee-Tombigbee waterway would add immensely to the strength and service of the Nation's system of inland waterways.

The Senate subcommittee has shown commendable appreciation of this fact by voting to invest $2,500,000 (m) as a start toward that goal. Surely Congress as a whole is equally appreciative of the merits of the improvement and equally anxious to get the job under way.

The National Health Act

EXTENSION OF REMARKS

OF

HON. CHRISTIAN A. HERTER

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. HERTER. Mr. Speaker, a number of my colleagues and I have recently joined in sponsoring a bill providing for a national health-insurance program on a voluntary basis. This legislation has commanded such widespread interest that I should like to include here a résumé and explanation of its provisions.

The others sponsoring the bill are Senators FLANDERS, of Vermont, and IVES, of New York; and Congressmen AUCHINCLOSS, of New Jersey; CASE, of New Jersey; FULTON, of Pennsylvania; HALE, of Maine; JAVITS, of New York; MORTON, of Kentucky; and NIXON, of California.

An explanation of the bill follows:

THE NATIONAL HEALTH ACT—RÉSUMÉ AND EXPLANATION

This national health bill has a threefold objective: (1) To make it possible, through voluntary prepayment plans, for everybody in the United States, of whatever income, to obtain adequate health care to the fullest extent that medical resources permit; (2) to see that the quantity of health service is expanded and its quality raised throughout the Nation, by progressively eliminating shortages in our medical resources; and (3) to do these things in such a way as to foster constructive freedom of action, and the responsibility that goes with it, on the part of both patients and doctors, individuals and associations, communities and States.

MAIN PROVISIONS

Basic in the bill's program will be voluntary prepayment plans. Their subscription charges would be scaled to their subscribers' incomes, rather than flat-rate premiums. Mixed Federal-State funds would make up any difference between the aggregate of subscribers' payments and the cost of furnishing health service benefits.

The bill would also provide: (a) special Federal help in areas where the shortage of health resources is particularly acute, to attract personnel and maintain modern facilities; (b) increased Federal aid to communities throughout the country for building hospitals and health centers: (c) Federal grants to medical and nursing schools; and (d) additional Federal aid to the States for expanding their local public health services.

Finally, the bill sets up machinery for constantly appraising the health needs of the Nation and for developing a national health program which would be periodically revised to keep pace with the growth in medical resources.

BASIC PRINCIPLES

This bill does not bring about socialized medicine; on the contrary, it very greatly encourages the development of private efforts, which actually pace the program.

It invokes no means test; on the contrary, it offers to everybody, poor or well-to-do, the right to obtain the same services as everyone else, at a cost scaled to his means.

The bill reflects the belief of its sponsors that great social needs can be met without falling into the errors of state socialism, and that needed services can be given at needed cost to our people without disrupting—but on the contrary, encouraging—the development of private initiative and enterprise.

The sponsors do not consider this bill necessarily the answer for all time to the health problem. For this reason they have provided the means for constant readjustment of the program on a rational basis. But they do consider the bill realistically designed to bring within everybody's reach all the care that the Nation's medical facilities can provide—and to assure the rapid development of enough facilities to include everybody in every income group who wants to use them. It thus places itself squarely in the American tradition of more and better services in response to voluntary demand.

HOW IT WORKS

The key to the program is the local, voluntary prepayment health service plan. Many such plans already exist—Blue Cross, Blue Shield, innumerable group health plans, industry plans, labor union plans, welfare funds, cooperatives, and so forth. Over 35,000,000 people are already enrolled in these plans.

The chief advantages of all such plans are (1) that by spreading the risks among a large number of persons they enable their subscribers to protect themselves, at a moderate cost, against ruinous personal losses, and (2) being organized and operated privately, without governmental management, they can reflect accurately the desires and needs of their members. Their chief disadvantage is that the flat-rate premiums which most of the plans must now carry are beyond the means of millions of otherwise self-supporting people. This is especially the case when doctors' services in the home and office and preventive medical care, as well as hospital services, are included. Premiums for such coverage may run from $100 to $150 per family, far too much for incomes in the lower brackets. As a result, only a few of the voluntary plans at present cover more than hospitalization and surgical care, a fragment of the health services people need.

This legislation contemplates hundreds of such nonprofit voluntary plans, each locally organized and operated. It will use existing plans, enabling them to expand and open the way for new plans throughout the country.

Fundamental to the program is the requirement that these voluntary plans base the rate of payment by subscribers upon a percentage of the subscriber's income (up to $5,000). This provision will necessitate changing the method of charging practiced by most plans at present in existence. It is, however, essential for the purpose of opening voluntary plans to everyone by bringing in public aid for people of limited income without a means test.

In order to participate in the program, a State would set up a State health council. This council would divide the State into several regions, many of which have already been set up under the Federal Hospital Construction Act. Each region would be managed by a health region authority, made up of local people. On this authority and on the State health council there would be no practicing doctors, dentists, or others who provide health services since they represent groups with a direct financial interest in the public's contributions, but each authority and council would have medical and other advisory committees.

The bill sets up a national yardstick in the form of a comprehensive range of benefits, which it defines in detail and which includes the most vital health services. It further states that the subscription charge for this particular coverage cannot be less than 3 percent of the subscriber's income up to $5,000. The first duty of each health region authority is to estimate the normal cost in that region of supplying the national yardstick coverage.

Any plan operating in that region which provides the yardstick range of benefits will receive from the State (with Federal participation) the difference between its subscribers' payments and the estimated normal cost of the coverage.

A plan may offer a coverage less comprehensive than the national yardstick coverage, in which case it would charge proportionately less to its subscribers and any public contribution would be based on a proportionately lower allowed cost. Or a plan may provide a still more comprehensive coverage, in which case it must charge proportionately more and would have a proportionately higher allowed cost.

The maximum coverage a plan may offer under the bill's program will be fixed by the State health council. This maximum will be based on how much medical service can be provided in each of the State's regions by existing or reasonably obtainable personnel and facilities. The State may amend the maximum each year in the light of experience and in line with the growth of its medical resources.

HOW IT APPLIES

Let us suppose that a plan provides the yardstick coverage, for which it charges 3 percent of each subscriber's income. This would cover the subscriber and any dependents.

A subscriber with an income of $1,500 would pay $3.75 a month; one with $2,500 would pay $6.25 a month; and one with $3,800 would pay $9.50 a month. They would all get the same services, the deficit created by the lower incomes being made up by the State-Federal aid. Thus, if the annual cost allowed to the plan by the regional authority were $114 per family (which would be about the estimated average for the nation), and if the average family in the plan paid $75 a year, then the State-Federal aid would contribute $38 per family to cover the deficit to that plan.

On the basis of these figures it is apparent that a $3,800 family would be paying its full cost. Smaller incomes would be subsidized, partly by the higher-income people who join the plan and partly out of public funds. Partial subsidization of the low-income groups by the higher ones is what happens now, in a rough and unsatisfactory way, through the scaling of charges by the doctors and the hospitals.

The minimum that anyone can pay to participate in a plan is $6 a year. In the case of unemployed persons or public wards this may be paid by the State, for whatever plan the individual chooses. On the other hand, the highest income used for figuring subscription rates is $5,000. Persons with larger incomes may join the plans, and will undoubtedly choose to do so; but many plans will probably provide that such people would be paid fixed sums (called "indemnity benefits") rather than being covered for the complete cost of their care (called "service benefits").

FREEDOM IS PRESERVED

Whether a family decides to come into the most complete plan set up under the State's program in its community, or into a cheaper and less complete plan, or stay out of all of them, is left to its own free choice. Whether a subscriber's employer pays all or part or none of the subscription charge, is for the employer and employee to work out together. Whether a subscriber's contribution is deducted from his pay is also subject to prearrangement. In the case of State and Federal employees, the bill provides that this may be done.

Like their patients, the nation's doctors are free to come into any plan that will accept them, or to stay out of all of them. No more than at present will they be forced to accept any patients. Their inducement to come in lies in the fact that the services that they now supply free to those who cannot pay their own way, will be fully paid for by the plans, whose members may be these same persons hitherto dependent on medical charity. They will be free to join any sort of plan, including group practice plans, which will be fostered by the bill. Doctors may take part in the formation of a plan, but may not control it.

Hospitals likewise may contract to supply their services to any plan that needs them, or they may stay out. The same inducements apply to them as to the doctors. In supporting the Blue Cross, the country's hospitals have already demonstrated their willingness to take part in prepayment plans.

The advantages of the program will be inducement enough, and no individual or group—consumer, doctor, or hospital—will be compelled to join. The powers and duties of government—local, State, and Federal—will be held to the minimum. At every level there will be ample freedom for that creative initiative which alone can translate our American aspirations into reality.

FEDERAL AID

The basic formula for Federal aid under this bill follows the lines of the Hospital Construction Act. Federal aid will be granted a State in inverse proportion to its per capita income. States having the lowest per capita income will receive Federal aid at a ratio of three Federal dollars for every State dollar devoted to the program; those with the highest per capita income will get one Federal dollar for two State dollars. The average for the nation will be a little more than 50 percent Federal aid. The ceiling for Federal aid to any given State will be $15 a year for each person covered.

A State will begin to receive its Federal contribution as soon as it has passed the appropriate legislation and as soon as the machinery is in operation.

In the sometimes difficult matter of raising money to start a qualified nonprofit plan, the Federal Government will also help the States to help the organizers. Whatever amount the sponsors of a plan can raise, either by free contribution or in the form of non-interest-bearing loans, will be matched by mixed Federal and State money as interest-free loans.

A separate bill is being filed by the sponsors of this legislation which would make subscription charges deductible from taxable income.

The bill further provides for a revolving construction loan fund of $10,000,000 of Federal money. Without requiring any State participation, this sum will be loaned to cooperating prepayment plans for the special purpose of building and equipping small local medical centers for the group practice of medicine. This sum would provide for the setting up of about 125 new health centers at one time, with no burden on the States.

By these means the establishment of a widespread, diverse system of voluntary plans will be fostered, including those that use group practice. In the long run those plans which supply the best and most extensive medical care for the subscribers, and at the same time obtain the most effective cooperation of the medical professions and the hospitals, will most rapidly spread their influence and increase the number of their subscribers. The mainspring of the program will be competition between the plans in the quality and extent of their services, with free opportunity and incentive to develop ever more effective means of distributing high-quality medical care.

EXPANSION OF MEDICAL RESOURCES

The accelerated development of prepayment plans, and the increased effective demand for medical services which would result from the enactment of this bill, must be matched by a steadily increasing number of well-trained doctors and nurses. The bill, therefore provides special help for medical and nursing education, the cost to the Federal Government ranging from about $25,000,000 in the first year to about $40,000,000 in 1953. Federal aid is provided also for the construction and equipping of additional or new medical school facilities, the Federal funds to match money from other sources.

The development of prepayment plans also makes it necessary to accelerate new construction of diagnostic and personal health service centers as well as hospitals. For this reason the bill offers amendments to the Hospital Construction Act, adding $100,000,000 a year to the present appropriation of $75,000,000 to be mixed State by State with funds from any other source according to the formula already described. Diagnostic and health service centers may share in this Federal aid.

The improvement of personal medical care throughout the country does not diminish the need for improved local public health services. This bill therefore provides for the extension of the established program of Federal aid to the States and local communities for the employment of public health officers and other personnel, and for the extension of basic community health services throughout the nation. This is universally recognized as an integral part of a sound national health program.

Finally, the bill provides Federal aid (in the same proportion to State aid as in the case of prepayment plans) for programs in areas of "special need." Such an area is defined as one in which there are no more than 8 doctors per 10,000 of population. Here it is proposed, with mixed Federal and State funds, to provide immediately the financial incentives and guarantees required to attract to these areas doctors, dentists, and nurses, and to provide the traveling clinics they so sorely need. Such funds will also be used to cover the initial deficits of hospitals, health centers, and diagnostic centers set up in these areas with the help of grants provided for under the Hospital Construction Act, as amended by this bill. This special program is of a largely temporary nature to fill the gap existing before the voluntary prepayment plans can develop so as to take up the burden. At a later stage Federal and State aid will flow into these areas through the normal channels described above.

STUDY AND PLANNING COMMISSION

The sponsors of this bill believe that the program of action described in the preceding paragraphs represents the most that the Federal Government should now undertake in new forms of assistance in the field of health. There remains, however, much more to be done. For the purpose of determining precisely what the nation's health needs are, and how best to mobilize our resources to meet them, the bill sets in motion immediately a grass-roots inventory of health conditions, health resources, and all aspects of medical research, recruitment, and training of health personnel. For this purpose it establishes a bipartisan commission to be appointed jointly by Congress and the President to direct, supervise, and coordinate a continuing study conducted locally.

This commission is to report to Congress within 2 years on their findings with respect to the most pressing problems, such as the financial condition of the country's hospitals, the recruitment and training of health personnel, the provision of care for the chronic diseases (heart disease, cancer, multiple sclerosis, cerebral palsy, poliomyelitis, and other crippling diseases of children, etc.), and the provision of dental care.

Within 4 years the commission is instructed to report its findings and to formulate a 20-year national-health program. In formulating this plan the commission is to take into account the recommendations of the cooperating local and national organizations. Thereafter the commission will report every 2 years, at each such interval pushing ahead the 20-year plan by 2 years.

The survey is to be financed by the Federal Government at an annual cost of $5,000,000.

COSTS AND GROWTH

In all its parts this bill assigns the Federal Government the role of assisting local and State undertakings. The bill, in effect, says to the families of America and to their local and State governments, "The National Government offers to back up what you undertake. The scale of Federal aid depends on the scale of your enterprise." Thus, what these programs will mean in terms of Federal appropriations each year will be determined mainly by the scale of the voluntary response the Government's offer gets.

Assuming maximum voluntary response, the bill may be expected to call on Federal revenues for $300,000,000 the first year and for a possible $850,000,000 4 years hence.

The largest potential expenditure is aid to the prepayment plans. By 1953 the Federal share in that program could reach $500,000,000 a year. This would represent a little more than half of needed public support for these plans. Subscribers' payments should provide between 60 and 85 percent of the plan's costs, depending on the income level of the particular community.

The Federal contribution to the "special-need areas" can be expected to rise to a peak of conceivably $150,000,000 by 1952 and thereafter level off at between seventy-five and one hundred million dollars a year until prepayment plans blanket these areas.

The help offered to medical and nursing schools will probably range from twenty-five to forty million dollars a year from fiscal 1949–50 to 1952–53, respectively. Construction grants to the schools over those 4 years may total $120,000,000, or $30,000,000 a year.

Hospital construction is not likely to take less than the $175,000,000 a year proposed. This is $100,000,000 a year more than is provided by the existing law, under which a large backlog of much-needed hospital facilities has built up.

The local public-health-units program will probably rise to $30,000,000 by 1952–53 from $15,000,000 in 1949–50.

Comprehensive health study and planning will take $5,000,000 a year.

This added Federal expenditure will represent growth the length and breadth of this country in effective health services. It will also represent additional expenditures by States and local communites, which have to spend their money in order to get the Federal money. Indeed, individuals have to decide to spend their money before the Federal or State governments become committed to provide any funds whatever.

BRIEF COMPARISON WITH HILL, TAFT, AND THOMAS BILLS (S. 1465, S. 1581, AND S. 1679)

In principle this approach to health insurance is similar to that of the Hill bill, but with several important differences. One is that the Hill bill in effect requires those who need help in paying for voluntary prepayment plans to pass an individual means test, while this bill gives everyone the automatic right to join a prepayment plan at a charge that he can afford. On this point, the Taft bill is less explicit but just as clearly contemplates the use of a means test.

Under the Hill bill public aid would go only to prepayment plans offering no more than inhospital care and the out-patient services of hospitals and diagnostic centers. This bill leaves the scope of services for which public funds may be used solely to the discretion of the States and their health regions. From the beginning people in many communities will secure far broader benefits, such as home care and preventive services of doctors, where the community is equipped to supply them.

Both the Hill and Taft bills fail to provide for the free organization of prepayment plans within the States. At present in 22 States the organization of such plans is effectively restricted to medical societies. In contrast our bill provides positively for State enabling acts which would permit the free organization of prepayment plans.

The Taft bill concentrates all attention on those unable to pay the whole cost of care and requires the States to develop programs that would assure such persons all needed services within a period of 5 years. This requirement, we feel, is totally unrealistic in the light of the proposed maximum appropriation of $300,000,000, which, added to State funds, would provide no more than $600,000,000 a year of public funds for this purpose. In our judgment it would take five times as much money and more than 10 years' time to reach the Taft bill's goal.

On this score, the Thomas bill is equally unrealistic. Starting in July 1951 it would

impose a pay-roll tax of 3 percent on the employed and an income tax of 2¼ percent on the self-employed, for which there would be given as broad a range of services as the Federal Government believed could be supplied in the various States. But while theoretically only services that could be provided would be promised, the payment of so substantial a tax would necessarily confer on the taxpayer a right to demand comprehensive care. This insistent demand would force a burden on hospitals, doctors and auxiliary personnel that they could not possibly carry. The result would be grossly inadequate service and an irresistible demand for direct Federal control. In contrast, this bill links the extension of prepaid services with the local capacity to supply service. There is no element in this bill that would force or encourage public authorities or prepayment plans to issue contracts that cannot in fact be fulfilled.

The Hill, Taft, and Thomas bills all provide for surveys or studies of various elements of the health field. This bill seeks to unite all these partial studies and many others into a single coordinated whole, looking toward the formulation of a national long-range program. There have been too many fragmentary studies and plans. It is time for the health problem to be treated as a single problem, one of the biggest and most basic problems the nation faces today.

The goal of this bill is the most efficient production and distribution of medical care for the benefit of all the American people. We propose means for moving immediately toward that part of the goal which is realizable with present resources and those that can be developed soon. The survey is intended to amend the means if necessary, to develop further means, to state the further goal of covering all the health needs of the American people, and to work out the means of achieving that ultimate goal.

Development of Backward Areas in the World

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1949

Mr. MULTER. Mr. Speaker, I heartily commend to the attention of my colleagues the following newspaper items which appeared on June 28. The editorial entitled "Progress of Point IV" appeared in the Christian Science Monitor, and the column entitled "Truman Acts To Implement World Development Program" appeared in the Brooklyn Eagle:

[From the Christian Science Monitor]
PROGRESS OF POINT IV

A few months ago a few Americans who combined political perception with economic foresight had an idea about the development of backward areas in the world. In January, President Truman put the idea into his inaugural address as point IV. Since then the Thorp committee has fashioned it into a policy. Now it has become a specific proposal to Congress.

Point IV has a dozen angles. Export of American know-how got the initial emphasis. Some of this need not take much money. Some is already handled by the Government, such as the discovery by experts from the United States Geological Survey of manganese deposits in Brazil which make America less dependent on Russian supplies. But capital will help, and Mr. Truman has now asked Congress to underwrite private investments under point IV in the sum of $45,000,000.

As Federal funds go, this is small. It looks like a mere starter. But getting started is important. A new reason has appeared for progress with point IV. The development anticipated would help Europe find new markets and sources of raw materials which need not be paid for in dollars. It would also help solve America's need for exports. It is estimated that nations with highly developed industrial economies buy $5.80 worth of goods per capita from the United States each year, while undeveloped countries buy only 70 cents' worth. The difference shows the dollars and cents value of building up backward areas.

But that might be the smallest part of the gain. The political aspect—heading off communism—is important. And the humanitarian possibilities are inspiring. We are glad the President is putting before Congress this project for definite action.

[From the Brooklyn Eagle]
NEWS BEHIND THE NEWS
(By Ernest Lindley)
TRUMAN ACTS TO IMPLEMENT WORLD DEVELOPMENT PROGRAM

Point IV in President Truman's inaugural address—American technical aid and capital in the development of underdeveloped areas of the world—is a sound concept. Indeed, it is probably indispensable if less developed areas are to be held within the free world and the United States is to maintain over the years a high level of prosperity.

The specific program which the President has recommended to Congress in support of point IV certainly does not err on the side of grandeur. It calls for $45,000,000 to finance technical assistance—of which $10,000,000 was included in his budget of January—and authority for the Export-Import Bank to insure American private capital against certain special hazards of investment abroad such as expropriation, destruction through war or rebellion, unfair or discriminatory treatment, and inability to convert earnings into dollars.

The State Department already has begun to negotiate investment treaties designed to protect American capital against such of these hazards as are within the control of other individual governments. Obviously these cannot guarantee against destruction through war or rebellion.

The program outlined by the President represents a victory for his more conservative advisers on this subject, led by the Treasury. At this stage, probably, it is wise to be cautious. It would be unhealthful if other nations were to obtain the impression that point IV is intended to be an international relief project or even an extension of the European recovery program to other parts of the world. It is neither of those. It is a long-range program for the development of other free areas of the world.

It is absolutely essential that the nations or areas that want this assistance take the steps necessary to make it possible. There will not be much difficulty about technical advice. It costs little and involves few questions of national policy.

Conditions that justify the investment of capital are a different matter, especially if the capital is to be private. In many underdeveloped areas the opportunities for investment by foreign capital are strictly circumscribed by law.

Foreign capital is regarded as a tool and symbol of imperialism. Many of these countries have reserved certain areas of enterprise either to domestic capital or to the state itself. That is their right. But if they want private capital from this country, they must give certain basic guaranties. It is a good thing that they should know this now and never be permitted to forget it.

Some of these countries would much prefer to have foreign capital in the form of loans to their governments rather than as direct private investments. This is a problem for which no fixed rule can be laid down. The World Bank makes loans to other governments. The President, in his message to Congress, however, wisely put the emphasis on private capital.

This private capital might be lent to foreign governments or to locally-controlled industries, or it might be in the form of direct risk-taking investments in specific enterprises under American or joint management.

Alabama's New Coastal Highway

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Mobile Press Register of July 3, 1949, in connection with the official opening of a new 11-mile highway along Alabama's beautiful Gulf coast.

As this editorial states, this new highway, plus the Dixie Graves Parkway, which runs westward from Gulf Shores to historic Fort Morgan, gives Alabama as beautiful a beach highway as can be found anywhere in the Nation.

ALABAMA'S NEW COASTAL HIGHWAY

A significant development will be celebrated Monday at Gulf State Park in Baldwin County. The new coastal highway, first to border the Alabama beach on the Gulf, will be officially opened with a dedicatory address by Gov. James E. Folsom.

The 11-mile coastal highway stretches from Little Lagoon, one of the large inlets near Gulf Shores, to Alabama Point, across Perdido Bay from Florida.

Monday's celebration will mark the completion of a project begun in 1947. On July 4, 2 years ago, Governor Folsom officially opened the first leg of the coastal highway. The black-topped pavement ran from Gulf State Park Casino to the park's eastern boundary. Now the road is black-topped its entire length.

The new coastal highway, plus Dixie Graves Parkway running westward from Gulf Shores to Fort Morgan, gives Baldwin County and Alabama as beautiful a beach highway as can be found anywhere in the Nation. This paved road from Alabama Point to Fort Morgan is essential to the further development of Alabama's Gulf coast as a tourist attraction.

Completion of Alabama's coastal highway lends new interest to a bridge-building measure now before the State legislature. Among the bridges called for in Senator Robin Swift's bill is one connecting the new coastal highway with Florida. The bridge would cross Perdido Bay between Alabama Point and Inerarity, Fla.

The possibility of this bridge, connecting Alabama and Florida coastal highways, stirs hopes of even greater development of the State's beach attractions.

With this bridge in the realm of future developments, Alabama can be grateful that a through coastal highway has become a reality in Baldwin County. This is an important step in the over-all development of the area.

Common Sense and Sound Thinking Needed in Shaping Government Policies and Conducting the Government Business

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. WHITE of Idaho. Mr. Speaker, many earnest and thoughtful citizens with the best interest of our country at heart are giving their time and attention to the affairs and the legislative program of our Government and making their views known to the Members of Congress on vital issues affecting the welfare of the American people. There is submitted herewith for the consideration of my colleagues a letter from Mr. C. F. Adams, a pioneer businessman of Idaho:

IDAHO CANDY CO.,
Boise, Idaho, June 29, 1949.

Hon. COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR REPRESENTATIVE WHITE: Speaking for a business firm that has been established and operating continuously in Idaho since 1903, and as, we think, fair-minded citizens of the United States of America, it is our desire to express to you our feeling regarding the measures now before the Congress. It is our opinion that with economical conditions as they are at the present time that the Congress should be spending their time on measurements that will help reduce the tax burden on citizens rather than increase them tremendously.

Most of the measurements proposed in the present Congress, if enacted, mean additional tax burdens on the citizenry, and will mean plunging our Government further into debt, which, if continued, will eventually mean that the debt burden will be such that it will be impossible economically to survive.

Certainly you, as an individual, must realize that it is impossible to continue spending and spending and never pay off. There is only one solution, and that is bankruptcy.

If there ever was a time when statesmanship and common sense and sound thinking is needed in our governmental affairs, that time is surely now. We do hope that you, together with all of our other congressional delegation, will realize the seriousness of this situation and vote against the housing bill and the pension bill, and any other bill that will mean a burden on the taxpayer.

Thanking you in advance for your cooperation in this regard, we are

Sincerely yours,

IDAHO CANDY CO.
C. F. ADAMS.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Mobile Press Register of July 1, 1949:

RECIPROCAL TRADE AGREEMENTS

A cornerstone of American foreign policy died Thursday night.

The Reciprocal Trade Agreements Act expired and Congress did not renew it.

First passed in 1934, under guidance of President Roosevelt and Secretary of State Hull, purpose of the act was to build up better trade with other countries. Up until this year it had been renewed repeatedly by Congress.

Months ago President Truman told Congress the deadline was approaching and the act should be renewed. The House approved it, but the Senate failed to take action.

All this is a little bit embarrassing for this country and a group of our trade experts. They are now in France with the representatives of 33 other countries—all trying to work out trade agreements.

These agreements are important in restoring world trade. They work like this: The United States lowers its tariffs on certain, agreed-upon goods imported from other countries, provided they reciprocate by lowering their tariffs on certain goods imported from us.

When the Trade Act was first passed in 1934 our tariffs on foreign goods coming in here to compete with American goods were very high. This was to protect American producers.

So the act allowed the President to cut tariffs where he saw fit, but only after a long study by Government experts and public hearings where anyone who thought he might be hurt could complain.

Some Congressmen haven't been too fond of the Trade Act. They've argued the tariff cuts have hurt some American businesses, which undoubtedly is true. It is a truism that someone gets hurt by almost every piece of legislation, no matter how many benefit.

Being a port city, Mobile is more interested in foreign trade than most other American communities. It appears that the Reciprocal Trade Act should benefit this and all ports, since it would lead to bringing in more goods from foreign countries and sending out more American goods to those countries.

Weapons for Peace

EXTENSION OF REMARKS
OF
HON. L. GARY CLEMENTE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. CLEMENTE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include a very able address delivered by Cadet First Sgt. Richard B. Murto, of Trenton, N. J., at the commencement exercises of LaSalle Military Academy, Oakdale, N. Y., June 16, 1949:

WEAPONS FOR PEACE

A world which is nothing more than a mass of chaos, made up of cities whose once proud skyscrapers are now merely a mass of twisted steel, whose farms are ruined, whose factories and schools are but a shadow of their former stature, this is the world which we saw at the completion of the past conflict. This is our vaunted civilization. The culture of which we raved have failed to give us the one thing which we need above all else. True, we have beautiful cities, industrial empires, spacious farms, but, have we peace? The answer is certainly self-evident. Can we have peace in a world where one section is steadfast in its denunciation of God and of all things pertaining to Him and the other is supposedly opposed to the atheistic philosophy of the former but whose actions belie that opposition. This is the problem which has confronted the statesmen of the nations of the world since the end of the Second World War. I say "confronted" because although they have been faced with this tremendous problem of bringing peace to the world, they have rejected the one true way to solve it. They have tried all of the world's ways and they have failed. They are at the end of the road—all that remains is a crossroads with one sign reading "This way to peace through God" and the other "This way to war"—and they hesitate. This, then is the state of the world into which, across the Nation, graduating students are stepping as citizens. And since these same students are either going to be the coming statesmen of the world or the soldiers who will fight the next war when it comes, they should, in all justice, know the predicament the world is in and the reason for its being there. Let us, therefore, try to place in the hands of the neophyte citizens some weapons with which to fight for the peace which is rightfully theirs.

In order to have peace we must have a state of mutual trust among nations. For peace is not merely the absence of war or the cessation of hostilities; it is a deeper, more profound thing than that. Peace is found primarily in the soul of man. If the individual does not have peace of soul—God's peace—the family will not have it. And, if the family is without it, the nation cannot have it. Thus we can see that our troubles lie within ourselves. So, to all of us, the peace of the world should be very important because a great part of it hinges on our own state of mind and soul. So, returning to our original premise, we must have a state of mutual trust among the nations of the world. But, there can be no mutual trust and friendship among nations if that relationship is nonexistent between men themselves. So, we are now confronted with the question "How should be obtain trust among men?" The answer is very simple, "Through the common medium which all men should respect—God." We must, therefore, return to God and His law. The formula for peace has been before us through the ages—waiting to be seized and cherished by mankind. There is no substitute for God's peace—neither Pax Romana nor Pax Americana or any other peace can replace that given us by our Creator. And we, His creatures, are unwilling to accept what He knows we need. So, to attain mutual trust among nations and men we should make use of God's peace. But many do not even know God, and many, knowing Him, have rejected Him. We should, therefore, bring about a return to God both in school and in everyday life. We here at La Salle have had it at school. We who are leaving should keep our devotion to our faith throughout life when we will not always have a guiding hand in the person of a Christian brother. For it is this bond of faith which can and will bring trust and friendship to the nations of the world.

Now, our second step in the search for peace should be the elimination from our minds of man's ways toward attaining it. We should give ourselves over wholeheartedly to pursuing the path toward peace which our Lord has pointed out to us. No longer should we hope for even a pale facsimile of peace from the methods of man which have brought only death and destruction. The two world wars within 21 years bear witness to this. Thousands of war dead lie in military cemeteries at home and abroad—solemn reminders of the cost of a peace which never materialized. These facts alone should make those in responsible positions think. And yet, every day you have sad reminders that they don't think, that they have forgotten,

and that the dead from two world wars have died in vain. These reminders appear as headlines which read "Military experts say way to peace is with bigger armed forces" or "Atomic stock pile increasing." Is this the way to peace—or war? Frankly I am not too sure, and I sometimes wonder whether those who are directing this program are sure. If only they would turn to the way shown to us by our Lady of Fatima—God's way. More devotion to our Lord and less to our armies. More prayer and less practice for war. More communions or reparation for the sins of mankind and fewer attempts to repeat them. By these practices I'm sure that we would arrive at our destination more quickly than by any of man's tried-and-found-wanting methods.

We have now, therefore, the path to follow and the means by which to follow it. But we of the graduating class have a greater interest in this because we shall be going to the places where Catholic action is needed most. It is our duty, therefore, to further Christ's kingdom on earth and to work toward peace. Now, there are many ways to sprea l catholicity in everyday life which we should learn and practice. We can become active in the Catholic action committees in our parish, and if there aren't any—we can start some. Get a group of men and women in the parish to come together to discuss different means of making more nominal Catholics—active Catholics, of bringing more non-Catholics into the church, and of strengthening the faith of many in whom the light of faith is burning low. We, the new citizens, have a chance to further the mutual understanding among men through the Christophers. By being a Christopher we can help to change the world from its present-day attitude toward God, and by bringing the world back to God we will be bringing peace to it at the same time. Another weapon which we have for peace is the rosary. For unless we fulfill our Lady of Fatima's direction to pray for the conversion of Russia and to consecrate the world to her through the rosary, the Communist menace will continue to run rampant and an era of persecution such as has not been seen will be upon us. A good way to insure a greater devotion to the rosary is through a devotion begun in New Jersey which is now spreading to other cities and States. It is called the "block rosary" and consists of having the Catholics in a block assemble a few nights a week in one of the members' homes to recite the rosary together. It is a practice which I am sure is very pleasing to our Blessed Mother.

So, in conclusion, we now have the key to peace—a mutual understanding among men. We have the road to follow—God's road, and we have some ways of helping ourselves and others along the road to peace on earth and heaven after death. These helps are: The Christophers, Catholic action, individual parish organizations, and the block rosary. These are only a few for there are many more. But if these are thought over and put into practice we, the graduating class of 1949 along with all of the other classes who are leaving their campuses this spring, will have something with which to work—we will really have some good weapons for peace.

Island Governor

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. MULTER. Mr. Speaker, while the economic problems of the world require our attention and our help we should not overlook the necessity of helping our own citizens whenever and wherever necessary. The people of Puerto Rico are citizens of this country who do need our help. In that connection I am pleased to call the attention of Congress to an editorial which appeared in the Washington Post of July 6, 1949, welcoming the Governor of Puerto Rico, Luis Munoz Marin:

ISLAND GOVERNOR

Luis Munoz Marin, a well-known and always welcome visitor in Washington, is here at present for the first time in his official capacity as the first elected Governor of Puerto Rico. He has come in the past as president of the island's senate and as leader of its dominant political party to plead the cause of self-government for his people. His success and the esteem in which he is held at home as well as on the mainland have been attested by the change which made the governorship of Puerto Rico an elective office and by his election to it almost as a matter of course.

Puerto Rico has some exceedingly grave economic problems. Its present plight is so severe that migration from the island has reached unprecedented proportions; in April, for example, the latest month for which figures are available, 4,956 persons left the island because of the difficulty of gaining a livelihood there. As an underdeveloped area, Puerto Rico ought to be in line for substantial help under the point 4 program. Perhaps an even more important form of aid required by the island is in the area of education, for it is through improved schooling that the roots of poverty are best attacked. There should be generous provision for Puerto Rico's special and desperate needs in whatever program of Federal aid to education Congress finally adopts. No doubt Gov. Munoz Marin will want to talk about these problems with the President and his other old friends on Capitol Hill. We wish him a cordial and sympathetic reception.

Soil Conservation in the Red River Valley

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include herewith a very fine address delivered by Hon. Louis P. Merrill, of the Soil Conservation Service, on the occasion of the Red River Valley Improvement Association annual convention at Shreveport, La., held on April 19, 1949. The address was greatly appreciated by a large attendance at this convention; and it reads as follows:

SOIL CONSERVATION IN THE RED RIVER VALLEY

The United States Department of Agriculture has a very important responsibility in the development, use and disposal of water. Water and good soil are the two great natural resources that must be present to make productive farming and ranching possible. In large portions of the country such a combination occurs naturally; but there are large areas of good soil where men must either bring water to the land or drain it off before agriculture can become stable and prosperous.

Two fundamental principles underlie the Department's water policy. One is the conviction that the ultimate goal of every water project must be the welfare of the families who make their homes on the land. The other is the conviction that a water policy, to be fully effective, must be part of a comprehensive policy for wise use of all of the Nation's natural resources.

Needs of industry and commerce and different kinds of agriculture are tied in closely. The forests that protect upland water supplies, for example, yield lumber for buildings on land irrigated by that same water downstream. Hay and forage grown under irrigation supplement range land grazing. The areas of grass that support livestock protect the watershed and safeguard downstream agriculture. If the range is overgrazed, failing supplies of supplementary feed and increased flood damage downstream are among the unhappy results.

The Department of Agriculture, with its definite responsibility for production of crops and livestock and for measures to prevent erosion and reduce flooding of agricultural land thereby shares the responsibility for the development, control, and use of the national water resources. It is also deeply interested in other uses of water such as the production of electric power and improved navigation that affect farm living and the handling of farm products.

The Soil Conservation Service has been given a major responsibility in the Department of Agriculture's water program, involving research, surveys, planning and operations on the privately owned grazing lands and agricultural lands of the Nation.

Because soil and water are inseparable the term "soil conservation" has included water conservation, use and disposal and the work of irrigation, drainage and flood control just as it has included erosion control and land use. In fact, the most important work the Soil Conservation Service has done in water conservation has been carried on as an integral part of a coordinated program by which all known adapted measures are used to treat the different kinds of land in accordance with their needs and capabilities. The soil is the greatest water storage reservoir we have, other than the oceans. The coordination of proper land use, the right combination of conservation practices, the improvement of soil productivity and economically sound conservation farming, afford the most practical means of storing the maximum amount of water in the soil.

Approximating nature's method of using close growing vegetation has produced the safest, most effective and most economical results in conserving water. The results of many years of research show that under Bermuda grass soil loss is almost too slight to measure and run-off is only 1.1 percent, while the same land unprotected and in cotton loses an average of nearly 28 tons of soil yearly and 21 percent of the annual rainfall as run-off. Soil conservationists are also deeply concerned with the utility of the vegetation produced and the efficiency with which plants use water. The mesquite, which is typical of woody plants invading the grass land, requires 1,700 pounds of water to produce a pound of dry matter of no particular value. In contrast, the highly nutritious blue grama, which the mesquite helps to destroy, uses only 350 to 400 pounds of water to produce a pound of dry matter.

However, in meeting man's requirements for food, clothing, shelter and cash income close growing vegetation cannot be used on all of the cultivated land. Mechanical measures must be used as a supplement. Such measures as terraces, furrows, ridges, ditches, diversions, borders, and dams are always designed to hold the amount of water the soil will require to supply the plants during growth and maturity, then to dispose of the surplus water in an orderly manner.

SOIL CONSERVATION PROGRAM

The normal soil conservation program is modified materially when the upstream flood-control phase of soil conservation is added.

The normal program of soil conservation is carried on farm by farm, unit by unit. Each part and parcel of a farm, each acre, is studied and its usefulness evaluated. Each acre is put to its best use on a continuing basis and it is given the treatment it needs to do the job it is best suited to do. Some land is level, or nearly so, and can be cultivated with the application of only a few measures, these mainly to protect the fertility of the land. Some land is sloping and can be cultivated safely only if certain measures are taken for its constant protection. These measures may include terracing, contour tillage, strip-cropping, cover crops and so on, to prevent erosion and keep the soil continuingly productive. Other land may be too steep for safe cultivation, and this land must be kept constantly in cover, such as grass or trees, and some land is too wet or too dry for economical production and requires still other measures to make it useful.

Such a program of course has public benefits. Many people benefit directly or indirectly from a program which increases the prosperity of families living on farms. But the on-farm or private benefits determine whether this program is to be applied, and of course, the farmer himself is responsible for the application and maintenance of the program on his farm. The on-farm planning and application is in keeping with the program and work plan of the soil conservation district, with the technicians of the Soil Conservation Service assigned to the district providing the technical help the farmer needs in working out and applying the program.

FLOOD CONTROL PHASE OF SOIL CONSERVATION

When the upstream flood control phase of soil conservation is added to the normal soil conservation program, farm land treatment continues but the rate of application is speeded up from about 40 years to about 15 years. The faster rate of application is achieved mainly through the employment of additional technicians who are assigned to watershed work and who are paid from flood-control funds.

The treatment of farm land for upstream flood control has private benefits just as the normal soil and water conservation program, but in addition it has off-farm benefits in that measures installed upstream contribute to the protection given lands farther down. Therefore, flood-control funds are spent only if the off-farm or public benefits justify the cost.

The graphic difference when the flood-control phase of soil conservation is added to the normal program lies in the special flood-control measures that are employed. After a large portion of a watershed has been given the treatment provided in the normal program of soil conservation, there still is likely to be run-off which will damage farm lands downstream. Special engineering measures therefore are useful. These special measures include small detention reservoirs, which catch the excess rainfall from a watershed of a few thousand acres and release over a period of days the water flow that otherwise would have been discharged in a few hours. They include drop inlets, large diversion terraces, gully plugs, silt traps, and so on.

Private benefits from such measures are incidental. The measures are justified on the basis of public benefits, the protection they will give several farms, roads, and bridges, and other such installations. The Federal Government bears the cost of these special structures and the soil conservation districts accept the responsibility for protection and maintenance of the structures.

In upstream flood control a given amount of work must be done on the approved watershed in a specified number of years, at a given cost. And it must produce satisfactory run-off and water-flow retardation and soil erosion control.

When soundly planned and properly applied the coordinated program of soil conservation contributes to flood control by (1) reducing run-off and soil losses on agricultural and grazing lands, (2) prevents the covering of fertile valleys with the products of erosion, (3) prevents the sedimentation of ditches, stream channels, and reservoirs, (4) reduces the frequency and severity of minor floods, and (5) lowers the crests of major floods.

THE WATERSHED SURVEY

Before we start upstream flood control we make a survey of the watershed area. We want to know how much of a job it's going to be, what benefits we can expect, and what the job will cost. Congress wants this information before taxpayers' money is spent.

On the Red River watershed in New Mexico, Texas, Oklahoma, Arkansas, and Louisiana, we made a preliminary examination, and some of the things that this examination showed will be interesting data. A preliminary examination like this is made to learn whether upstream flood control appears sufficiently feasible to justify detailed investigation. We started our detailed study of the Red River last October, and we estimate we have done 12 percent of the job.

The Ouchita of Louisiana and Arkansas, a tributary of the Red River, is not included in this survey. Because the Ouchita watershed is predominantly woodland, the United States Forest Service has been assigned this responsibility.

But first let me give for the benefit of those who may not have had this information from other sources, a brief description of this watershed we are studying.

In the entire drainage area in the five States is 58,515,000 acres. Some of this area, 2,168,000 acres, lies in what we call the non-flood-contributing portion of the high plains. The total land area we are concerned with in our survey totals 40,481,280 acres. Of this, 13,600,000 acres are in cropland, 11,884,000 acres in grazing land, 8,999,000 acres in woodland, and a little less than a million acres in miscellaneous uses. Land not in farms totals 5,132,000 acres.

In the watershed, we have the problems of both wind and water erosion. Damage by wind erosion is most severe on the high plains, in the rolling red plains and cross timbers of Texas and Oklahoma. Water erosion occurs of course over the entire watershed and is especially severe in the Permian red bed breaks along the river and major tributaries in the western portion of the watershed.

Severe gully and sheet erosion is found in the cross timbers of Oklahoma and Texas and in portions of the Coastal Plains of Texas and Louisiana. Large areas of the soils in the watershed are so shallow or steep that they are suited only for range or woodland. Large numbers of beef cattle are raised in these more rugged areas.

Annual rainfall ranges from about 60 inches at the mouth of Red River to about 15 inches in the New Mexico portion of the watershed. The moisture is sufficient in the area for growing crops except for the extreme western portion.

There are numerous works of improvement relating to flood control already in the watershed. These works include levees, reservoirs, irrigation projects, channel straightening and channel enlargement.

Denison Dam, completed in 1943 at a cost of $54,000,000, has a flood storage of 2,690,000 acre-feet. Altus Dam and reservoir has 21,500 acre-feet of flood-control storage. Lake Kemp and Diversion Lake have assisted in the control of several floods. Their capacity is nearly 500,000 acre-feet.

Nine flood control reservoirs have been authorized or are under construction on Red River tributaries. These provide a total flood-control storage of about 7,540,000 acre-feet, and of course the Department of Agriculture already has under way its program of upstream flood control on the Washita River watershed and we can expect this program to have a material effect on floodwater contributions to Red River.

Six major floods occurred on the main stem of Red River between 1843 and 1900. The greatest of these was in 1843. Five great floods have occurred since 1900; one, in 1945, occurred with the Denison Dam in operation. The other four floods were in 1908, 1927, 1932, and 1938.

Studies show we can expect a major flood about every 10 years and a minor one about every 2 years. Flooding of tributaries is more frequent. Major floods usually result from a succession of storms or from one of long duration.

THE COST TO AGRICULTURE

Most of the damage from flooding is to agriculture. In the case of Red River and its tributaries, damage amounts to over $13,000,000 a year, according to our preliminary investigation. About 55 percent of the estimated annual damage is to growing or harvested crops. Other agricultural damage is to fences, equipment, and houses, which amounts to an additional 18 percent. Nonagricultural damage, chiefly to roads and bridges, is slightly under 10 percent of the total damage. Here's the way these estimated damages run:

Floodwater damage:	
1. Crops and pasture	$7,200,000
2. Land damage	1,050,000
3. Other agricultural	2,400,000
4. Nonagricultural	1,300,000
Total	11,950,000
Sediment damage:	
1. Valley	200,000
2. Reservoir	1,020,000
Total	1,220,000
Grand total	13,170,000

In our estimate of the annual flood damages on Red River, we have included an item of $1,020,000 as sediment damage to reservoirs. We have in Texas today a number of examples of large investments of public funds in the building of dams.

Studies of sedimentation rates on some of these reservoirs indicate that they are filling with sediment at such a rate as to render them useless or at least to reduce their usefulness greatly in a comparatively short period. Sedimentation of the lakes serving Waco and Corpus Christi has progressed to the point to which these municipalities already must look for new sources of water and of course that means building new dams.

In the Department of Agriculture watershed treatment program, we realize that it is extremely unwise to build detention reservoirs without first providing for the protection against rapid sedimentation, therefore, the use of vegetation to protect sediment sources against further erosion is one of the first steps in the application of a watershed program. Stabilization of soil means that the effectiveness of our engineering structures will be protected and that the further filling of stream channels with sediment will be greatly reduced.

All but 250 square miles of the entire Red River watershed lies within the four States of the Soil Conservation Service of Western Gulf region. There are 72 soil conservation districts in the watershed in these four States.

As of our most recent reporting date, January 1, 33,543 farmers and ranchers operating 8,283,991 acres in the watershed of Red River had entered into agreements with their soil conservation districts for the application of the normal soil and water conservation programs. Needed conservation measures had been applied on 4,565,635 acres of that amount.

There are 17,743 of these cooperating landowners above the Denison Dam, 15,800 of them below. Here's what they already have done:

Practices	Units	Planned	Applied
Contour farming	Acres	2, 294, 046	1, 585, 471
Cover cropping	do	2, 358, 946	1, 227, 822
Crop-residue management.	do	2, 971, 668	2. 455, 346
Strip cropping	do	174, 729	116, 824
Range improvement	do	3, 068, 356	2, 144, 226
Pasture improvement	do	1. 295, 000	666, 732
Seeding of range	do	344, 913	112, 769
Seeding of pasture	do	950, 005	451, 700
Woodland management.	do	368, 071	175, 898
Tree planting	do	29, 161	15, 34?
Farm and ranch ponds.	Number.	14, 713	11, 261
Terraces	Miles	104, 000	52, 41
Field diversions	do	3, 431	1, 920
Farm drainage	Acres	249, 905	133, 474

Because the Soil Conservation Service already is carrying on an upstream flood-control program on the Washita River, one of the main tributaries of the Red River, a glimpse at our progress on the Washita appears in order at this time.

THE WASHITA PROGRAM

The Washita River watershed of 5,189,000 acres in Oklahoma was one of the 11 streams on which programs of agricultural flood control were authorized by Congress in the Flood Control Act of 1944.

The report on the survey placed direct flood damage at about $2,225,000 a year, with 96 percent of it agricultural. Annual average damage to roads was estimated at $110,000 and to lakes and reservoirs at $50,000. Annual damage to land by erosion was estimated at considerably more than the direct flood damage.

The watershed treatment program, according to survey estimates, would afford these benefits: $358,000 a year reduction in annual direct flood damage (16 percent); $48,000 a year reduction in sedimentation damage. That is a total of more than $406,000. Increased income from farm lands, principally from the use of land that could not be cultivated safely without protection, was placed at almost $5,000,000 a year on the Washita.

Cost of the Washita upstream flood-control program was estimated at about $14,000,000, with the share of the farmers estimated at about $3,150,000 in the form of labor, use of equipment and materials.

Operations in the Washita watershed treatment program began when the first appropriation became available in July 1946.

There are 20 small detention dams now complete or under construction in the watershed, and field surveys have been completed for 37 more. The storage capacity of those completed or under construction ranges from 76 to 1,172 acre-feet. The fills range from 21 to 44½ feet in height.

A total of 48 flood water diversions have been constructed, and 132 gully control structures.

The big harvest of native grass seed in Oklahoma last fall has made possible another achievement which I can proudly report in the Washita program. That is that already this spring 75,000 acres of eroded, sediment-producing land have been seeded to native grass in the Washita watershed. That was our goal and it was an ambitious one. But the goal has been reached and indications are that we will be able to go far beyond it.

When we entered upon this watershed treatment program in the Washita we thought that 75 or 80 percent participation by farmers in the subwatersheds would be as much as we reasonably could expect. We are getting very near 100 percent participation.

The work we have been doing in the Washita River flood-control program has been a pioneering sort. There was no precedent for such a program. Yet we have never doubted but that this kind of watershed treatment would accomplish the things it was meant to do. In the watershed of the Red River, of which the Washita watershed is a part, we have the machinery already set up in the form of nearly complete soil conservation district organization and a nucleus of trained SCS personnel. We have the background and experience gained from our work on the Washita, Trinity, and Colorado. We are going ahead with the survey of the Red River watershed as fast as our resources will permit and, as I have reported, the portion of the program represented by normal soil and water conservation already is well advanced. If, when our report is made to Congress, funds are made available for an agricultural flood control program on the Red, the Soil Conservation Service will be ready to go.

Can Britain Compete?

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by the Honorable William Benton, publisher and chairman of the board of the Encyclopedia Britannica, Inc., and chairman of the board of the Muzak Corp., before the American Chamber of Commerce in London, May 26, 1949. This address, like its author, is strongly imbued with the American principles of free enterprise and it gives evidence of a very business-like approach to the problem of economic aid to the western European nations with special reference, in this case, to Great Britain.

The address follows:

CAN BRITAIN COMPETE?

It was 6 years ago that I first met so many of you here today. And it is to my American friends here that I shall largely address my comments.

It was in the wartime August of 1943 that I came to England as vice chairman of our war-born Committee for Economic Development. I came at the invitation of Lord Halifax to discuss postwar trade relations between Britain and the United States.

The big issues then seemed to be the classic issues of free trade—tariffs and import quotas, cartels, monetary stabilization, shipping subsidies and export subsidies, and the chosen instrument theory in aviation. No one then foresaw the depth and extent of the world political crisis that would carry over from the war. No one guessed the acute economic anemia in western Europe that was to call for massive transfusions of dollars.

My observations on that visit are on the record. I embalmed them in an article in Life magazine which the Life editors titled "Business in Britain." Its subtitle was "Britain's Industrial Leaders, Driving on the Left Side of the Economic Road, Worry About Postwar Collisions With the United States." In this article I predicted a rapidly expanding role for the Government in the British economy. One British editor reprinted the article under the heading, "The amazing impressions of Mr. Benton." What amazed him was that I though Britain was driving on the left side of the road.

The forecasts I made in 1943 about the nature of postwar trade problems between the United States and Britain are still, I hope and believe, valid for the long term. For the shorter term the resolution of the present international political crisis may depend first and foremost on whether the Atlantic community, and the rest of the free world, can achieve economic stability on a high and rising level. The crisis cannot otherwise be resolved so long as the men of the Kremlin feel they can look forward confidently to a catastrophic depression in America, and to chaos in the free world.

Yes, economic stability seems now to be a better form of defense than a still bigger Navy or an enlarged Air Force or a more powerful atom bomb.

Although a key to the political crisis is economic health, we must also develop the ideological skill to interpret that health to the skeptics. If the "hordes" Mr. Churchill fears are to be kept out of western Europe, it will be by forces other than men bearing arms.

Our ideological skill with the skeptics is pitifully weak. During my service in the State Department I have often spoken on the subject. That is another speech, for another audience.

Today I shall explore with you the present state of our economic health. Nearly every business leader I know in the United States, and nearly all economists believe the economy of the United States is in good health. They would be glad to write an insurance policy on its life. Most of them are encouraged by the progress towards recovery in western Europe. A nominal decline in total business activity for 1949 is expected in the United States. This should be a healthy thing. It is or should be a movement toward a high-level norm. Many indexes tell us that this year will not be as good as 1948, but it will be good.

Personal incomes for March of this year—the latest figures available—were at the annual rate of $214,000,000,000 (or thousand millions). This is a little below the all-time peak of last December but above the level of a year ago. Liquid assets of individuals—the backlog of savings—have reached a record high of $200,000,000,000. This is a total of $114,000,000,000 available in 1949 to back up expenditures by American consumers.

I cite these figures because of their bearing on the present outlook for the British economy. When I was in England last May and again in August the big problem was production. Today we see the emerging shape of a newer problem—the inevitable second phase. That is the problem of merchandising.

Last year I repeatedly heard the criticisms of British production that Englishmen have now heard so often that they may be angered if not bored by them: That British production suffers from obsolete plant and equipment; that the productivity of labor in Britain is low, and lags far behind the rate of the United States; that scientific management in Britain does not keep pace.

These common criticisms are not justified to the degree that they may have been a few years ago. However, as some of the key production problems seem on the road to solution, they are rapidly being superseded by others. The president of the Board of Trade seems most alert to this. He said on May 10: "Our problem is not one of production but of selling."

There are many who feel Britain can never compete with the United States in mass production in many lines of manufacture. She can become far more efficient in production, and indeed she must, but even with plants equally modern, many factors of cost may be unfavorable to Britain.

Yet Britain can compete in selling. Further, she can outdo the United States, if she will apply herself to it. Selling depends on brains and aggressiveness. The British have plenty of the one and are cultivating the

other. Brains and aggressiveness, in a few decades, built the State of Illinois, where I have business interests. Brains and aggressiveness can win for Britain a great and profitable slice of the rich American market.

I need hardly add that aggressiveness entails hard work and plenty of it. At the Palladium the other night I heard Ted Ray—I did not say Danny Kaye—win the crowd when he referred to "your husband coming home from what he laughingly calls his work." Yes, it was hard work which created Chicago's industrial empire out of the dreary prairies. Chicago looks east toward New York and New England and thinks that the lawyers and the financial men of the East do not know how to work as do the engineers and the salesmen who built and who run our great productive enterprises.

It is my opinion that if Britain is to achieve the balance she seeks with the dollar, she must aggressively launch a direct assault on American and Canadian markets.

There has been criticism of the Organization for European Economic Cooperation for overestimating the level of Europe's exports in 1952, the year the Marshall plan is scheduled to end. This criticism may be right. But of the anticipated $5,000,000,000 increase in European exports between 1947 and 1952, only $1,000,000,000 of the increase is forecast from sales to the United States. This is a gross underestimation of the potential of the United States market. As I have pointed out, United States citizens have a record $414,000,000,000 to back up their spending this year—if they can be persuaded to spend their dollars.

I am in good company here. The President of the British Board of Trade says that the United States and Canadian markets for British goods can be greatly expanded and without any manipulation of the value of sterling.

Is there any modern business that has prospered waiting for customers to beat a path to its door, mousetrap manufacturers not excepted? If he is to prosper, the producer must take the initiative. He must be a salesman. As a salesman he must study the market, the pattern of buying, the consumer preferences, the best price ranges, and a multitude of other detailed questions. This is market analysis, plain and simple.

The British manufacturer cannot only master American advertising and sales promotion techniques, but in my opinion, by brains and aggressiveness he can improve upon them. He can learn to tailor his products for the American market, and to design them and package them so that they will win dollars by the thousands of millions. The market is in the United States because the dollars are there.

I agree with the leader in the Times of last Saturday that "by their own exertions British manufacturers and British workers and British leaders must stop the rot." More important to the point I am trying to make, however, is my disagreement with another statement in the same editorial. The Times stated, "The only cure for high prices is to lower them." No; there is another cure, certainly in the export trade, which is sometimes equally or even more effective—better products more attractively designed and made and more skillfully promoted and sold—in a word, merchandised.

The United States is today importing from the ERP countries—including the United Kingdom—at a level that is still below the average of 1936–38, in terms of volume of goods, although the dollar value is higher. The volume of imports from Britain has only about reached the prewar level, which, as you will remember, was not high. But an equally significant fact is that western Europe's share of United States imports has dropped from 23 percent prewar to about 14 percent today. Far from straining our ability to import, Europe is getting a little more than one-half of the share of our dollars it used to take.

Yet this is a peculiarly good moment for a vigorous invasion of the American market. Not only is our income at an all-time peak, but during the last 8 years of easy business many of our manufacturers have grown soft and fat. Many are vulnerable to aggressive competition. Many have forgotten how to sell.

Only recently I heard Mr. Paul Hoffman, the Administrator of the ECA, argue that one of the great mistakes of American business during the depression of the 30's was that the first cuts in company budgets were too often made in advertising and sales. Mr. Hoffman told me the other day that his old company—Studebaker—recently increased its advertising outlay even though American manufacturers are spending proportionately far less on advertising today than they have since before 1900. (Advertising expenditures today are running at only 1.8 percent of national income in contrast to a half century average of 3 percent or better.) Mr. Thomas McCabe, another of America's great salesmen, though now a banker and Chairman of our Federal Reserve Board, said the same day: "Our merchandising has lagged way behind our production. If we in the United States were now as well prepared on selling and promotion as we are on production there would be no danger whatsoever of any recession." Mr. McCabe added, "Advertising is to merchandising what electricity is to production." (I am glad to give this plug, as we Americans call it, for advertising—the business in which I was engaged prior to 1936, and which provided me with my first capital.)

When Mr. Wilson last month gave his eight-point program for enlarging Britain's exports to North America, he explained: "We shall give every help and, where necessary, open favoritism to exporters to Canada and the United States in their production difficulties." He said that regional trade consuls, accompanied by business advisers, would be sent to each of four regions in the United States. He promised government assistance for market research in the United States, and the freeing of dollars for sales promotion. On the Export Credit Guarantee program he conceded that exporters to North America might require—as he put it—"a less conventional conception of commercial risk." He pointed out that British exporters had concentrated on our eastern seaboard, neglecting our West and South. (They are not alone in this, as our New England manufacturers can testify, I am glad to assure them.)

I herewith suggest a ninth point for Mr. Wilson. I suggest the creation of an Anglo-American council on merchandising as a logical corollary to the council on productivity. I would hazard the guess that, as in the case of the joint council on productivity, we in America can teach the British some things—and we will discover we can learn a good many too—and both countries can profit from a mutual exploration of problems of selling and promotion. I have reason to believe that important groups in the United States would welcome the creation of such a council on merchandising.

The United States interest in British economic welfare is, of course, not unselfish. We are learning that our welfare depends upon an expanding and healthy world economy.

But there are other reasons as well, reasons which also appeal to the economic statesman. One of them is that the competition will be good for our internal economy. The Encyclopaedia Britannica says, in its article on competition by Professor Hilton, of Cambridge University, and Professor King, of New York University, that competition is socially beneficial, for it provides a zest that might otherwise be lacking in industrial endeavor. The presence of an avowed trade enemy, the sense of danger, the imperative need for keeping in fighting trim have produced in the past qualities of alertness, vigor, and self-reliance which the more amiable objective of service might not have fostered so keenly.

I believe the businessmen of the United States are now trying to say this to their British friends: "We will help you to your feet. Then as businessmen we will fight it out, in every market, including our own, for our individual benefit and our two countries' benefit and for the world's benefit."

This may sound unrealistic today. Is it unrealistic? If it is, I suggest that the American Chamber of Commerce in London dissolve. I suggest this group seek a new name. Let it become merely an American front in England, an American-Anglo friendship society.

Some of you may recall that Geoffrey Crowther once remarked that "Britain can compete the pants off the United States." Surely he has not yet proved to be anywhere near right. But for my part I hope he will prove to be a prophet with honor, not only in his own country but abroad.

Some Americans are alarmed at the prospect of European industry made efficient by American know-how, and reequipped with American capital goods. Yet need they be alarmed? I had the privilege this month of inspecting some new charts prepared by Willard Thorp, our Assistant Secretary of State for Economic Affairs. They show that one-fifth of the world's population live in areas of the world that are relatively developed; another one-fifth live in so-called transitional areas, while three-fifths live in the industrially undeveloped areas. The United States between 1936 and 1940 exported to the industrially developed one-fifth at the rate of $5.80 a year per capita, and to the undeveloped three-fifths at the rate of only $.70 a year per capita.

World economic development benefits all nations. But as the less industrialized areas acquire productive facilities the composition of world trade will undergo important changes. The simple exchange of manufactured goods for foods and raw materials will decline. Trade in semimanufactured goods will increase. The whole mechanism of trade will become more complex. In this process, the advanced manufacturing nations will gain in trade as backward areas develop. But they must abandon, as rapidly and sensibly as possible, the production of goods that can be made more economically elsewhere, and must emphasize the production of goods which require complex manufacturing skills, large amounts of capital, and new technology.

My hope is that, as a byproduct of increased emphasis on world salesmanship, some of that competitive spirit will flow back into the internal economy not only of Britain but of the rest of the world even including the United States. Selling is by its nature less easy to regulate, control, or nationalize than production.

Britain today seems to be moving in two directions at once. The role of government in the economy has been greatly expanded by nationalization. On the other hand, with the passing of the Monopolies and Restrictive Practices Act last year, a step has been taken toward breaking up monopolies. This is a step toward what we Americans regard as "free enterprise." As the president of the board of trade told the House at the time, Britain " * * * cannot as a nation afford restrictive practices if they increase * * * costs abroad, if they prevent the fullest development of inventions and new techniques, or reduce output, or maintain prices at an excessive level to * * * consumers at home."

A group of important British industries has been recommended for investigation by the Board of Trade. Britain is now and for the first time, recognizing "that vigor-

ous competition may exert an important and beneficial effect upon national productivity." That is a quotation from the first report of the Anglo-American Council on Productivity.

Even a combination in Britain of modern plant, a highly productive labor force, and imaginative management may not prove sufficient—without competition. Man is indeed fallible and his capacity to rationalize and to deceive himself seems unlimited. Where is management's measure of its efficiency? When the business executive claims his plant is modern, who is there to deny it? Who checks the productivity of man's labor? The deliberate encouragement of competition is needed both as a stimulus and as a yardstick. Reading the debate on the monopoly bill in Hansard, I found at least one honorable member of Parliament blaming restrictive business practices for retarding the British economy during the last 50 years. Can there be any doubt about this? He pointed out, in contrast, that during this period the United States had taken vigorous steps to encourage competition. Perhaps the British, who have tried most everything in recent decades, are now going to try competition.

Here we have a strange paradox. On the one hand, Britain moves toward nationalization, and, on the other, Britain develops an urge toward competition. The rationalization of these trends is one of the great problems of our time. In Britain, the twentieth century trend toward nationalization grows in part from a lack of competition. In the United States our faith in competition sometimes keeps us from recognizing the areas where it does not exist, or is ineffective, and where we should either enforce competition more vigorously or bring enterprises under Government control.

The United States also is moving in two directions at once. Every American is aware that Government is assuming greater responsibility for the general economic climate of the Nation. We have come to accept some of the precepts of the "welfare state" as they have been outlined first in the New Deal and now in the Fair Deal at the same time, as I predicted to the dismay of some of my British friends in 1943, there has been no relaxation of the Sherman Antitrust Act, and our desire for competition is as deep as ever, regardless of how we may on occasion prostitute it.

The role of the United States Government in controlling booms and depressions, we hope, is to be primarily at the fiscal and monetary level. We in the United States hope to regulate the climate, as the Economist once put it, without rationing the raindrops. Almost unanimously we agree that the Sherman Antitrust Act and the Clayton Act have spurred production just as they have spurred selling.

Just 2 days before I left the United States, Paul Hoffman told me that one of the most beneficent results of the Anglo-American Productivity Council will be its byproducts—the understanding and friendship it engenders. (Mr. Philip Reed agrees with this.) I have tried to suggest today the beneficent results that might flow from a more difficult kind of cooperation—cooperation in competition. I have suggested that, as Britain learns better to compete in the American market and better to compete with America in all markets—as it applies to international salesmanship the energy and brains it has long applied to international politics and diplomacy—it will render an indispensable service to itself, to America, and to the free world. I have expressed the hope that its competitive spirit in world markets can feed back to give zest, alertness, vigor, and self-reliance to its own internal economy.

If these hopes are realized, you businessmen of two countries can give the world once more a living example of a free, stable, and expanding economy. Further, you can learn to give the lie to the forces of pessimism that preach the inevitability of collapse in a competitive economy. Yes, you can give the lie to the theory of the inevitability of crisis and war. Let us therefore march together—not left, not right—but forward.

Rev. Joseph L. N. Wolfe

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to have included in the CONGRESSIONAL RECORD the following obituary appearing in the July 1, 1949, issue of the Catholic Standard and Times in memory of the Reverend Joseph L. N. Wolfe, S. T. L., J. C. B.:

ST. GREGORY'S RECTOR DIES—FUNERAL TODAY (FRIDAY) FOR REV. JOSEPH L. N. WOLFE, FORMER CHAPLAIN IN TWO WARS

The Reverend Joseph L. N. Wolfe, S. T. L., J. C. B., rector of St. Gregory's Church, Fifty-second and Warren Streets, died after a long illness at St. Joseph's Manor, Meadowbrook, on Monday, June 27.

Born in Philadelphia on December 26, 1881, Father Wolfe was educated at Cathedral Parochial School, Roman Catholic High School, and St. Charles Seminary. He was ordained by Bishop Prendergast in the Seminary Chapel, Overbrook, on May 24, 1906. He was a student at the Catholic University, Washington, D. C., from 1907 to 1909. His first appointment was as assistant rector of St. Katharine's, Wayne. He also served as assistant at Holy Spirit, Sharon Hill, St. Teresa's, Philadelphia; Assumption B. V. M., Philadelphia, and St. Patrick's, Philadelphia. From 1918 to 1919 he served as chaplain in the Army. He was appointed rector and founder of St. Barbara's Parish in May 1921. On November 3, 1936, he was appointed rector of St. Gregory's. While there he became chaplain in World War II and served from February to May, 1941.

AMERICAN LEGION CHAPLAIN

Father Wolfe was a former national and State chaplain of the American Legion and chaplain of De Soto Council, K. of C. Solemn requiem mass was celebrated in St. Gregory's Church today (Friday) at 10 o'clock, by the Reverend Joseph I. Schade. The Reverend William J. Casey was deacon and the Reverend John P. Greene was subdeacon. The Reverend Francis J. Kane preached the sermon. Interment was in Holy Cross Cemetery.

Father is survived by three sisters: Mrs. Mary E. Lang, Miss Lillian Wolfe of this city and Mrs. Laura Kaighler of St. Petersburg, Fla., and a brother, Raymond L. Wolfe.

It's Our Money

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. HAND. Mr. Speaker, many people are indifferent to governmental extravagance because they are unable to see it is really their money that is being wasted. An editorial in the Millville (N. J.) Daily Republican presents this problem so clearly, that it is worthy of wide attention. The editorial follows:

The real problem in connection with taxation is the fact that so few people take any interest. Believing that a soak-the-rich and tax-the-corporations policy relieves the average citizen of his share of the tax burden, most people do little to nothing about the ever-mounting cost of government.

If the ABC Corp. pays 10 cents out of every dollar for real-estate and business taxes and those taxes are increased to 15 cents out of each dollar, then the consumers of the ABC Corp. products are going to pay 5 percent more for the merchandise or the merchandise is going to be cut in quality to that extent. Taxes are included in the cost of doing business.

The average citizen pays so much in taxes which are indirect in their application that he is not aware of the full extent of their depreciation of the buying power of the dollar. There are local real-estate and personal-property taxes, sales taxes of various kinds such as on cigarettes, gasoline, bulbs, luggage, transportation, cosmetics, jewelry, and scores and scores of items. Then there are income taxes, manufacturers' excise taxes which are included in the price of the items, unemployment taxes, social-security taxes, disability taxes, and plenty more.

It has been estimated that the average person works from 3 to 4 months of the year for his Government—local, State, and National. Granted that it costs money to operate government, it is the most profligate and wasteful organization of any kind in the land. Yet, it is our Government and is supposed to be working for us and for our interests.

Governor Driscoll, at the governor's conference in Colorado, emphasized the need of the Federal Government's retirement in favor of the States from certain tax fields. The New Jersey Chamber of Commerce reports that all-purpose taxes levied on real estate and on tangible and intangible property this year in this State will amount to over $355,000,000.

Particularly in the fields of Federal and State governments, no thought has been given to the readjustment of costs such as should have followed immediately with the winning of World War II. There is a continued expansion of services, some of which are very questionable. We cannot expect our unemployment and our old-age pension funds to be solvent, when that money has already been used by our Federal Government for operations.

When one looks at the big salaries of movie stars, business executives, and others who are in the higher brackets, it may appear that they are getting more than their share. But as an example, most movie stars making $200,000 a year are lucky if they can manage to hold on to about $35,000 after Federal, State, etc., taxes. That is still a lot of money, but it illustrates what taxes do to salaries.

Taking a look at corporation taxes, one will find that Uncle Sam received three and a half times more in taxes from the Santa Fe Railroad than the owners (stockholders) were paid. For every $8 in profit the railroad paid $28.47 in taxes. For every employee of the Santa Fe, it pays in taxes about $1,000 each.

Until each one of us takes a greater interest in what taxes are costing us as individuals and until each one demands that something be done about Government costs in Washington and in Trenton, there will be no slowing down of the increasing bureaucracy and the mounting cost of government.

Appointments of Postmasters and Rural Carriers

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. MANSFIELD. Mr. Speaker, I have today introduced a bill to provide that postmasters and rural carriers in the postal service shall be appointed solely on the basis of fitness to perform the duties of the position and that such appointments shall be made by the Postmaster General upon certification by the Civil Service Commission from a list of eligibles. It is my belief that the passage of this measure will fit into President Truman's proposed reorganization plan for the Post Office Department which was presented to the Congress on June 20, 1949.

The enactment of this measure into law, in my opinion, will prove to be an incentive to the career employees in the Post Office Department because it should enable many of them to achieve the position of postmaster when and if such a vacancy occurs. The only patronage I have, as a Member of Congress, is the right to recommend eligible applicants for the positions of postmasters and rural carriers to the Post Office Department. This authority, I have, in turn, delegated to the Democratic county committees in my district because I have felt that on the basis of its knowledge of local conditions, it would be in a better position than I to make a recommendation based on the wishes of the committeemen and women in the area served by the post office and also based on the wishes of the majority of the patrons in the area to be served. I have also adhered to the provisions of the Veterans Preference Act of 1944 in the consideration of applicants for postal positions to the end that veterans would be given every possible consideration. When the chairmen of the Democratic county committee have forwarded to me the committee's recommendations based on the above conditions, I have, under my name, sent those recommendations to the Post Office Department for its approval. This, I believe, is the only fair and democratic way to make the selection for these positions and I shall continue to follow that policy unless the law is changed giving that authority to the Postmaster General along the lines recommended in the bill I have introduced today.

Mr. Speaker, I am inserting at this point in the RECORD a copy of my bill covering this subject:

A bill to provide that postmasters and rural carriers in the postal service shall be appointed solely on the basis of fitness to perform the duties of the position

Be it enacted, etc., That every appointment to a position as postmaster of any class or as carrier in the rural delivery service of the Post Office Department shall hereafter be made by the Postmaster General upon certification by the Civil Service Commission from a register of eligibles without regard to any recommendation which may be made, with respect to any person whose name is so certified, by a Member of, Delegate to, or Resident Commissioner in Congress, or by any other person.

"Second Class" Citizens

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I would like to have included in the CONGRESSIONAL RECORD the following article which appeared in the Catholic Standard and Times issue of July 1, 1949:

BILL REPUDIATES PARENTS' RIGHTS—K. OF C. SAYS BARDEN BILL MAKES CATHOLIC PUPILS "SECOND CLASS" CITIZENS

NEW HAVEN, June 27.—The Barden Federal school aid bill in effect repudiates parents' rights and "reduces parochial school pupils to a status of second-class citizenship," declared the Knights of Columbus, in moving the force of its 700,000-plus membership into the current congressional school aid fight.

The K. of C. supreme council, in a resolution adopted here, arrived at the same description of the measure as did Catholic school authorities earlier in Washington. They said it was the worst and most objectionable Federal-aid bill ever approved by any congressional committee.

The national leaders of the Catholic fraternal organization asked their members across the country to protest the Barden bill in letters to Congressmen and to "enlist the support of other citizens of their communities in protesting against this unjust proposal."

The Barden bill, which has been approved by a House subcommittee headed by the bill's sponsor, Representative GRAHAM A. BARDEN, of North Carolina, contains iron-clad assurances that its $300,000,000 annual grant to the States will go only to public school students. In this respect it exceeds even the Senate-passed Thomas bill.

The fact that such a lopsided measure could win some amount of approval on Capitol Hill has brought a sharp new awareness among Catholics generally of the importance of the Federal-aid fight. Diocesan weeklies gave the Barden bill story top play, and many carried special editorials analyzing the bill and urging protests to Congressmen. Hundreds of pastors discussed the proposed legislation with their congregations.

TYPICAL REACTION

A typical reaction was that of Henry A. Reinhard, Columbus attorney and president of the diocesan Holy Name Union, who made this public statement: "The Barden bill violates the true intentions of the Federal Constitution. It infringes upon the rights of Catholic children who, as citizens, are entitled to all the rights, privileges, and immunities of every other child."

Bishop William O. Brady, of Sioux Falls, wrote bluntly to his South Dakota Catholics: "What will South Dakota do with the funds sent to it by Uncle Sam? South Dakota will spend it all on the public schools, after the expense of handling the funds is deducted. Will the Catholic schools get any of Uncle Sam's gifts? Don't be foolish."

"Our Catholic schools are in a rather strange position," he continued. "The Federal Government insists that we may have them. The various State governments inspect them and approve them. High-spirited citizens praise them. That is all."

Bishop Brady said that Catholic school children get full consideration from the tax assessors when it comes to fixing the formula for school taxes, but are left completely out in the disbursement of the tax funds.

"Will it be any different if Uncle Sam appropriates money for schools?" he asked. "No different—except that our children will be counted three times; i. e., once for the State taxes and once for the Federal taxes—and then they will be counted again * * * counted out when the distribution begins."

"For 25 years and more we Catholics have fought to retain control of our schools on a local level," the bishop stated. "If backward States need help, let that be arranged the same as any other emergency relief. But we in South Dakota have boasted of our schools. Let us keep control of them."

The Knights of Columbus resolution stated, in part: "One of the cherished and inalienable rights guaranteed by the Constitution of the United States is the right of parents to further the education of their children in the schools of their choice, whether public, parochial, or private.

"The history of our country, past and recent, abundantly proves that parochial schools, maintained at great cost to Catholic taxpayers effectively prepare children for the responsibilities of American citizenship and graduate young men and women qualified to vote, eligible for public office and subject to military service.

"The Barden bill * * * in effect repudiates the rights of parents and reduces parochial-school pupils to a status of second-class citizenship by depriving them of the bus rides, nonreligious textbooks and health aids to which they have a constitutional right.

"The Barden bill, which counts parochial-school pupils in for the purpose of computing the Federal aid to be granted and counts them out of their share of benefits, is the worst and most objectionable Federal-aid bill ever approved by any congressional committee."

WASHINGTON, June 28.—President William Green of the American Federation of Labor has attacked the Barden bill as not satisfying the A. F. of L.'s requirement that Federal school aid include health and welfare services for children in all schools. He hit hardest at the bill's discrimination against Negroes and its lack of guaranties that teachers' salaries will be increased.

Airlift's Anniversary

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend and revise my remarks, I include herewith an editorial from the Shreveport Journal of July 5, 1949, entitled "Airlift's Anniversary":

AIRLIFT'S ANNIVERSARY

When Russia agreed some time ago to call off the Berlin blockade, which was responsible for the airlift operated by western allied forces to furnish food and other essentials for the people inside zones of occupation, there was presumption that the gigantic operation would cease quickly. However, Gen. Lucius Clay, who was in charge at the time, made it clear that stop-

page of the airlift would not be immediately practical or advisable, but would have to be done gradually, and so far there has been little let-up. This was brought to the attention of people everywhere last Sunday when the first anniversary of the unprecedented activity was noted.

That continuation of the service was the reflection of sound judgment was shown when there developed a strike of Berlin's rail transportation. Without the airlift there would have been indescribable suffering. Figures released on the recent anniversary give 8,200 tons as the daily minimum cargo movement by the planes used in this historic activity. The rail strike has been conducted as a protest by Berliners against the Russian management of the rail service between occupation areas and into the German capital.

The need of full-scale operation of the airlift would not be required should the Soviets keep their promise not to shut off Berlin's land approaches to the Western Powers again, a pledge which was contained in the agreement at a conference of the foreign ministers. Without further complications the airlift could be largely reduced and eventually closed entirely. But who can say there won't be new complications, that Russia will abide by its pledge? Reports the last several days have carried the hint that the Russians are thinking of clamping the blockade on again. And they probably will if they don't have their way in other matters to the disadvantage of the Western Powers.

The Kansas City Star in praising the airlift for its first year's accomplishment commented:

"But the Russians have a too familiar way of 'reinterpreting' their promises. They do so when it suits their convenience to wriggle out of them. It would be naive, therefore, for the Americans and British to regard Berlin as hereafter immune to Soviet blockading action.

"For that reason the airlift ought to be maintained on a restricted basis. It should be prepared for quick expansion if necessary. Thus there would be no possible waste of the methods and technical knowledge mastered in the most pressing times of the Berlin crisis. The Russians then would not be allowed to forget how we withstood their pressure move previously. And the anti-Communist population of Berlin would be assured of our readiness to sustain them in the event of another blockade.

"The Berlin airlift has magnificently served the purpose for which it was designed. Even in a form narrowed to fit less critical conditions, it can represent the ability of the Western Powers to stand fast in Berlin as long as that remains their policy and intention."

The Stalin bunch of power-crazed troublemakers must be constantly watched, and preparedness against any hostile move is the safest instrument.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. PATTERSON. Mr. Speaker, since Cardinal Spellman's message concerning the Barden bill on Federal aid to education, H. R. 4643, many hundreds of my constituents have written expressing disapproval of legislation which omits nonpublic schools from grants for educational purposes. Enactment of this measure would result in stringent Federal control as it specifically fixes the method for the allocation of funds granted to the States. Education is properly a State function, and jurisdiction must remain with the States. As evidence of the widespread interest which has been evoked, I cite the names and parishes of a representative group of clergymen who have written expressing opposition, and include resolutions adopted by the Connecticut Catholic War Veterans; Waterbury Council of Catholic Women, junior division; and Knights of Columbus, Unity Council No. 37, Torrington, Conn.

Clergymen names and parishes follow:

Rev. John W. Dial, Sacred Heart High School, Waterbury, Conn.

Rev. Leon Ristuccia, St. Joseph's Monastery, Winsted, Conn.

Rev. Vincent E. Finn, St. Bernard's Rectory, Sharon, Conn.

Rt. Rev. Henry J. O'Brien, Bishop of Hartford, Hartford, Conn.

Rev. Roger M. Charest, S. M. M., St. Louis de Montfort Seminary, Litchfield, Conn.

Rev. Julius Guandalini, St. Lucy's Rectory, Waterbury, Conn.

Rev. John F. Kenney, Blessed Sacrament Rectory, Waterbury, Conn.

Rev. George F. X. Reilly, Immaculate Conception Rectory, Waterbury, Conn.

Rev. M. F. Keating, S. S., Peter and Paul Church, Waterbury, Conn.

Rev. William P. Kennedy, Assumption Rectory, Ansonia, Conn.

The resolutions follows:

CATHOLIC WAR VETERANS
OF THE UNITED STATES OF AMERICA,
DEPARTMENT OF CONNECTICUT,
Bridgeport, Conn., July 2, 1949.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The Catholic War Veterans of the Department of Connecticut, at a joint meeting of the executive board and post delegates, at a meeting duly called for the purpose of analyzing the so-called Barden bill have unanimously adopted the following resolution:

"Whereas the Barden bill on Federal aid to education, now being considered by the Eighty-first Congress, infringes upon the rights of every Catholic, especially Catholic parents; it is the most discriminatory and most objectionable of the Federal aid bills, for it not only excludes nonpublic school children from benefits, even though it counts them when figuring the allocations, but it makes provision through the courts to see that nonpublic school children do not get any benefits. If Federal aid is to be given to education, justice demands that the pupils of Catholic schools share in those benefits;

"And whereas the Catholic parents are not asking the Federal Government to help erect any new Catholic schools nor pay the salaries of any teachers; and

"Whereas the Catholic parents are asking the Federal Government to include the well-being of all children, regardless of race, creed, or color, in the distribution of funds, and to give Catholic school children, at the very minimum, the same health and welfare services that are provided for public-school children. These services include health aids, nurses, transportation, nonreligious textbooks, recreational facilities, and other social-welfare benefits: Therefore be it

"*Resolved*, That the Catholic War Veterans of the Department of Connecticut, acting for the membership and officers thereof, do vigorously oppose the Barden bill in its entirety."

Attest:

IRVING H. JOHNSON,
Commander, Department of Connecticut.
CARMEN A. TORTORA,
Adjutant, Department of Connecticut.

WATERBURY COUNCIL OF
CATHOLIC WOMEN,
JUNIOR DIVISION,
Waterbury, Conn., July 1, 1949.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

DEAR MR. PATTERSON: The Junior Division of the Waterbury Council of Catholic Women formally protest against the Barden bill, H. R. 4643.

The reasons for our protest to you are, firstly, it discriminates against our Catholic children and deprives them of aid toward or in matters of public health and transportation.

Secondly, it repudiates the constitutional rights of parents by infringing upon their choice in the selection of schools for the education of their children.

Thirdly, it accepts our Catholic child as a numerical member of our individual States but refuses them financial aid which is to be granted the individual States.

We urge you to oppose this measure personally and to do all that you can to kill it in committee.

We would appreciate receiving an appraisal of your views in this matter, so that we may present it to the 300 members of the junior division of the Waterbury Council of Catholic Women.

Very truly yours,

POLLY FLEMING,
Corresponding Secretary.

Whereas one of the cherished and inalienable rights guaranteed by the Constitution of the United States is the right of parents to further the education of their children in the schools of their choice, either public, parochial, or private; and

Whereas the history or our country, past or recent, abundantly proves that parochial schools, maintained at great cost to Catholic taxpayers, effectively prepare children for the responsibilities of American citizenship and graduate young men and women qualified to vote, eligible for public office and subject to military service; and

Whereas the Barden Federal aid to education bill, H. R. 4643, in effect repudiates the rights of parents and reduces parochial school pupils to a status of second-class citizenship by depriving them of the bus rides, nonreligious textbooks, and health aids to which they have a constitutional right; and

Whereas the Barden bill, which counts parochial schools in for the purpose of computing the Federal aid to be granted and counts them out of their share of benefits, is the worst and most objectionable Federal aid bill ever approved by any congressional committee: Therefore be it

Resolved, That Unity Council, No. 37, of the Knights of Columbus in Torrington, Conn., is opposed to this, or any other Federal aid to education legislation which fails to guarantee that the essential services mentioned will be available to all children in both public and parochial schools; and be it further

Resolved, That the members of Unity Council, No. 37, of the Knights of Columbus in Torrington, Conn., make known immediately to Congressman JAMES T. PATTERSON our opposition to the Barden bill for the reasons herein stated, and that he further enlist the support of other Congressmen in protesting against this unfair proposal.

JOHN H. BARRETT,
Grand Knight.
JOHN J. GIBBONS,
Recording Secretary.

A Letter From a Grateful Official

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from the Honorable Eugene I. Van Antwerp, mayor of the city of Detroit, in which it is brought forcibly to the attention of those who read, that the enactment of the long-range national-housing program will facilitate many improvements for the general good, and at the same time bring relief to certain families, the tragic victims of the housing shortage. The letter of the mayor follows:

CITY OF DETROIT, *June 30, 1949.*
Congressman LOUIS C. RABAUT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN RABAUT: Please accept my sincere thanks and congratulations for your vote supporting the long-range national-housing program and particularly for your vote against the damaging amendment that would have eliminated the public-housing section of the measure.

The enactment of this legislation is a significant milestone in the progress of American cities. It will permit a real start on the job of cleaning up disgraceful slum housing and rehousing the low-income families who are the most tragic victims of our continuing housing shortage.

In addition to relieving the housing shortage this legislation will greatly facilitate all of our city's improvement plans including the construction of new parks, playgrounds, schools and expressways. All these plans hinge to some extent on the rehousing of displaced low-income families.

We are sincerely grateful to you for your support of this legislation.

Sincerely,
EUGENE I. VAN ANTWERP,
Mayor.

Zero Hour of Inflation

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol Courier of July 6, 1949:

ZERO HOUR OF INFLATION

The most tragic side of the housing fraud which the Truman lobby has just steamrollered through Congress is not the scandals which will result when the New Deal politics start swapping these new public-owned dwellings for votes.

In the end these scandals will carry their own punishment with them. That's what happened back in the late thirties. The American people will stand for a great deal, but it is doubtful whether they will tolerate anything so raw as a phony slum-clearance scheme which turns into patronage and plunder. The reeking and disgraceful misuse of the Federal slum-clearance programs of 12 years ago unquestionably played a major role in the reversals which the New Deal suffered in the 1938 elections.

The really tragic part of this housing swindle is that it may be the last straw that breaks the back of the efforts to control run-away inflatiton.

The bond issue end of the scheme is as fraudulent as the rest of this humanitarian program.

In its main details the financial outline is modeled on one of the most tragic inflationary enterprises in the history of the world—the one which wrecked the first French Republic in its infancy, and which opened the doors of that liberty-loving nation to a return to despotism under a new tyrant, Emperor-Dictator Napoleon.

The parallel is astonishingly exact. In both cases we have a nation whose normal credit has been largely exhausted. Sixteen years of overspending and overborrowing have overdrawn the borrowing capacity of the United States to the point where no one really thinks our present debt will be paid off at par.

In 1789, when the French Revolution was over, France also found her normal credit exhausted. In that case also it was overspending and overborrowing which had exhausted it. The spending had been more leisurely, dating back to the time of Louis XIV and the building of Versailles. The borrowing had been less extensive, for the simple reason that the government financiers of that time had not learned the trick of their present counterparts—the trick of mortgaging all the public's possessions along with the property which the government itself owned.

Both nations are found to be facing the same problem—how to borrow more money when normal credit is exhausted. Both turn to the same expedient—trick bond issues which really are against the already overstrained public credit, but which appear not to be.

In both cases, it is experts who have worked out the fraud—experts who proclaim at every moment: "This is not inflation. If it turns out to be, we will control it."

What the French did in 1789 was to issue bonds which appeared to be—though it did not so turn out—based on real estate. The land in question was church farms which had been seized by the revolutionists. These were large and productive farms, whose earnings appeared to be sufficient to carry all interest charges and retire the principal of the new bonds.

These special bonds were issued independently of the outstanding government bonds, and were highly attractive on the basis of return—if one forgot security of capital. They went like hot cakes. All the financial experts fought to get them.

Note how similar this is to what Uncle Sam is authorized to do under the new housing scheme. We are to have a special type of bond—one which, like the French bonds, appear at first glance to be mortgage bonds on improved real estate.

But again, like the French bonds, the new American bonds are not really tied in with the real estate. The housing bonds are not to be paid off by the rentals of the dwellings. Nor can the bond owners seize any part of the housing projects as collateral for their bonds, if these start to collapse.

As in the case of the French bonds, the new American bonds are really against the general credit of the Nation. It is pure deceit for us—as it was deceit for the French—to pretend that these bonds are anything more than a new borrowing being made against public credit. Yet the French so pretended in 1789—and the Truman administration proposes so to pretend when the housing bonds are sold.

The French made their bonds attractive by a high interest rate and a government guaranty. The housing bonds are to be made attractive to United States investors not only by a good interest rate but by being made tax exempt.

Individuals and financial houses already are preparing to scramble for these new bonds. They are infinitely more attractive because of being tax exempt than most of the outstanding Federal bonds.

It is almost inevitable that billions of dollars worth of these bonds eventually will be sold. Very likely there will be several issues of them. The French in 1790 and 1791 were unable to resist the temptation of selling more and more of their special bonds.

Now, note carefully how this works out in both cases. The French Republic, though "busted," was able to borrow a billion dollars more on the first go-round, and eventually nine and a half billion dollars—while pretending all the time that the bonds were amply secured by productive real estate, not simply a further overextending of its exhausted public credit.

In the United States today, whether we are "busted" or not is a debatable point. At any event, we are in sufficiently shaky position so that if the United States Treasury were to announce that it proposed to make a multibillion dollar addition to our gigantic Federal debt, there would be a shiver of horror. The mere announcement might pull the plug and bring depression and chaos.

Yet, by deceit and misdirection that is precisely what is about to be done. The hidden-bond issue is nothing more nor less than a new general bond issue in the potential total of several billions—at a moment when our official bonded debt is growing again, and when our national budget and financial program are far, far in the red.

As a matter of cold fact, this bond issue is not merely inflationary, but it very likely represents the key decision which will make it impossible for this Nation to withdraw thereafter from the inflationary cycle.

It may be the peril point beyond which inflation becomes a run-away boom-and-bust cycle, with nothing left at the end except for the entire population of the United States to go through the wringer.

There are two real peril points in any classic instance of inflation. One is the original decision to abandon hard money and sound credit. That's where inflation begins. If the original decision is not made, true monetary and credit inflation cannot take place.

In this country, the original peril point was passed in 1934, when we went off the gold standard and began using fiat money—greenbacks which say on their face that they are nothing more than promissory notes.

But a country can go off the gold standard, and can rely on fiat money, without entering runaway inflation. We were off the gold standard during the Civil War and for many years thereafter. During that time all the money we had was fiat currency.

Yet nothing in that period pushed us to the second peril point of inflation, which is the one where the lid really starts going off.

To vary the comparison, the first peril point is the one which starts generating inflation pressures—the second is the one which starts them exploding.

The original land-bond issue of the French Republic is still defended by economists as having been fundamentally sound. It was, nevertheless, the instance of a little inflation seeming to be good for the nation—and it created an overriding demand among the French people for the issuance of more of these attractive bonds. When that second decision was made was the second peril point in the cycle.

Once the baby French Republic embarked on its scheme there was no turning back.

Away she went. All of the trimmings of inflation were there. Prices were "fixed"—and the guillotine threatened the black-marketers. At one time it was a penitentiary offense to ask what sort of money you were to be paid if you had goods for sale.

Those who want the details will find them in a small book called Fiat Money Inflation in France, written more than 50 years ago by Andrew Dickson White, of Cornwell University, and reprinted as recently as 1933 by the D. Appleton-Century Co., New York and London. Small as it is, this booklet is probably the best single work on the subject of inflation which has ever been published.

The cycle lasted 8 years in France. By 1797 all the bonds were worthless and were repudiated. The new French Republic was bankrupt, thousands of its people impoverished, the Government demoralized. The stage was set for Napoleon and the death of freedom.

Yet France, it may be, escaped lightly by comparison with the catastrophes which Uncle Sam is inviting. In France there were two principal losers—and only two; first, the Government itself, and, second, the "suckers" who lost money in the bonds. Others were inconvenienced in many ways—the general demoralization of the country, the loss of their power to control their Government, etc., etc. But the people themselves were not bankrupted—only their government.

This cannot be the case in this Nation if it is fated to follow the French example. The New Deal has successfully mortgaged everything of value belonging to the American people as collateral to its gigantic public debt. The new bond issue is going to be piled on top of the biggest national debt in history. If it is the last straw—or the last bail of hay—which breaks the camel's back, then everything will go down like the one-horse shay.

We will have not merely Government bankruptcy, but universal and total public bankruptcy.

What's a "vote steal" involving a few hundred thousand houses, by comparison with that titanic threatening disaster?

Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, July 7 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most challenging article in favor of the establishment of the Columbia Valley Administration. This article was written by Richard L. Neuberger, a member of the State Senate of Oregon, who is among the group leading the fight for the establishment of CVA. The article was published in the June 21 issue of the Reporter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KILOWATTS OUT TO SEA

(By Richard L. Neuberger)

The 6,000 people in Sweet Home, Oreg., are worried. Nine years ago, when the census was taken, only a thousand inhabited this sawmill town at the edge of the last great fir forests left in the United States. The increase came about because of lumber. It is Sweet Home's only resource.

As long as the trees endure, the furniture store bought with a mortgage by Dave Epps, once an all-star basketball player at the State university, will prosper. So will the weekly Sweet Home New Era, operated by a couple of migrants from Wyoming. So will Stewart Weiss' West Gate lumber yard. Weiss, a Republican State official, came to Sweet Home with $900 in 1940; now he is considered to be nearly a millionaire.

But will the trees last? The United States Forest Service warns that each year the number brought down on the mountain ramparts above Sweet Home far exceeds the new growth. That is why the people worry. What to do if the fir gives out.

Sweet Home has heard of a plan proposed by the President of the United States in a special message to Congress in April. The plan is known as the CVA. Stewart Weiss regards it as "superbureaucracy." Dave Epps, who ran for secretary of state on the Democratic ticket in 1946, thinks it is a part of the New Deal, and that is all right with him.

The Columbia Valley Administration is the Northwest's greatest issue, yet few of the people there understand what it would be. Most know it would be patterned after the TVA, 3,000 miles away across the continent, and that is all most know.

The Northwest is in a crisis, and this is the principal strength of the CVA as a public issue.

Since 1940, about a million people have come to Oregon and Washington. Only 932,000 migrated to the Northwest in the entire first century after Jefferson claimed the area for the United States. The population increase has been larger proportionately than in any other section of the land. Many moved westward to work in the shipyards, which now rust in 80 annual inches of seacoast rainfall. Aircraft production has been cut back. Lumber has absorbed much of the slack. In Oregon, 71 cents out of every pay-roll dollar originate in forest products. But the forests will not last forever. Indeed, unemployment in the Northwest is more than twice the national rate. How can the newcomers be put to work?

The Northwest has one resource that has barely been scratched. To all intents, it is as unexploited as it was when Lewis and Clark saw it.

That resource is the Columbia River. It carries down to the ocean more water than all the other rivers on the Pacific seaboard combined. The vast icefields of the Canadian sub-Arctic, the Snake and the Salmon in mile-deep canyons, the glaciers of the Cascade and Selkirk Ranges, the angry Kootenai and the rumbling Clark Fork—all bring their water to the Columbia. This wondrous flow empties a drainage basin as immense as Texas.

No other source of power on the North American Continent can match the Columbia. Thirty-three million kilowatts can be generated on it. Only 3,000,000 have been produced. This means that less than 10 percent of the Columbia's energy has been tapped by the multitude of Government bureaus and private companies functioning in the region. In contrast, the Tennessee Valley Authority has developed 2,567,000 kilowatts of power, which represent a far higher percentage of the Tennessee's comparatively puny maximum output.

And so in the Columbia 30,000,000 kilowatts are going to waste. They foam downhill and disappear where the river's generous mouth tastes the brackish tide of the Pacific. Conservation is not wholly a lost cause, and the men and women of the Northwest understand what this signifies. Thirty million kilowatts over 1 year are the equivalent of 150,000,000 barrels of oil. This oil could be used to operate factories, to move trains, to heat buildings, to send aloft bombers.

And what of jobs?

Columbia River power is the cheapest in the Nation, because it is the most abundant. Manufacturing plants have been moved across the country on flatcars to use it. In 1939 not an ounce of aluminum was produced west of the Mississippi. Now half the national supply is spun out along the Columbia. More would be manufactured if more power were available. Ever since the Bonneville Dam was completed, new kilowatts invariably have meant new jobs. In fact, chambers of commerce must violate their natural instincts by discouraging factory construction in the Northwest until additional dams rise across the Columbia.

Yet on the foggy April morning in 1937 that President Roosevelt stood at Bonneville and dedicated the cavernous powerhouse to "the production of a vast amount of cheap power," the utility industry issued a press release claiming hydroelectricity was impractical compared with energy generated from coal. The industry felt Bonneville's capacity would not be absorbed.

"We have kilowatts running out our ears," said a utility president.

"A folly of great magnitude," contributed a widely quoted regional editorial page.

Memories of this episode serve the CVA usefully. "I don't know much about the CVA," confessed a stringy railroad man with ruddy skin stretched taut over high cheekbones, "but I do know that the same folks who are opposing the CVA once told us that Bonneville and Grand Coulee were white elephants. We heard this all the time, especially in election years. Yet today we need a lot more dams like Bonneville and Grand Coulee. If the utility crowd was so wrong once, why should we listen to what they say now?"

Not only men in overalls and gauntlets come up with these recollections. The chairman of the board of Portland's First National Bank has reminded his city's business community of "where we might be, had we heeded the voices which criticized Roosevelt's plans for the Columbia, and I say this as a lifelong Republican."

Faintly and spasmodically, a similar feeling pricks many of the people of the Northwest. They are far from sure what the CVA would be. They demonstrate only casual interest in the verbose explanations of the CVA issued by Government offices. But people remembered that grim warnings were issued concerning Bonneville and Grand Coulee. Comparisons were made between these projects and the useless but imposing Egyptian pyramids. Today the main objection to Bonneville and Grand Coulee seems to be that there are not more of them.

The CVA would coordinate and integrate all the Federal agencies in the Northwest now concerned with river development. This has not penetrated deeply into the regional consciousness. "Integration" is a word that moves few men and women. "Jobs" and "light bills" are words that move many.

Senator ESTES KEFAUVER talked about the CVA in these terms and attracted the biggest banquet crowd served at the Hotel Portland since the fabled structure was built in 1879, only 2 years after the pastoral Nez Perce were subdued with fire and cavalry. Retainers of the hotel whispered that the discussions of the CVA and jobs showed even greater drawing power than a legendary political feast of the 1890's, at which a lithe ballet dancer from San Francisco bathed in Oregon loganberry wine.

The interest stems from the ferocity of the fight in the Northwest. So bitter have been the denunciations of the CVA that dispassionate discussion has been rare. Although it is seldom mentioned, a single clause of the administration's bill probably inspires

these denunciations. This paragraph authorizes the CVA to buy private utility systems. Power companies are contributing funds to hastily created civic organizations which have just one mission: to arouse public sentiment against this clause and the whole CVA.

The ideological tone for these groups has been set by a 54-year-old novelist, Robert Ormond Case (Dynamite Smith—Cowboy, Riders of the Grande Ronde, etc.). He also is author of River of the West, published in 1940 under the imprint of the Pacific Power & Light Co. One of Case's warnings is that the President might appoint his foes of last November, Henry Wallace and Senator GLEN TAYLOR, to be two of the three directors of the CVA.

In the measureless vistas of the Columbia Basin, James Burnham could find much valuable addenda for his Managerial Revolution. Some of the corporate owners of the region's utility companies are not averse to selling out to a solvent buyer such as the United States Treasury. They recall enviously the $78,600,000 paid by the TVA to the Commonwealth & Southern Corp. for its properties. Furthermore, the power companies of the Northwest have been whittled away by local public-ownership elections which often seize the heart of the system and leave the utility only empty veins and arteries. More than one stockholder thinks now is the time to sell out.

But the managers of the power companies have a different stake in the struggle. They own little or no common stock. Far from enriching them, a profitable sale to the Government merely would make them lose jobs of comfort and prestige. They think the CVA means their personal liquidation. But reports persist that the families which hold title to the region's utilities companies are holding down the anti-CVA activities of their hired managers.

It is a curious paradox that practically all substantial editorial support for the CVA originates outside the region where it would function. Newspapers in the Northwest are almost uniformly hostile. The Portland Oregonian is benevolently neutral, with a slight tilt in favor. Smaller dailies in Pendleton, Oreg., and Wenatchee, Wash., think the CVA is a move in the right direction. Practically all other regional papers denounce it as "socialism," and a few call it "communism."

But thousands of miles from the racky chutes where the Columbia roars and trembles, editorial writers are enthusiastic. The New York Times, the Washington Post, the St. Louis Post-Dispatch, even the cautious Washington Star—all salute the President for proposing the CVA. The Star, traditionally right of center, considers it to be logic and common sense.

The paradox has been summed up neatly by an aged editor, in green eyeshade and paper cuffs, who lives in a Puget Sound town of 3,000. "It's a dam sight easier for the editor of the New York Times to come out for the CVA than it is for me," he admitted. "The editor of the Times doesn't have my chamber of commerce president breathing down his neck."

Yet the warnings about "socialism" and "tyranny" have had an impact—even in the White House

It was by decision of the President that CVA stands not for Columbia Valley Authority, as might have been expected, but for Columbia Valley Administration. This is a significant bit of semantics. The President and his consultants felt the word "authority" might sustain the extravagant charges against the CVA.

This somewhat devious approach on the part of the plan's adherents has not been successful. Senator KEFAUVER, who is close to the Tennessee Valley Authority, spoke in Seattle and Portland in behalf of the Columbia Valley Administration. Early in his speech at Portland, KEFAUVER crumpled his manuscript in his hand.

"Let's call CVA what it is," he said. "It would put all the Columbia River agencies under one roof, as TVA has done. So I'm going to talk about an 'authority.' If anyone is afraid of the word 'authority,' let him remember that we are enjoying our liberties in my State of Tennessee under the 'authority' and are none the worse for wear. In fact, we like it. I commend it to you."

The pioneer economy of the Northwest is a wreck. Inexorably, the lumber industry brings about the end of the forests which have been easy to log, cheap to harvest. Free land remains, but it is gaunt and arid. Coyotes cannot live on it because their natural prey, the jackrabbits, cannot find even weeds for sustenance. This land will yield crops only if the Government spends millions for pumps and canals. It will be desert forever unless it is ribbed with water from the Columbia. The old, untrammeled era is gone—the era when the Government carried the mail and sent the cavalry and did little or nothing more.

The region is packed with migrants. Some live in tarpaper shacks; others have no electric lights. Families from flooded Vanport, which was crushed to kindling by the river in 1948, still sleep in army cots on basketball courts. But their numbers count. Soon the frontier State of Washington is to have more electoral votes than industrial Connecticut, more Members of the House of Representatives than South Carolina. When these newcomers need jobs, and only more hydroelectric power can put them on pay rolls, the Northwest will get its CVA. That is the timetable.

Emma Lazarus

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1949

Mr. MULTER. Mr. Speaker, the people of this country are now observing the one hundredth anniversary of the birth of a famous American woman, whose name has become a symbol of American freedom. I refer to the great American poetess Emma Lazarus, who was born on July 22, 1849, in New York City, and whose centenary occurs this month.

To many of us she is known for the stirring words of her immortal sonnet The New Colossus which is inscribed on the Statue of Liberty, at the entrance to New York harbor. That is the famous sonnet which contains the often-quoted lines:

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tossed, to me,
I lift my lamp beside the golden door!

For about a century and a half our country was known throughout the world as a haven of refuge for the oppressed, whether for religious or political reasons. During this century and a half the United States had been enriched in many ways by the persecuted of other lands who settled here and helped to build our country.

The following article about Emma Lazarus, written by Murray Frank, well-known Washington correspondent, appears in the current issue of Liberal Judaism:

EMMA LAZARUS: 100 YEARS LATER

(By Murray Frank)

The one hundredth anniversary of the birth of Emma Lazarus, American poetess, is being observed this year by the liberty-loving people of America. As author of the famous and oft-quoted sonnet, The New Colossus, which is inscribed on a plaque at the base of the Statue of Liberty in New York harbor, Emma Lazarus has been universally acclaimed for many years as the champion of American liberty and democracy, just as the statue itself has become the symbol of our liberty.

The Goddess of Liberty, conceived and executed by the French sculptor Bartholdi and presented to the people of America to commemorate the first centenary of American independence, brings to mind Emma Lazarus and her stirring words about the "huddled masses yearning to breathe free * * * the homeless, the tempest-tost." Her sonnet comprised of only 14 lines, was sufficient to immortalize her in the annals of American culture and civilization. The "Goddess of Liberty" and Emma Lazarus have become synonymous; few poets of all nations and all times have achieved such distinction.

PRODUCT OF HER AGE

Emma Lazarus has been described by some as the first great literary figure to come out of Jewish ranks in America, as the "Sweet singer of Israel," and as one of the most brilliant writers of the nineteenth century. Emma Lazarus should be regarded as a product of her age. It would be erroneous to take her out of the period in which she lived and was a creative force to compare her style and art of expression with contemporary poets who write under different circumstances and new concepts.

The literary legacy of Emma Lazarus is not too voluminous—two volumes of collected poetry, published after her death, some translations into English of medieval Spanish-Jewish poetry and nineteenth century German poetry, and scattered essays in several journals. Not a very great literary heritage quantitatively, due primarily to the fact that she died at the early age of 38, but compared qualitatively with Robert Browning and others of similar stature.

Of Sephardic Jewish ancestry, Emma was one of seven children born to Moses and Esther Lazarus. They migrated to the United States in the first half of the nineteenth century and settled in New York City, where Moses Lazarus conducted a large sugar trade. There Emma was born on July 22, 1849. She was educated by private tutors and was raised in an atmosphere of wealth, culture, and refinement.

Emma's talent for poetry became manifest at an early age. She wrote her first verses at 14, and published a collection of poetry and translations at 17. A second volume of her verses appeared in 1871 under the title Admetus and Other Poems, dedicated to Ralph Waldo Emerson, with whom she established a close friendship during this formative period and who was her literary mentor for many years.

By this time her writings attracted the attention of literary circles in the United States and England. Emma Lazarus corresponded with the literary great of her day, including Emerson, William Cullen Bryant, Robert Browning, William Morris, Edmund C. Stedman, the Russian novelist Ivan Turgenev, and others. Her poetry was being published in the finest literary magazines. She was completely absorbed in the world of letters.

A TURNING POINT

A marked transformation in her concept of life, which was soon reflected in her poetry, set in during the year 1881, Emma Lazarus had reached the age of 32. By now she could boast of several small volumes of verses, a novel about Goethe (published in 1874), a five-act drama of medieval Italy (written in 1876, but never produced), and translations of selected poems and ballads of Heinrich Heine (published in 1881).

And yet there was something lacking. Her talent had not reached full fruition and her poetry was still short of first-rank quality. She came too much under the influence of the classicists, and worshiped the abstract beauty of nature. Her earliest verses appeared artificial in construction, and indicated a lack of fire. A critic once described her literary creations of this period as possessed of "quiet emotion, Hellenic beauty, romance without passion."

Throughout this period Emma Lazarus showed no interest in Jewish affairs and no desire to be openly associated with her people. Her writings showed no traces of influence of Jewish thought or history. The poet and essayist Stedman is said to have reproached her for this lack of interest in the history and traditions of her people, while John Burroughs brought to her attention the Hebraic influences of the works of Walt Whitman and Thomas Carlyle. Even the persecutions of the Jews in Russia, which shocked public opinion and aroused much criticism of Czarist Russia in the United States, could not move her to adopt a more friendly attitude toward Jewish life and an understanding of the desperate plight of her people.

Yet the emotional impact which stirred her to poetic heights and served as the source of genuine inspiration for the most creative years of her life was the Jewish factor, specifically the deterioration of the Jewish position in Russia, which finally penetrated the literary seclusion of Emma Lazarus. The spark which brought forth the literary genius in her was provided by the persecutions and martyrdom suffered by Russian Jewry in the early 1880's. It awakened her from her classical dreams and caused her to turn to Jewish themes.

SHOCKED INTO ACTION

Two occurrences were the direct cause for this transformation. During a visit to Ward's Island, where the Russian-Jewish immigrants were kept pending their admission to this country, she came face to face, for the first time, with the poverty, hunger, and fear of fleeing immigrants. This experience stirred Emma Lazarus to the very depths of her soul, and aroused in her a yearning to learn more about their tragic experiences and about the life of eastern European Jewry in general.

The second event was the publication of an anti-Semitic article by a Russian woman, Zenaide Ragozin, in the April 1882 issue of Century, a magazine where Emma Lazarus was a contributor. The author of the article, who was subsequently denounced as an agent of Czarist government, attempted to justify the persecutions of the Jews in Russia by placing the blame on the Jews themselves. Mme. Ragozin brought forth the old anti-Semitic charges that Jews were conspiring against all gentiles, and as her authority she cited a book written by a renegade Jew, Jacob Brafmann, and supposedly based on the Talmud.

Emma Lazarus was shaken out of her complacency by this vicious article. This was the spark that set her aflame. The next issue of Century carried her impassioned and vehement refutation of the anti-Jewish charges by Mme. Ragozin under the title "Russian Christianity versus Modern Judaism." For the first time in her life, Miss Lazarus emerged in the role of spokesman and defender of her people by applying her literary talent to disprove the falsities of its slanderers. The following quotation from her article clearly indicates its tone:

"There is but one answer to the charges against the Jews which Brafmann professed to base upon quotations from the Talmud: They are singly and collectively false. They have not even the doubtful merit of originality, being simply a revamping of the wearisome old perversions, garblings, distortions, mistranslations of the spirit and letter of the text, which have been fully refuted by documents familiar to the whole reading public. For the subtle meaning of the Talmud we need not go to a bribed renegade and thief."

Emma Lazarus now turned her full literary genius and her entire efforts to the vindication of her people. Her verses began to glow with human fire, her essays reflected a deep understanding of Jewish martyrdom. She devoted much time to the study of the Bible, Jewish history and the Hebrew language. She developed a keen interest in Jewish problems, Jewish relief activities and Jewish education. The more she learned about her people, the greater grew her love for it, her understanding for its concept of life and her appreciation for its contributions to world civilization.

CHAMPION OF HER CORELIGIONISTS

Emma Lazarus had returned to her people for the last 6 years of her life. It was during this period that she made her greatest literary contributions and established her claim to a leading position in American literature. She discarded her fascination for Greek mythology and the beauty of nature, and concentrated entirely on Jewish themes, chiefly of historical content. She sounded a clarion call to all Jews to stand united, fight for their human rights and aim for new achievements and new glories as in the days of the Maccabeans. Shortly after she had gone through her great transformation, she wrote "The Banner of the Jew," which contains these lines so appropriate to events of our day:

"Oh, for Jerusalem's trumpet now,
To blow a blast of shattering power,
To wake the sleepers high and low,
And rouse them to the urgent hour;
No hand for vengeance, but to save,
A million naked swords should wave.
Oh, deem not dead that martial fire,
Say not the mystic flame is spent!
With Moses' law and David's lyre,
Your ancient strength remains unbent.
Let but an Ezra rise anew,
To lift the banner of the Jew!"

Next, she wrote The Dance to Death, a dramatic poem in five acts, considered her best and most powerful literary effort. It deals with an episode in the medieval Germany city of Nordhausen, where the Jews are accused of poisoning the wells and causing the Black Death. The entire Jewish community is sentenced to be burned at stake and, though many perish, Judaism scores a spiritual triumph and manages to survive. As the Jews of Nordhausen march to their death, dressed in their holiday clothes, carrying the Holy Scrolls, the Perpetual Lamp and the seven-branched candelabra of the synagogue, they are greeted by jeers and insults of the inflamed and fanatic townspeople. Suddenly, the frightened little band of martyrs bursts forth in song to drown out the jeers and the insults:

"We die a thousand deaths—drown, bleed, and burn.
Yet the wild winds cherish the sacred seed,
The waters guard it in their crystal heart,
The fire refuseth to consume.
Even as we die in honor, from our death
Shall bloom a myriad heroic lives,
Brave through our bright example, virtuous
Lest our great memory fall in disrepute."

How timely and realistic are these lines in our own day when the memory of Auschwitz,, Bergen-Belsen, and Dachau is still so vivid. It is here that Emma Lazarus shows prophetic vision. And in the same masterful work she turns her back on the world and proclaims aloud:

"No more of that.
I am all Israel's now—till the clouds pass
I have no thought, no passion, no desire,
Save for my people."

In her last six fruitful years, from 1882 to 1887, Emma Lazarus created other fine literary works, such as The Crowing of the Red Cock, which was termed by Whittier as a "forceful lyric worthy of the Maccabean Age"; By the Waters of Babylon, considered by the late Henrietta Szold as Miss Lazarus' strongest bid for literary distinction; and The New Ezekiel, a short poem in which she advocated the reestablishment of Palestine as the homeland of the Jewish people. In the latter work, speaking again in prophetic vein, she says:

"The Spirit is not dead, proclaim the word,
Where lay dead bone, a host of armed men stand!
I ope your graves, my people, saith the Lord,
And I shall place you in your Promised Land."

Another slender volume published during the same period is called Songs of a Semite, which contains some of her own poetry and translations of the medieval poets of the golden era of Hebrew literature in Spain: Judah Halevy, Solomon Ibn Gabirol, Moses Ibn Ezra, and others. This volume was dedicated to the memory of George Eliot, the illustrious writer who did most toward elevating and ennobling the spirit of Jewish nationality.

JEWISH CAUSE HER MAJOR INTEREST

Emma Lazarus must have been working at a furious pace in her last years in an effort to give vent to the fire and the passion which had accumulated in her during the earlier years. She contributed frequently to various publications where she often discussed Jewish problems. The best known of her prose writings was the series of 16 essays on Jewish affairs entitled "Epistles to the Hebrews," which appeared in The American Hebrew in 1882–1883. In one of these Epistles (February 24, 1883), she advocated a program for her people:

"My chief aim has been to contribute my mite toward arousing that spirit of Jewish enthusiasm which might manifest itself: first, in a return to the varied pursuits and broad system of physical and intellectual education adopted by our ancestors; second, in a more fraternal and practical movement toward alleviating the suffering of oppressed Jews in countries less favored than our own; third, in a closer and wider study of Hebrew literature and history; and finally, in a truer recognition of the large principles of religion, liberty, and law upon which Judaism is founded, and which should draw into harmonious unity Jews of every shade of opinion.

Although written more than three-score years ago, her program for Judaism still remains much freshness and timeliness. She was also actively interested in the movement for vocational education among Jewish immigrants to make them economically self-supporting and instigated Jewish leaders to establish the Hebrew Technical Institute in New York. She revisited Wards Island time and again and sought in every possible way to aid the needy Jewish immigrants.

During these last years of her life Emma Lazarus made two trips to Europe, in 1883 and 1885, and was acknowledged publicly in England, France, and other countries as a great literary figure. Frail of body, her health began to fail rapidly now and during her second trip abroad she became seriously ill in Paris. She was brought back to New York in July, 1887, where she died 4 months

later on November 19, 1887. Death came to Emma Lazarus when she was only 38 years years old at the height of a brilliant literary career. Her passing was mourned by Jews and non-Jews alike, who recognized and appreciated her contribution to American literature and to the enrichment of American Jewish life.

INSPIRED BY "GODDESS OF LIBERTY"

Her most famous poem, The New Colossus, was created under very interesting circumstances. A campaign was underway throughout the country in the 1830's to raise $300,000 for the construction of a pedestal upon which to place the Statue of Liberty. Public-spirited citizens resorted to various fund-raising projects to obtain the necessary amount. One of these citizens, Mrs. Constance Cary Harrison, had undertaken the publication of a portfolio (known today as souvenir journal) of poetry and sketches by well-known authors and artists.

She also approached Emma Lazarus for some appropriate verses, but the latter refused to write anything "to order." Admonishingly, Mrs. Harrison suggested: "Think of the Goddess of Liberty standing on her pedestal yonder in the bay, and holding torch out to these Russian refugees you are so fond of visiting at Wards Island." Two days later Mrs. Harrison received a sonnet entitled "The New Colossus." Twenty years later, in 1903, this poetic gem was inscribed on a plaque and placed in the pedestal of the Statue of Liberty.

Emma Lazarus' love and faith in America and her sympathy for the oppressed and persecuted of all lands can be easily sensed in her famous sonnet, which has immortalized her in the hearts of freedom-loving men. One wonders how much richer and more meaningful American culture and American Jewish life would have been had she lived and created for another decade.

The voice of Emma Lazurus was silenced all too soon but was never forgotten by the American people. Although her life was so tragically brief, her noble soul and humane heart are today symbolized in the Goddess of Liberty—The New Colossus—whom she described with such eloquence and prophetic pathos. As long as the Statue of Liberty will remain the symbol of American freedom, the name of Emma Lazurus will be associated with that symbol as the champion of liberty.

I hope that a reading of this article will inspire some of my colleagues to recede in their opposition to the displaced-persons legislation offered to the Congress, and encourage the sponsors to continue their vigorous support.

All or Nothing

EXTENSION OF REMARKS

OF

HON. OTTO E. PASSMAN

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of July 1, 1949:

ALL OR NOTHING

If the labor bill passed by the Senate yesterday ever reaches President Truman, he doubtless will kill it by a veto.

Not that it's a bad bill. It would make 28 changes in the Taft-Hartley Act—changes designed to meet specific objections by union leaders.

But practically all of it was written by Senator TAFT. And, while nominally repealing the Taft-Hartley Act, it keeps many of that law's basic provisions. Among those kept is authority for the President to obtain temporary injunctions to protect the public against national-emergency strikes and lock-outs, to which authority for temporary Government seizure of employers' plants has been added.

So the prospect is that this bill will die, and that the Taft-Hartley Act will stay on the books unchanged during the life of the present Congress.

That's what John L. Lewis, William Green, Philip Murray, and other union leaders are demanding. They want this slavery law, as they call it, to remain in effect so they can make its repeal their big political issue in the 1950 congressional elections.

It will be a phony issue—as phony as the slavery-law slogan with which they have misrepresented the Taft-Hartley Act—as phony as their pretense that they are inspired by concern for labor's welfare, rather than by their own desire to wield enormous power and be free from public responsibility for its abuse.

For many years these union leaders, aided by Presidents Roosevelt and Truman, thwarted all attempts by Congress to remedy the defects of the one-sided Wagner Act.

When it became evident that the Eightieth Congress, responding to public demand, would undertake to correct the damage done by the Wagner Act, they still insisted that they would tolerate no change.

And, after they got the Taft-Hartley Act, they began an absurdly intemperate attack upon it. In this, Mr. Truman abetted them by demanding nothing less than outright Taft-Hartley repeal and restoration of the Wagner Act with a few inconsequential improvements.

That all-or-nothing attitude, in our opinion, cannot win them the support of a majority of the American people. Most Americans want labor's rights to be protected, want labor law to be fair, want Government to encourage the processes of genuine collective bargaining, but do not want this country's laws dictated by union leaders.

Wanted: A United States Sales Force

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Northwestern Miller of June 7, 1949:

WANTED: A UNITED STATES SALES FORCE

What the grain trade says, apropos of the International Wheat Agreement, which seems likely to be ratified by the Senate, is that the instrument can meet the basic need of American agriculture and of the associated servicing and processing industries only if it permits and promotes the restoration of private trading. Governments are poor salesmen, and the near as well as the long-range necessities of this country call for the highest grade of salesmanship in international trade.

This unassailable philosophy is forcefully outlined in the National Grain Trade Council's statement to the Senate Committee on Foreign Relations. The council's spokesmen discern in the proposed agreement, or in the minds of its proponents, some intention of permitting use of private trade channels, but they see little chance of bringing this about unless the intention is unreserved and supported by an administrative staff with sufficient technical skill and an adequate knowledge of the private international wheat trade

"We believe," state the council's representatives, "that wheat exports and imports can be handled by private firms under the agreement as drafted, but to do so will be complex and difficult as compared with straight Government trading * * * Private grain trading is * * * done by hundreds of people, of all nationalities, all over the world. It is done in small parcels and full cargoes at fluctuating rates of freight, in all kinds and grades of wheat, from different countries and ports of export to various destinations. All of these must be recorded, and checked against Canadian prices of wheat delivered under simultaneous conditions to the same destinations—on the chance that the governments of the exporting and importing countries may not agree on prices, discounts, or premiums for quality.

"Suppose that an exporter sells a cargo of say 300,000 bushels. He must immediately buy wheat to cover it. How can he guard against loss if the government of either country declares that the prices is above the maximum permitted in the wheat agreement?

"The business of exporting and importing grain is full of uncertainties. There are the natural hazards of fluctuating markets and ocean freight rates, foreign exchange, marine insurance, accidents and repairs to ships, strikes, rail embargoes, and port elevator congestion. Added to these inherent risks we have nowadays the licensing procedures in both importing and exporting countries, ECA procurement and pricing provisions, and avoidance of conflict with Commodity Credit Corporation shipments to occupied areas (amounting to more than half of all grain exports). To these difficulties will be added price and quota technicalities, and the subsidy paraphernalia of the wheat agreement.

"These are examples of the problems that confront private handling of grain exports. They show how far we are removed from the days when an importer in London could pick up the telephone, buy a cargo of American wheat with all details finalized in a 5-minute telephone conversation. We have frozen world trade into a wooden-like pattern resembling nothing so much as a coffin.

"Yet these are requirements born out of wartime and postwar necessities. We have had to learn how to live with their intricacies. Under private trading they can be gradually abandoned. But to do so will take great patience and a high resolve both by government and business.

"Like choosing democracy itself, we recommend following the hard way."

Flour, too, wishes to go the hard way. It can see no future in the hands of government salesmen. Even more desperately than wheat it needs foreign distributors pushing it enthusiastically. It, too, must escape from the mortuary of state trading.

Liberties We Hail Today Must Be Safeguarded

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial which appeared in the July 4 issue of the Pontiac Daily Press, one of

the outstanding newspapers of Michigan, published and circulated in the Seventeenth Congressional District which I have the honor to represent.

I commend this editorial to the reading of my colleagues in the House as one setting forth basic principles on which this Nation stands and which we must preserve if the country we call home is to survive.

The ideology of freedom is the very antithesis of the ideology of Communism. To weaken the concepts and fundamentals upon which this Nation has become the most powerful in the world means danger and destruction to the land we call home. God forbid that day should ever come.

LIBERTIES WE HAIL TODAY MUST BE SAFEGUARDED

Today our Nation is 173 years old.

Rightly this birthday of the immortal Declaration of Independence is celebrated each year as our most important national holiday. It is a day for patriotic programs, parades, picnicking, and merrymaking. It also is an ideal occasion for some individual inventorying of our national strengths and weaknesses.

Internationally our position is strong.

We have begun to act our age.

In spite of ourselves, we are smoothing out the wrinkles in the mantle of world leadership which destiny has draped around us.

Notwithstanding the cold war, the situation in Europe has improved measurably in the past year. Our ECA program has helped western democracies make great strides toward prewar economic stability.

Our leadership in the organization of the North Atlantic community, with its promise of rearmament aid, has revived European hopes for the future.

Militarily we are mighty.

Our defense program appears adequate.

Politically we are maturing. For proof of this we cite ever-increasing public support of policies to encourage a two-way flow of international trade and other measures aimed at keeping the cold war from becoming hot.

On the domestic front, however, there are those who believe that some of our internal weaknesses pose greater threats to our national security than communism's program of world conquest.

With them we agree in part.

Certainly we face grave problems.

Most serious of all, it seems to us, is the accelerating trend away from the economic principles which enabled the American people to create and enjoy the world's highest standard of living.

Former Secretary of State James F. Byrnes emphasized one aspect of this situation in his recent address. He also gave us all something to think about when he warned that we are traveling the road toward statism and expressed fear that this country eventually would become a welfare state, with all of us economic slaves of our Government.

The Daily Press long has been concerned with another phase of this internal weakness—the increasing demands for Government interference with or control over business.

Though not entirely new, these demands began to be heard more frequently with the advent of the Roosevelt New Deal. The pressures for more controls continued throughout that era of our political history. They have not diminished under the Truman Fair Deal.

Some restraints are needed.

But this trend, unchecked, spells danger.

The free economy which is the life blood of private enterprise is just as essential to our way of life, with its high standard of living as our national independence. History proves unwise socialization and all-powerful government fatal to both.

The founding fathers who risked their lives in signing the Declaration of Independence never made the mistake of taking that independence for granted. They knew it was not self-perpetuating and would have to be defended constantly.

Too many contemporary Americans are making that mistake. They forget that independence is just another name for liberty. They fail to realize that liberty must be safeguarded just as jealously against internal weaknesses as against external threats.

Friendship With the Philippines

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. BOGGS of Delaware. Mr. Speaker, on June 14, 1949, the Veterans of Foreign Wars of the United States, District of Columbia, in convention were honored in having the Honorable Emilio Abello, minister plenipotentiary, chargé d'affaires, ad interim, of the Philippines, deliver one of the principal addresses of the convention. I am sure the Members of this House will be interested in this important message which is as follows:

Gentlemen, I deeply appreciate the honor of addressing you tonight. This occasion has special significance to me and to my Government because you have named one of your Posts after one of our ablest soldiers and foremost war heroes—the late Gen. Vincente Lim. There is nothing more gratifying and edifying than to see Americans and Filipinos together as comrades-in-arms and in the closest fraternity when, at the turn of the century, we fought against each other and shed each other's blood. The outcome of that unequal struggle was apparent. But that bitter conflict served to forge bonds of friendship and ties of loyalty which withstood the test of the Second World War when Americans and Filipinos fought side by side in the plains of central Luzon, in the trenches of Bataan and in the caves of Corregidor. Such friendship and loyalty are mute testimonies of the affection and respect which were engendered during the four decades which followed 1899 and of the success of the American experiment in altruism and democracy which the first American soldiers to land on our shores implanted in our country.

There is more than meets the eye in the history of Philippine-American relations between 1899 and 1946, when you gave us our independence of your own free will. It is this: You gambled in the Philippines when you initiated us into the American way of life, and won—not only in the sense that you have proven that democracy, nurtured by kind and sympathetic hands, can take root even in the enigma that was the East early in this century, but also because by your magnanimous gesture, you have won for the American people the love and gratitude of over 19,000,000 Filipinos. To you, the American veterans of foreign wars who initiated this experiment in nation building and who, 40 years afterward, made our liberation from the yoke of the Japanese invader possible, we are forever indebted.

I wish also to advert at this moment to the valuable support that your organization has all along given to our efforts to obtain for Philippine veterans the recognition due them as a result of their sacrifices for our common cause and to bespeak for them your continued support.

I will use as the theme of my message tonight one of the principal objectives of the Veterans of Foreign Wars, which is the "preservation of the basic principles of Americanism as expressed in the Bill of Rights."

I need not tell you that until the American soldier landed in the Philippines, democracy as a way of life was unknown to us. The propagandists for Philippine freedom, those who advocated reforms in the Philippines late in the nineteenth century, exemplified by our Rizal, Del Pilar and Mabini, spoke of democracy and freedom and in due time inspired our Bonifacio to fight for it. But as a way of life, as a militant, pulsating, and working principle, it was the American soldier who first opened our eyes to the immense possibilities for happiness in the idea of democracy. It was the American soldier who exemplified it not only in his relations with his superior officers but also in his dealings with his fellow soldiers and with the community in which he lived. Truthfully it can be said, as it has more than once before been said by Filipino leaders, that they first learned the alphabet and their ideas of democracy on the knees of an American soldier. For indeed, our first teachers, both by precept and example, of the ways of freedom and democracy were the American soldiers who were sent to our country to fight but who, after the battle, became the apostles of their country's traditions and the liberties that they enjoyed in their homeland. They were the men who spread before the unlettered Filipino of those times a vast vista which gave them hope and assurance of deliverance from the bondage to which they, for centuries, had been subjected.

Today, we live in a troubled and chaotic world. The forces of evil stalk the earth with promises and panaceas which but for the rampant misery in many parts and the confusion that trouble men's minds, would merit scant attention. Against the democratic way of life, with its realities of freedom of speech, of the press, of conscience and of assembly, and the dignity of the individual, stands opposed an ideology with alluring promises of work for the unemployed, homes for the homeless, lands for the landless, clothes for the naked, and education for the unlettered peoples of the earth. We must disabuse our mind from the illusion that these promises cannot and will not take root in man's consciousness. The people in want, the under-privileged will, in their desperation, cling to a raft of promised salvation whatever may be their doubts as to the substance of that promise. They will be impressed by a feeling that they stand to lose nothing since they have nothing to lose anyway; and forthwith, they become victims of an insidious propaganda, ready to trade freedom for grandiose promises which exist only in the lips of the propagandists.

The preservation, therefore, of basic Americanism and of human rights against the onslaughts of communism must rest upon a well-planned program of economic and social security. America is fortunate because her long history of progress in individual liberty has been coupled with the general economic well-being of the people. America, conscious of its primacy in world affairs today, has abandoned her age-old policy of isolationism for that of concern for the problems of less fortunate peoples. Her helping hand is felt in the war-ravaged countries of western Europe and the effect of this assistance is reflected in the brighter faces of the men, women and children inhabiting that part of the world. But the problem posed by communism is not in Europe alone. It is even more urgent and more portentous of disaster in Asia and the Far East. In this part of the world, communism has greater allure, because there is

so much more misery and so much more ignorance; and if it succeeds there, no power in the world can stop it from spreading and contaminating the rest of humanity.

The objective of the Veterans of Foreign Wars of preserving the basic principles of Americanism as expressed in the Bill of Rights must, in my view, extend to the preservation of human liberty and the democratic way of life, not only in these United States, but also in all other parts of the world in which the principle is consecrated or to which it can, in time, be extended. There is in the present world situation a challenge to this worthy organization. While you and all good Americans like you have a right and a duty to look around and vigilantly preserve your liberties; and while you and all good Americans like you, should look across the oceans toward Europe so as to preserve and defend democracy's gains in that continent; you and all good Americans should, likewise, cast your eyes to the Far East and in like measure or in greater measure, extend yourselves so that the peoples who inhabit that part of the world may enjoy the freedom and the liberties which it has been your good fortune to enjoy during the last two centuries. If you so address yourself with the same enthusiasm and zeal with which you have embraced all the just causes which you have fought for or have supported up to now, we cannot doubt the outcome, and we of the Far East—in fact all Asia—would be in debt to you for all time.

Murder of War Prisoners Still Unsolved

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article appearing in the New York Herald Tribune of July 3, 1949. This is the first of two stories by Julius Epstein, noted journalist, who served in the Office of War Information.

The article follows:

MURDER OF 10,000 POLISH PW'S IN KATYN FOREST STILL UNSOLVED—GERMANS AND RUSSIANS ACCUSE EACH OTHER—WRITER URGES INQUIRY INTO WARTIME SLAYINGS

(By Julius Epstein)

Despite a multiplicity of war-crimes trials since the end of World War II and the conviction of hundreds of defendants, no court as yet has fixed responsibility for what may have been the greatest single crime of the war—the mass killing of many thousands of Polish Army officers in the forest of Katyn, near Smolensk. Officially, at least, it is as much a mystery today as it was when it first came to light 6 years ago.

Investigation and research during the last year led me to believe, however, that responsibility for this atrocity may still be placed where it belongs if the case is reopened and submitted to an impartial body. To that end an American Committee for the Investigation of the Katyn Murders might be organized. Composed of experts in the law and in forensic medicine and given enough money to obtain all necessary witnesses and documents, such a group should be able to get to the bottom of the matter.

Here are the facts as known to the public and the results of my further investigation:

On April 13, 1943, the German radio announced that troops in the Smolensk area had discovered mass graves of "about 10,000" Polish officers in the Katyn forest. The Germans asserted that these officers had been killed, while prisoners of the Russians, in April and May of 1940. Two days later the Soviet radio branded the Nazi story as "vile fabrications."

ASKED RED CROSS INQUIRY

The Polish Government in exile in London had been trying to locate a large number of missing Polish officers, however, and took immediate cognizance of the German accusations. On April 16 Gen. Wladyslaw Sikorski, head of the Government, suggested that the International Red Cross investigate the matter. At the same time his Minister of National Defense, Lt. Gen. Marjan Kukiel, issued a statement reviewing his Government's efforts to locate the missing officers and confirming that the Red Cross had been approached.

This brought a delayed but violent reaction in Moscow. Foreign Minister Viacheslav Molotov handed to Tadeusz Romer, the Polish Ambassador, on April 25, a note which concluded: "The Soviet Government has decided to sever relations with the Polish Government."

World attention was next attracted to the Katyn murders when the International Tribunal was convened at Nuremberg to try German war criminals. Gen. R. A. Rudenke, Russian chief prosecutor, handled the prosecution for alleged atrocities in eastern Europe. His indictment of the Nazi leaders included the charge that "in September 1941, 11,000 Polish officers who were prisoners of war were killed in the Katyn Forest near Smolensk." But when the tribunal handed down its verdict on September 30, 1946, no mention whatsoever was made of this charge.

LAST OFFICIAL NOTICE

That was the last—and only—time that any except the governments directly concerned took official note of the case. The only available additional information is that resulting from investigations during and after the war by individual governments acting unilaterally.

The Germans, of course, were the first to stage a full-dress investigation. Immediately after discovery of the mass graves, a 12-man commission was appointed. Its members, doctors and scientists, were drawn mainly from universities in countries occupied by Hitler's troops, but there were apparently no out-and-out Nazis among them.

On April 30, 1943, this Commission signed a protocol at Smolensk in which it declared unanimously that the evidence showed that none but the Russians could have committed the mass murders at Katyn. Among the salient points upon which this conclusion was based were the following:

1. Because of an unusual soil composition the bodies, as well as clothing and other personal effects, were well preserved when exhumation took place. It was possible to establish, therefore, that there was not a single document, letter, newspaper, or other paper dated later than April and May of 1940.

WORE WINTER UNIFORMS

2. The men were clothed in heavy winter uniforms as they might have been in that area in April or May, but not in August 1941 when, according to a Russian charge, they were shot by the Germans. A Russian claim that the latter month was unusually cold was disproved by meteorological data which showed it to have been a normal summer month.

3. There were no insects or traces of insects on the bodies, a fact which pointed to cold-weather burial.

4. When one grave lower than the others was excavated, water welled up. The Commission pointed out that no grave could have been dug at that point in warm weather.

5. Microscopic investigation proved that spruce trees planted on the graves were 5 years old and that they had been transplanted when they were 2 years old. The 3-years difference coincided with the interval between April and May 1940, and April 1943, when the investigation was made.

6. Rope used to tie the hands of the dead men was of Russian manufacture and the knot was one used by the NKVD. Wounds in some of the bodies corresponded to those made by Russian bayonets, of four edges.

7. All of the men had been shot through the back of the head, the official Russian method of liquidation.

COMMISSION IS QUERIED

In the course of my research I decided to try to get the present opinions of the members of the German commission. Letters were sent to each one asking three questions: (1) Did the German Government exercise any pressure upon you before or during your investigation? (2) Do you still hold the same opinion as expressed in the protocol you signed in Smolensk on April 30, 1943? (3) Are you ready to testify before an American congressional committee or before an American organization investigating the murders of Katyn?

Dr. Helge Tramsen, of Copenhagen University, Danish member of the commission, replied in part:

"I hope that a strong, hard-working commission of good American scientists in close connection with the Congress and never barred by any diplomatic care would work in the name of humanity to unveil totally the motive and reason for this horrible mass murder of absolutely defenseless prisoners of war. It might open the eyes of many blindfolded in a certain political faith. I should gladly offer my help."

Professor Palmieri, of the University of Naples, answered the three questions categorically. He wrote that "I noticed no pressure at all from the German Government, either before or after our investigation," that "even today there would not be any modification of the protocol signed at that time" and that "I have no objection to testify before a restricted committee of experts as to the object and results of our investigation."

NEUTRAL MEMBER REPLIES

A completely neutral member of the commission was Dr. F. Naville, a member of both the medical and juridical faculties of the University of Geneva in Switzerland. For that reason I quote from his reply at some length:

"1. No government, neither the German nor any other, has exerted any pressure upon me in connection with the investigation of the Katyn case. I could freely exercise my rights as a forensic physician.

"2. I have not changed my opinion and therefore continue to believe in the correctness of the protocol I have signed in April 1943, at Smolensk.

"3. I am ready to give all the information in my possession to an American committee which would conduct a hearing with me at Geneva and to which I could show my documents. (Dr. Naville explained that he does not speak English and that, therefore, he would prefer not to come to the United States except for very exceptional reasons.)

"I further want to call your attention to the dossier deposited in Sweden which establishes the Russian guilt and even gives the names of eight Russian colonels of the NKVD who organized the massacre."

The hint in this last paragraph of Dr. Naville's letter proved invaluable in my further research, as I shall show.

Unemployment

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following copy of my radio broadcast over WMEX, Boston, Mass., entitled "Public Works to Provide Jobs":

Ladies and gentlemen of the radio audience, the old ghost of unemployment, outlawed by the great industrial activity of the past 8 years, has come back to haunt us again.

As of May 14, the United States Census Bureau estimated the number of jobless at 3,289,000 persons. This was a rise of 273,000 since April 9, and came at a time when unemployment usually falls off due to a pick-up in seasonal jobs.

Competent authorities believe that this total may approach the 6,000,000 mark by next winter unless present trends are reversed.

In addition, the number of people working part-time swells the present figure to 8,000,000, which may exceed 10,000,000 before a turn for the better comes.

"What to do about it," is the question on everyone's lips. Even in far-off Russia they talk about it, hopeful that it may become worse. The economic health and political stability of many nations are tied to the American kite. If we suffer a little, they will suffer more. There is nothing that would suit the Russians better than to see the western nations bogged down as they were in the thirties. Men who can't get work become the victims of despair. They will listen to anyone who promises them a way out of their intolerable situation. The Russians know it and they never fail to take advantage of it. We also know it, so that the issue becomes clear: Will we move swiftly to halt the rise in unemployment and, if so, how shall we do it?

I confess that I am puzzled and disturbed by the attitude of some big businessmen who look at the problem only in terms of cold figures, oblivious to the human elements. Now I know that business must trim its sails to the wind in order to keep going. But is this alone enough? Business, with its reserves, can ride out the storm, but what is to happen to those who are unemployed in the meantime?

Are we to do nothing to tide them over the readjustment period?

I remember the violent opposition of big-business men to such progressive legislation as old-age insurance and unemployment compensation, during the depression of the previous decade. They predicted that such measures would ruin business.

Shares representing ownership in American corporations, measured by their price-earnings ratios, are stronger today than they ever were. Even business itself, without realizing it, has reversed its former position. In the June 24 issue of Business Action, published by the Chamber of Commerce of the United States, is the opinion in which I concur, that the present recession will not become a depression. However, in the course of the arguments presented to support this opinion, the report points to, and I quote: "Old-age benefits and unemployment security provide for built-in security." Inadvertently, the chamber admits that these economic props are desirable and helpful.

But I maintain that they are not sufficient. Old-age payments are inadequate, and unemployment compensation runs out.

Most Americans are interested in jobs and the need to provide and maintain jobs.

It all begins with the individual and the family, which is the source and inspiration of our society. Each person wants to earn his way, to earn his happiness, and earn greater opportunities for his loved ones.

Once upon a time, in the days of handicraft industry, he could do the whole job, with his own tools. Today, as part of an assembly line, he does only one operation, relying upon others before or after him on the production line to help complete the finished product. In the close and complex organization of our modern society, men must depend on each other. This they do through voluntary cooperation. In the process of shifting, adjusting, accommodating ourselves to new realities, there is always the danger that one group may acquire too much power. One may feast while others famish.

The merit of the American system is its flexibility. The Bill of Rights protects the basic freedoms of the individual. The Constitution, through the process of amendment, gives the people the power to make changes in their Government consistent with these fundamental guaranties.

However, because economics, which is concerned with the production, distribution, and consumption of wealth, plays an increasingly important role in the daily lives of individuals, new arrangements to meet this problem are being evolved by such various groupings as industry, labor, and agriculture. It is the human tenency of each group to put its own interests first. There is a growing realization, on the other hand, that only through mutual compromise can we arrive at that area of understanding which is best for all.

The overwhelming majority of Americans believe in the free enterprise system, not that of the 1890's which was ruthless, but one modified to meet the needs of our times. That system depends upon the widest possible distribution of purchasing power. One look at the productive energy of the United States, so far superior to that of any other nation, eliminates comparison. Our problem is how to provide for the minority of unemployed at those various stages of pause, or recession, or readjustment, before we move on to the next level of economic progress.

We are in one of those periods now.

Unemployment is severe in the textile-manufacturing States of New England and the South, in steel and metal-working industries, and in the State of California as a whole. Even though it is spotty, from the Nation-wide viewpoint, I believe that the Government should take steps to check the blight before it spreads. If the number of unemployed is permitted to increase above the so-called normal figure customers decrease and the whole economy feels the effects.

There are some experts who say that we must now pay the piper for our inflation spree the hard way. They claim that prices must come down before the Government starts to stabilize the level of jobs. Rather than have our hands forced by a situation out of control, I say that we should move at once to nip it in the bud. For it is unfair and dangerous to ask the unemployed to assume all of the burden. Even though many in business and in the high income brackets may have their income reduced slightly, their standard of living will hardly be affected. Not so with the unemployed who will have nothing. These people in larger and larger numbers are using up their unemployment insurance benefits. And many others, not covered by this law, do not have one red cent of income, once they lose their jobs. Either they must depend on help from relatives or seek pauperizing relief payments from their local governments, both alternatives being distasteful to the dignity of the average American.

In 1933, we had nearly 13,000,000 unemployed, almost 25 percent of the total labor force. Work relief projects were set up to alleviate the distress and to save the social order from disintegration. Under the impact of this emergency, new to our experience, there were many accomplishments and many failures. Much needed schools, hospitals, highways, bridges, and other public structures were built and have served us well since. There were also leaf-raking projects which served no productive purpose. It was the shame of those days that men out of work had to curry political favor in order to wangle one of these relief jobs from local authorities. The dispensation of relief too often became a racket.

But even businessmen ran to the Public Treasury for help in those desperate times.

We have learned much from that experience.

The well-being of any nation and its people is based on its productivity. Government cannot match free enterprise as the effective creator of wealth. Our friends in England who have turned to socialism, are finding that it does not work. French nationalized industries have met with extra difficulties, not less, and a start is being made toward denationalization. They, like we, have found that controls should be imposed only when there is no other choice.

Our industrial system has such a dynamic quality that the over-all problem is not one of production, but of distribution. During the last half of 1948, just when one hundred and forty-seven or more million consumers had caught up with their civilian needs which had been deferred because of the war, there was a tremendous increase of manufactured goods. At this point, the public was ready to taper off in its buying and wait for lower prices. Manufacturers are now trying to reduce their inventories. Instead of purchasing new supplies, they are producing goods from their stock piles. They, in turn, are looking for lower prices on raw materials. This retrenchment leads to a reduction of unneeded workers.

Meanwhile, there is a large backlog of purchasing power in the hands of those who are employed. It is on the side lines, and will become active again when people are convinced that prices have leveled out on a lower but firm base. Once this price adjustment has been completed, our economy will pick up to a normal stride.

During this correctional process there is a gap, marked by slowly mounting unemployment. The censensus of opinion is that we may be over the hurdle within 6 to 9 months. Fortunately, this adjustment is taking place, industry by industry, rather than all at time, thereby cushioning the shock. The danger lies in the fact that unemployment may increase to such an extent before the shakedown is completed that a psychology of fear may set in, hampering recovery.

We must, therefore, help the unemployed to bridge this gulf.

For the week ending June 18, there were 155,000 continued unemployment claims filed in Massachusetts, representing more than 10 percent of covered employment in this State.

This is not a situation to be hushed up on the theory that these unemployed will be rehired eventually. Such an attitude shows a heartless disregard of a human problem, not to mention the falling off in manufacturing and trade which will result therefrom. It calls, instead, for direct and positive action.

First, and foremost, we should increase and extend unemployment-compensation benefits and enlarge the coverage.

We should do the same with old-age assistance and old-age insurance.

It is also high time to grant tax relief to low-income individuals.

The minimum wage should be raised from its present 40-cents-an-hour low.

New and small businesses should be encouraged by Government loans.

Most important of all, we should develop a public-works program and put it into operation in those areas where unemployment has assumed dangerous proportions.

This brings us to the crux of the situation, not only as it concerns the immediate problem, but to correct one glaring defect in the functioning of our economy as a whole.

Throughout our history we have had brilliant periods of progress punctuated by depressions. To accent either the ups or downs is to lose sight of the whole picture.

I repeat, ours is the best system in the world so far. We can meet the challenge which ever faces us by improving that system. It can be done by following a middle-of-the-road policy which avoids extremes.

We believe in extending to private enterprise every opportunity consistent with the general welfare. Business believes that insurance is necessary to protect itself against contingencies beyond its control. In the larger sense, the Government must protect the people where business fails to maintain sufficient employment and withdraw as soon as business picks up the slack.

How can this be done?

I suggest support of immediate legislation by the Congress whereby a Federal Works Agency shall draw plans for suitable public works in conjunction with officials of the various States and the major subdivisions thereof and to proceed with construction of such projects in any area where unemployment reaches and holds at a level of 10 percent or more of the labor force for a period of 4 months.

If, upon completion of the project, unemployment shall have dropped below this level, no further Federal works of a relief nature shall be approved in that area until unemployment reaches the danger line as defined in the preceding paragraph.

In determining such ratio, I have used the years 1931 to 1940, inclusive, in each of which the number of unemployed ranged from 10 to 25 percent of the civilian labor force.

I believe that this work insurance will not only help to tide many of our people over the present critical period, but will spur private industry to such efforts that the need for public works will be reduced to a minimum.

Thank you and good night.

Independence Day

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial entitled "Independence Day," which appeared in the June 29, 1949, issue of the Framingham News, Framingham, Mass.

The editorial follows:

INDEPENDENCE DAY

One hundred and seventy-three years ago a little band of men, fed-up after long indignities, assembled in Philadelphia and severed the political connection of the Colonies with Great Britain.

They hadn't wanted to do it, and there were many dissenters among the inhabitants of the Colonies. But they were goaded by a great many arbitrary acts and saw no other course.

A long and difficult war for independence began, ending in victory and the establishment of a republic in an era when wide subscription of the divine right of kings turned nearly every hand against them.

The struggles of the new nation to pioneer in and entrench liberty are now history. The system then conceived, and safeguarded during succeeding generations has made America the most powerful, prosperous, and humanitarian nation on earth.

Subscribers to other political theories have contended that America under any system would have grown rich and powerful. But several political divisions of the earth, Russia among them, have equal or great resources but have neither prosperity nor liberty.

America's system of freedom and vigorous individual initiative is the key to the trumph. July Fourth is a day for rededication to the principles of 1776. In them are the Nation's strength and security.

Independence Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the Lawrence Daily Eagle, Lawrence, Mass., Monday, July 4, 1949:

INDEPENDENCE DAY REMINDER: TYRANNY STILL STALKS ABROAD

(By Bruce Biossat)

On the Fourth of July we celebrate the winning of independence as a Nation. This day—in 1776—was the moment in history when a great enterprise founded on freedom was begun.

We Americans of the midtwentieth century are the current custodians of those liberties born 173 years ago. We and our forefathers have seen them challenged by tyrannies that have come and gone in the world. We have guarded freedom well against these tests.

But the idea of tyranny dies hard. Crushed, it finds new forms and new tools and rises again. When it grows strong, it seeks to stifle liberty wherever it exists. For the heady droughts of free air are poisonous fumes to the tyrant.

Today tyranny is astride part of the world once more. In its new dress it is called communism. It has a strong weapon, a philosophy of government that professes to look toward a great cooperative society welding the mass of men together.

Armed with this weapon, Communists have shrewdly muddled the world's thinking. They have made a starkly reactionary system appear progressive to some, thus trapping idealists, intellectuals, and others easily drawn to the idea of cooperation.

Yet while extolling the glories of cooperative living, practicing Communists in Russia and other nations have ruthlessly stamped out liberty and real cooperation among peoples wherever they could.

Communist ideology is a hideous deception conceived to lure millions to the destruction of their freedoms. Communists have adopted the idea of cooperation only to debase it and corrupt it to their own tyrannical ends.

Not many Americans are deceived by this elaborate fraud. Some who are fooled are blinded to the realities by genuine grievances they nurse against our admittedly imperfect society. Feeling robbed of their American birthright, they unwittingly make themselves servants of a tyrant who, at a whim, would crush not only their liberties but their lives.

Independence Day is a good time to vow anew never to let this tyrant or any other set his cruel boot down on our soil. And to remember, too, that so long as we know him for what he is, few of us are likely to welcome his coming. This one called a Communist we already know. Need there be any panic, then, when a few of his henchmen are unmasked?

Public Financial Aid to Parochial Schools

EXTENSION OF REMARKS

OF

HON. HUGO S. SIMS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. SIMS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by the Honorable ANDREW JACOBS, Member of Congress from Indiana:

It is good policy that the public consider well public questions before final decision. It is particularly essential that such questions be viewed from every angle before decisions are made, either by the individual in private life or the representative in Government.

By virtue of my position, the question of Federal or public aid to parochial schools has come squarely before me for decision. As one of 25 members of the House Committee on Education and Labor, it becomes my duty to help perfect the measure for Federal aid to education. Accordingly I have given this question my careful consideration and measured judgment.

Early this year I stated that in my opinion we could not wisely, nor constitutionally, use public funds in support of parochial schools.

Unfortunately a hostile press interlarded into my remarks hostile words, which were later admitted to be incorrectly reported by the reporter in question. I reiterate a total absence of any feeling of hostility toward any school system—public, private, or parochial. My position is based upon fundamental principles of our conception of government.

I shall, therefore, take up the various views and state my opinion of them.

I

The first is that exclusion of parochial schools from Federal aid is discriminatory.

We must distinguish between aid to the individual child and aid to the parochial school. For example the hot lunch program is available to all children, including those in parochial schools. Already passed in the Senate is a health bill for all children. These benefits are to go to the child and are not directly connected with his teachings. I would deem standard approved secular textbooks in the same category as well as the right to ride a school bus upon a scheduled route. Establishment of a separate or special school bus route for the parochial school would, in my judgment, violate the principles hereinafter stated.

Whatever can be constitutionally done to aid a child will win my support. However, I cannot, and will not, support any measure that grants public financial aid to private or parochial schools.

Religious freedom is a two-way street. We are free to establish and utilize our parochial schools or utilize public schools, as we choose. But the right to establish private schools does not imply the right to public financial support thereof. We have the right to build and maintain our churches, but not to build or maintain them with public funds. Our parochial schools are an adjunct of our religion, established for educational use instead of using public schools, solely for sake of the child's religious training.

As long as we have the same right to send our children to public schools as anyone else, we are not discriminated against, and as Catholics we do not have a right to a separate publicly supported school system, nor does any other group of people have such right.

II

The second argument is that Catholics are double taxed.

This argument is based upon the fact that Catholics pay public taxes and also support their parochial schools. Hence it is argued that contributions, tuition, etc., to parochial schools are a tax, but it is not a tax imposed upon them by Government. Again the public schools are maintained at public expense and all children are entitled to attend. The fact that we provide for ourselves something we prefer rather than to use that which the public provides does not warrant us in demanding that the public pay for what we voluntarily choose. What we pay for what we voluntarily choose is not a tax, hence we are not double taxed.

III

Thirdly, it is argued that parochial schools are accredited, hence legal, hence entitled to public support.

Indeed, this argument answers itself. Certainly, every activity that is legal is not entitled to public support.

But in this argument we can find material for a great lesson. The Oregon case is stoutly relied upon. There the United States Supreme Court held invalid an Oregon law actually outlawing parochial schools. Hence the hate of Klan days failed in 1925. The decision was applauded by every tolerant American. But there was no question of public support of parochial schools presented, considered, or decided. Rather it was the preservation of the right of parochial schools to exist. Again the legal right to maintain parochial schools does not establish the right to public maintenance. To so argue is to say with one breath, our parochial schools are in the public-school category, for the purpose of public aid; while in the next breath we stoutly maintain our right to parochial schools for the purpose of religiously training our children. However, when we put our parochial schools in the public-school category for one purpose, we do so for all purposes, and we must then comply with public-school regulations which forbid sectarian religious teachings therein.

The issue is clear. Either you keep parochial schools and maintain them or take public funds and convert them into public schools, and they will then no longer serve the religious purpose for which they were established.

CONCLUSION

In 1927 one Charles C. Marshall challenged the qualifications of Gov. Alfred E. Smith to be President. Marshall contended Governor Smith would be subservient, in the discharge of his civil duties, to the church. Governor Smith replied publicly as follows:

"I recognize no powers in the institutions of my church to interfere with the operations of the Constitution of the United States or the enforcement of the law of the land. I believe in the absolute freedom of conscience for all men and in equality of all churches, all sects and all beliefs before the law, as a matter of right and not as a matter of favor. I believe in the absolute separation of church and State and strict enforcement of the provision of the Constitution that Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof. I believe that no tribunal of any church has any power to make any decree of any force in the law of the land, other than to establish the status of its own communicants within its own church.

"I believe in the support of the public school as one of the cornerstones of American liberty. I believe in the right of every parent to choose whether his child shall be educated in the public school or in a religious school supported by those of his own faith."

At that time, when the embers of the fiery crosses were smoldering, we all applauded and adhered to Governor Smith's statement. Shall we now give plausible excuse to the resurrection of the old Klan spirit, by demanding a breach of the fundamental law of the land for our immediate and doubtful benefit?

This thought is so well expressed in the two letters which I received from Mrs. Eva MacDonagh Smith, of 3554 Sydney Place, San Diego, Calif., that I, with her permission, reproduce them here:

MAY 16, 1949.

DEAR CONGRESSMAN JACOBS: As a Catholic, a long-time member of the Catholic Daughters, and one of a family which has given three priests and a religious to the church, I wish to congratulate you on your farsighted and truly spiritual stand with reference to the financing of our parochial schools by Federal grants.

No doubt you have received some protests from members of our faith, but many more Catholics than you think agree thoroughly with you that the moment we permit civil authorities to preempt any control whatever over Catholic education—which is what we are doing the moment we accept their money—on that instant we sell our birthright for a mess of pottage.

This is so clear to me that I am amazed some of our clergy fail to recognize the fact. The day Catholics consider it too great a burden to support the splendid school system which is the bulwark of our faith will be a sad day indeed for the church. Millions of dollars from outside sources are poor security for the church compared to the devoted faith of other days, the faith of our fathers which counted every sacrifice a privilege when borne for the sake of holy mother church.

Again, thank you.

Sincerely,

EVA MACDONAGH SMITH.

JUNE 1, 1949.

DEAR CONGRESSMAN JACOBS: Yes, you are at liberty to use any letters of mine in any way that may serve. I should be only too glad if they could be put to service.

Many Catholics feel that their fellow church members are not thinking through the implications of the situation. There are values greater than the material, and it is exactly these which we believe would be sacrificed if we were to sell short the faith of our fathers for 30 pieces of silver.

By way of background I may say that my uncle (deceased) was a dearly loved pastor in Nebraska for many years, and I have a beloved sister in the convent. Our family is not convert, but has been Catholic as far back as can be traced, and has given many sons and daughters to the church. Generations have held the faith through all struggles and vicissitudes. Yet we believe that never, as in the days of its greatest misfortunes, has the church stood in such danger as now, in its heyday of power and wealth.

This danger is not from without but from within. It is the danger of substituting material values for the spiritual, of selling for a mess of pottage our sacred birthright, bought with the blood and tears of the heroic dead.

Thank you for the privilege of speaking so freely. You are a man of courage and insight, deserving the gratitude of all Catholics who place the spiritual ahead of the material values—and they are many.

Sincerely,

(MRS.) EVA M. SMITH.

I trust that all Catholics will think sincerely on this serious question, and conclude what is best for the church as well as their country. And may I ask you, how could we, as Catholics or as Americans, applaud Governor Smith's statement in 1927, and disagree with the views stated herein?

Most sincerely,

ANDREW JACOBS,
Member of Congress, Eleventh Indiana.

Address of Hon. Donald L. Jackson, of California

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend and revise my remarks, I ask unanimous consent to have reprinted in the RECORD a thrilling speech by my distinguished colleague from California, Mr. JACKSON, delivered at the national convention of the Young Republican Federation at Salt Lake City last month.

Nothing gives me more pleasure than to have this address made a part of the official proceedings of this body as I believe it contains a dynamic and forceful message.

I am proud that my good friend, Mr. JACKSON, is a native of my State of South Dakota. His foresight and clear thinking clearly reflects the pioneer spirit exemplified by his forefathers in their struggle to establish themselves on the rugged prairies of the Middle West. His well-considered actions and his sound judgment as a Representative in Congress from the great State of California are a constant source of pride and satisfaction to me.

His speech is a stirring discussion of the principles of Americanism and is an excellent message for anyone concerned over the vicious inroads which are being made on the pattern of our traditional free way of life.

ADDRESS BY HON. DONALD L. JACKSON OF CALIFORNIA

Mr. Chairman, ladies, and gentlemen, fellow Republicans, at the outset of this discussion may I say what a pleasure it is for me to be here with the Young Republican Federation in Salt Lake City for the business sessions of this convention. Your intelligent interest in the vital problems confronting the Nation and the Republican Party at this time is one of the healthiest expressions of the day. For more than 3 years it has been my privilege to work very closely with young Republican groups in all parts of the country, and in common with many other members of the senior organization it is my feeling that your active participation in Republican affairs and in the councils of the party should be encouraged in every way possible. I am happy to say that in my own congressional district the young Republican organizations are full

partners in every sense of the word. We would no more think of embarking upon a major course of action without first obtaining the opinions and suggestions of the young Republicans than we would consider embarking upon the same course of action without prior consultation with senior party leaders. We have a team, and the motive power which furnishes the energy for our operation is the intelligent and coordinated activity of all groups within the district. You will probably be told during the course of this convention of our plan of personal contact. This contact program is working and it is bringing scores of new recruits to our cause and many new members to our field organizations. I hope that each of you will make an effort to determine the operational details of our plan, and that you will return home imbued with the same enthusiasm which those of us who are in the contact program ourselves feel.

Without respect to my own participation in the convention activities, I can assure you that in bringing to this convention my distinguished colleagues, Congressman JOHN LODGE, of Connecticut, and Congressman WALTER HORAN, of Washington, Chairman Ralph Becker has indeed done an outstanding job. Both Mr. LODGE and Mr. HORAN are nationally acknowledged to be not only dynamic speakers, but men who have brought to the Congress an added measure of stature and statesmanship. Both of them are experts in their respective fields. Perhaps no Member of the Congress is more conversant with matters having to do with current legislation than is Mr. HORAN, a distinguished member of the House Committee on Appropriations. Certainly, there is no more competent authority in the House of Representatives on the subject of foreign affairs than my distinguished colleague and fellow-committee member, Mr. LODGE. As a matter of actual fact anyone would feel diffident in discussing foreign affairs with Mr. LODGE in the same room, but it so happens that we have, by and large, a complete meeting of minds as far as the important aspects of our foreign policy are concerned.

The vital import of foreign affairs and of our foreign policy cannot be overemphasized at this time. I think that we are all agreed upon several basic premises having to do with our international relationships. I am sure that each of us has long since reached the reasoned conviction that this country cannot exist in peace, prosperity, and security, in a world of turmoil and discord. If it were possible for this Nation to rear up as a single island of stability and peace above a sea of troubled international waters, perhaps our current foreign policy might be modified in many respects. However, in the day of the atom and of the guided missile, such a position of isolated independence is patently impossible. We are no longer merely a neighbor of the other countries. Today, the other nations and the other peoples of the earth are an integral and important factor in our daily lives. There was a time when the two great oceans acted as a deterrent to aggression and lent to the people of this country a great and satisfying sense of security. It was in a climate engendered by factors of time and space then existing that George Washington warned the young Republic to beware of all foreign entanglements. As great a man as he was, as great as was the foresight of our progenitors, they could not have conceived what the passage of the years and the succession of generations were to do in the way of shrinking our globe and of forcing us into a position of world leadership. So it is today that we find ourselves in an international role where our own enlightened self-interest forces us to accept a new concept of our responsibilities, and to take a totally new, and for us, novel position with respect to the postwar world.

We are not a people trained in the intricacies of international diplomacy. During that era when we were gradually expanding our national frontiers and adding to our overseas possessions and dependencies, our history was being largely written with the hot barrel of a rifle. Our remoteness rendered us immune, not only to military attacks, but it also insulated this hemisphere from the area of diplomatic intrigue. Our diplomats in buckskin spoke the tongues of the Indian tribes, but they were always uneasy when confronted with the suavity of Old World diplomacy. It was not until after the First World War that we were forced to emerge from our isolation and accept a new measure of responsibility for the future welfare of the world, and we were to cut our diplomatic teeth the hard way. Had we at that time, taken an intelligent and farsighted role in world affairs, had we recognized the full truth of and the total necessity for world interdependence and cooperation, it is conceivable that World War II need never have been fought. But, after we had paid the terrible price for our ineptness in the first instance, and that tragic conflict had been fought, there was an almost universal demand on the part of the American people themselves that this Government join with the other victorious allies, and exert its best efforts in international affairs to the end that we might have a hand in winning the peace as we had aided in winning the war. As a result of that mandate the United States played a major role in San Francisco in the drafting of the Charter of the United Nations, and since that time we have been a leading factor in all of the activities and decisions made by that instrumentality for world peace.

The Republican Party has not lagged in this effort, but to the contrary has spared neither time nor talent in seeking effectual implementation of sound national policies. Out of the postwar problems which this Nation was called upon to meet and attempt to solve, there came into being what we now know as a bipartisan foreign policy. The term means simply that we do not engage as an opposition party in purely partisan politics where the welfare of the Nation is concerned, or where it is considered essential that the American people present a solid front to possible aggressor nations. As a result of that decision, made at the highest policy levels of the Republican Party, we have marched shoulder to shoulder with our political opponents in a unity of expression and purpose never before witnessed in the history of this Republic. The European Recovery Program, the Voice of America, aid to Greece and Turkey, all stand as milestones on the road of bipartisanship in foreign affairs.

By accepting equal responsibility in implementation of the decisions of the President, the Republican Party has not sought political advantage. To the contrary, participation by our party and a sense of national loyalty to the bipartisan effort has been effective in silencing some of our party leaders at times when the better part of wisdom, the better part of judgment and the national interest all demand that they speak out frankly in opposition to certain policies and practices of the administration.

There can be no doubt but that secret agreements arrived at secretly in several of the wartime conferences between the heads of the Allied Powers have resulted in disaster. The course of action decided upon at Yalta most effectively sold the Nationalist Government of China down the river in return for a few scant and costly days of Russian participation in World War II. The partition of Korea at the thirty-eighth parallel likewise was the result of ill-advised action at Yalta. After more than half a century in which we have consistently guaranteed the integrity and the independence of an undominated China, we have at long last reversed our traditional open-door policy, and have, in effect, turned our backs upon our wartime allies, whose aid and assistance we gratefully accepted when the chips of war were down. When Secretary of State Acheson announces that we will wait until the dust settles in China, he does not speak with the authority of the bipartisan foreign policy. He speaks rather for the China clique in the Department of State, and perhaps unwittingly for those who would prefer to see the chaos of a Red Asia rather than admit to a previous error in judgment. The policy with respect to China was inaugurated in the Department of State following the ill-starred attempt of General Marshall to force the Chinese Government to permit cabinet participation by the Chinese Communists, in the very face of irrefutable evidence that no nation has ever successfully worked out a destiny of freedom and equity in the face of Communist sabotage at policy levels. That policy has been adhered to stubbornly in the presence of disaster in the Orient. It is our contention that the same circumstances which obtain in China today are the circumstances and conditions which brought this country to the aid of Greece and Turkey 2 years ago. The policy being pursued by the administration with respect to China today is not a policy concurred in by the Republican Party.

Let us consider for a moment the relationship of the Republican Party to the so-called bipartisan foreign policy. Does the pursuit of such a policy constitute blind agreement? Does it represent a willingness on the part of a minority to follow wherever the majority may lead even to destruction and disaster? To my mind, it means none of these things. To be bipartisan appears to me to imply that one is following a clear-cut course of action which has been conceived at a common counsel table in the interests of national welfare. Bipartisanship in foreign affairs should mean the minority party places the national welfare above any consideration of partisan politics. In defense of the present policy, the administration has often stated that partisan politics should "end at the water's edge." With that position we Republicans have no quarrel. That we should lend every aid and assistance to the administration in the face of the great problems which we today seek to solve is beyond any question.

However, it is not enough to say only that "politics should end at the water's edge." In order to develop and implement a true American spirit of cooperation and harmony in foreign affairs it is essential that partisan politics end long before our policies reach the edge of the water. It is our contention that the grave decisions which we are called upon to make should be subjected to full and frank discussion at the conference tables in the White House and in the Department of State. Every step of every proposed course of action should be discussed fully and in complete candor, for where there is not such discussion there cannot conceivably be joint cooperation and mutual effort. We Republicans want a bipartisan foreign policy. This country needs such a unified approach to the great international problems of today. But it is of far greater importance to the United States and to the Republican Party that our policy be right before it is simply bipartisan. Accord does not necessarily mean equity, and unity itself does not insure the national welfare in the field of international relations. The long scroll of history sets forth graphically the tragic faith of many nations, the peoples of which were united, but in the wrong cause. Neither great party can escape its responsibility in this connection. If we, as Republicans, simply accede, without protest, to any line of action determined upon by the Executive and the Department of State, we shall violate our sacred trust as a minority party in honest opposition. Whenever the best interests of the American people can be served by the bipartisan policy, it is our duty and obligation to so implement the decisions of the President. But, of equal importance on the other hand is the obvious

fact that when improper courses of action are being proposed or pursued it is our solemn duty and obligation to disclose to the American people the facts in any given case.

Without Republican support there could have been no European recovery program. Without the support of the Republican Party there could have been no Truman doctrine and no effective implementation of our national effort to maintain a free and peaceful world.

Let us make our goal a strong America in a sound world, and let us work in harmony where we can, and oppose unsound plans and fallacious policies where we must. The task is a great one, but the rewards are even greater. The peace and prosperity of a world may hinge upon the manner in which we discharge our sacred obligations.

Di Giorgio Ranch

EXTENSION OF REMARKS

OF

HON. THOMAS H. WERDEL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. WERDEL. Mr. Speaker, on October 1, 1947, a picket line was placed across the entrance of the Di Giorgio farms, located near Arvin in the Tenth Congressional District of California, which I represent.

There have been remarks made before congressional committees and on the floor of the House accusing the Di Giorgio Fruit Co. of unfairness, and referring to the situation as a strike. As a matter of fact, the picket line represents an attempt by the National Farm Labor Union to force the permanent agricultural employees of Di Giorgio farms to accept that union as a bargaining agent against the will of the vast majority of the permanent employees.

The picket line was placed across the entrance of the Di Giorgio farms during that season of the year when California farmers must hire temporary agricultural labor and very few of these so-called strikers had any extended history of employment with Di Giorgio farms.

Over twelve hundred of the permanent employees of Di Giorgio farms have signed an affidavit that they do not want the National Farm Labor Union or any other union as a bargaining agent. I believe any fair analysis of the situation will show that the disturbance is not a strike, but an attempt by the National Farm Labor Union to force organization of the Di Giorgio farms employed through use of a picket line.

Mr. Gordon Pates, of the San Francisco Chronicle, wrote what I believe to be a very impartial statement in connection with the subject, which statement was published in the San Francisco Chronicle on June 26, 1949. Even though Mr. Pates refers to the disturbance as "the Di Giorgio strike," I believe that his recitation of facts, with some exceptions, are substantially correct, and that his article will be of interest to all Members of the House, and for that reason I have included the complete text in my extension of remarks. It follows:

THE DI GIORGIO STRIKE

(Di Giorgio farms, the heart of the world's largest fruit empire, was struck October 1, 1947, by the National Farm Labor Union. The strike has been fought with words, music, and movies but seldom with facts. This is the Di Giorgio farm and strike as of today.)

(By Gordon Pates)

Eight miles south of Bakersfield on the east side of United States Highway 99, the old, abandoned Greenfield School crumbles quietly in the summer heat. A sign in the weeds alongside the school points east along a black-top county road toward the foothills of the Sierra Nevada and announces: Oneness church and tabernacle 5 miles.

This is the Di Giorgio road. It passes through one of the richest farm communities in America, and it leads to one of the most widely publicized but least-understood labor disputes in America. This is the road to Di Giorgio farms and the Di Giorgio strike.

Turn left onto the county road and learn the central fact of life on the flat land of Kern County. One side of the road is desert, its gray surface broken only by sagebrush and tumbleweed. The other side is rich farm land planted to grapes and corn and potatoes. It's the same land on both sides of the road. The difference, of course, is water.

Scattered through the vineyards and cornfields are steel towers which look like oil derricks, and a few of them are. But most of them are water wells, wells which must pump night and day to fill the irrigation ditches. Kern County gets only 6 inches of rainfall a year and without its underground water supply it would perish.

But the water is there, which is what counts, and it bubbles out of the ground from pipe lines all along the Di Giorgio road as you drive east toward the hills. Water built this farm community, water first discovered in quantity by the man who built the farm at the second stop sign.

The intersection at the second stop sign is the X that marks the heart of Di Giorgio, Calif., which might be just another wide spot in the road but isn't. The first sight of it is not impressive. A long packing shed. Some neat gray bungalows. Some trees. A water tower. Some privet hedges. A little wooden post office. A low, white-washed frame building with a sign: Di Giorgio farms—Office.

There are a few cars parked in front of the office but no human being is in sight, no one, that is, except an old woman who marches back and forth before the main gate to the packing shed. She wears a straw hat and carries a heavy umbrella against the summer sun. Strapped around her waist is a sign which reads: "Di Giorgio workers on strike for a living wage. Local 218, National Farm Labor Union—AFL."

She, and other pickets like her, have marched before the gate since October 1, 1947. Today, 21 months later, the strike is no more effective than it was at the end of the first week. There are more people at work at Di Giorgio farms today than there were the day before the strike was called. Judged by ordinary standards, this strike is a failure. But it is not an ordinary strike any more than Di Giorgio is an ordinary farm.

The strike and along with it the farm, have received Nation-wide publicity during the past 2 years—most of it false or misleading or distorted. The newspapers, the press services, the radio, and the various citizens' groups which have covered the dispute seem to have succeeded only in further confusing an already confused situation.

The blame for this confusion seems to fall about equally on bad reporting, union propaganda, managerial silence, and the emotional intervention of outsiders on both sides of the dispute. No one appears to have been able to consider either Di Giorgio farms or the Di Giorgio strike dispassionately.

The pattern of confusion was established during the first weeks of the strike and nearly all stories written since then have borrowed freely from the first reports. As a result, much of the public information circulated about the strike is mythical. Here are a few of these myths:

The Di Giorgio farm consists of 9,400 acres or 12,000 acres or 15,000 acres or 20,000 acres or 22,000 acres or 26,000 acres.

A strike vote was taken September 30, 1947, by 1,200 workers or 1,400 workers or 1,500 workers or 2,500 workers.

The number of workers who struck October 1 was 1,100 or 1,200 or 1,400 or 1,500.

This strike was organized and conducted by Communists and subversives.

No real Di Giorgio workers struck and the picketing was done by outsiders who had no connection with the farm.

Di Giorgio farms would have settled with the strikers in the first few weeks had it not been for pressure from the Associated Farmers.

Cruel and Fascist methods were used to break the Di Giorgio strike.

The strike is an attempt by left-wing labor agitators abetted by Government bureaucrats and crackpots to establish a left-wing dictatorship over Kern County agriculture.

To comb even an approximation of fact out of this tangled skein requires a close examination of both the farm and the strike. First, the farm.

Di Giorgio farms is a great example of the industrial agriculture for which California is famous. The Di Giorgios are, in the truest sense of the term, corporation farmers. They operate with great skill and success what Carey McWilliams would call a factory in the field. The farm has about it a good many of the appurtenances of big business. It is the keystone of the Di Giorgio Fruit Corp., which is incorporated in Delaware, owned by 6,000 stockholders, and managed from the tenth floor of the Insurance Exchange Building on California Street in San Francisco.

The farm, according to the latest survey, consists of 10,621.116 acres. It will grow this year 465 acres of asparagus, 600 acres of potatoes, 1,132 acres of plums, and 7,784 acres of grapes. It will ship, by its own estimate, 70 carloads of asparagus, 350 carloads of potatoes, 400 carloads of plums, and 1,200 carloads of grapes. Another 20,000 tons of grapes will go to its winery, which has a 9,000,000-gallon capacity.

Di Giorgio farms has the largest vineyard in the world and the largest plum orchard in the world. Its winery is so built that it could easily be expanded to a 20,000,000-gallon capacity, which would make it the largest winery in the world. Its wells and pumps and pipe lines for irrigation are valued at nearly $2,000,000. With them it pumps onto its land each year nearly 15,000,000,000 gallons of water, enough to keep San Francisco supplied for 5 months.

It has its own branch rail line (now used also by neighboring growers) which is jointly owned by the Southern Pacific and the Santa Fe. The SP operates it in even-numbered years, the Santa Fe in odd, and it is considered the most profitable branch freight line in America.

Di Giorgio farms is to farming what Tiffany's is to jewelry. It has made a specialty of quality fruit and vegetables—the finest grapes, plums, asparagus and potatoes. It is all shipped fresh and it all tops the eastern markets. And it is all packed under one cumbersome but catchy brand name—Oh, Yes; We Grow The Best.

This remarkable example of industrial agriculture employs 1,200 people the year round, and in harvest season as many as 2,500. Di Giorgio farms manages to keep these 1,200 workers busy on a permanent basis (which is rare in California agriculture) by

its diversification. Each of its four crops matures at a different time during the year and the necessary care that each requires stretches into a 12-month cycle.

Di Giorgio farms pays a basic wage to its workers of 80 cents an hour. This is neither the highest in the valley nor the lowest; in fact, some nearby growers are paying a nickel more. Except in one phase of its work, the farm does not pay premium rates for overtime or engage in piecework.

The exception is the packing shed. The women packers come under State laws which require time-and-a-half after 8 hours in a day and double time after 48 hours in a week. Grape and asparagus packing are paid for by hourly wages. Plums are packed at a piece rate of 15 cents a box, but the packer's wage is also figured on an hourly basis and she receives the higher of the two sums.

The Di Giorgios do not encourage dawdling, however, and the packer who does not meet a satisfactory daily quota during grape and asparagus season is soon moved out of the packing shed to the field where the overtime law does not apply. The same is true of the plum packer who does not pack enough plums to exceed, at the piecework rate, her wage under the hourly schedule.

Plenty of overtime is paid during the height of certain packing seasons, but according to the management, it must be well-earned overtime lest the narrow spread between production cost and market price be wiped out. For within the spread lies the profit on the crop.

For the permanent field worker the year falls into three earning periods. He can figure on about 12 weeks of 60 hours each during the harvest times. About 20 weeks of 49 hours each scattered through the light months. And about 20 weeks of 44 hours each during the dark months. The year-round average is a 5½-day 49-hour week which, at 80 cents an hour, will bring him $2,080 a year.

The average annual income of the permanent employees of Di Giorgio farms (excluding top supervisory employees) is reported to be $2,600. The management is fond of pointing out that this is twice the national average for farm workers.

Di Giorgio farms is also a remarkable community in other respects. It houses 132 families and has facilities for some 600 single men in bunkhouses. At present around 800 of the 1,200 permanent workers live on the farm. It houses and feeds its single men, if they are Americans or Mexicans, for $1.60, or for $1.35 if they are Filipinos (whose diet is cheaper).

It has its own fire department, its own medical dispensary and resident physician and, to some extent, its own police force. It has its own telephone switchboard and its own clattering teletype machines which give the farm a direct-wire contact with San Francisco, Chicago, and New York City.

Housing on the farm ranges downward from the neat gray bungalows of its top supervisors to the small frame houses of its truck drivers and irrigators. Some of the houses are made out of converted refrigerator cars, their thick walls providing insulation from the heat. And some of them are shacks, though they are better built and neater than the incredible eyesores that dot the surrounding towns of Arvin, Weedpatch, and Lamont.

The farm managers have plans for the shacks—they intend to burn them as soon as they are vacated, just as they burned the tent houses which preceded them. At present, however, the shacks at least provide better housing than is available elsewhere in the area.

All this housing, from the top down, is at least 20 years old. It is, by management's estimate, certainly not the best farm housing in Kern County and certainly not the worst. It is considered adequate by the State department of industrial relations, which conducts periodic inspections of farm housing to see that standards of decency are maintained.

Nearly all houses have inside toilets and hot and cold running water. A very few do not. These have sanitary toilets and showers, and hot and cold running water, in community facilities adjacent to the houses. The only old-fashioned privies at Di Giorgio farms are several behind the packing shed. According to the management, they will eventually be replaced by septic tanks.

These houses rent, regardless of size or condition, for $3 a month, which includes water and garbage disposal. Electricity and butane gas for cooking are extra. The bulk of the houses are occupied by salaried employees, and only a very few are available for hourly workers. Getting on salary and getting a house are big things at Di Giorgio farms.

The single men who live on the farm are split into three groups, each of which is separately housed—American, Mexican, and Filipino. This has been called segregation by some sources, but the management defends the policy on dietary grounds.

The Americans are fed the usual varied American farm diet. The Mexicans subsist largely on lean beef, frijoles, hot peppers, and paste. The Filipinos eat pork, fish, and great quantities of rice. Each diet is prepared by cooks to whom it is native and served in separate dining halls. And that is the reason why the housing is also separate.

There is also another reason, among others, such as language barriers. Most of Di Giorgio's American workers are Oklahomans or Arkansans or Texans and they do not take any more kindly to Mexicans than they do to Negroes. The management does not defend the prejudices of its workers, but, dreading trouble, it bows to them.

The bunkhouses for the single men are uniform regardless of the race or nationality occupying them. They are clean and plain and the State law requiring a minimum cubic air space per man is observed. The farm provides a cot and a mattress; the rest is up to the man. Sanitary facilities are in separate buildings outside the bunkhouses. They include flush toilets and showers with hot and cold water, and they are kept reasonably clean and in adequate repair.

The maintenance problem around this housing can be a headache. Farm laborers run a wide gamut and not all have been educated to the advantages of sanitary life. There are men who will hang curtains at their windows, and others who will wipe their hands on the curtain, lacking a towel. Some are clean, neat, and self-respecting; others are not. Di Giorgio farms imposes certain rules to keep the premises reasonably clean but otherwise maintains a hands-off policy.

There are also certain recreational facilities on the farm such as tennis courts and swimming pools, but for the most part they are not available to the farm's hourly workers. There would be no point in mentioning this, since it is not incumbent upon a farm to provide such facilities for its workers, except for the fact that they have been widely publicized as if they were available to the hourly workers.

Aside from its approach to a guaranteed annual wage through attempting to provide year-round employment, Di Giorgio farms makes certain other contributions to its employees' security. Nearly all promotion is by up-grading from the ranks of field worker; as a result, its supervisory employees are men who came up the hard way, and today's swamper has a reasonable chance of being tomorrow's foreman.

Since it started the farm has voluntarily operated under the workmen's compensation laws to protect its workers against loss due to accidents on the job. This is the more interesting since farms are not compelled to have such coverage.

For a great many years it has also made group insurance available to its employees. In the beginning this was for salaried workers only, but in 1937 it was extended also to the hourly workers. Now two insurance policies—straight life and accidental death or dismemberment—are available to all Di Giorgio employees who have worked on the farm for 1 year. A third, providing hospitalization benefits, is available to salaried employees only but may soon be extended to all workers.

The farm has also made substantial contributions to the surrounding community. In an area populated largely by midwesterners who brought "that old-time religion" with them from the dust bowl, the Lord has many mansions. Every church (and there are dozens of them) which is attended by Di Giorgio workers has received a cash donation from the farm.

In the past 5 years the farm estimates these contributions at $200,000, including $150,000 and 40 acres of land for an addition to the now-crowded Di Giorgio district school. It has been said that these gifts were all deductible from the farm's taxable income, which is true, but that does not detract from the fact that they were made.

This institution, Di Giorgio farms, was developed by Joseph Di Giorgio, the son of a Sicilian lemon grower, who left home alone at the age of 14 to take on the new world. He arrived in New York in 1889, got an $8-a-week job peddling fruit, and was on his way. He was in business for himself years before he could vote, and at 21 he was the director of a bank.

In his mid-twenties he was operating a fleet of 29 banana boats and successfully bucking the giant United Fruit Co. He switched back from bananas to jobbing citrus and deciduous fruits in the eastern markets, then to buying the fruit from the growers, then to growing it himself.

Di Giorgia arrived in Kern County in 1919, bought a few thousand acres of arid land, hired some labor, sank some wells, and began to roll. With water and labor and a bulging wallet he experimented over a period of years to find the fruits best suited to the soil and the climate. The end result was Red Malaga, Emperor, Thompson Seedless, and Ribier grapes and Beauty, Santa Rosa, and Wickson plums. Potatoes and asparagus brought up the rear and the rest is history.

Today the Di Giorgia Fruit Corp. is the largest grower of fresh fruit in the world. All its fruit, however, is not in one basket. It owns the second biggest grape vineyard in the world at Delano, the biggest pear orchard in the world near Marysville, a large, new development in the Borrego Valley, citrus groves in Florida, and a lumber mill and box factory in Oregon. It is a $21,000,000 corporation, based, in part, upon the fact that people like to buy fresh plums and grapes from push-cart peddlers on the sidewalks of New York.

Joseph Di Giorgio, as board chairman of Di Giorgio Fruit, was until recently the active head of the company. Now, due to advancing age (he was 75 this month) he has begun to pass control to his executives who include his four nephews.

These are J. S. Di Giorgio, vice chairman; Philip Di Giorgio, president; J. A. Di Giorgio, vice president (in charge of production); and Robert Di Giorgio, vice president (in charge of personnel and administration).

J. S. and J. A. Di Giorgio (whose first names are obvious) are known only by their initials. This is partly to escape confusion but mainly because there is only one Joseph Di Giorgio—the founder. There is also only one "Mr." Di Giorgio; everyone else is called by his first name or his initials by everyone from top to bottom of the corporation.

This, then, is the institution which the National Farm Labor Union chose to take on in the summer of 1947 and to whose skirts it is still clinging with feeble grip but great tenacity.

The unionization of California farm workers has been attempted periodically since 1909. It has never met with any lasting success but fear of it remains ever present in the minds of California's big farmers. A good many of these organizational attempts have been made by the American Federation of Labor which has long recognized agriculture as the last remaining reservoir of unorganized labor.

The A. F. of L. was spurred to new efforts after the war by the rise of the CIO's Food, Tobacco, and Agricultural Workers' Union, which is run by Donald Henderson, a veteran Communist. The National Farm Labor Union was chartered as an A. F. of L. affiliate, bank-rolled by the national A. F. of L., and sent out to organize the Nation's big farms under the leadership of H. L. Mitchell, a former leader in the Southern Tenant Farmers' Union.

Mitchell sent out to California as the NFLU's western representative, a young man named Hank Hasiwar. He landed in Bakersfield in the summer of 1947 and began to make enemies fast as soon as local farmers learned who he was. Hasiwar found farm workers in the Bakersfield area receptive to his arguments that organization offered them certain advantages in dealing with their farm employers.

He found, according to his story, that farm workers were interested in the union's program to press for their inclusion under certain social legislation from which they are now exempted. That they felt that unionization would provide them with machinery through which they could better adjust certain grievances. That they were attracted by the prospect of better wages and working conditions to be obtained through use of the union as their bargaining agent.

Hasiwar held an outdoor meeting in Lamont to which several hundred farm workers came. He discovered that many of them worked for Di Giorgio farms. When they manifested a desire to join up to see what the National Farm Labor Union could do for them, Hasiwar began passing out application blanks. Those who paid the $2 initiation fee became the nucleus of Local 218, NFLU.

After several hundred Di Giorgio workers had joined the union, overtures were made to the farm management looking toward recognition of the NFLU as bargaining agent for the farm's employees. Di Giorgio farms refused, and since farm workers are excluded from coverage by the Taft-Hartley Act there was no way to force a National Labor Relations Board election to determine whether the union contained a majority of the workers.

Probably it did not, in actual membership, and there is no way of telling whether, in a secret ballot, a majority of the workers might have voted for the union. On September 30, 1947, a meeting was held for the purpose of taking a strike vote. At that time, according to Hasiwar, some 600 Di Giorgio workers had actually joined the union out of a total of 900 who had accepted applications.

The meeting was attended, again according to Hasiwar, by around 700 people. They were addressed by Jimmy Price, the local's president and for a number of years a shed foreman at Di Giorgio farms. The decision to strike was put to a vote and a majority decided to go out. The next day, October 1, a picket line was thrown around each major entrance to Di Giorgio farms.

According to the farm, there were 1,445 people employed the day before the strike. The next day 540 reported for work, leaving 905 to be accounted for. Some hundreds of these were on strike and some were on the picket lines. A number of others were workers who sat tight at home to see which way the wind would blow. And there were others who had no intention of striking but were afraid they would get their heads cracked passing through the picket lines.

In the ensuing days, as it became obvious that law and order would prevail and that the strikers would not engage in violence (Hasiwar says he gave strict orders about this), workers began to drift back to Di Giorgio farms. Within a few weeks the labor force was nearly back to normal, though practically none of the strikers, who were bitter against Di Giorgio, would return.

The farm says that it had no objection to rehiring them (since it felt that they were badly misled) but when it did hire one or two who applied, the nonstriking workers threatened to walk out themselves. The union did win one immediate victory. It forced the removal of 130 Mexican nationals (who worked for Di Giorgio under contract) on the ground that they were being used as strikebreakers.

The whole subject of Mexican labor is a sore one in Kern County. It has several phases. Mexican nationals were brought in during the war years and up until 1948 to help work the crops. Farmers insist that they must have the Mexicans to do the stoop labor which Americans will not do. American farm workers argue that there is now no labor shortage, that the Mexican nationals are not needed and that Americans would do the stoop labor if offered a decent wage.

The labor agreement with Mexico under which the nationals were brought in has not been renewed and most of them have gone home. Those Mexicans working in Kern County today fall into three classes—Mexican-Americans, alien residents, and "wetbacks"—border jumpers who are in the country illegally. The "wets" seem to be in bad odor with everyone—except the farmers who hire them.

Personnel methods on California farms—including Di Giorgio farms—are somewhat loose. Applicants for jobs are asked their names, ages, home addresses, birthplaces and experience, and usually nothing else. It is not customary to ask a Mexican applicant for papers proving he is in the United States legally, since this might be construed as looking a gift horse in the mouth.

These methods naturally encourage the infiltration of "wets" all of whom, almost by tradition, say they were born in either Texas or Los Angeles but almost none of whom can speak English. The Immigration and Naturalization Service maintains an office in Bakersfield and makes periodic raids on surrounding farms to scoop up and deport "wetbacks."

The service is prodded along the path of duty by United States farm labor leaders who consider the "wets" among their worst foes. Raids in Kern County early this May netted more than 500 "wets." More than 100 of them were bedded down at Di Giorgio farms.

During the first few weeks of the strike the National Farm Labor Union entertained high hopes of settlement. Then, when these hopes were not fulfilled, the strike passed into its national phase. It began to serve the purpose for the union of dramatizing to people everywhere the position of farm labor in the national economy.

The National Sharecroppers' Fund put out a pamphlet picturing John and Stella Gorman and their four children in their cabin at the Arvin Farm Labor Camp. They were supposed to be a typical migrant labor family, which may have been true enough. It was also mentioned that John was on strike against Di Giorgio, though it was not made clear that he had worked only occasionally at the farm.

A copy of the pamphlet fell into the hands of Harold Ickes and he promptly bulled his way into the Di Giorgio strike via a Thanksgiving Day column in the newspapers using his feature. He managed, since he had no opportunity to investigate the situation, to get a good many of the facts wrong, or at least warped.

This action provoked its reaction in Bakersfield. A small group of farmers and businessmen (a somewhat unrepresentative cross-section of the area) rode out to Di Giorgio farms to investigate the strike and answer Ickes. The group published its findings in a handsome pamphlet called "A Community Aroused" (a rather broad title since Bakersfield as a whole appears to have taken the strike in its stride and not to have been irritated en masse by Ickes' remarks).

This well-meaning pamphlet proceeded to whitewash Di Giorgio farms, deny the existence of the strike and hint darkly that it was all a Communist plot. It was so composed that its appeal was only to those already on its side and it is doubtful whether it had much influence on the general public.

Various investigators for committees of the California State Legislature and of the United States Congress began to look into the strike, apparently for signs of subversive activity on the part of the leaders. No evidence was forthcoming, and they quickly dropped off the vine.

A national citizens committee to investigate the Di Giorgio strike was formed in New York, with the Reverend John Haynes Holmes as chairman. Its members included Chancelor Robert Hutchins, of the University of Chicago, Author John Dos Passos, and Socialist Norman Thomas. The committee was not able to investigate the strike in person, so it accepted a report on the strike from Ernesto Galarza, educational director of the union, and hardly an unbiased source.

The strike scene itself was remarkably peaceful as such things go. The farm had evicted some of the strikers who lived on its property, and there had been some scuffling between strikers and nonstrikers at the gates. A few men got into fights in town, and there was a little vandalism on the farm. But compared to some of the waterfront violence San Francisco has seen, the strike at Di Giorgio Farms was as peaceful as an Iowa picnic.

Then, on May 18, 1948, Jimmy Price, the boss of local 218, was shot while attending a strike committee meeting in Arvin. The shots were fired through the window of a house from a car parked outside. One bullet plowed through Price's mouth and out near his left ear. Gov. Earl Warren ordered an immediate investigation and offered a reward for the killer should Price die.

Again, on the strength of Jimmy Price's bullet wound, the Di Giorgio strike made national headlines. But Price pulled through with only slight scars and impaired hearing. It is a tribute to the good sense of the National Farm Union leaders that none of them ever tried to blame the shooting on the Di Giorgios.

No one was ever charged with the shooting and today it is presumably just another unsolved crime. A. F. of L. leaders are inclined to blame it on the rival CIO farm union (which indignantly denies it) and to think that the bullets were really intended for Hasiwar who was also attending the meeting.

The union was soon in much worse trouble. Through local 848 of the teamsters union in Los Angeles it had launched a secondary boycott against retailers handling Di Giorgio products. Since it had been unable to shut down the farm or keep its produce from being shipped out, its last hope lay in choking off the farm's markets.

The Di Giorgio Fruit Corp. promptly claimed that a secondary boycott was an unfair labor practice under the Taft-Hartley Act and complained to the National Labor Relations Board. The NLRB petitioned the Federal courts for an injunction to restrain

the unions from their activities. The injunction was granted on July 3 and the strike was thus deprived of its most powerful weapon. The union appealed on the ground that it could not be prosecuted under the Taft-Hartley Act since farm workers were excluded from coverage under the act.

Meanwhile, the national A. F. of L. had been busy. Its unions throughout the Nation had been well briefed on the Di Giorgio strike and the necessity of supporting the fledgling National Farm Labor Union. Checks poured in from locals from coast to coast to help finance the strikers, and food caravans were organized by California locals to help feed them.

The Hollywood A. F. of L. Film Council came through with a propaganda weapon—one so potent that it may yet stab the men who forged it. It was a documentary film called Poverty in the Valley of Plenty. The film was shot in the Arvin-Weedpatch area and around Di Giorgio farms. It is narrated by Radio Commentator Harry W. Flannery and purports to show the conditions of life on the Di Giorgio farms and in the surrounding area.

It is well made and it has a clever script which says a lot of things—some of them true and some of them only half true. Phrase by phrase, the script is difficult to pick apart. But heard in conjunction with the movie its implications are clear and highly unfavorable to Di Giorgio farms.

"Poverty" has circulated across the country and has been seen by union audiences in a good many cities. It has been shown in schools and churches and lodges and to congressional committees. It was even televised over KTLA, a TV station in Los Angeles owned by Paramount Pictures, in May 1948. The Di Giorgios, noting this, filed it away for future reference.

This spring Di Giorgio farms decided to strike a counterblow in the celluloid war. It hired Gene Walker, a documentary producer in San Francisco, to turn out a film showing its story of the farm. The result is the Di Giorgio story—in color.

The film nowhere recognizes the existence of Poverty nor, say the Di Giorgios, was it intended as an answer to it. The fact remains that the Di Giorgio Story parallels Poverty closely enough to be a rather effective answer to anyone who has seen both films. It has its faults—some of the points it strives to make against farm unionization may not be valid to many people—but it is a reasonably accurate portrayal of the farm.

The Di Giorgios have also struck another, more serious blow at the union. Last month, just before the statute of limitations expired, they filed a $200,000 libel suit against KTLA for having televised Poverty. It is obvious that they are far less concerned with extracting $200,000 from Paramount than getting a verdict which will permit them to knock Poverty out of circulation.

There are a number of John Does named in the complaint and it is possible, therefore, for the suit to be amended whenever the company wishes to include the Hollywood Film Council and the National Farm Labor Union as defendants. The union, while hopeful that the suit will come to nothing, is not too happy about it.

In any case, the union has one thing to be thankful for. It has progressed a step closer in its fight to vacate the injunction against it. Last month an NLRB trial examiner agreed with the union's contention that it cannot be prosecuted under the Taft-Hartley Act. The Di Giorgios, of course, filed an exception to the ruling and now the decision must be made by the National Labor Relations Board itself.

The strike, as of June, 1949, is ending its twenty-first month of life. It remains as officially on as it was the day it started, but so far as the farm is concerned, it is almost nonexistent. Only one picket marches at a time now, and the picketing is done in shifts by three strikers—O B. (called Obie) Whatley, Mrs. Ann Bickford and her deaf mute son.

Mrs. Bickford, who might have modeled for Grant Wood's Daughters of Revolution, is a tough, old woman and the iron has entered deep into her soul. She still glares fiercely at each truckload of Di Giorgio workers who pull through the gate, and she has become a landmark. Presumably, as she marches back and forth, she hums the refrain of the strike ballad she composed: "God Almighty made the valley for a land of milk and honey; now a corporation's got it for to turn it into money."

The Di Giorgio strikers are scattered from "hell to breakfast" and some have even gone back to "the old country" (which in the humor of Arvin means Oklahoma). Most of them, however, now work on nearby farms and still live in the area. Some still attend the meetings of local 218 but membership has slipped down to a couple of hundred or so. The nucleus that is left is tough and not apt to give up.

A few dozen strikers, bringing their wives and kids, drift in to the union hall each week to discuss the "good and welfare" of the union and learn what new contributions have been received for the cause. At one recent meeting some of the original members showed up—Deacon "Smiley" Brown and "Old Mitch" and Reverend Phineas (called Fine-us) Parks and Jake Adams, a bearded man who let his whiskers grow the day the strike started and has vowed he won't shave 'til it's over.

Through the courtesy of a Bakersfield businessman, they were shown a print of "The Di Giorgio Story." Some hooted, some laughed, but most took it in their stride. When it was over, Jimmy Price said: "Well, they got their story and we got ours." Mrs. Bickford rose to say that she'd been so mad she couldn't look at the film, then snapped her jaw shut and sat down.

Hank Hasiwar is still plugging away as chief organizer of the union. He does not appear to be discouraged, but then he's been around a lot. He came out of the coal-mine country around Cherryville, Pa., the son of Social Democrat Austrian immigrants. He's been in union work all his life—with the auto workers in Jersey and the operating engineers in New York and the tenant farmers down South. He helped introduce democratic trade unionism into Japan as a GI in the army of occupation.

At the age of 32, Hasiwar, in old slacks and an inner-and-outer, looks like somebody's ex-fullback and the kind of a guy who would be called Hank. He did go 2 years to Columbia but not to play football. He is married to a beautiful Mexican-American girl and has a baby son and lives in a battered house in the poorer part of Bakersfield. He is paid $300 a month and traveling expenses and believes passionately in the importance of the trade-union movement. He will keep plugging.

So will the Di Giorgios, Joseph and his four nephews, who never had any intention of settling with the National Farm Labor Union and have none today. They have nothing against unions in what they consider the right place (such as their winery) but they have no use for them on the farm.

They remain philosophically opposed to the organization of farm labor and no arguments in its favor are in any way valid to them. They are supported in their stand by all large farmers in California. And they are not apt to change their minds soon. Jake Adams, it would appear, has a long wait ahead of him before he can shave off his beard.

House Joint Resolution 286

EXTENSION OF REMARKS
OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am glad to make a second report for the gentleman from Ohio [Mr. McGREGOR] and myself that 29 additional Republican Members of the House have signed the round-robin petition supporting House Joint Resolution 286, which was introduced on June 30 by the gentleman from Massachusetts [Mr. MARTIN]. This makes a total of 136 Republican House Members who have signed this petition to this date

It is the opinion of the gentleman from Ohio [Mr. McGREGOR] and myself, after having discussed this matter with practically the entire Republican membership, that a minimum of 165 Republican Representatives will support the proposal when it comes to the floor. I do wish to add that it has been impossible to consult some Members who are either ill or out of the Capital on official business.

For the convenience of Members I wish to refer to the Appendix of the RECORD of June 30 at page A4188 where I quoted the text of this brief resolution which would direct the President to reduce Federal Government spending by 5 to 10 percent.

I am now including a complete list of those who have joined in supporting the resolution:

GERALD R. FORD, Jr., Michigan; CLARENCE J. BROWN, Ohio; CLIFFORD R. HOPE, Kansas; FRANCES P. BOLTON, Ohio; CARL T. CURTIS, Nebraska; JOHN SANBORN, Idaho; HUGH D. SCOTT, Jr., Pennsylvania; LESLIE C. ARENDS, Illinois; RICHARD B. WIGGLESWORTH, Massachusetts; CHARLES A. WOLVERTON, New Jersey; CARL HINSHAW, California; LEONARD W. HALL, New York; LOUIS E. GRAHAM, Pennsylvania; RALPH W. GWINN, New York; CHRISTIAN HERTER, Massachusetts; JAMES W. WADSWORTH, New York; J. CALEB BOGGS, Delaware; JOHN JENNINGS, Jr., Tennessee; HARRIS ELLSWORTH, Oregon; JAMES S. GOLDEN, Kentucky; FRANK A. BARRETT, Wyoming; NORRIS POULSON, California; JOHN W. HESELTON, Massachusetts; REID MURRAY, Wisconsin; A. L. MILLER, Nebraska; R. WALTER RIEHLMAN, New York; JAMES I. DOLLIVER, Iowa; CHARLES H. ELSTON, Ohio; CHARLES W. VURSELL, Illinois; ALVIN F. WEICHEL, Ohio; BERNARD W. KEARNEY, New York; ROBERT HALE, Maine; ANGIER L. GOODWIN, Masaschusetts; J. HARRY MCGREGOR, Ohio; JAMES C. AUCHINCLOSS, New Jersey; GEORGE J. BATES, Massachusetts; JOHN C. KUNKEL, Pennsylvania; KENNETH B. KEATING, New York; RICHARD M. NIXON, California; HARRY L. TOWE, New Jersey; PAUL B. DAGUE, Pennsylvania; HARDIE SCOTT, Pennsylvania; WILSON D. GILLETTE, Pennsylvania; CLARENCE KILBURN, New York; CHESTER E. MERROW, New Hampshire; ROBERT B. CHIPERFIELD, Illinois; JAY LEFEVRE, New York; HENRY J. LATHAM, New York; WALTER NORBLAD, Oregon; JAMES E. VAN ZANDT, Pennsylvania; EDWARD T. MILLER, Maryland; THRUSTON B. MORTON, Kentucky; RICHARD M. SIMPSON, Pennsylvania; RUSSELL V. MACK, Washington; CHARLES A. PLUMLEY, Vermont; JOHN B. BENNETT, Mich-

TALLE, Iowa; JOSEPH P. O'HARA, Minnesota; CHARLES E. POTTER, Michigan; KARL STEFAN, Nebraska; H. CARL ANDERSEN, Minnesota.

In order to complete the record at this point I want to refer again to the action on the identical resolution, Senate Joint Resolution 108, which was reported favorably on June 13 and to the very significant nonpartisan support indicated in the other body by 61 Senators, 37 Republicans and 24 Democrats.

Either the gentleman from Ohio [Mr. MCGREGOR] or I will be glad to receive any further names of any of our colleagues who wish to join in this effort. In that connection, may I repeat the quotation from the statement by the gentleman from Massachusetts [Mr. MARTIN], when he filed the resolution:

I invite Democrats as well as my Republican colleagues to join with us in this vital effort.

We are faced with cold, unpleasant, indisputable facts. In his budget message, January 3, the President estimated a deficit of $600,000,000 in fiscal 1949. Last week the facts were established that the deficit is $1,811,000,000, over three times as much as the President estimated.

In that same message the President estimated the deficit for the current fiscal year at $873,000,000. On the same minimum basis that estimate should be revised to at least $2,620,000,000.

It is frequently argued here that on occasions we are faced with a condition and not a theory. Surely, this is a condition of major importance with probable tragic results on the economy of this Nation. This resolution offers a means of meeting this condition. It is entitled to the fullest kind of immediate consideration here.

Amendment of Clayton Act With Regard to Price Discrimination and Freight Absorption

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements:

STATEMENT OF ANGUS M'DONALD, ASSISTANT LEGISLATIVE SECRETARY, NATIONAL FARMERS UNION, ON S. 1008, AN ACT TO DEFINE THE APPLICATION OF THE FEDERAL TRADE COMMISSION ACT AND THE CLAYTON ACT TO CERTAIN PRICING PRACTICES, TO THE SELECT COMMITTEE ON SMALL BUSINESS, HOUSE OF REPRESENTATIVES, JULY 1, 1949

Mr. Chairman and members of the committee, as a representative of the National Farmers Union I am here to state the position of my organization in regard to S. 1008 which amends the Clayton Act in regard to price discrimination and freight absorption. In our view, this amendment cuts the heart out of our antitrust laws, repeals section 2 of the Clayton Act, which contains the revisions of the Robinson-Patman antidiscrimination act, and legalizes the old Pittsburgh-plus practices which, it was proved in 1924, cost American farmers hundreds of millions of dollars.

Before I proceed to a consideration of the several discrimination cases and our analysis of S. 1008, I would like to explain why our organization, as well as American farmers in general, has been traditionally opposed to basing-point price systems and to any kind of price discrimination which gave to the seller a varying mill net return. Agriculture is the most highly competitive group in our economy and, therefore, farmers have no means of engaging in price discrimination or setting up pricing systems with varying mill net returns except under very exceptional and temporary circumstances.

A farmer cannot set up a price system under which he charges one customer more than another for the simple reason that as soon as he started discriminating, farmers in competition would undersell him as soon as the discrimination became known. Therefore, the farmer in his business has no interest in seeking to exact from the general public charges for phantom freight or charges which would result from any other monopolistic practice.

The farmer, however, does have an interest in seeking to prevent price systems and monopolistic practices which extract from him charges which are in excess of those existing in a free competitive system. In the past, farmers have been cheated out of billions of dollars because they had to pay excessive prices resulting from Pittsburgh-plus and other basing-point price systems. The record is clear that the farmer has nothing to gain and much to loose by the existence of so-called uniform pricing systems. Let me quote briefly from a decision of the United States Supreme Court, 1924. This opinion outlawed the Pittsburgh-plus prices because it was proved that farmers and others paid many million dollars because of the operation of this monopolistic price system.

"Deere & Co., farm implement manufacturers, pay $488,400 annually as imaginary freight, while the farmers who purchase their implements must pay over double this amount, or over $1,000,000 annually, as extra prices for Deere & Co.'s implements, because of this imaginary-freight item. In other words, for every dollar which the farm implement companies pay as Pittsburgh-plus, the farmers must pay more than double every such dollar, because to the actual Pittsburgh-plus paid by the farm implement manufacturer must be added the various percentages of overhead, selling expenses and profits which are borne in the ordinary course of business. The figures are undisputed in the record. As the president of the American Farm Bureau Federation, representing more than a million and a quarter farmers, testified, the double Pittsburgh-plus imaginary freight thus paid by the farmers in only 11 Middle Western States amounted to around $30,000,000 annually. The farmers in the other States would use even more steel than those in the 11 States figured in the calculations. The Emerson-Brantingham Co., a farm implement manufacturing company pays around $100,000 annually as Pittsburgh-plus imaginary freight, which means that its customers must pay around $200,000 annually more than they would have to pay if the Chicago district mills eliminated Pittsburgh-plus as hereinabove mentioned. The Litchfield Manufacturing Co., a farm implement manufacturing company, pays $68,000 annually as imaginary freight, and its customers pay twice that amount. Pittsburgh-plus resulted in an addition to the list prices of J. I. Case Threshing Machine Co., an agricultural implemnt manufacturing company, in the year 1920, of $509,033, which amount the farmers would have been saved if Pittsburgh-plus had not been charged. A Minneapolis manufacturer pays $84,000 annually as Pittsburgh-plus, and so on."

Successive cases have indicated that such excessive charges are the inevitable result of such monopolistic systems. There have, of course, been many variations in the methods devised by greedy groups and unscrupulous attorneys when they sought to evade our antitrust laws. But there is one characteristic common to all of these methods, and that is that they all employed price discriminations. That is, they did not sell to all customers at the same price but picked out a favorite few so that the rest would go out of business. This was the tactic employed in the recent Standard Oil case. The Standard Oil Co. selected out of 357 customers 4 big concerns who acted both as wholesalers and retailers. At the time of the action these 4 big concerns were systematically putting out of business the other 353.

Now we are told by experts who have made a life-time study of such practices that this legislation S. 1008 legalizes such practices and not only undoes the work of the United States Court of Appeals in the 7th Circuit—that is, the recent Standard Oil case—but actually makes legal Pittsburgh-plus, multiple basing point price systems, price discrimination of every kind, including that involving freight absorption, unless some element of conspiracy can be proved.

Now I would like to discuss S. 1008 in detail. Section 1 says nothing about protecting competition and it ties the hands of the Federal Trade Commission in looking into monopolistic situations where uniform delivered prices or freight absorption is involved. Section 2 goes even further. It

provides that "sellers may absorb freight to meet the low price of a competitor in good faith" no matter if this so-called meeting of competition is such as in the Standard Oil case, which could have resulted in the complete destruction of competition. The way this particular section was amended makes me suspect that the authors were actually working to design a bill which would injure competition. This is indicated by the deletion of the phrase "except where effect of such absorptions will be to substantially lessen competition." If the authors of this legislation did not want to injure competition why did they delete this phrase? But this section goes even further. The authors of the bill are anxious that the sky should be the limit in raising or lowering prices to bring about the destruction of competition. Significantly, this phrase is added: "this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains."

Section 3 of S. 1008 is even more far-reaching than section 2. It not only legalizes discriminations which result from freight absorption, phantom freight, etc., but it legalizes price discriminations where no element of transportation costs are involved. Again in this section the authors of the bill struck out any language which would safeguard competition. The opening paragraph, particularly the words "Upon proof being made, at any hearing on a complaint under this section, that there has been discrimination in price the effect of which upon competition may be that prohibited by the preceding subsection" is nonsensical. It doesn't make sense, because the words "except where the effect of such absorption of freight will be to substantially lessen competition" were stricken from the bill. In this section, also, the authors seem to feel that they might have overlooked some discrimination or other that wasn't legalized, so they added, and I quote, the words in italics in the bill: "and this may include the maintenance, above or below the price of such competitor, of a differential in price which such seller customarily maintains."

In the fourth section there is also an attempt to weaken the Robinson-Patman Act by substituting reasonable probability for the words "substantial and probative evidence."

In conclusion, I would like to refer briefly to the arguments which the proponents of this legislation have put forward. They contend that sellers meeting competition in good faith is made a complete defense that this will result in lower prices to consumers and in so-called hard competition. They also say that if sellers are not allowed to cut prices and discriminate against various buyers that the result would be soft competition.

This is a curious argument. It seems that what we have always considered as fair competition, that is, that a seller always sells to everybody at th. same price, is now considered soft and that which we had considered as unfair competition, that is, practices which operated by means of discriminations to destroy competition by the seller's customers is now considered hard. This argument, of course, is not new. It has always been used when sellers were engaging in monopolistic practices with adverse effects on competition. This was pointed out recently in the Standard Oil case referred to above. I quote from the opinion of the circuit court:

"Now as to the contention that the discriminatory prices here complained of were made in good faith to meet a lower price of a competitor. While the Commission made no finding on this point, it assumed its existence but held contrary to the petitioner's contention, that this was not a defense.

"Prior to June 19, 1936, when the Robinson-Patman Act went into effect, the Clayton Act, section 2, provided:

" 'That it shall be unlawful for any person engaged in commerce, * * * either directly or indirectly to discriminate in price between different purchasers of commodities * * * where the effect of such discrimination may be to substantially lessen competition or tend to create a monopoly in any line of commerce: *Provided,* That nothing herein contained shall prevent discrimination in price between purchasers of commodities on account of differences in the grade, quality, or quantity of the commodity sold, or that makes only due allowance for difference in the cost of selling or transportation, or discrimination in price in the same or different communities made in good faith to meet competition.'

"Thus it will be seen that a discrimination in price made in good faith to meet competition was a defense under section 2 of the Clayton Act, as was a showing that the discrimination was made because of cost savings, or proof of the other defenses given by the act. But since large buyers could always get such price meeting by suppliers to justify a discrimination in price in their favor, the purpose of the act to avoid such discrimination was easily evaded."

The evidence thus seems overwhelming that this legislation should not be passed by the Congress. It should not be passed because, as stated above, it legalizes price discrimination of every kind, and will allow the reimposition of the old Pittsburgh-plus system and repeals our basic antitrust laws. We, therefore, urge that every Member of Congress use his utmost efforts to bring about the defeat of this legislation.

STATEMENT OF HON. WRIGHT PATMAN TO INFORMAL CONFERENCES OF VOCATIONAL ORGANIZATIONS ON JULY 7, 1949

If there is one thing on which all of us can agree, I think, it is that we must have a free economy if we would preserve our political freedom.

If there is another thing on which we can agree, I think, it is that unless we attack and solve this problem of monopoly and monopoly power we will be confronted by some kind of collectivism.

At least, I think there is every justification for the report and warning sent to the Congress about a year ago when the Federal Trade Commission presented its report on the concentration of financial and industrial power. The warning was that there was only a short time to choose between having a system of bona fide free enterprise and a system of some kind of collectivism.

This problem of monopoly power is a problem with which we are concerned in the House Committee on Small Business, of which, as you know, I am chairman. But I invited you to this preliminary conference as a Member of the House and in the hope that I could get your assistance for the purpose of presenting a program to the House Small Business Committee for its consideration. I wanted this to be an informal conference. I may have to be in the House during part of the day, but I shall be here as much as possible because my heart is in this conference and this work.

We now have a warning of possible trouble ahead of us in the increased number of unemployed. Let us hope that will not become a serious problem. But the warning is here now. We have a warning in the weakening of our agricultural economy. Let us hope that will not become serious, but the problem is here with us now. We all know that what the Brookings Institution revealed to us some years ago is true—we can produce an almost unlimited quantity of goods and services. We all know also what the Brookings Institution revealed is true—that our basic difficulty is in our power to buy and consume these goods and services. I believe that the outstanding factor in this problem is the problem of monopoly and monopoly control of our economy.

We have attempted to deal with this monopoly problem, through our antitrust laws, and in some manner over a period of more than 50 years. But it is one thing to write laws. It is another thing to enforce them. It is important that the people of the country shall be intimately concerned with the enforcement of these laws. I thought that the best method for getting the interest and support of people was to get your great vocational groups to come together. Very frankly, we need your help. At least, I know that I need it.

In the discussions preliminary to the calling of this conference, I got many suggestions. I am going to put them before you but I think the conference should be free to discuss any proposal which may come from those present.

The first suggestion is that the House Committee on Small Business should organize a series of hearings on the monopoly question. In preparation for the hearings the committee should call on the Department of Justice and the Federal Trade Commission, and also on the Departments of Commerce, Treasury, Labor, Agriculture, Interior, and the Federal Reserve Board to present statements in which they would discuss the general problem of monopoly and its magnitude, the difficulties the Departments have in dealing with the problem, and what recommendations they would make.

These statements from the Government services would be mimeographed and distributed to the representatives of vocational groups some time prior to the hearings. Then the vocational groups would be asked to present statements and they would be mimeographed and distributed.

Thereafter, and with due notice, the hearings would be opened. The departments of Government would present their witnesses. After the members of the committee had completed their examination of the witnesses, the vocational group representatives would be privileged to ask questions. Thereafter the representatives of vocational groups would present their witnesses and after they were examined by the committee, the Government representatives would question them. In that way the committee would get the value of a round-table conference session with an adequate record.

Thereafter, the Government departments and the vocational group representatives would, let us say within 10 days, present a written summarization of views and recommendations which would be based on the record.

I have also had some very general suggestions, or questions, which might be developed as part of the inquiry by the House committee and which might be, perhaps, discussed in this conference. I have tried to make the questions somewhat specific, as follows:

Is our general approach toward solution of the problem of monopoly, as that approach is now outlined in the Sherman Act, the Clayton Act, the Federal Trade Commission Act, and the Robinson-Patman Act, a sound approach?

1. Are the duties now assumed by the Department of Justice the entire and general duties and obligations the Department should assume?

2. Are the duties now assumed by the Federal Trade Commission the entire and general obligations the Commission should assume?

3. Are the Department of Justice and the Federal Trade Commission adequately

equipped and supported to do the work which they should do?

4. Do the Department of Justice and the Federal Trade Commission have complete cooperation from other departments of Government in matters affecting fair-trade and antitrust laws?

5. Should the Government continue to purchase goods from organizations which have been persistent violators of the antitrust and fair-trade laws?

6. Should the Government lease public lands and mineral rights to organizations which have been persistent violators of the antitrust laws or should these resources be developed in some way as controls against monopoly practices?

7. Is there discrimination in our tax laws, or in other laws, in favor of or against any kind of business?

8. Do the tax laws, through providing for formation of charitable and educational trusts, encourage the concentration of economic power?

9. Should the Government act to disintegrate those businesses which are now integrated, such as has been proposed for the rubber-tire industry and the oil industry?

Welfare State Will Lead to Compulsion, End of Freedom

EXTENSION OF REMARKS
OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, it is refreshing to note that some of the Nation's business leaders are concerned about the future of our country. Only a few have had the courage to speak up against the rapid drift toward bankruptcy and socialism in the United States. On this issue, I recommend that you read the following constructive address made by Mr. John Cowles, president of the Minneapolis Star and Tribune, in Des Moines on June 21, 1949. Mr. Cowles is one of the leading businessmen of the country.

WHERE WILL NEXT CENTURY CARRY UNITED STATES?—WELFARE STATE WILL LEAD TO COMPULSION, END OF FREEDOM

Whether the next 100 years will be marked by as great advances for America as the past century is the subject I should like to discuss tonight. The easy, Pollyanna attitude is to say, "Yes, of course." I believe the question deserves fuller consideration.

The concept of the freedom of the individual, of the importance and human dignity of the self-reliant individual, was the basic philosophy upon which America grew great.

For a number of years we have been increasingly lessening our emphasis on, perhaps losing our faith in, both individualism and freedom. Freedom is the most important thing in the world. If we lose it we will lose everything.

If I were asked what is the greatest single menace confronting us today, I would not say Russia. I would say soft socialism, the idea of the welfare state, the steady increase in the Federal Government's power over the lives and purses of our citizens.

Although I do not minimize the danger to the world of Russia, I think we are more likely to lose our freedom as a result of our own internal domestic actions than as a result of foreign aggression.

I was interested to learn recently that General Eisenhower feels the same way. As president of Columbia University, Eisenhower, in a letter declaring his opposition to Federal aid for education, made this statement:

"I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us."

In my opinion, if President Truman's current program were adopted by Congress, the United States would be converted from a Republic to a Socialist state within a few years. Socialism is the great illusion of this generation and the belief that socialism could give us a freer and more abundant life is fantastically false.

President Truman is, I believe, a well-intentioned man, a man of goodwill. I think that he simply does not understand the implications and the consequences of the proposed policies which underlings bring to him for his approval. He recognizes that they have political appeal and so he endorses them.

Socialism means, of course, a planned economy and a centralization of power, and they in turn mean socialism. The United States has grown strong and great by following precisely the opposite philosophy. No large nation anywhere has yet demonstrated that a planned economy can be successfully operated without compulsory labor, destruction of representative government, and the suppression of civil liberties.

There is less difference between socialism and communism than many people assume. While the Government of Great Britain is anti-Communist, it is philosophically Marxist, and will tend to become, I believe, increasingly a totalitarian state. There is no evidence from the British experiment to date to indicate that socialism will prove successful there, but the areas of personal freedom are already diminishing. Yet many people in the United States want us to adopt the British pattern along many different lines without waiting to see whether the Socialist experiment fails or succeeds in Britain.

One of the great tragedies of this decade is the fact that, because of the Russian Communist menace, it has been necessary for the United States to give billions of dollars to the Socialist governments of western Europe to help support them as a bulwark against the western spread of communism.

No one should assume that I am unsympathetic either with the British as a people or with the necessity of the Marshall plan and European aid. I had the privilege of being in England at one of the darkest times in the war, during the blitz, after France had fallen and before Russia or the United States had declared war on Germany. No one who was in England during that period and saw the magnificent spirit and courage of her people can ever have any feeling other than that of deepest admiration for them. But in England today, it seems evident to me that two cancers are spreading through the whole body.

First is the lack of incentive for production, with progessively increasing regimentation and growing bureaucratic controls that themselves retard production.

Second is the apparently growing acceptance of the view that individual liberty and freedom of choice are secondary and must unquestioningly give way in acquiescence to what the people in control say is in the interest of the state.

Anyone who thinks that things are going well in England is profoundly mistaken. On the contrary, the experiment in England is demonstrating that socialism is not a workable system without compulsion. Despite the fact that the United States has given England billions of dollars since the end of the war, her financial position is becoming steadily worse.

Wholly apart from lend-lease which continued long after the conclusion of the fighting, we have given England an American loan of $3,750,000,000, the international monetary fund has given her $300,000,000 and Canada has given her a large loan.

Under the Marshall plan, England in the last 12 months has received about $1,263,000,000. The population of the United Kingdom is about 50,000,000. Assuming four to a family, that means there are 12,500,000 families in the United Kingdom. So our ECA aid alone during the past year has amounted to $100 a family.

Despite the fact that England is scheduled to receive about $1,000,000,000 under the Marshall plan this coming year, I fear that she is headed within relatively few months into another major crisis.

Now that throughout the world we have shifted from a sellers' to a buyers' market, English exports are beginning to show serious declines.

Most financial experts believe that, despite Stafford Cripps' recent statement to the contrary, before many months England will be forced to devalue the pound. Clearly that will be a wise development, but even an intelligent optimist can't believe that devaluation alone will conceivably solve England's financial plight.

The workers in England, probably because they fear unemployment, are resisting new techniques and the introduction of modern machinery which would increase production. Many of the unions are demanding more pay. Strikes and slow-downs are showing up in nationalized industry. The workers are demanding higher wages but lower prices, lower taxes, and shorter hours.

If Britain devalues the pound, that will tend to raise the cost of the food and raw materials that the British have to import from abroad, and the British will have fewer dollars as their exports decline.

Last year, for example, British automobile makers sold 19,000 cars in the United States. Now they are only selling a trickle here. Security prices in England have been declining, and there are many indications that, unless the United States wants greatly to increase its gifts to England, Britain is headed for an extremely tough time, with a standard of living substantially lower than that which exists in the United Kingdom today.

Before the United States goes farther down the road that England has taken, it would seem to me only the part of prudence to await the consequences of present British Socialist policies and then determine whether we want to imitate them.

Here in the United States the administration is now urging that we adopt the so-called Brannan plan which is similar in principle to the food subsidies paid in England. The British Government lets people buy food at much less than its cost, and the national treasury pays the difference out of taxes. Under the Brannan plan, farm products would be sold to city people at lower prices and the Federal Treasury would pay increased subsidies to farmers so that farm income remained high.

Now no one whose business depends upon the prosperity of the agricultural States, as do our newspapers, could desire anything other than high farm income and high farm purchasing power. But before our Nation adopts a policy of selling food cheap to consumers with the Federal Government directly subsidizing the farmers, both the consumers and the farmers should scrutinize the plan

with the greatest care and consider its ultimate implications and consequences.

Consumers would be indirectly paying the subsidy through higher income taxes. Moreover, if the farmers expect permanently to receive guaranteed income, they should recognize the certainty that it will mean complete production controls and the utter surrender on their part of any freedom of choice, or freedom to take individual risks in the hope of extra rewards.

In the past year, average prices paid to farmers for their crops have declined more than have retail food prices. That is largely because marketing and processing and transportation costs take nearly half of every dollar that consumers spend for food. Will the next step be the proposal that the Government should also subsidize the food manufacturers and processors and the railroads so that food can be sold to the consumer at still lower prices?

Let's consider another example. Clearly, it is in the national interest to have high employment in the automobile industry, and it would be a fine thing if every American family had not only one but two cars. Let us assume that not enough people will voluntarily pay $1,500 or $2,000 for a car to keep all of the automobile factories going full tilt indefinitely, so that some of them are forced to reduce production and lay off some of their workers. Should the Federal Government then say that the price of automobiles should be reduced to $800 or $1,000 apiece—with the Federal Treasury paying the difference to the automobile manufacturers?

And where is the Federal Government to get the additional billions it will need for all of the new spending programs that are being urged?

No matter how theoretically desirable certain social-welfare legislation may be, we simply must consider the extent to which the national economy can stand additional taxes.

Moreover, we are too prone to accept, uncritically, the view that all the proposed social-welfare legislation is theoretically desirable.

Every enlightened American wants to improve the quality of our schools and colleges. Better public education is one of the most basic needs of the Nation. The teachers generally deserve much higher pay. Yet, even if the Federal Treasury had the money, which it does not, do we want Federal aid for education, which is almost certain to result in Federal control?

Every enlightened American wants to see the quality of our housing improved. There are many things that States or cities can and should do that will make building costs lower and will stimulate more individuals on their own initiative to build more homes, for themselves, or for sale, or for rent.

But even if the Federal Treasury had the money, which it does not, why should we assume that the Federal Government now has an obligation to provide decent homes for every American family?

Even if we do believe that these proposals and dozens of other social-welfare projects like them are theoretically desirable, and even if we do believe that they are a proper function of the Federal Government, we must still make the preservation of the financial stability of the United States, upon which not only our freedom but the peace of the world rests, our first concern.

If the United States should go into a financial crisis through excessive Government spending, which it might, we would completely lose our place as the bulwark of resistance against the spread of communism throughout the world. That would mean that all the billions that we have spent for the Marshall plan would have proved an utter and complete waste of our substance.

I for one am convinced that if Congress were to raise the tax rates with the idea of collecting the $4,000,000,000 in additional income taxes which President Truman is urging, those higher tax rates would produce less revenue for the Government than it is now taking in. In addition, in all probability, it would plunge the United States into a major depression. Fortunately, Congress is apparently going to ignore Mr. Truman's recommendation as to a tax increase.

While deficit financing (spending more than is collected in taxes) may be necessary or even desirable in a critical period, such as during a war or depression, the budget ought to be at least in balance during periods of relative prosperity. If the people get the idea that the Government can spend limitless amounts, and that it is unnecessary to balance the budget even in comparatively good times, we will head down a road that can only lead to national disaster.

I had the privilege of serving as a member of the Hoover Commission task force on the national defense set-up. From my experience on that committee, I am convinced that at least $1,000,000,000 and perhaps $2,000,000,000 could be saved with no loss and perhaps with a gain to our national defense. I have read other Hoover Commission reports, and I am satisfied that without harm $2,000,000,000 to $3,000,000,000 additional could be saved in other branches of the Federal Government. Until those savings are made and until the burden of foreign aid is substantially reduced, the United States simply cannot take on additional governmental spending without endangering our whole national economy.

From what I have said, you may conclude that I am extremely pessimistic about the future. To the contrary, I am optimistic provided the American people make wise decisions in the next few years. I believe that it is possible for us to live in peace and freedom and at the same time to increase our productivity to a point where we can at least double the average standard of living in the United States in the next 20 or 30 years, and perhaps, much sooner. But we can only do this if we keep the incentive system based on individual initiative, and do not embrace the idea of the welfare state.

The American free-enterprise system, the incentive system, the profit and loss system—call it what you will—cannot continue to perform its economic function and raise the country's standard of living if tax rates are excessive. The present trend toward Government control is already in some areas beginning to strangle individual initiative. Any increased tax burden would largely destroy the incentive to start new or expand existing business ventures, and our whole standard of living would progressively decline under the weight of Government bureaucracy, much of it wasteful and nonproductive.

Dr. Robert A. Millikan, of the California Institute of Technology, who is certainly one of the most distinguished scholars and greatest scientists of our age, not only a Nobel prize winner but the recipient of many other national and international awards issued a statement a couple of weeks ago opposing Federal aid to education in which he said that local self-government is not only a priceless American heritage but probably the key to the continued maintenance of our freedom.

Here are a few sentences from Dr. Millikan's statement:

"It (local self-government) is the great safeguard against the malignant disease politely called patronage, better called political corruption, which is the chief device through which the party in power in Washington can, and to no small extent already does, seek to indoctrinate the public in the interests of the maintenance of its own power.

"Local cancers in humans or in the States can be eliminated before they have spread throughout the whole body, but when the whole system has become infected the patient dies, whether that patient be a man or a great Federal republic.

"Listen to the exact words of the historian and political philosopher Montesquieu (1747) whose writings were carefully studied and were also very influential with our founding fathers: 'If a republic is small, it is destroyed by a foreign power; if it is large, it destroys itself by an inner vice.' "

Those who are attracted by the alluring promises of the welfare state assume that a planned economy would mean a higher standard of living. I am convinced that the exact opposite would be the result, and that in addition to a lower standard of living for almost everyone, what is far more important is that we lose our freedom as well.

Economic Expansion

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the stenographic transcript of the radio broadcast on July 3, 1949, on the subject of the economic expansion program. The broadcast was participated in by the Senator from Alabama [Mr. SPARKMAN], the Senator from Minnesota [Mr. HUMPHREY], and myself.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

This is Charles Parmer from Washington. As the Fourth of July 1949 approaches, a new declaration of independence is being formulated—a bill to be introduced in Senate and House, which may guarantee freedom from want and misery. Here, as the week ends, three of our Senate leaders, Democrats all, confer together in the office of Senator JOHN J. SPARKMAN, of Alabama, who for long has been planning such a fight. For your listening benefit, I've been permitted to place my microphone on Senator SPARKMAN'S desk. You may now hear their plans, for the first time made public.

Sitting across from Senator SPARKMAN is Senator JAMES E. MURRAY, of Montana, who led a congressional delegation on a mission to the White House a few days ago to inform the President of their plan. And here is Senator HUBERT HUMPHREY of Minnesota, who has thrown himself wholeheartedly into the battle.

I'm glad to tell you that these gentlemen—realizing the gravity of our national situation—have brushed aside sectional differences; they present a united front to our common enemy—national want.

Senator MURRAY, why do you plan this bill on economic expansion?

Senator MURRAY. Our bill is proposed as a means of checking the development of economic conditions that might result in a serious recession. In many sections of the country there has been a general slowing down in industry, and serious unemployment is found in certain spots. Our program is designed to offset this unemployment, encourage business and industrial expansion, provide ways and means of encouraging private enterprise, and thus avoid any dangerous conditions of unemployment and business recession.

Mr. PARMER. Are conditions that bad, Senator?

Senator MURRAY. They are not serious at this moment from a national standpoint,

but in particular localities where unemployment has developed, it presents a very serious problem. A prudent government should not be expected to take steps in any other direction except to aid in preventing these conditions from spreading and creating a serious catastrophe.

Mr. PARMER. Did you say catastrophe, Senator?

Senator MURRAY. Yes. It was our failure in the last depression to take appropriate steps in time that permitted that depression to develop into a serious catastrophe. Only the Government can take appropriate steps to aid business in a situation of this kind. Every businessman knows that, acting by himself, he is not able to contribute much toward overcoming conditions of this kind; and therefore, a democratic government must not sit by while unemployment is developing in any serious degree. The Government must look for the economic causes and provide appropriate remedies wherever possible.

Mr. PARMER. I note, Senator MURRAY, that you have alined yourself with the North and the South.

Senator MURRAY. Yes, we have; and we have alined ourselves with the East and the West also. This is a national problem. Every section of the country is witnessing a curtailment in business and industrial activity and a rise in unemployment. These conditions are found in the New England States, in the large cities of the country, on the Pacific coast, in the South, and in almost every area. The present situation is extremely unhealthy, and can easily become worse unless steps are taken to deal with it in a positive manner. Already unemployment has reached a figure of approximately 3,500,000 out of work. In addition, several million workers are on part time, and in some communities we have extreme conditions of unemployment. If the unemployment we already have continues to grow, we could very soon have 6,000,000 or 8,000,000 unemployed workers in the Nation. Every day the press carries articles on this subject, and Members of the Congress are beginning to receive letters from their constituents about it. And so I think it is obvious that Congress should give careful attention to these conditions so as to prevent them from getting out of hand.

Mr. PARMER. I understand, Senator MURRAY, that you contemplate long-range public planning. Specifically, what does that take in?

Senator MURRAY. Well, we propose a series of steps. First, we would provide for a National Economic Cooperation Board, to be composed of representatives of industry, labor, agriculture, consumers, and others having special qualifications. This board would study the developing conditions and make recommendations to promote maximum employment, production, and purchasing power. This would bring the various groups in our economy closer to each other, and would provide a united front to oppose any possible recession or depression. We also propose assistance to private investors, to expand capacity and production in various fields where it is necessary, and to encourage such investment through a speeded-up amortization of such investment, and to supply insurance of such investment in State and regional organizations. Also, we propose scientific research and advice for small business, and study by the Federal Trade Commission of any existing barriers to private investment and production.

We propose also studies by the various Federal agencies of these economic problems and to promote better understanding and better cooperation among the various groups in our economy. We also provide for prompt study of unemployment which has developed in spots, so as to prevent such conditions from spreading.

Mr. PARMER. Thank you, Senator MURRAY. Now Senator SPARKMAN, what about this long-range public-works-planning program?

Senator SPARKMAN. Well, Mr. Parmer, I am a strong believer in a well-planned public-works program to be ready at any time to throw into the breach in the event that unployment becomes so serious as to require it. I believe that the Federal Government should maintain at all times a flexible program that could be expanded tremendously in times of unemployment, and naturally, in times of good employment, could be contracted. So we must have a long-range public-works program. With a rapidly growing national population, we should also give attention to some of the underdeveloped areas of the country so as to make it possible to develop our resources and create new industry and new job opportunities in those particular areas. I want to point out that one of the strong points in this measure that we are proposing is that very thing—so as to lend encouragement to industry to go into areas that are presently underdeveloped industrially, and particularly if those industries will utilize the natural resources that may be found in those particular areas. I would like to point out also that as a part of this long-range public-works program, we certainly should give very careful consideration to President Truman's recommendation of a vast program for the development of our river valley systems. We are having hearings right now, by the by, before the Public Works Committee of the Senate on the Columbia Valley Administration. Senator MURRAY is the chief sponsor, and I believe both Senator HUMPHREY and I are cosponsors with him, on a bill to improve the Missouri Valley. Other valleys in the country ought to be improved. This kind of a program would produce opportunities for employment in those particular areas; such a program would prevent any possible development of a depression in this country for a long time to come. We would have the development of low-cost power in the Pacific Northwest—we have already got it some there, but we need to expand it tremendously. Also in the Missouri Valley. I might just mention hurriedly public buildings, highways, airports, a general over-all public building-public works program that would create jobs in great numbers if it became necessary. That is certainly a major part of the objective of this program.

Mr. PARMER. Now, Senator SPARKMAN, how much do you estimate such a vast program would cost?

Senator SPARKMAN. Well, Mr. Parmer, I don't know that that could be estimated. You probably have in mind the feature in the bill in which we recommend a fund of $15,000,000,000. That I think would be referred to more or less as working capital for all of these various objectives, and that figure certainly should not be used as the estimate of the cost of the public-works program. Of course, we never get through with public works in this country. The big question is, how much do you want to congest them in any one particular given period of time?

Mr. PARMER. Thank you, Senator SPARKMAN. And now, Senator HUMPHREY—you, sir.

Senator HUMPHREY. Mr. Parmer, I am very happy to be just a little part of this program. You have heard from the two distinguished Members of the Senate, who are literally and truly experts in the field of our economy. I come in more or less, as you say, just to give a few general observations. I look upon the economic situation that now confronts us, which surely is not alarming but is one that deserves our consideration, as similar to any situation that might exist in international affairs. For example, in 1935 and 1936, we knew that Hitler was a menace. We knew that he was taking certain steps that were aggressive and that could cause great trouble. The question at that time was, Should we quarantine the aggressor before he gets out of hand? Or should we wait until he did—and as we did, at Pearl Harbor, when everything was out of hand. In other words, should we take preventive measures to stop aggression or should we wait until a full-scale war comes upon us? So we waited for a full-scale war, and we spent not only hundreds of thousands of lives but billions and billions of dollars, into the hundreds of billions. Now, the same thing is true in economics—in our economy. Should we wait until we have what Senator MURRAY has referred to as catastrophe or, back a step, depression; or should we attack these islands of depression, recession, unemployment, where we see them? When we see them and at the time that we see them. I believe in quarantining unemployment; I believe in putting up a public notice that here's a place where we need preventive economic medicine. We need to come in and cure the problem right where we see it, at that moment.

Mr. PARMER. Now, right there, Senator HUMPHREY, how are you going to do it? And will this bill embody such provisions?

Senator HUMPHREY. I think it will. And I think that the one word in this bill that indicates what we're after is what Senator MURRAY pointed out—the National Economic Cooperation Board—cooperation between Government and the people, Government and business—cooperation with the Government in the factors of the economy and as Senator SPARKMAN has pointed out, public works is one great aspect—but not just public works. We also talk about coordinated planning, integrated planning, on the basis where you can project it into the future. It is like visualizing an attack on the part of an enemy. What are you going to do about it? You have long-range plans. And then the substance of this bill is centered around the very nature of our economy—private enterprise. The independent businessman working with the established institutions of our economic system—in other words, this is a bill that works within the framework of the American economic plan; and as Senator MURRAY pointed out, a great portion of this bill is dedicated toward strengthening the productive capacities, providing loans and credits and quick amortization of plant. In other words, using American management, American capital, to meet a problem in our own country. I want to say that there are only two dangers that this Nation faces—one is on the outside, from totalitarian aggression, and I think that danger is even less than the danger of break down within our own economy. And surely if we can appropriate billions and billions of dollars to stop a potential international aggressor, we ought to at least be willing to make plans—sensible, long-range plans within the American pattern, to stop any kind of economic disaster within our own economy. That's why I think this is a well-planned bill. It is called the Economic Expansion Act. It is based upon a growing economy. We can't have the status quo, Mr. Palmer. Every year we get from five hundred to seven hundred thousand new people in our work force; we have to think of America as a growing country—a young nation still growing and moving ahead and unwilling to stand on past laurels.

Mr. PARMER. Thank you, Senator HUMPHREY. Now Senator, just a day ago I heard you, down on the floor, say that you did not stand for nationalization of industry.

Senator HUMPHREY. Well, that's certainly true.

Mr. PARMER. Senator SPARKMAN, is this going to bring about any nationalization of industry whatsoever?

Senator SPARKMAN. No. As a matter of fact, it is the one insurance against it.

Mr. PARMER. Now, Senator MURRAY, how do you feel about that, sir? Is there any danger

to what the old-fashioned leaders talk about—our American way of life?

Senator MURRAY. Absolutely not. The bill emphasizes the idea of having this done within our economy. It should be emphasized that the proposed legislation in no manner whatsoever authorizes Government operation of business. This is to stimulate business—not to operate business.

Mr. PARMER. Thank you, Senator MURRAY. Ladies and gentlemen, we have just sat in the conference of Senate leaders fighting for economic expansion—to save this Nation from depression. The conference was held in the office of Senator JOHN J. SPARKMAN, of Alabama, and with him are Senator JAMES E. MURRAY, of Montana, and Senator HUBERT HUMPHREY, of Minnesota. These three gentlemen—from North and West and South—have united in forming a new declaration of independence—independence from national want and misery. Gentlemen, our appreciation to you for letting our radio audience listen to your plans, today. This is Charles Parmer from Washington, who will be with you again next week, same time and same station. So long until then.

Editorial Comment on Labor Relations Bill Passed by the Senate

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a well-considered editorial from the Greensboro (N. C.) Daily News entitled "What Must Come First." This editorial emphasizes the necessity of adopting some measure for the protection of the Nation in periods of national emergency, and is the reasoned justification for the passage by the Senate of the labor legislation containing the injunction and seizure provisions.

The second editorial is entitled "Be Specific, Please," and is from the Christian Science Monitor, of Boston. This is a complete answer to those who say that the bill passed by the Senate last week does not repeal the objectionable features of the Taft-Hartley bill. This article shows that the portions of the bill which have been more seriously complained of have been eliminated, and yet the labor bosses are not satisfied, because they do not wish any regulation, control, or restraint whatsoever.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greensboro (N. C.) Daily News]

WHAT MUST COME FIRST

In writing the plant-seizure and injunction provisions into the administration's labor bill, as the hub of the long-standing fight and the section on which action doomed the administration's hopes for repeal of the Taft-Hartley Act, the Senate took about the only sensible, sound course left open to it and one which, in our opinion, will meet with the approval of the average American who has not a particularist approach to the issue involved.

While use of the injunction in strikes is dangerous and distasteful, it is not as dangerous and distasteful as having no legalized way of dealing with industrial tie-ups which threaten the Nation's health or safety or otherwise contribute to a national emergency. It is at least better to write certain provisions clearly and understandably into the law, with restrictions and limitations definitely stated, than to leave a void, without statutory limitations, in which the President might go ahead and act anyway. That would open up the gravest sort of abuses if highly placed officials were of a mind to resort to them.

It is a matter of record that quite a few Senators who did not relish these provisions voted for them because there was no other way offered to accomplish what they were designed to accomplish, assurance through orderly processes that the Nation might not be left at the mercy of a strike or have its economy crippled by any such tie-up as that which might come of a long-time coal-mine idleness or a railroad stoppage. The President is now empowered to act, just as he would have to do if a national emergency occurred anyway, but under designated procedure and within fixed limits.

It is too bad that this issue, as it so vitally affects the Nation, could not have been settled in a different atmosphere in which politics was at least subordinated to the public interest and the ultimate responsibility of Members of the Congress to serve this rather than any group interest, however vocative, well-organized, and capable it is of getting its votes to the polls. It is difficult to see how this one issue, any one issue, can be made the final and only test of a Congressman's ability to serve, his statesmanship, his honesty and sincerity of purpose, and his over-all contribution to his Nation and its security.

For that matter if labor really wishes to get at the individual who is responsible for putting more of the legislation it does not like on the statute books than anybody else, it ought to inscribe John L. Lewis at the very top of its blacklist. Every time Congress comes to a crucial vote, he manages to remind it of just what the country might have to deal with, come a hard winter and a dwindling coal supply.

[From the Christian Science Monitor]

BE SPECIFIC, PLEASE

President A. F. Whitney (to whose Brotherhood of Railway Trainmen neither the Taft-Hartley Act nor the Senate's labor bill applies) declares the new Taft measure worse than the old, and predicts its passage would push the Nation within one step of a Hitlerian dictatorship over labor.

Labor leaders, like politicians and attorneys, are often prisoners of their positions. Their constituents frequently demand of them not impartial statesmanship but militant partisanship. But partisanship as extreme as Mr. Whitney's is likely to make the average American skeptical—the average American who, in his interests, actually is neither all worker nor all boss.

We try to think as would such a composite citizen, and this is how Mr. Whitney's blast and the Taft bill looks to us:

Labor has had some justifiable objections to the Taft-Hartley Act as it stands. Perhaps the most valid has been to the provision which prohibited strikers on an economic issue from voting for a new choice of collective bargaining agent, thus making it at least possible for an employer, through the votes of strikebreakers, to get rid of a union. This threat to union security the new Taft bill removes.

Another reasonable union objection has been that the existing law sets up the general counsel of the National Labor Relations Board as an independent prosecutor, with power to determine, in effect, what cases shall come before the quasi-judicial view of the Board itself. The new Senate bill would restore the authority of the NLRB over its general counsel, and restore, also, the Board's initiative as a sort of benign watchdog over labor's rights and over the workings of labor-management relations.

Union spokesmen, with some cause, have condemned the secondary boycott prohibitions of the Taft-Hartley law as compelling workers in one plant to help break a strike in another, and as crippling union labor's ability to establish and protect minimum-wage scales in an industry. The Taft bill would permit workers to refuse to work on or handle goods subcontracted from a company whose employees are on strike.

The new bill likewise removes doubt that unions may legally spend union funds (though not make campaign contributions) for political activities in behalf of labor's interests. It makes concessions to certain long-established and special situations (such as maritime hiring halls) involving the closed shop. It gives the President at least the option of plant seizure versus seeking an injunction in national emergency disputes. And there are other provisions in the bill directed toward a balance more favorable to labor.

We are reluctant to draw too positive conclusions this early. The flaws in the Taft-Hartley Act did not begin to show up for a year—and even then with scant help from union leadership. Nevertheless, if there be hidden "jokers" in this measure now before the House which warrant talk about its leading to an American Nazi state, a large burden of specific proof lies with those like Mr. Whitney who are making extravagant generalizations. Just more cries of "slave labor law" will hardly be persuasive.

British-Argentine Trade Agreement

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What Kind of Suckers Do They Think We Are?" published in the Indianapolis Times of June 23, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT KIND OF SUCKERS DO THEY THINK WE ARE?

Formal approval of the deal to exchange British oil, coal, and machinery for Argentine meat and wheat has been delayed, pending an effort to satisfy American objections to this discrimination arrangement.

But if it's true, as reported, that little more is being sought than a face-saving compromise, not materially changing the contract's terms, it is an insult to American intelligence.

If the State Department is willing to settle that easily, some new faces are needed in that Department.

We are being shut out of an important market for our goods and our own money is being used to underwrite the deal.

The London Economist admits that this trade pact violates the British-loan agreement and offends against the charter of the international trade organization, drafted at

Habana in March 1948, to which Britain was a party. It further admits:

"Of course, it is wrong that the Argentines, in selling their meat, should be compelled to take payments in specific British goods, which may not be what they want most or as cheap as the same goods elsewhere. Of course it is wrong that they should have to discriminate against American goods. It is not by these means that international trade can be restored to the level at which it can do its job of enriching and pacifying mankind."

But the Economist defends the arrangement from the standpoint of British self-interest. Without such an exchange, it contends, Britain will get no meat. Also, that Argentina has no other market for its meat which it must sell in order to buy oil, coal, or motorcars from anybody. To which this English publication appends the illuminating observation that "it is only fair to add that the British Government has its eyes so closely glued to the necessities of the moment that it does not give as much attention as it might to the long-term consequences of its policies."

Right there is where we come in.

Britain is sitting in this game with Marshall-plan money—our money—and using it to put us out of business in Argentina for the next 5 years. That is a consequence of British policy with which we must be concerned.

The Marshall plan wasn't intended to create exclusive markets for Britain. It wasn't intended to buy meat for Britain. It is an investment in world recovery. If money voted for this purpose is used to build new barriers to international trade we had better keep it at home and use it to build up our own business.

There is such a thing as American self-interest, too.

The source of Argentina's oil supply is Venezuela. The oil production there is owned by rival American and British concerns, which are competing for the Argentine market. We are selling Venezuela-produced oil to Argentina now, but if this deal goes through we will lose that business.

What kind of suckers do the British think we are?

The Reds and Paul Robeson

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. ADDONIZIO. Mr. Speaker, it is unfortunate, to say the least, that the recent conduct of Mr. Paul Robeson has unjustly raised a question in the minds of many Americans as to the patriotism of their fellow citizens of the Negro race. The leaders of the Negro people who are striving to achieve by peaceful means the rights guaranteed them by the Constitution have been quick to repudiate Mr. Robeson's stand and to disclaim his right to speak for them. The following editorial from the New Jersey Record of July 2, one of the leading Negro newspapers in the country, reflects the views of the great majority of colored citizens. I wish to commend Mr. Fred R. Clark, publisher of the New Jersey Record, and his associates for their attitude on this issue which is in keeping with the intelligence and judgment that characterize their thinking on all racial problems.

THE REDS AND I UL ROBESON

(By Wesley T. Moon)

One of the most disgusting apparitions to confront the Negro in late years is the spectacle of a Red-rampaging Robeson. Since his return from Russia every time he opens his mouth it is to boost Russian "Red-ism" and take a slap at democracy.

When he stepped off the plane at New York, upon his return, he had a gripe to make about the police escort awaiting him, when his son married a white girl and some spectators booed, he put in some words for Russia. Now we hear he is going to testify for the Communists on trial in New York—to get in a few more thousand words for Russia, we presume.

Robeson lived well here in the United States. He has seen doors opened to him that were closed to the masses of Negroes. He has been placed in a position from which he can trumpet his magnificent voice to the world. Talent alone put him where he is today; a talent so great, that it pushed down innumerable barriers.

Now that he is in a position to reach down and help others of his race, to be a liaison agent between the races here, he has made himself an object of disgust. On every side we are asked, "Why doesn't Robeson go on back to Russia and stay there?"

We ask the same question. Why doesn't he go back? If a poll were taken among Negroes, I'm sure they would vote to pay his way back if he would promise to stay there. Hard-working, intelligent people on all sides of the racial fence shudder each time his name is mentioned, for fear of what he is doing to their work.

He has nothing to say, and nothing is more annoying than a great person endlessly complaining in a petty way. No Negro group working for better race relations want him as a spokesman. That was made very clear after the noise he made at Paris peace conference, but he continually goes about his Russia this and Russia that business.

If he likes Russia, well and good—that's one of the beautiful things about this country—but we care precious little about how much he likes it over there. He said it a dozen times, now we are waiting for him to go over there—forever—and prove it.

Eye Openers on the Eve of the Fourth

EXTENSION OF REMARKS

OF

HON. JAMES V. BUCKLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. BUCKLEY of Illinois. Mr. Speaker, under leave to extend my remarks, I wish to include an article from the Polish-American Journal of July 2, 1949, written by Mr. Ludwik Lesnicki, a Washington political columnist observer for the Current News Bureau and other newspapers. His views are shared by many correspondents.

The article follows:

EYE OPENERS ON THE EVE OF THE FOURTH

(By Ludwik Lesnicki)

Again a prominent, but ignorant as to our status, John Bull called this Nation: "A nation of lucky Shylocks. They live in the richest country, endowed with almost unbelievable resources of mother earth, which they do not deserve." So writes John Bull—let's look at the facts on this eve of the Fourth of July.

America asks nothing for herself except what she has a right to ask for humanity itself, as described wisely by the immortal Woodrow T. Wilson. This cardinal fact that we ask nothing for the United States, except what we have a right to ask for humanity itself, sets us apart from the other nations of the earth.

We have no dreams of empire.

We cast eager eyes on the possessions of no nation under the God's sun.

We are content to live and let live.

We are content to have and let have.

Time and time again we have put aside opportunities which few nations would have the courage to resist.

We might have taken Cuba: we did not.

We might have taken indemnities from China; we returned them. We might have seized favorable occasions to extend our territory in this hemisphere; we did not.

We preferred to stand before the world as a protector and not as a despoiler.

Today—on the eve of the Fourth of July of 1949—when the ambitions of so many nations can be and are expressed in terms of more territory, more power, more influence, our country stands forth as one that wants nothing for itself except the well-deserved respect for those elemental rights which nations must make respected or cease to be worthy of the name.

We ask the nations for nothing.

We simply ask them to respect what is our own.

They have nothing we desire.

But we have much that we desire to keep, must keep, and will keep.

Those things, the essentials of nationality and the common possession of humanity, they cannot and will not take away.

For their own purposes some foreign nations—Great Britain mainly—have created and maintained the infamous lie of America's preoccupation with dollars only. Our donations of billions of good American dollars to them answers the familiar, foolish libel again repeated by the ignorant, to put it mildly, John Bull.

On the eve of Independence Day we again reaffirm this Nation's ancient dedication to humanity.

Visible and Invisible Taxes

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "You Pay Out in Taxes More Than You Think," written by Earl Richert, Scripps Howard staff writer.

This is a time when the people of the country are very anxious to understand just what taxes are being paid. The article deals with the taxes paid on automobiles. I am inserting it in the RECORD so the people may understand that they pay an average of about $450 on the average car in the low-price brackets.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU PAY OUT IN TAXES MORE THAN YOU THINK; THEY'RE ABOUT $450 ON AVERAGE CAR IN THE LOW-PRICE BRACKET

(By Earl Richert)

The way the experts figure it, you pay anywhere from $355 to $466 in taxes—most of it hidden—when you buy a new car in the $1,600-to-$2,000 price range.

All told, it is estimated at least 206 separate tax transactions occur along the route of manufacture—from raw materials to shiny new auto.

And these taxes are all covered in the price you pay your dealer. You're stuck for interest on them, too, if, like most people, you pay by monthly installments.

The man who buys a car, says James D. Mooney retiring president of Willys-Overland, usually knows he is paying a Federal excise tax of about $90 or more. Then there is a State or city sales tax that usually runs about 3 percent of the price of the car, plus license plates and registration fees.

But what the buyer doesn't think about, Mr. Mooney said, is that the income and withholding taxes paid by the men who make and sell the vehicle are also a part of the car's selling price. So are the corporation taxes, the property taxes, the transportation taxes etc., all along the line.

"In the end, all taxes must come out of the pocket of the consumer," he said. "When the Government slaps a heavy tax on a corporation it is really taxing the man who buys the corporation's product.

"This is because of the simple economic fact of life that all costs that enter into the manufacture of a product must be covered by its selling price."

Mr. Mooney said today's average car in the lower price brackets contains about $450 worth of direct and indirect taxes.

K. T. Keller, president of Chrysler, estimated that a car which his firm sells wholesale at $1,120 carries with it at least $200 in tax when it leaves the factory.

"By the time a transportation tax has been added, and a State sales tax, and the applicable portion of the dealer's income and property taxes, and a license and title fee, the customer who drives it away for around $2,000 can tell himself that no less than $355, and probably at least $400 of the check he has written is for tax money," he said.

General Motors officials estimate at least 17 percent of their price to dealers is to cover their own corporation and excise taxes.

Mr. Mooney's estimate of about $450 in taxes was based on a car which sold at retail for $1,897 in 1948. It adds up as follows:

Direct corporation taxes	$36
Income taxes paid by employees of car manufacturers	81
Corporation taxes and income taxes of employees of parts suppliers	110
Taxes paid by dealer and his employees	96
Federal excise taxes	91
State sales tax	52
Total	466

Mr. Keller suggested that every time a person paid for a new automobile he fix it firmly in his mind he is paying off:

So much of interest on the war debt; so much for the Army, Navy, and Air Force; so much for old-age pensions;

So much for the Indians; to dredge rivers; for unemployment insurance; for public health; for the merchant marine; for the highways; for local police and fire departments, and sewers;

So much to support the price of eggs; for atomic research; to support inefficient producers; for relief abroad, and for relief in this country;

So much for the cost of collecting all these taxes, and so much more to pay salaries of a lot of other people on the public pay roll.

Fake Story of Guadalcanal Strike Retracted

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. HART. Mr. Speaker, under leave to extend my remarks, I include herein an article from the CIO News of June 13, 1949, relating to the entirely false story circulated in January 1943 by certain newspapers which grossly libeled seamen members of the CIO Maritime Union, by charging that servicemen engaged in the defense of our country on Guadalcanal "had been forced to unload their own supplies from a merchant ship on the island battleground because of the refusal of civilian crewmen to work on Sunday."

Although this vile story was repudiated in the month following its publication, it was not until early in June 1949 that, as a result of a libel action brought against the Associated Press by the National Maritime Union, the story was formally retracted. As in practically all such cases, the retraction was made as inconspicuously as possible. The article follows:

AFTER 6½ YEARS AP FINALLY RETRACTS FAKE STORY OF NMU GUADALCANAL STRIKE

An exposé disparaging the war service of CIO Maritime Union seamen, which made headlines throughout the country in January 1943, and which was officially repudiated a month later, was retracted last week by the Associated Press as one of the terms of settlement of a libel action brought against them by NMU.

Associated Press also agreed to pay the union $7,500 in the settlement, which was reached out of court. The union's suit against Hearst Consolidated Publications, publishers of the New York Journal-American, which had carried the original AP release, was settled at the same time by payment of $1,000.

The libel suit was based on an Associated Press story of January 22, 1943, quoting a copyrighted article under the byline of Helen Waterhouse, which had appeared in the Akron Beacon-Journal the day before.

The Beacon-Journal story purported to be based on the accounts of six servicemen who had returned to Akron from fighting on Guadalcanal with "the incredible claims that their buddies had been forced to unload their own supplies from a merchant ship on that island battleground because of the refusal of civilian crewmen to work on Sunday." The story identified the servicemen only as "three marines, two sailors and a Navy pilot."

Confirmation, said the newspaper, has come from a high official source in Washington who, though he witnessed these conditions during his service on Guadalcanal, must necessarily remain anonymous.

The Beacon featured the story across eight columns of its front page with the headline, "Ship 'strike' ires Guadalcanal fighters."

The Associated Press story went out the following day, quoting the Beacon story and adding a line to the effect that the merchant seamen refused to work on Sunday because of union regulations.

The New York Journal-American was one of the papers which used the story. It broadened the reflections against merchant seamen to include the entire CIO by headlining it "Marines Unload in CIO Holiday." The story was featured on page 1.

The Chicago Tribune added quotes of disparaging remarks supposed to have been addressed to the marines by the merchant seamen as they watched them work. "Fifty-dollar-a-month suckers" was one of these.

NMU Pres. Joseph Curran immediately denounced the stories as "a tissue of lies." He pointed out that there are no union regulations against Sunday work. "On the contrary," he said, "crews are required to work whenever necessary—and that includes loading and unloading ships." He cited several instances in which NMU crews had volunteered to do the job of unloading their vessels in combat areas and their offers had been turned down by authorities.

The story was officially repudiated a week later, on January 28, when the Navy Department made public an official report from Admiral Halsey, commander of United States forces in the South Pacific. "In no instance," Halsey's report stated, "have merchant seamen refused to discharge cargo from their vessels or in any other way failed to cooperate with the United States forces ashore in that area." Halsey said that "the merchant seamen's cooperation, efficiency, and courage, on some occasions in the face of enemy attack, have won high praise."

Halsey's statement was given one paragraph on an inside page of the first edition of the Journal-American for that day. It was dropped completely in later editions. The Chicago Tribune gave it one paragraph inside and carried it in all editions.

Before the Halsey report, Brigadier General Denig, Marine Corps public-relations officer in Washington, had told reporters: "The Marine Corps knows nothing about the published charges. The people in Akron called us about it and we told them we knew nothing about it. We referred them to the Navy and I understand the Navy told them there was no basis for the story." Commander Berry, in charge of Navy public relations, confirmed that the Navy had no knowledge of the incident.

A congressional committee investigated the Guadalcanal story and branded it wholly untrue. Chairman WARREN MAGNUSON, Democrat, of Washington, revealed that the author of the Beacon story had been questioned in the course of the investigation and had refused to identify her sources even in confidence.

The libel suit, naming AP and Hearst Consolidated Publications as defendants was filed shortly afterward. The NMU complaint specified that the story was intended to and did impute to the union and its members acts and conspiracies of subversion, sabotage, and mutiny of a felonious nature and was designed to expose them to public contempt and ridicule.

The AP retraction, approved by NMU attorneys, was released for publication on June 3 and consisted of four paragraphs. The first three paragraphs reviewed the discredited story. The fourth stated: "A thorough investigation conducted at the instance of the AP has produced no evidence attributing such conduct or such an incident to a National Maritime Union crew."

The retraction was prefaced with the following note: "Editors who printed an Akron, Ohio, story distributed in the night report of January 21, 1943, regarding reports of ship unloading at Guadalcanal are requested to print the following:"

In announcing the terms of settlement, Curran emphasized that this is small satisfaction for the seamen whose valiant efforts during the war were so viciously slandered.

He pointed out that the NMU and CIO are still fighting for congressional recognition of the war service of merchant seamen similar to that granted to veterans of other services.

"There are still no provisions to grant special citizenship credit to alien veterans of the merchant marines although veterans of all other branches get such credit," he said.

"There is a GI bill of rights but no seamen's bill of rights. The Guadalcanal smear and stories like it are largely responsible for the public indifference which permits these legislative injustices to remain."

A Limited World Government

EXTENSION OF REMARKS
OF

HON. LAURIE C. BATTLE

OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. BATTLE. Mr. Speaker, under unanimous consent to extend my remarks, I include the following speech which I made in Baltimore May 23, 1949, on the necessity for a limited world government capable of preventing war:

A LIMITED WORLD GOVERNMENT

I. WE ARE MAKING STEPS TOWARD WORLD PEACE

The prospects for peace are better tonight than they have been in almost a year.

A. The lifting of the Berlin blockade was a magnificent victory for democracy. As a result, our chances for a general settlement with Russia are immeasurably greater, at least so far as Europe is concerned.

B. The recent election in the Soviet zone of Germany illustrates again the more favorable climate that prevails for us in Europe. This election has been called the greatest loss of face the Communists have suffered in Europe since the conclusion of the war. Normally, in an iron curtain one-ticket election, an affirmative vote of well over 90 percent is taken for granted. Nevertheless, more than 4,000,000 Germans—or a little over a third of all who participated in the election—voted "nein" to the list of candidates the Communists had instructed them to approve.

C. This may in some way be linked with the recent rumors of Russian overtures for a settlement in Greece.

D. The historic meeting of the foreign ministers in Paris today is another sign of progress. Our leaders are cautious now about any gentlemen's agreements with Russia. We cannot afford to be lulled again into a sense of false security. Any agreement in the future must be spelled out in detail. Our firm attitude may bring about more success in this conference because this time we have more force to back up our good intentions. Also, Russia may be more reasonable about a European settlement because she is succeeding so well in keeping China unsettled.

We cannot afford to be complacent about our progress. We must remember that our diplomatic victory in Europe is a direct result of our unyielding stand against further Russian expansion. The Marshall plan, the amazing airlift, the strong counterblockade of Berlin, and the Atlantic Pact—all costly and dangerous operations—expressed to the world America's determination to resist world domination by Russia.

II. A LIMITED WORLD GOVERNMENT CAPABLE OF ENACTING AND ENFORCING INTERNATIONAL LAW IS AN ABSOLUTE NECESSITY

A. From an international point of view, we live in a lawless world which means an ever present danger of war.

1. If Russia does not already have the atomic bomb, she will certainly have it in a few years.

2. The shrinkage of the world has been so great—because of modern transportation and communication—that nations no longer have the age-old protection of distance and time.

(a) This was dramatically illustrated the other day by a flight of the Air Force's Lucky day by a flight of the Air Force's Lucky Lady No. 2 around the world in 94 hours and 1 minute.

3. The civilized world is traveling down the road to destruction again. Let us imagine what is in store for us in this atomic age if we continue our race with other nations—without any rules and without world law and government:

(a) In such a world America will have to be constantly alert and armed to the teeth. We will have to maintain even more tremendous armies and navies and move our factories and cities underground. We must be willing to deny ourselves all but the basic necessities—spending even more gigantic sums on military research. Few people realize that since George Washington's day our Federal Government has spent 75 cents out of every dollar for the prosecution or settlement of wars.

(b) To continue on our present course will make us a haunted and regimented people—many of our basic civil liberties swallowed up by a central government whose broad powers would be necessary on a permanent wartime footing. Even then—we would have no assurance against a sneak atomic attack. We would have no protection against a third world war—a war that would bring untold destruction to our own firesides.

B. No single nation can prevent war—not even America with all of our strength and resources.

1. American programs of foreign aid can not in themselves prevent war.

(a) I am a staunch supporter of the Marshall plan and the Atlantic Pact. As a member of the Foreign Affairs Committee of the House, it was my privilege recently to help revise ECA legislation and assist in its passage, but I do not for one moment believe that the Marshall plan or the Atlantic Pact lessen the need for a limited world government. Rather, they show the great necessity for it—and prove to me that a universal government can be accomplished.

(b) I believe in helping friendly nations to rearm so they can protect themselves against Communist aggression—if we can provide such arms without endangering our own economy. Even these tremendous sacrifices, however, will not guarantee peace.

(c) We are already staggering under the great load of our foreign-assistance programs. We certainly could not stand this financial drain indefinitely. Yet, even greater programs, expanded far beyond our present efforts and extending into other areas of the world are needed to help preserve peace. I feel certain that neither America nor any single nation can by its own efforts alone guarantee world peace.

2. England's balance-of-power policy preserved peace for limited periods in modern history but was not sufficient to prevent war ultimately. To the contrary, England has always wound up involved in a great international conflict—and as a result she came near being wiped out of existence in World War II.

3. A union of some of the nations of the world excluding others will not work. This would keep the world divided into two or more armed camps. Blocks of nations have never been able to hold the line very long and there is no reason to believe that such a division would lead toward better understanding and more peaceful relations in the world.

4. Treaties have not prevented aggression. In the past nations have relied upon treaties to keep peace but they have never been successful. When a nation is determined upon a policy of aggression, it is a simple matter to break a treaty. Treaties are good and proper insofar as they go, but they never have and probably never will give us the kind of protection that is necessary in the world today.

C. China is a striking example of the necessity for a limited world government.

1. There is little the United States can do for China at the moment acting unilaterally.

(a) To prevent the Communists from gaining control of China, we would have had to launch a full-scale war which would have meant the loss of American lives, untold misery, and cost beyond our comprehension.

(b) Any decisive action of a nonmilitary nature that we might have taken in China recently might have aroused the lasting hatred of a great portion of the population which wanted no part of American intervention in Chinese civil affairs.

(c) It would have taken far more financial assistance than the Marshall plan to have made any headway at all toward alleviating the intolerable conditions in China—and stopping the Communists. It was impossible to carry the financial load of two such tremendous programs at the same time. It was natural, therefore, that Europe should come first. Europe was the most savable and the most dangerous—from the point of view of our own security.

2. We must adopt a long-range policy toward China and the Orient—working through the United Nations. It is yet to be proven that the Communists can pull down the iron curtain around China completely. If possible at all it will take many years for Russia to regiment or even change appreciably the way of life of so many poverty-stricken Chinese people who live so much in the past. I do not believe she can do it. We must do everything in our power to prevent it—but only a world organization can set up a program capable of dealing successfully with the Chinese situation.

(a) The United Nations and individual nations must battle to keep the doors open—to keep the walls from closing around China.

(b) The United Nations and individual nations must wage a long-range fight for the minds of the millions of people in China and all of southeast Asia.

(c) We must continue and further develop our community of interests with these people—and encourage them to become our fellow citizens in a free universal government.

(d) We must encourage free trade with China—helping to keep private channels open to us and all other nations.

(e) We, along with other countries, must nurture the seeds of democratic freedom that are still alive in individual leaders and groups in China.

(f) We can still build ideological fortifications in China and in other nations endangered by atheistic communism.

(g) We can join other nations in taking out diplomatic insurance with surrounding countries to prevent further Soviet expansion in the Orient.

(h) By accepting world leadership and taking the first step, we can help to build a fire under the member nations and help mold the United Nations into an organization capable of handling any aggressor nation.

III. WHAT KIND OF A WORLD ORGANIZATION DO WE WANT?

A. Before I go further I want to pay warm tribute to the United Nations for the highly successful work it has done in the short years of its existence. However, we simply cannot sit back and do nothing to improve this great organization because it—like the League of Nations—is incapable of preventing war.

B. The United Nations—like the League—is an association of fully sovereign nations.

And such loose organizations throughout history have never been capable of preventing war.

1. The city states of Greece were constantly warring upon each other until they united under a common government. The same process occurred in France, Germany, and England. We have only to look at our own history to prove this point. Our Articles of Confederation did not work. But we soon learned that a little bit of relinquished sovereignty by each State added a much greater proportion of strength to the whole United States. As a matter of fact, the individual States were secure then for the first time. Very little has been said or written of the Toledo War of 1835 when Ohio and Michigan took arms against each other over a border dispute. The militias of each State were called out by their Governors. There was a great deal of talk and excitement followed by a march on Toledo. Although no blood was shed, it finally took an act of Congress to settle the dispute. It became necessary for the authority of our Federal Government to be firmly, and as an Alabamian I might say quite forcibly, established in the 1860's. As a result every State is stronger and more secure because we have a common Government—a Government with the necessary power to prevent the several States from warring with each other.

C. The United Nations is not a universal government. It has no laws. It has no means of enforcing laws. The General Assembly only recommends and each nation has one vote regardless of population or power. The Security Council—which has the main responsibility for maintaining security—has been prevented from doing its job by the veto. And Russia may be able to force China to become a partner in this veto fiasco.

D. We must have a universal government by law and not by men. Governments are costly and cumbersome but man, throughout history, has always been driven to the conclusion that a common government is the only way to obtain domestic tranquillity and avoid internal wars. The costs of government shrink into oblivion by comparison. The idea of a limited world government then is the expansion of a tried principle which has been highly successful within national boundaries. It must be adapted and applied to meet the needs of our family of nations. We must have a government with machinery that makes it possible to stop world aggressors—a government that can weld together our family of nations, promoting their general welfare and protecting their general interests.

1. We need a legislative body where there will be no veto. The laws passed by such a body would necessarily be limited to relations between nations. Such laws would involve world problems only, leaving each country free to handle its own domestic affairs.

2. Certainly an executive branch is necessary to put the laws into effect. As an example—we must reach some agreement on arms limitation—including the atom bomb—or continue our mad race against death. But, of course, America cannot give up its rights to the most destructive weapon ever devised until there is a real world police force capable of enforcing disarmament in all nations.

3. A judicial system is necessary to interpret the universal laws and to help the executive enforce the law, especially as it relates to individual violations.

4. But our most important task is in winning the recognition of the necessity for a world constitutional convention—a convention to be called immediately for the purpose of remodeling the Charter and the modus operandi of the United Nations—a convention for the purpose of writing and adopting a universal constitution that would make the United Nations capable of fulfilling what we hope is its true destiny.

IV. NOW IS THE TIME FOR ACTION

A. On the national level, several Members of Congress, including myself (H. Con. Res. 15), have introduced legislation calling on President Truman to take immediate steps to call a general assembly of the United Nations pursuant to article 109 of the United Nations Charter—for the purpose of making the United Nations capable of enacting, interpreting, and enforcing world law—to prevent war. This is at least a starting point on the national level.

B. On the State level, nearly half of the legislatures have indicated a definite recognition of the need for a limited world government.

C. But the most important action of all is on the personal level. When enough individuals want action, you may be sure that our State and Federal legislators will act along with the governors and the President of the United States. People all over our great country are beginning to realize that there is no time to lose in forming this universal government to create a peaceful climate in world affairs and to enforce justice in international relations. Perhaps the people throughout the United States are further along in their thinking than our Government realizes. Your presence here tonight makes me feel that this is true. Of course, there are other countries that know more keenly than we do the horrors of not having a universal government to which they can turn for the preservation of their homes and families. We cannot afford to wait for this tragic lesson to be taught to us the hard way—on our own shores.

D. The time for action is now. There is a tremendous job ahead for you as world federalists, for the United States Congress, for the State legislatures, and for all of us who realize the necessity of building a limited world government capable of preserving peace. This calls for an active, powerful force dedicated to maintaining justice throughout the world. The task will not be easy. Individuals and groups will say, "Wait a while, the time is not right." But this is sort of like getting married—if you wait for everything to be just right, you wait forever. There is really no time to lose. The idea is a big one, but it takes a big idea to accomplish big things.

I see no alternative. We must measure up to the task. As Vernon Nash said: "What should be done can be done." I would like to go one step further and say: What must be done will be done.

Budgeting for Good Health

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Budgeting for Good Health," published in the Worthington (Minn.) Globe of June 28, 1949. The editorial is a splendid one.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGETING FOR GOOD HEALTH

A trip to a local hospital last week convinced us of one thing—health insurance is one of the best securities a person in this country can hold. It almost makes it a pleasure to undergo medical treatment and have the dual assurance of the best in medical care and insurance to cover the expenses.

No place on earth can a person get better medical care than right here in America, and good treatment, especially if the illness requires hospitalization or surgery, runs into money. Special drugs, the services of an expert physician and trained nurses, excellent hospital care—all, of necessity, are expensive.

But the fear of large medical expense need not trouble the family which holds Blue Cross and Blue Shield contracts. Health insurance organizations of this kind will pay the big part of any large medical bill for their paid-up members.

In fact, the merits of the insurance approach to this universal problem of large medical expense have been so numerous as to lead some people to propose putting such insurance programs in the hands of the Government and making them compulsory for all.

We feel, however, that there are many good reasons why a compulsory health insurance program is unnecessary and inferior to a voluntary-insurance plan.

First of all it must be remembered that the voluntary set-up has the whole-hearted endorsement of the medical profession and the national hospital associations. It would be inadvisable to force a system of health insurance upon a profession which has provided this Nation with the best health of any in the world today.

Second, there is the obvious advantage of the voluntary-insurance program in the fact that it is voluntary. Programs like Blue Cross operate from the bottom up, rather than from the top down. This is the preferable way to do things in a democracy.

Third, it should be pointed out that the voluntary insurance program is considerably cheaper to operate, accomplishing many administrative economies which a Government program could not. This is one of the biggest arguments for the voluntary program.

Fourth, we believe that there are more important missions in the field of public health for the Government than the operating of a health insurance program. These are the expansion of medical school facilities to keep up with the continuing need for more doctors, the reorganization of existing public and veteran's health programs in line with the recommendations of the Hoover Commission, and the continued expansion of public health services to the acutely depressed social areas of America—the rural south, metropolitan slums, and the American Indian population.

There is one advantage to the compulsory health insurance program, the fact that it does include every family in its plan. This advantage can be easily countered by the voluntary insurance proponents through a program of public information and education as to the need for enrolling every family in a program like Blue Cross and Blue Shield.

By and large, the opponents of compulsory health insurance have missed the boat in presenting their case to the Aemrican people. Instead of arguing the advantages and merits of their voluntary insurance proposal, they have put most of their effort into dramatizing the compulsory system in bloody terms of "socialism, un-Americanism," etc.

Now is the time for the medical associations to put all of their resources into promoting universal membership in voluntary programs. This is a bill of goods that is easy to sell, because it has real merit. When nearly every American is a member of a voluntary insurance program, the demand for compulsory health insurance will vanish.

The Malmedy Case

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. MULTER. Mr. Speaker, on March 11, 1949, my distinguished colleague, Hon. LAWRENCE H. SMITH, of Wisconsin, inserted an article in the CONGRESSIONAL RECORD from the New York Times of March 2, 1949, in support of his resolution, House Resolution 143, asking that a full and complete investigation be made of reports that United States investigators in the Malmedy case have practiced third-degree methods against those charged with the crime.

In the Malmedy case, 74 Germans were charged with having massacred in cold blood American GI's taken prisoner during the Battle of the Bulge. Hundreds of Belgian civilians, as well as American boys, were slain without mercy, and in direct violation of the laws of war. These German criminals were given their day in court. They confessed their guilt, and it was only when the American military tribunal handed down its verdict, that these self-confessed criminals pretended that they were tricked into confessing. This sham maneuver, however, cannot square with the regulations governing the war crimes trials which stipulate that "a defendant shall have the right through his counsel to present the evidence at his trial in support of his defense and to cross-examine any witness called by the prosecution."

If the excuses now being offered by these criminals were true, then why did they not take advantage of their rights during court proceedings? The answer is clear. Their barbarous crimes were proven by the overwhelming evidence presented by the prosecution, American GI survivors, and other victims of this massacre. Forty-three were sentenced to death. But in March 1948, General Clay very quietly commuted the sentences of 31. Since then, the other 12 have also managed to escape justice; 6 of the 12 have also seen their death sentences commuted recently. The actions of General Clay in this case were supported by Secretary of the Army Royall, who admitted before a subcommittee on appropriations on March 2, 1948, that he had no sympathy for the prosecution of German war criminals in general. Is it any coincidence that the former Secretary of the Army made public his views in the same month that General Clay mitigated the sentence of the Malmedy criminals?

Realizing that American public opinion would not tolerate a direct quashing of the Malmedy verdict, Secretary of the Army Royall created a three-man commission to "investigate" the Malmedy case. This seemed like a fair step to ensure that there would be no miscarriage of justice. One would have expected that this committee would have sought out all persons connected with the trial before reaching conclusions. Believe it or not, this three-man commission did not bother to talk to any of the members of the prosecution staff, but they were very keen on seeking out the German defendants for their story. This is certainly a novel approach for a committee which is supposed to be seeking full information. Yet, it was done and the report was accepted by Secretary of the Army, as though this commission had truly made an impartial investigation.

One of the guiding spirits behind this campaign of spurious charges against the American war crimes investigators in the Malmedy case is Judge LeRoy Van Roden, of Media, Pa., who was one of the members of the commission appointed by Secretary of the Army Royall on July 29, 1948. Since his return to this country, Judge Van Roden has gone out of his way to vilify the American prosecutors and in general the Malmedy case itself.

I deem it of great importance, therefore, to call attention to certain activities of Judge Van Roden which may shed some light on his conduct and his motives.

A United Press dispatch, dated May 20, 1949, from Media, Pa., which was published by the New York Times on May 21 reports the case of a certain Herbert Gunther Sonthoff, a former member of the Nazi brownshirts now teaching at Harvard University, who received United States citizenship in Delaware County court over the objections of the Federal Bureau of Naturalization.

It is interesting to note that it was Judge Van Roden who ruled that, although Mr. Sonthoff was subjected to Nazi indoctrination in his native Germany, he successfully escaped its perverting influence and came to recognize fully and clearly the advantages of the American type of democracy, despite strong evidence to the contrary.

The United Press dispatch further stated that the Bureau of Naturalization recommended that citizenship be refused to Mr. Sonthoff on the basis of some letters he allegedly had written to friends in foreign countries. These letters were produced by Judge B. Halbestadt, a Naturalization Bureau agent, at a hearing on March 10 on Mr. Sonthoff's petition for citizenship. In one letter, Sonthoff wrote:

> I do not intend to deny my adherence to the German cause, to renounce it and to become a United States citizen.

Thanks to Judge Van Roden's ruling, a former member of Hitler's S. A.—the ill-famed brownshirts—has now become an American citizen. But this is not all.

On May 31, 1949, the New York Post Home News published an exclusive story entitled "Malmedy Trial Prober Who Blasted United States 'Brutality' Backs Pro-Nazi Book," written by Jay Nelson Tuck and Irving Lieberman which follows:

MALMEDY TRIAL PROBER WHO BLASTED UNITED STATES "BRUTALITY" BACKS PRO-NAZI BOOK

(By Jay Nelson Tuck and Irving Lieberman)

Edward Le Roy Van Roden, the Media, Pa., judge who served as an investigator of the Malmedy trial and has subsequently led the attack against the United States prosecutors, has given his endorsement to a pro-Nazi, anti-Semitic book, it was revealed today.

Van Roden was a member of a three-man commission named by former Army Secretary Royall to investigate charges that United States war-crimes investigators used brutal third-degree methods and unfair procedures against 74 Nazi defendants accused of having shot down 83 United States war prisoners after the Battle of the Bulge.

He has been a violent critic of the United States prosecution and his utterances on the subject have been widely used by assorted pro-Fascist publications and by John O'Donnell, of the New York Daily News, and the Chicago Tribune. Van Roden recommended that the death sentences of the convicted defendants be commuted and that the prosecutors be placed on trial.

Today the Post Home News learned that Van Roden has joined hate merchants like A. O. Tittmann and A. J. App in endorsing a book called The Crime of Our Age, by one Ludwig Adolphus Fritsch. The theme of the book, as explained by Fritsch in a letter he mails out with it, is how "the Jews and the Anglo-Saxons succeeded in uniting the nations of the world into an unholy alliance in order to destroy Germandom."

WANTED GERMANS TO DOMINATE

The book, dedicated to "Christian Americans," opens with a reference to "the physically and mentally sick late President (who) surrounded himself with advisers who * * * reject the Saviour." He lists the advisers as "Bernhard Baruch (sic) from Konigsberg, Henry Morgenthau from Mannheim, Felix Frankfurter from Vienna, Albert Einstein from Berlin," and so on.

In subheadings, Fritsch's book refers to "Roosevelt's Satanism," "Roosevelt sin register," and "Roosevelt, the evil spirit of the world."

The book declares that "the real aggressors are the great powers of today" and proclaims "one Holy Reich, which was predestined to be the defender, guardian, and protector of Christianity and of the white race."

Van Roden's printed endorsement of Fritsch's book calls it "startling," and says, "I think it should have a wide distribution, not only to the clergy, but to all Americans." The endorsement is carried by Fritsch in a leaflet advertising the book. Fritsch is a former Lutheran clergyman.

Reached by this newspaper, Van Roden said of Fritsch, "I agree with his actual facts, though not with all of his conclusions and speculations." There was no qualification of this kind in his published endorsement of the book.

A Post Home News reporter read to Van Roden a passage from the book which declared that "the Germans would have broken the eccentricities of Hitlerism after they had reached their goal—unification of all Germans * * * Their God-given noble characteristics would have been revealed. Their unique ability to organize would have created order and tranquillity. * * * Their deep spiritual life would have enriched and ennobled mankind. * * * The American leaders prevented this development and destroyed that great nation against the will of 86 percent of our population."

Asked if he agreed with that, Van Roden said, "It is partially true. We should have approached the problem in a different way."

Another endorser of the book is Tittmann, president of the Voters Alliance for Americans of German Ancestry, a Yorkville outfit revealed by this newspaper last month as a successor to the defunct German-American Bund. Tittmann's endorsement expresses gloomy doubt that the work will have any influence with the clergy, who are called "a lot of hypocrites and cowards."

A third endorser is App, who has suggested that General Eisenhower be hanged as a war criminal. App expresses his "appreciation, admiration, and congratulations" to the author, declaring that the book "certainly tells the truth."

That item gives only a brief idea about the book The Crime of Our Age. The following letter to the editor of the New York Herald Tribune by C. Monteith Gilpin, secretary of the Society for the Prevention of World War III, New York, as printed on May 29, under the title "Book Excuses Nazi Acts," give a more complete description of this nefarious work:

BOOK EXCUSES NAZI ACTS—CHICAGO AUTHOR BLAMES ALLIES FOR AGGRESSIVE WAR, DEFENDS GERMAN CHARACTER AND MOTIVES

To the New York Herald Tribune:

It seems that the whitewash Germany campaign instigated by certain elements in this country has now turned into smear-the-Allies propaganda. Unfortunately, most people in New York and Washington seem not to realize the extent of this recent campaign pushed forward in the Middle West.

I would like to call attention to a recently published book called The Crime of Our Age, which is by far the most fantastic whitewash not only for the Germans but also for the Nazis, and at the very same time is an outrageous smear against the United States, France, and Britain. It can only be classified in the category of Pan-German writings.

The author of The Crime of Our Age is a Rev. Dr. Ludwig Adolphus Fritsch, of Chicago, who also figures as publisher.

While it is written in English (in a very bad English at that) the book is being heavily advertised in German-language newspapers throughout the country and sells for $1 apiece.

Here are some typical chapter headings:

The Real Aggressors Are the Great Powers of Today, Germany the Protector of Christianity and the White Race, the Victors Have No Moral Right, the Allies Were the Aggressors Through the Centuries, the Allies Were the First Exterminators of People, the Allies Invented the Concentration Camps, the Allies Were the First Slave Traders, the Allies Were the First Mass Murderers, the Allies Committed More Crimes Than German Doctors, the Allies Are the Greatest Looters of History, Shame of Our Troops, Even the Russians More Honest, What Would Pan-Germanism Give the World.

And here are some significant quotes, picked at random, which need no comment:

"The Germans are accused of having started an aggressive war. For that crime their leaders were hanged. Every historian knows that this accusation is a great lie. The Germans wanted to reach their rightful goal in rescuing Europe by peaceful means. In the case of Austria and the Sudetenland, they succeeded. A peaceful agreement with Poland also would have been possible had not Churchill, encouraged by Roosevelt, instigated the leaders of that unfortunate people. * * *

"The Germans were accused of having introduced the concentration camps as a new means of war. For this crime their leaders and helpers were hanged. The Germans, in their 2,000 years of glorious history, never used this objectionable means. * * *

"The Germans were accused of destroying the village of Lidice and of executing about 200 British-sent murderers of a governor. The perpetrators of this crime were hanged. On the other hand, the victorious nations committed thousandfold greater crimes."

In the chapter, What Would Pan-Germanism Have Given the World? Herr Fritsch writes:

"In my opinion the Germans would have broken the eccentricities of Hitlerism after they had reached their goal—unification of all Germans. The best proof for this statement is the fact that responsible Germans tried to get rid of Hitler seven times. After consolidation of the greater Reich the hundred million Germans would have gone to work in holy enthusiasm. Their God-given noble characteristics would have been revealed. Their unique ability to organize would have created order and tranquillity in Europe and in the world in the shortest possible time. They would have created the United States of Europe without bloodshed. They would have placed their great capabilities in the fields of science, arts, and technology to the disposition of the world as they did before. * * *

"In short, pan-Germanism would have brought to mankind spiritual and material blessings. The west European culture and civilization would have been rescued once more by the Germans, the old, experienced defenders of the most precious treasures of mankind. The American leaders prevented this development and destroyed that great nation against the will of 86 percent of our population."

These are only a few excerpts, but they will suffice to show the tendencies of this outrageous book.

C. MONTEITH GILPIN,
Secretary, Society for the Prevention of World War III.
NEW YORK, *May 21, 1949.*

Philippine Leader Laurel Is Foe of Communism

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 8, 1949

Mr. HAGEN. Mr. Speaker, in view of the coming November elections in the Philippines, there is considerable interest in the candidates for the office of President. Reports coming into Washington indicate that Dr. Jose P. Laurel is the favorite and will be elected.

In view of this likelihood, Members of Congress and readers of the RECORD will be particularly interested in a letter recently published in a small-town newspaper in Minnesota. It so happens that the editor of this newspaper is my former secretary, Fay George Child, of Maynard, Minn., who is now editor and publisher of the Maynard News. The letter gives considerable background concerning Dr. Laurel and his relentless fight against communism in his country.

The letter, published in the Maynard News on June 24, 1949, follows:

LETTER ABOUT PHILIPPINES OF INTEREST TO OUR READERS

(The editor of the News received a letter from Mr. P. W. Reeves, former Secretary to several Congressmen and Senators, and more recently Director of Civilian Personnel of the War Department in the Philippines, Mr. Reeves, has just returned from a trip to the Philippines and what he has to say in his letter to this writer will be of interest particularly in view of the fact that the Philippines is still very close to the United States in its political and economic life.)

Mr. FAY GEORGE CHILD,
Editor and Publisher, Maynard News, Maynard, Minn.

DEAR FAY: Our letters must have been crossed in the mail. In my most recent communication I told you of most of my experiences on my trip to the Philippines, but I did not go into a great deal on Dr. Laurel. Your interest in the great Philippine leader—who may be the next president of the Philippine people is understandable, and so the following factual information may be of interest to you—and perhaps to your readers.

On May 22, 1949, Dr. Laurel was nominated by the Nacionalista Party as its candidate for the presidency in the Philippines in the coming November election. The nominating convention was made up of 737 delegates from all sections of the Philippines. Dr. Laurel had the support of 636 delegates and the combined opposition to Dr. Laurel cast 101 votes for Senator Camilo Osias, an outstanding Filipino, a great leader of the people and a man of the highest integrity. Thus Dr. Laurel will oppose President Quirino in the November election.

Governor General Leonard Wood appointed Dr. Laurel as head of the Interior Department in the famous "Wood Cabinet." From 1925 until 1931 Dr. Laurel served as a senator in the Philippine Senate. In 1935 Dr. Laurel was a delegate to the constitutional convention and was one of those selected by the convention to write the constitution for the Commonwealth of the Philippines; and this same constitution which Dr. Laurel assisted in writing for the commonwealth was also adopted when the Philippine Republic came into being. In 1936 Dr. Laurel was appointed by President Manuel Quezon to be associate justice of the supreme court. On December 24, 1941 (after war was declared on Japan) President Quezon again appointed Dr. Laurel—this time to one of the most important positions in the Philippines, the post of Secretary of Justice. When Manila was about to fall and President Quezon was preparing to go to Corregidor, he sent for Dr. Laurel and told him he wanted him to go along in advisory capacity. However, at the last hour Quezon decided, on account of Dr. Laurel's popularity with the Filipinos that Dr. Laurel should stay in Manila, and President Quezon instructed Dr. Laurel to remain and help protect the people. President Quezon's instructions to Dr. Laurel were given with the knowledge and approval of General MacArthur. General MacArthur's instructions were that the Filipino officials could serve in the Japanese-sponsored organization in order to better protect the people, but General MacArthur admonished them that they must not take the oath of allegiance to Japan otherwise they would be shot by his order upon his return to the Philippines.

The late President Quezon was a patriot of the highest order. It was a signal honor which President Quezon paid to Dr. Laurel when he, the President, instructed Laurel to remain and help protect the people. In October 1943, Dr. Laurel was made President of the Republic of Philippines by order of the Japanese who were occupying Manila. Dr. Laurel served as President under Japanese occupation from October 1943 until February 1945. Laurel was carrying out the instructions of his President (who was in Australia) by remaining in Manila and trying to cooperate with the Japense in order to better protect the Filipino people.

When Laurel was appointed president he selected the late Manuel Roxas as chairman of the economic planning board, and as such Roxas was an ex-officio member of Laurel's cabinet. President Laurel and Roxas worked out an exceptional plan that materially helped in coping with the food shortage.

They saw to it that the Filipinos received rice rations. Roxas was a patriot. No one accused Roxas of being a traitor. Roxas was elected president in 1946.

Also when Laurel became president he appointed men of the highest type to serve in his cabinet. The man who is now president of the Republic of the Philippines, Hon. Elpidio Quirino, served in the cabinet of President Laurel. No man has ever dared to challenge President Quirino's patriotism. No one has accused President Quirino of being a traitor. Men who were appointed to high places by President Laurel were later appointed to high places by President Roxas and by President Quirino.

Dr. Laurel's greatest obsession is his uncompromising opposition to communism. Dr. Laurel told me in February 1947, that communism is the world's greatest menace. Dr. Laurel told me when I was in Manila in 1947 that the happiest moment of his life was when the American soldiers reached Manila and freed the Filipinos from the oppression of Japanese rule.

Dr. Laurel is a statesman in every sense of the word. He is a learned man. Intellectually, he has no peer in the Philippines among the living or dead. He is a religious man and daily worships God. Often when I have been in his study in his home in Manila (also in his law office where he daily receives scores and scores of friends who like to visit with him) I have seen Dr. Laurel on bended knees in silent prayer. Dr. Laurel has a private chapel in his home where he spends a portion of his time in prayer each day.

In 1947 Dr. Laurel told me that he could not understand why any person would try to create the impression that he is anti-American. He said that some of his best friends are Americans and he corresponds with them regularly. Many Americans who attended classes with Dr. Laurel at Yale University keep in touch with him by correspondence. In America many prominent Americans who know Dr. Laurel have told me fine things about him. Just recently I received a letter from a prominent United States Senator in which he mentioned Dr. Laurel. Many Americans, upon learning that I visited the Philippines, asked me about Dr. Laurel. One of Dr. Laurel's teachers was an American lady. She lives in Georgia or Tennessee. Dr. Laurel writes to her regularly. He told me that when he comes to the United States, the first thing on his program will be to pay her a visit. As a matter of fact, I think he told me that he has already made one visit to see her at her home.

In a letter which I received from Dr. Laurel, dated October 21, 1948, he made the following statement: "Sometimes I wonder why certain persons are bent on discrediting me before the American people. America has been our benefactor in many ways and I am grateful to America for her sincere and altruistic spirit in the rehabilitation of our country after the ravages of the last war." And again in February 1949 when I was in Manila, Dr. Laurel said to me: "It is an insult to our intelligence to say we dislike America. What would we have done without America's help? We were a conquered people and our homes and all business were destroyed by the Japanese. America came to our rescue and liberated us. I have always been grateful to America for the help given to us before the Japanese came; and I shall always be grateful to America for liberating us and making us a free people, as well as for the wonderful aid given to our country and our people since the war."

And, in closing, I should like to quote a short letter which I received from Dr. Laurel just a few days ago. The letter is dated Manila, May 27, 1949, and it as follows:

"Thank you for your congratulatory radiogram. Now that I have been chosen to carry the people's banner for a clean and honest government, I can start the intensive campaign which I could not do before my nomination on May 22, 1949. I have full faith and confidence in the ultimate justice of the people. With God's aid, victory will be ours. With warm personal regards."

Sincerely yours,

P. W. REEVES.

CARE Book Program

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 5, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of June 24, 1949. I hope it may soon be possible to get action on my bill H. R. 5186, which would implement this important program:

A NEW CARE PROGRAM

In its appeals for help for the needy in Europe, CARE has made effective use of the slogan "Our Friends Abroad Are Hungry." The organization has now announced some of the details of the program with which it hopes to meet another kind of hunger, the hunger of the mind, through the dispatch of scientific and technical books to libraries abroad. A service of this sort is what one would have been led to expect from an organization that has shown how sensitive it is to need and how competent it is in meeting it. That proved competence should invite the fullest support for the program.

Dr. Evans, Librarian of Congress, has indicated that books would be chosen as a defense of our way of life and thus make their contribution to better understanding. Presumably he has in mind that this is one "Voice" program that can't be jammed. But we like to think that our way of life itself includes such things as wanting to supply books for libraries whose stocks have been destroyed and wanting to provide the tools of learning for those who wish to learn. That is, or ought to be, our way. CARE is again blazing a trail in good works and its support is again urged.

Washington Reporting

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 8, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include my column which appeared in the Allegheny Advance Leader on June 23, 1949:

WASHINGTON REPORTING

There seem to be so many so-called spy trials going on at one time that someone looking down on us from Mars must wonder about our political stability. Here in Washington, one trial, that of a former employee of the Justice Department, charged with delivering American secrets to the Russians, has had repercussions in Congress as well as in the executive branch of the Government.

This Washington trial has brought into the open the vast amount of informing American citizens are telling the FBI about their neighbors. In almost all instances, such reports are sheer hysteria, and are based upon personal dislike or suspicion. They represent a method of doing harm to others, while at the same time avoiding the penalties of personal exposure.

The Washington Coplon trial has actually done some good on this score, for it has brought into the open the names of the informants as well as the statements they have submitted to the FBI. These persons who thought they could tell on their neighbors without their neighbors finding out about them are now being shown up for what they are.

I believe it is important for any of us who learn that an individual is not working to the interest of the United States to make that information available to the FBI or other proper authorities. But I do believe that these informers must feel their information is so accurate that they would be willing to be named as informants in the press or in court. Those who are eager to make charges against the character of another must be willing to face the accused and repeat the charges openly.

There is another question related to these spy trials that has also come in for fair amount of discussion in Congress as well as in the magazines and papers. This is the question whether persons of questionable political beliefs should be allowed to teach in our schools and colleges. There seems to be a growing fear that the present generation is less able to sift through all opinion and come up with the right answers than our older generations. I for one find such a thought preposterous. I have faith in the ability of the youth of this Nation to draw democratic solutions after studying all ideologies.

In a discussion with some of my colleagues last week, I was hurt by the lack of faith some of them had in our youth. Erroneously, some thought that the best way to keep our youngsters democratic was to keep them isolated from all other types of thinking. To me, this is the surest way of keeping the coming generation from preparing itself to take over the management of this great country of ours.

In Czechoslovakia, the great Charles University recently expelled all students and faculty members who did not agree with the political beliefs of the Government. To me, this signifies the end of academic freedom for that country. Yet some of my colleagues who agree with me on the meaning of the action taken at Charles University do not see a parallel between that action and their own proposal to do exactly the same job in American schools.

I have faith in our people. I do not believe they will ever turn from their great desire to expand personal liberties. I believe that those who work for foreign governments should be exposed. But I do not believe that we are so weak that the existence of a few persons working for foreign nations should cause us to quake in our boots and make us adopt undemocratic methods in order to keep us democratic. If we abolish freedom of speech in order to prevent a few persons from talking have we gained anything? If we end academic freedom, are we preparing our youth for the world of tomorrow or are we hastening the end of democracy? These are vital problems today for all Americans.

Antireligious Activities

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. MULTER. Mr. Speaker, from time to time I have directed the attention of the House to antireligious activities not only in this country but throughout the world. In recent months such activities have been on the increase, particularly in various parts of the Eastern Hemisphere. The following item by John A. Heffernan, of the Brooklyn Eagle, which appeared in its issue of July 6, is another good summary of the situation. I agree with Mr. Heffernan that it is high time that the United Nations took official cognizance of this situation.

HEFFERNAN SAYS "AND WHY IS THE UN SILENT?"

It ought to be manifest to all ministers of whatever religious denomination, and indeed, to all who profess faith in the moral values of religion and its indispensability to the civilization we have known that there is something more than a mere political question at issue in Russia's satellite countries.

It has been proven that under the reign of the Communist governments Protestant, Roman Catholic, and Jew alike have suffered persecution. The Moslem groups also have felt the rod of the little tyrants who would substitute the teachings of Marx, Lenin, and Stalin for the Old and New Testaments, the Talmud, and the Koran.

It happens that the blows aimed at leading members of the Roman Catholic hierarchy in countries which have been predominantly Roman Catholic have attracted the most attention. There was drama of high quality in the arrest of Archbishop Stepinac and his kangaroo court trial. Even more startling was the arrest and trial of Cardinal Mindszenty, who had first suffered under the Nazis.

And now comes the case of the entire Roman Catholic hierarchy of Czechoslovakia under the leadership of Archbishop Joseph Beran, who has taken the same precautions against his possible arrest and torture that the Hungarian cardinal took prior to his incarceration.

The threats of the Red politicians have not daunted the Czechoslovak bishops. Despite the government decree, their pastoral letter read in every church was a recital of tyrannical acts of suppression, of subversion of schools and silencing of the press and sequestration of church property. It was in line with Stalin's professed policy, which aims at the destruction of men's souls, and the use of such churches as have the government sanction, as political agencies. We are unfamiliar here with those political practices, but Europe has known them ever since the days of Christ.

Isn't it becoming clear to us here that freedom of conscience is under threat among us? Bishop De Wolfe, head of the Protestant Episcopal Diocese of Long Island, not long ago issued a warning against ultra liberalism that strangles liberty. But our guest and creation, the United Nations, erected to guard a peace that has never come, has no word of protest to make against violation after violation by Russia and her satellites of the agreements as to the liberation of the Nazi-dominated countries of the Old World.

You Cannot Bend a Principle

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1949

Mr. CURTIS. Mr. Speaker, our distinguished colleague, the Honorable DONALD L. JACKSON, of California, made an inspiring address at the convention of the Nebraska Young Republicans held at Hastings, Nebr., on the 3d day June 1949. I wish to extend my remarks by including Mr. JACKSON'S address, which is as follows:

Mr. Chairman, ladies and gentlemen, fellow Republicans, it is a great privilege, a pleasure and an honor to be here in Hastings with you tonight. No doubt your last convention was during the period when we were all hopeful, yes even overly sanguine, about our chances for victory in November of 1948. There seems to be no sense in laboring overmuch the reasons for our defeat. Suffice it to say that circumstances combined to make last November 2 a fitting day for the donning of sack cloth and ashes rather than for the crowning of our brows with wreaths of laurel. We had, during the months immediately preceding the election of last fall, every reason to believe that the American people were sickened by the continuance of a socialistic program which combined the worst features of the pork-barrel system of government with the squandermania of an administration running rampant over the constitutional rights and the legal prerogatives of a great people. We felt certain; and our optimism was reflected by all keen observers of political trends, that we were at long last to achieve the victory which had eluded our grasp for so many years. What transpired on that fateful second of November last, will furnish the subject for political post mortems for many months to come, but what is eminently more important, that day proved to Republicans everywhere the need for a revaluation and a reassessment of our position. Our task now is not so much to review what has already transpired, as it is to build something new and vital in the way of a political program which we can take to the people of this country in 1950 as we attempt to regain possession of the legislative reins, so necessary to hold in our hands if we are to maintain our great country and the system of government which served to make it great.

We were, last fall, a party not only divided in fundamental concepts, but a party of divided counsel. There were those who conceived the proper course of action to be a fighting campaign in which the deeds of the much-maligned Eightieth Congress would be taken directly to the people in a positive way, in order that they might better know and understand what had transpired during the 2-year period when the Republicans had held a working majority in both Houses of the Congress. The other school of political thought within the Republican Party felt it better to conduct a campaign of broad generalities, generalities based in a natural desire for harmony and understanding among all shades of American political thought. The latter group prevailed, and we embarked upon such a program as was desired by it.

It is not my intent, nor is it my desire, to engage in idle recriminations. We should not be "Sunday morning quarterbacks," discussing when and where our fumbles occurred. Rather it should be our purpose to seek out, as best we can, the reasons which led directly to the fantastic upset of which we were the victims. Millions of words have been written on this subject. Other millions of words have been spoken over the radio networks of the country. Political pundits have assigned a score of varying reasons which they allege led to the defeat. Far from being a political crystal-ball gazer, able to forecast with any degree of accuracy coming events, I confess to considerable bewilderment in looking back on the campaign waged by the Republican Party. As individuals, we are limited in our field of vision, and we are largely prescribed in our outlook to that field of activity with which we are most closely and intimately associated. Thus it is that I must interpret events on the national scene with respect to events as they transpire within my own congressional district. My conclusions are therefore based in the personal experience and the personal observations which I was able to make during the course of the election in the Sixteenth Congressional District of California.

A few words in description of my district might be well at this time to properly set the stage for your individual understanding of the conclusions I have drawn. My district is a most representative one. Aside from the fact that it numbers many thousands more of Democrat registrations than of Republican registrants, it is a typical American community. Upon the close of registration in the Sixteenth California District, prior to the election of last fall, registration figures showed 105,828 Republicans, or 39 percent of the total registration. Democrat registrations accounted for 142,542 registered voters, or 53 percent of the total. Another 20,389 registrants were divided among the minor parties for a total of 8 percent. It is reasonable to assume that the twenty thousand-odd voters in the minor parties represented political thinking more closely approximating the Democrat than the Republican. It was obviously necessary for any Republican candidate to carry a very large number of Democrat voters along with him if he was to achieve victory.

This condition in turn opened up two possible courses of action, as follows: (1) Conduct an extremely nonpartisan or bipartisan campaign, which avoided as much as possible those issues in fierce contention, or (2) conduct a two-fisted campaign predicated upon sound accomplishment and solid principles which had long since proved their worth. You will recall that issues were in no way lacking during the course of that campaign. Probably the prime issue of widest interest was the record of the Eightieth Congress. President Truman, on his famous nonpolitical tour, and later during his very exhaustive trips into the several States, hammered without surcease at the record of the Eightieth Congress. There can be no question but that his job of unselling the American people on that Congress was most effective, and probably played the major role in the verdict that was finally returned at the polls on November 2. On our side there was a tendency to play down the activities of Congress in such matters as management-labor legislation, income-tax reduction, rent control, and the several very substantial contributions to the system of free, legal, and competitive enterprise which had been written into law. The people of this country during the summer months of 1948, were hearing but one side of a story, and they heard no effective rebuttal. They were, in effect, looking at but one side of a legislative coin. They were quite rightfully demanding specific answers to specific questions, and this was as true in the First District of New York as it was in the Sixth District of Ohio, the Tenth District of Illinois, or the Sixteenth District of California. My experiences indicated that they were not condemning per se the activities of the Eightieth Congress, but they were rea-

sonably demanding that the other side of the story be told—that the other side of the coin be exposed. It was here, I believe, that we made our first grave mistake, a mistake which was to pay off in tragic dividends. Combine this unceasing attack by the President upon the Eightieth Congress, with a program of promises directed at every strata of our national society, and the campaign of attack and promise last summer commenced to bear its bitter fruit. We could not, nor should we, as the party of sound principle, have attempted to match President Truman promise for promise, nor demagog for demagog, but we should have pointed out with devastating logic the total impossibility of ever having the many pledges and promises redeemed by the Democratic administration after the election.

My campaign was waged solely upon the issues. What I have to say with respect to the race in my district I say modestly, because I know, as you know, that the actual contribution of any candidate to a campaign is very small when compared to the work done by the volunteer workers in the grass roots. Frequently, as a matter of fact, the workers have a terrible time selling a candidate time and time again after he has succeeded in unselling himself.

It has long seemed to me that the main strength of the Republican Party is a spiritual one. We have been for many years a party which has built its greatness upon certain basic and fundamental premises. When we have stood firmly for these basic principles we have seen the star of Republicanism in the ascendancy. When we have wavered in our determination not to compromise or yield ground to political expediency, outside pressures or opportunism, we have inevitably lost ground to our political opposition. The principles we espouse, those things in which we believe, are not new innovations in government. They are the things which men and women of all ages have struggled to achieve. One of these principles is a firm belief that the less government inflicted upon a subject people, the more adequately that people will work out a sound political, economic, and social destiny for itself. We Republicans also believe firmly in the right of a citizen to exercise control over legally acquired private property. We believe that character and greatness are best forged in the flame of hard work, thrift, and initiative, and that the incentive to possession—to improvement—to a better economic place in the sun, have been the finest expressions of the era which saw this great land achieve a foremost place in the world. We do not believe that the security of a cow in a slaughterhouse pen is compatible with personal freedom of legal action. While we recognize that the trained canary in its cage represents a high degree of personal security, we contend that man in a like condition is a creature of no dignity whatever. We are convinced from a study of history that people who have exchanged their liberties for a narcotic of false and expensive security have, in the natural and normal course of events, exchanged freedom for slavery. We recognize, as does any civilized people, the necessity for caring for the aged and the meritorious indigent. Ours has been the party which has ever been diligent in the defense of the rights of minorities. It can truly be said that we have been the party of constitutional rights and of constitutional liberties under law. The Republican Party has never been a party of rash promises, and it has never made an appeal to the baser nature of men in offering something for nothing. It has realized, perhaps more than any other political party in history, that to promise reward without effort is a fraud and a delusion. We have attempted to maintain a strong Federal structure within the framework of a reasonable and balanced budget. We have recognized the fact that largess placed in the right hand of a petitioner must, of necessity, be taken from his left pocket. There are those whose idea of political philosophy is hinged upon the premise that human rights are by nature superior to property rights. We take no issue with this premise but we Republicans do say that unless we have sound fiscal operation, we cannot properly guard the human rights we all hold in high esteem.

The socialized state when viewed from afar is an achievable utopia. It professes to offer so much in return for so little. It holds out to the hopeless a hope, to the impoverished a share in the wealth of the Nation, to the disillusioned a promise of a better life. But we are not interested in the theoretical advantages to be conceivably gained by embracing a system of state socialism. We are quite rightfully concerned with facts about how this system works in actual practice. The record on this score is not good. In our day, as young as we are, we have seen the plight of nations which have hastily shrugged off the mantle of a free and competitive economy and have gathered about themselves the rosy cloak of state socialism. The reasons assigned for this change of economic clothing have been many and varied. Many of the nations which have embraced socialism or communism have done so because of an economic situation which found 98 percent of the wealth of the land in the hands of 2 percent of the people. Any change under such a set of economic conditions would certainly be preferable to the system of exploitation imposed by such a division of the world goods. But can it honestly be said that those who espouse state socialism for this Nation, do so for the reason of inequality in the matter of national wealth. Can they seriously claim that their concern for the welfare of the so-called common man (and how I detest the term), moves them in the direction of a course of action which would necessarily, and by its very nature, make the Government a virtual dictator over the lives and the property of every American citizen. Can they say that in this great land where free labor and free capital, working hand in hand, have created the most magnificent concept in modern times, needs or requires the proven failure of state socialism? No; ladies and gentlemen, I think not. To my mind, this quest for additional power on the part of government is but another chapter in the unceasing struggle between governments and peoples, with government grasping for power on the one hand and a people resisting the effort on the other. The great saga of America has not been without its black pages, but with its admitted shortcomings it still offers the greatest hope for the future of men and women everywhere. We must then, in our quest for the better life, be ever on the alert to see that the fundamental threads which hold our way of life together are not severed in our attempt to weave into the pattern of our ways new and novel threads.

The uncertain course of legislation in Washington today leaves much to be desired. Without unduly lauding the work of the Eightieth Congress, it can be said in all honesty that by this time a year ago that Congress had achieved considerable in the way of legislation. The Republican majority at that time was a team, working in complete harmony toward definite goals. Today the picture is entirely reversed. The Democratic administration, beset on all sides by clamoring pressure groups demanding the redemption of campaign pledges, finds itself upon the horns of several dilemmas. The President, intent upon the construction of a new and novel form of society, is demanding an increase in the tax burden already being carried by the American people. While the Democrat committees on Capitol Hill mill around in what can only be described as the abysmal mazes of confusion, the President lashes forth in dubious language at individuals who have the temerity to criticize his military aide, General Vaughn, for accepting a decoration from the totalitarian regime of Peron in Argentina. Bickering and dissension are the order of the day, with malcontents within the administration itself needling their Democrat colleagues. Wage-and-hour legislation hearings have been marked by heated tirades, and the same is true of the proposed extension of Federal rent controls for a period of 2 years. If the able Speaker of the House, SAM RAYBURN, had any hair, it would doubtless have turned white since the Eighty-first Congress convened on January 3, last. The party of victory on last November 2 is a party of internal conflict today, with its component parts ranging all the way from the near-Fascist right to the near-Communist left. Each faction of the party believes itself anointed to carry out the uncertain and obscure "mandate" of the people. Which brings us back again to the question, "What did the people of America intend in the last election?" Did they intend that the Administration should open up a broad highway to the socialist state, or were the voters of America simply expressing their disapproval of a campaign which cannot, by any stretch of the imagination, be termed a brilliant one on the part of the Republican Party? We Republicans had a God-given opportunity to nail our colors and our principles to the masthead in the last election, and to let them float free to be seen by all. We had an opportunity to stand up and be counted as the party of constitutional government. I say, without personal recrimination of any kind, that we missed the boat.

We must now attempt to retrieve our losses, losses which are not confined to prestige alone, but which number many able and fine representatives of the people. We cannot, nor should we attempt the regeneration of Republican fortunes in a campaign designed to outbid, out-promise, and out-spend our Democrat opposition. To do so, would be fruitless, not only because it would eventually result in national bankruptcy and disaster, but because it would represent an ignominious retreat into unconditional surrender. We must take some very positive, and in some quarters, very unpopular positions if we are to hold steady to the path of sound principle which has been the guiding light in the history of the Republican Party. We cannot contend, in all honesty, that Government has a right to exercise control of an individual's legally acquired property, whether it be by outright confiscation or by the slower but nonetheless effective device of Federal rent control. To acknowledge the right of Government to control real property holdings is the opening wedge which will eventually result in the abdication of all our rights with respect to all types of property, real or personal.

This great country and the continued existence of our two-party system of government requires the immediate establishment and the maintenance of a strong party in opposition. Fate, and the voters, have decreed that this is to be the role of the Republican minority for the next 2 years. It is my feeling that we cannot do less than to furnish that opposition which may have the effect of turning us back from the morass of socialism to which we appear headed at the present moment. Neither can we be intellectual cowards in our approach to

these questions, the type of cowards described by the Omaha World-Herald in its editorial of January 26, God Hates a Coward. There is little doubt that many of us have been cowardly and derelict in taking the path which appeared to be the popular course, without respect or without regard for the principle involved. Political opportunism and expediency are constant lures which have a great attraction for an harassed and overworked legislator, but we must all realize that to yield ground in the face of organized pressure is to condemn the Republican Party to an irrevocable loss of a sense of fundamental values. We must raise up the strength of our convictions against the tide which threatens to sweep away the foundations of a great and good way of life. We must have spokesmen who dare to speak lines that may not be universally popular. We need an order of statesmanship which is prepared to furnish a standard of substantial opposition around which the people of America may rally with hope and not with a sense of frustrated despair. We must reaffirm our belief in moral courage and in loyalty to our American institutions and ideals to which the opposition pays nothing more than the lip service of demagogues.

America, for want of that determined opposition, is drifting out of smooth water into the hazardous rapids of an unknown experience. The power to tax is being twisted into a weapon to destroy. One by one those things which constitute the foundation work for individual freedom of action, are being taken from us, and in return for the handling over of our Bill of Rights, it is proposed that we receive in return a sheet of bureaucratic documents to be filled out and returned at the earliest moment.

Human initiative and human enterprise, battered and worn from long years of futile and unsupported struggle, appear to be lying upon the deathbed. Our system of free capital and free labor staggers under the attack of the advocates of the social state.

The challenge is ours to meet or to flee. To do the latter is to sentence our land and the people who populate it to a short period of disturbed and narcotic-induced slumber, followed by the sad awakening to the realities of life in a government-dominated state. In the words of the Omaha World-Herald, "The Republican Party can keep on crawling ignominously along the dusty trail of an order it abhors but shirks from challenging. Or it can rise out of the dust of four merited defeats, stand erect and unafraid, proudly to take up the battle for all that free men prize."

There is no honorable alternative which we can follow. The immutable law of compensation decrees that for everything received, a price must be paid. The price of individual freedom of action under law—the end goal of mankind—is too great a price to pay for the small and uncertain measure of security which would be accorded by a socialist America.

In the beginning of my talk I mentioned the factors which entered into the election in my district. I had a very determined campaign organization, comprising both the older Republicans and the younger Republican groups. We early held a council of war upon this very matter, and it was unanimously decided that the issues should be faced without fear of consequences, and that all the people of the district were entitled to receive definite answers to definite questions. This was the type of campaign which was conducted. It was a bitter, hard-fought, and exhausting program. It was a campaign in which those who spoke for me gave the same answers to the left wing as were given to the merchants and manufacturers. My campaign was waged in opposition to socialized housing, increased tax rates, Federal rent control, a reinstatement of controls and rationing on consumer goods, socialized medicine, and any and all adjuncts to the social state which came up from time to time during the course of the campaign. By the same token we affirmatively expressed an intention to support Federal antilynch legislation, antipoll-tax legislation, Federal aid to education, and the bipartisan foreign policy. Upon the conclusion of the campaign there were no questions left unanswered in the minds of the people of my district. My speakers bureau, and more particularly the young Republicans of my district, did a bang-up and magnificent job. They carried the fight into the bailiwick of my left-wing opponent, and the fruit of their efforts were somewhat astounding, to say the least. You will recall that only 39 percent of the registered voters in my district are Republicans. In spite of this, when the ballot boxes were opened on the night of November 2 the voters of my district, 80 percent strong—and I repeat that figure because a large vote is generally believed to be beneficial to the Democrats—80 percent strong had gone to the polls and had voted for certain Republican principles—American principles—in which they believed, Republican and Democrat alike. My opponent, following the tried and true Democrat tradition of promise and promise again, polled 90,000 votes. We polled 121,000 or 57 percent of the total registration, two and one-half times the majority we had gained in 1946. You will notice that I do not say that the people voted for me. Rather, I stress the fact that they voted for certain principles. This is an important point to be remembered. Candidates come and go. Politicians can be bought and sold. Just the other day it was discovered that a ray of light can be bent between its source and its objective. Almost anything in the world can be accomplished today except the bending of principle. Let us set up our standards as a rallying place, and let us go forth into the battle with confidence in ourselves and in a way of living that has offered, and offers more today to the average man, than any other way of life has ever approached. This may cost us not only the next election but the election after that, and the one following. However, as certain as truth and as certain as the unchanging laws of nature, we shall win through eventually, and the victory will be the more satisfying when it comes, by reason of the fact that we can look each other in the eye with a clear conscience and with the certain knowledge that what has been won represents a victory for all men and women of good will everywhere.

Curtailment of Oil Production in Texas

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution adopted by the Texas State Senate regarding a serious situation being caused the oil industry because of foreign crude oil imports. The Railroad Commission of Texas has found it necessary to reduce the production of oil in Texas 15 percent and our school system in turn will face a loss of revenue because of this curtailment. The senate resolution deserves serious consideration as the oil industry of this Nation serves us well both in peace and in war.

Senate Resolution 21

Whereas a situation exists concerning the oil industry of this State which directly seriously affects and threatens the economic structure of this State; and

Whereas the greatest problem that is facing the economy of this State and endangering its future revenue is the mounting importation of foreign crude oil; and

Whereas the Railroad Commission of Texas in January 1949 found it necessary to reduce the production of oil in Texas approximately 10 percent, and again for the month of February 1949 it was necessary for the commission to reduce the allowable of crude oil in Texas another 5 percent; and

Whereas this 15-percent decrease in production below Texas wells' maximum efficient rate of production will cause Texas to lose $15,000,000 per year in taxes from the production of crude oil; and

Whereas there is today being brought into this country approximately 625,000 barrels of crude oil each and every day, which imported oil has replaced Texas crude in the domestic market in this Nation approximately 350,000 barrels per day; and

Whereas the imports of foreign crude oil into this country can be expected to appreciably increase in this Nation and in Texas, thereby further decreasing domestic demand; and

Whereas it is apparent that unless remedial steps are taken by the proper authorities to arrive at a fair quota for foreign imports of oil, the oil industry in Texas will be not only seriously curtailed in its operations but further developments of Texas' greatest natural resource might come to a complete halt; and

Whereas the Nation's economy, welfare, and security require a policy on petroleum imports which will encourage exploration and development efforts in the domestic industry, and which will make available a maximum supply of domestic oil to meet the needs of this Nation; and

Whereas the operation of the schools of this State, and other functions of State government depend largely upon the continued development of our greatest natural resource for revenue; and

Whereas the present alarming increase of importation of foreign crude oil, coupled with the sharp decline in demand for Texas crude oil, is an immediate and pressing problem of concern to every person in Texas; and

Whereas it is estimated that the present decline in demand for Texas crude will cause a drop in the comptroller's estimate of 1949 covering expected revenue from oil production, amounting to approximately $40,000,000; and

Whereas the very structure of the economy of this State is seriously endangered; and

Whereas our national security depends largely upon the development of new domestic reserves of oil for use in order that this Nation shall have ample domestic supplies of crude oil for use in time of war: Now, therefore, be it

Resolved, That the Senate of Texas call this most dangerous condition affecting the people of Texas and Texas' greatest industry to the attention of the Members of Congress; and that copies of this resolution be forwarded to the Members of the Texas delegation in Congress.

[SEAL] ALLAN SHIVERS,
President of the Senate.

I hereby certify that the above resolution was adopted by the senate June 14, 1949, by the following vote: Yeas 28, nays 0.

GARLAND A. SMITH,
Secretary of the Senate.

To Head Off the Coming Depression

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, July 8, 1949

Mr. MULTER. Mr. Speaker, the following article entitled "To Head Off the Coming Depression" which appeared in the July 4 issue of the New Republic is worthy of the careful scrutiny of the Congress:

TO HEAD OFF THE COMING DEPRESSION

A serious depression is on the way.

It can be prevented.

Only the Government can take the necessary steps.

Action is needed at once.

These are the main points in a bold, sweeping, and comprehensive proposal just put forward by the Public Affairs Institute, of Washington, D. C. The work of Dewey Anderson, executive director of the Institute, and Wilfred Lumer and John Schott, two of his associates, the study is based upon information which was supplied by a number of governmental agencies.

The present recession is much more serious than is commonly reported, this document points out. The number of unemployed is estimated, as of about 6 weeks ago, at 3,300,000 (other, unofficial guesses late in June said 4,000,000). The Institute predicts, if the Government does nothing to remedy the situation, it will be close to 6,000,000 by the end of this year and nearly 8,000,000 by mid-1950. This situation is not, according to the Institute, just "frictional unemployment," representing people between jobs. Neither is it students out of school or workers on vacation. While it partly represents new workers coming into the labor force, the chief item is 1,900,000 who have lost nonagricultural jobs in the past 7 months.

Already, 5.3 percent of the civilian labor force is unemployed, almost double the rate of October 1948. Less than full employment is estimated to have cost the Nation in the first 3 months of 1949, $13,000,000,000 in goods and services at annual rates. The loss in goods and services which we might enjoy if full employment were to be maintained, is now running at the rate of $23,000,000,000 a year and for fiscal 1950 will be at the rate of $50,000,000,000.

There is good reason to believe that the present downward trend in business and upward trend in unemployment will grow rapidly worse unless the Government takes vigorous measures. The pipe lines of supply in every type of consumer goods are now full; the backlog of orders for steel has now disappeared; steel production has sunk from 102 percent of capacity to 89.1 percent, as of the date of this study. (By June 20, it had gone down to 84.4.) In automobiles, the backlog of orders will soon be gone. The labor force will be augmented by veterans coming out of school and increased numbers of women seeking jobs.

The loss in income caused by unemployment also means a loss in Federal revenue. If economic activity continues to decline at the present rate, the Federal deficit next year will be at least $7,000,000,000. A deficit would have been probable in any case, but if full employment were continued and maintained through 1950, it would not have been much more than $1,000,000,000.

The institute points out that this problem of the Federal deficit cannot be solved by a drastic slash in the operating costs of the various Federal departments. It agrees that waste should be eliminated wherever possible, on principle; but it argues that deep reductions now would only make matters worse.

What steps should the Government take to keep this recession from turning into a really bad depression? The Institute for Public Affairs names 10 of them:

First, in order to increase consumer purchasing power, raise the tax exemptions in the lower brackets and reduce the rates in the middle brackets.

Second, extend for at least another year the special unemployment benefits for veterans which are scheduled to expire this month.

Third, advance the date of payment of the special dividend on veterans' insurance from early 1950. This sum is more than $2,000,000,000, or an average of $175 for each veteran.

Fourth, increase social-security benefits, extend the coverage and increase the Federal contribution toward public assistance benefits to at least $2,000,000,000 annually.

Fifth, begin immediately a substantial program of emergency public works, including projects for white-collar workers who are not qualified physically for heavy construction operations.

Sixth, liberalize the provisions under which many veterans are now attending school or college, so that they can continue education a little longer and not compete quite so soon for scarce jobs.

Seventh, arrange a similar plan to extend the education of particularly well-qualified young people who are not veterans.

Eighth, reestablish the Civilian Conservation Corps giving a year of healthful and useful outdoor work to many young men.

Ninth, strengthen the Employment Service, and as a part of this, enable it to help transport workers and their families to areas where jobs are available.

Tenth and finally, reexamine all aspects of our economy to the end that policies in regard to taxes, wages, profits, credit and corollary subjects shall be geared to continue expansion of the economy and increasing levels of consumption.

House Appropriations Committee Praised for Its Alertness

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 7, 1949

Mr. RABAUT. Mr. Speaker, today, when we are rightfully turning to economy thinking and when, from all sides, we hear the loud and persistent cries of "Cut," "Curtail," "Limit," "Save," and so forth, it is pleasing to note that some of our citizens are conscious of the fact that the Federal Government is in a look-before-you-leap frame of mind.

The House Appropriations Committee, of which I am happy to be a member, is the object of commendation in a letter in the Washington post recently. Since in these days this is such a rare occurrence and, under leave to extend my remarks in the RECORD, I include the following article:

ALASKAN TIMBER LANDS

The House Appropriations Committee deserves the gratitude of all decent Americans for the action against which William L. Baker, editor and publisher of the Ketchikan (Alaska) Chronicle protests in his letter of May 23.

The $9,000,000 which the House Appropriations Committee refused to appropriate for pulp mill access roads in Alaska would have been spent to consummate a scheme which competent critics have called the most outrageous land grab since Teapot Dome.

Twenty-three Protestant denominations, represented by the home missions council, as well as leading Protestant, Catholic, Jewish, and nonsectarian civic organizations and magazines have protested against this scheme, which contemplates relieving the Alaskan Indians of their valuable timberlands and turning their timber over for a song to favored companies.

In the face of these Nation-wide protests, the scheme has been having tough sledding. Several responsible firms have decided not to deal in hot timber. Mr. Baker and some of his associates have therefore undertaken to secure substantial Federal subsidies for less squeamish investors. Scruple-swallowing timber companies were informally promised $9,000,000 of public funds for private timber roads which they would otherwise have had to pay for themselves.

Such roads would serve no public purpose, they would lie within a private lumber company empire; they would be used for transporting what the Catholic Commonweal calls expropriated timber taken from displaced Alaskans. These roads would represent the final step in what the Christian Century calls the plundering of our oldest racial minority.

FELIX S. COHEN.

WASHINGTON.

Beware of Buying Security at the Price of Slavery

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, July 8, 1949

Mr. McCULLOCH. Mr. Speaker, in the Columbus (Ohio) Citizen of July 3, 1949, there appeared a truly great editorial. In my opinion, it is well worth the reading time and the thoughtful consideration of everyone. The editorial follows:

BEWARE OF BUYING "SECURITY" AT THE PRICE OF SLAVERY

Once upon a time in these United States of America a large minority group "enjoyed" a form of security which met most modern definitions.

They had no fear of unemployment. They had food, housing, and medical care. They need have no economic fears for the future. It was all carefully planned for them.

One thing was lacking, and its lack made a mockery of all the others. They lacked liberty. They were slaves. We fought a bitter war among ourselves, nearly 90 years ago, to free them.

The millions of another country which sweeps for thousands of miles across the top of Asia had neither liberty nor security.

For hundreds of years they had lived in bitter want while the peoples of the free countries to the west passed them by. They had lived in virtual slavery to their masters, a small ruling caste.

A little over 30 years ago there was revolution in Russia. The Russians slaughtered

each other but the end sought was not, as in America, establishment of liberty.

The watchword was, instead, security. In Russia today there is no unemployment, no fear of it. The Russians have food, housing, and medical care. They need have no economic fears for the future. It is all carefully planned for them by a new master class.

The Russians, like the American Negroes of the last century, lack the one thing—liberty—which can give any meaning to the other so-called "four freedoms."

They are socially secure in their poverty and degradation. Secure to live crowded into shacks; secure against unemployment; secure in the knowledge that there will be work for them to do, in government factory, plantation, or slave camp, so long as they can lift a hand.

And yet, so irrational are human emotions, a large part of the world looks to this modern form of slave security with admiration.

Even while scorning the term "communism," free nations to the west tend to copy the Russian system. Gradually limitations are placed on liberty; gradually the state encroaches on individual human freedom of action.

Even in our own country, founded in liberty and dedicated to the proposition that all men * * * are endowed by their Creator with certain inalienable rights * * * life, liberty, and the pursuit of happiness, there is insistent demand that the state take over.

We are not afraid of chains. But the lesson of all history—ancient and modern—is that once economic authority is usurped by or surrendered to central authority, liberty goes with it.

And without liberty there is no real security of any kind; only the deadly monotony of the penitentiary or the slave camp.

Tomorrow is Independence Day, celebrating the one hundred and seventy-third year of freedom from a tyrant who, compared to the modern Caesars, was benevolence personified.

A country lawyer, speaking in a Virginia meeting house, electrified the country back in those days.

"Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?" demanded Patrick Henry. "Forbid it, Almighty God."

These sentiments are scorned today on many fronts by scheming power-seeking men who beguile the unwary with promise of bread and circuses; by maladjusted intellectuals who would peddle their birthright for a sop to their rankling frustrations.

This is the day to think these things over, lest we carelessly toss aside the liberty we won 173 years ago, and with it the whole basis of the record genuine security the Americans have achieved in almost a century and three-quarters of patient effort.

Less Regulation for Gas Lines

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Business Week of July 2, 1949:

LESS REGULATION FOR GAS LINES

Users of natural gas will probably pay more for their fuel soon. These are two causes: (1) A Supreme Court decision last week in a case brought by the Federal Power Commission against Panhandle Eastern Pipe Line Co., and (2) a decision by the Senate Commerce Committee not to make at this time any significant changes in the Natural Gas Act.

THE COMMODITY-VALUE PROBLEM

The basic problem involves the price that the pipe-line companies get for the gas they produce themselves from wells they lease or own. This amounts to about 42 percent of all gas carried interstate (according to 1947 figures). The rest of the gas the pipe-line companies buy from independent producers.

FPC has no control over the price of the independents' gas. This price, determined by supply and demand, is known in the industry as the "commodity value" of natural gas. The pipe-line boys think they should be able to get commodity value for the gas they produce, too. But FPC does have control over this gas because it is produced by interstate companies—and FPC says "No." Instead, it limits the price on the basis of the well-known utility rate-making formula of original cost. (That is, the Commission allows the pipe-line company a "fair" rate of return on original cost of facilities, including gas-producing facilities.)

So the pipe lines carry two kinds of gas—gas the companies produce themselves and gas they purchase. FPC has had to let the carriers charge consumers higher prices for the purchased gas. This set-up has played hob with pipe-line accounting. And it has led to almost inexplainable differentials in the price of gas to different consumers—depending on what pipe line served them and what gas the lines carried.

WAY OUT

When the Republican Eightieth Congress refused to write commodity value into the Natural Gas Act, several pipe-line companies decided that the only way out was to dispose of their producing facilities.

Panhandle took the lead. Last September it set up the Hugoton Production Co.; turned over to the new company its leases on 97,000 acres of gas fields. It also gave Hugoton $675,000 in cash. In return Panhandle received all of Hugoton's common stock, which it proposed to distribute to its own stockholders—to insure that Hugoton would be permanently independent.

INJUNCTION ASKED

At this point, FPC stepped in; it asked that the deal be enjoined until it could make an investigation to make sure the transfer would not impair Panhandle's ability to meet the commitments of its far-flung transmission system.

A lower court turned down the injunction request. And the Supreme Court, by 5 to 3, upheld the lower court. It held that the production facilities were now under the control of a bona fide independent (FPC admitted that), and that FPC, therefore, had no authority to delay the deal. The majority tartly advised the commission to ask Congress for power to control gas-supply transfers, if it saw a need for such authority.

BARRIERS DOWN

One result of the decision is, apparently, to remove all barriers to sales or transfers of gas-producing facilities by pipe-line companies. And it is thought likely in the industry that many companies will now follow Panhandle's lead.

As more and more gas thus moves into the unregulated class, the price will go up. But the boots should be slight. Less than half of the total interstate supply is involved. And the well-head price of gas makes up less than 10 percent of the total cost to domestic consumers, only about one-third of the delivered price of industrial gas (delivered in the East and Midwest in 1947).

UNCERTAINTY REMOVED

Another result of the decision: There is no longer any possibility that FPC can regulate the price of gas produced by independents. The philosophy of the majority of the commission has been that all property of a regulated pipe-line company is involved in interstate commerce.

This reasoning, the industry has feared, could lead to the conclusion that effective regulation requires control over all factors involved in the pricing of pipe-line gas—including gas bought from independents for interstate transmission. The decision removes any chance of that—and leaves the pipe-line companies without the support of the independents in their running battle with FPC.

What the American Flag Means to Me and My Family

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address written by a young gentleman, by which he won first prize in the Knoxville, Tenn., Flag Day contest:

WHAT THE AMERICAN FLAG MEANS TO ME AND MY FAMILY

I am just another boy in one of America's high schools. I go to school day after day, one school term after another. I have many duties outside of school that have to do with my life in my community, church, and home; I follow the plow, I blend my voice in song with the choir in our country church, I share with my parents and brothers and sisters the joys and sorrows that sooner or later come to most families. There is nothing out-of-this-world about my life—in one way you look at it.

As I come up the walk to the school building on bright mornings Old Glory is in her rightful place at the top of the flagpole. I think it was my mother and one of my early teachers who led me to look at the flag with a quickened breath and a feeling of responsibility and pride. It is that flag that lifts my life out of the seeming monotony that I mentioned just now. No American boy can live a colorless life. The flag guarantees too many opportunities for that. I go to a good school; the limit to my education I shall set myself. I worship my Maker as I see fit. I learn of what has happened and is happening in the world without fear of censor. I shall take my place in the world of affairs as I put forth an effort to do so—I may be a millionaire or a pauper, as I choose. I am free to establish a home and rear a family. In other words, I may attain to the stature of a free man, because Old Glory waves on high. Taking my hat off as the flag is passing by is not an idle gesture; I am bowing my heart in thanksgiving for the good fortune that is mine—I am an American citizen. The American flag belongs to me and my family.

WAYNE PROVENCE.

KNOXVILLE, TENN.

Refutation by Hon. Emanuel Celler, of New York, of Statements Recently Made Regarding Displaced Persons

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statements regarding displaced persons and a refutation of these statements prepared by me:

REFUTATION BY HON. EMANUEL CELLER, OF NEW YORK, OF STATEMENTS RECENTLY MADE REGARDING DISPLACED PERSONS

I. STATEMENT

"I am wondering how many of those who discuss this subject really know the subject. It has been sugar-coated with so much fraud and misrepresentation that sometimes I think that many who discuss the subject have no true idea or conception of it."

Facts offered by me

The following documents present the problem without "sugar-coating," without "fraud" and without "misrepresentation":

1. The Displaced Persons Commission's first annual report to Congress (February 1, 1949).

2. Hearings held before the Committee on the Judiciary, House of Representatives, on March 2, 4, and 9, 1949 (Serial No. 5).

3. House Report No. 581, Eighty-first Congress, on H. R. 4567.

II. STATEMENT

"I wonder how many know the millions of people who are in the United States now illegally and fraudulently."

Facts

It is absolutely impossible to determine the number of aliens who are illegally in this country, just as it is impossible to determine how many people jumped the red light if they were not caught up with.

It is possible, however, to determine that all estimate as to the number of aliens illegally in this country were grossly exaggerated. During the Senate debate on Senator Revercomb's displaced persons bill, it was estimated that around 100,000 aliens came as refugees during the war and remained in this country illegally. Subsequently, in order to legalize the residence of this category of aliens, the Congress has granted a quota of 15,000 under the provisions of section 4 of the Displaced Persons Act of 1948.

The Department of Justice is now just as surprised as the Congress that only slightly over 5,000 such aliens tried to avail themselves of this possibility. It is obvious, therefore, that the number of refugees illegally in this country constitutes about 5 percent of the estimates made last year.

It is also a fact that the law enforcement, with respect to all categories of aliens who are illegally in this country, has been much more efficient since the termination of the war permits resumption of deportations and voluntary departures.

Figures submitted by the Department of Justice show the following numbers of aliens deported:

1945	11,270
1946	14,375
1947	18,663
1948	20,371

The same source (Department of Justice) indicates the following numbers of aliens who have departed voluntarily after proceedings against them were started:

1945	69,000
1946	101,945
1947	195,880
1948	197,184

III. STATEMENT

"I wonder how many know that with all those who have been taken out of the camps there are today more persons in the camps than there were when we first set up the organization, more than there were when we first started to take them out."

Facts

Total number of displaced persons expecting resettlement as of—

Jan. 1, 1947	1,039,404
Jan. 1, 1948	836,989
Jan. 1, 1949	769,300
Apr. 1, 1949	708,600
May 1, 1949	699,300

It is obvious that the number of displaced persons expecting resettlement is going down and not up.

The total estimated resettlements of displaced persons through May 1, 1949 amounted to 522,900, of which 47,539 have been admitted to the United States and 93,431 to Israel.

IV. STATEMENT

"I wonder how many know that they are coming into the camps by hundreds of thousands, people who have no more right to the claim of being displaced persons than they have the right to a claim of nationality at the North Pole."

Facts

According to the International Refugee Organization, recent refugees are being admitted into camps only in isolated individual hardship cases. The camps are rapidly diminishing both in their number as well as in the number of their inmates.

According to Senate Report No. 467, Eighty-first Congress (Senator HERBERT R. O'CONOR, of Maryland, reporting, p. 20), in the period between September 1, 1948, and April 30, 1949, 85 camps, with a capacity of 57,600 persons, have been closed. During the period between May 1, 1949 and December 30, 1949, 44 camps, with a total capacity of 61,000, are scheduled for closure. It is estimated that by October 1, 1949, only 99 assembly centers, with a total capacity of 160,000, will be in operation in the United States zones of occupation.

V. STATEMENT

"I wonder how many know that there never was a more workable law than the one now in existence, and that that has been testified to by the Displaced Persons Commission. * * * It is not necessary to lobby through a measure which is just, when, as a matter of fact, Congress has enacted a law which is now working satisfactorily."

Facts

On March 4, 1949, the Displaced Persons Commission submitted to the Committee on the Judiciary, House of Representatives, a memorandum incorporated into the transcript of hearings held on H. R. 1344. The law contains, among others, the following statements in sharp contrast to Senator MCCARRAN'S appraisal of the existing law. Referring to the present cut-off date of December 22, 1945, this is what the Commission had to say:

"The present date line has had a serious deterrent effect upon effective and expeditious administration, because of the necessity for the search for documents to prove conformity and with an artificial date line. Amendment of the act to provide a more realistic and nondiscriminatory date line would speed up the flow of displaced persons to the United States."

Referring to other restrictions of the present law, the Commission's opinion is as follows:

"The first proviso of section 3 (a) requires that no less than 40 percent of the visas issued under the act shall be available exclusively to displaced persons whose place of origin or country of nationality has been de facto annexed by a foreign power. The Commission has experienced two difficulties with this provision. First, it has been a most serious administrative burden which has retarded admissions under the act. The law requires assurances before anyone may even be considered for admission. Suppose we cannot get assurances covering these people? The effect of this would be to shrink the whole program. For example, if only 40,000 displaced persons from these areas were found eligible for entry into the United States, then only 60,000 others could be granted visas—thus, instead of admitting 205,000 people, we would be limited only to 100,000, although another 100,000 were ready and otherwise eligible. Of the first 2,500 visas issued under this program, only 33 percent were from de facto areas. In order to achieve even this percentage, the Commission was required by the law deliberately to hold back thousands of assurances until there could be enough appropriate assurances even to approach the statutory ratio for de facto annexed areas.

"The Commission's experience has shown that a rigid day-by-day, or week-by-week, or even month-by-month, adjustment of this 40-percent ratio would have the effect of wrecking the whole program. The situation became so acute by the end of December that the Commission was compelled to effectuate its earlier conclusion that it was not necessary to achieve this 40-percent ratio within any given period of time, so long as it was reached on the basis of the whole program. The Commission supports its action on the basis that any other course would have found the program hopelessly mired. Unless this provision of the law is repealed the congressional intent to issue visas to 205,000 displaced persons will be thwarted.

"It might be pointed out here, that since the end of December, the Commission has been operating upon the general basis of first come, first served. The use of this chronological method has resulted in a progressive increase in the number of cases processed out of the Commission's European headquarter's office."

"The first proviso of section 6 (a) requires that no less than 30 percent of the visas issued under the act shall be made available exclusively to persons who previously engaged in agricultural pursuits and who will be so employed in the United States.

"This provision has had an effect similar to that described for the 40-percent limitation. Attempts to maintain the 30-percent ratio have meant postponing action on others who were eligible. This provision has slowed down arrivals in the United States and only 11 percent of the first 2,500 visas were issued to agriculturalists. The Commission is convinced that the percentage will be higher but cannot vouch for the number or time of their receipt. As with the 40-percent limitation, a rigid conformity with the 30-percent requirement might well wreck the program."

"It might also be mentioned that in addition to its administrative difficulties, and its unfairness to displaced persons the provision is insensitive to the needs of the American economy."

"As of January 1, 1949, of all persons resettled from Germany, Austria, and Italy, only 11 percent were admitted to the United States. This is because our resettlement

program started late in comparison to those of other nations. If the act were amended to authorize the entry of 400,000, that number plus the persons admitted under the President's directive would result in the admission of not more than 445,000 out of the million or more displaced persons who were to be resettled from Germany, Austria, and Italy since the end of the war.

"While every effort will be continued to be made by the IRO to resettle displaced persons throughout the world, it now appears unlikely that the problem can be solved without the United States authorizing the admittance of a number considerably in excess of 205,000 as provided for in the act of 1948. It does appear likely that an addition of 195,000—raising the total to 400,000—would completely end the problem.

"In this regard the Commission believes it is of utmost importance to note that the people of the United States want these displaced persons in their midst, and have been asking for them at a rate which will very shortly exhaust the 205,000 now authorized for admission. As of February 7, 1949, we had sent over to Europe requests for approximately 75,400 displaced persons. There have already come to our office requests for about 100,000 displaced persons, and this is only the beginning of the program. Assurances have been coming into Washington at the rate of between 4,000 and 5,000 people a week, and the number has been increasing steadily. The interesting fact is that the greatest demand for displaced persons comes from the areas in the country where some have already gone. All parts of the country, West, South, East, and North, all kinds of communities, all types of business and agricultural enterprises have expressed not only a desire to have displaced persons, but an increasing irritation at not having more. Increasing the number to 400,000 is not a guaranty that 400,000 will enter the United States; it is merely a ceiling authorization and the number to be admitted will depend entirely on the availability of satisfactory resettlement opportunities."

As evidence that our people generally want to bring these D. P's. into the United States, 31 D. P. commissions and D. P. agencies have been set up in 31 different States.

VI. STATEMENT

"If it were to become law the House [Celler] bill, H. R. 4567, would bring into this country not only those who are in camps or who have been in camps, but those who have been taken from camps by other countries and have gone to England, for instance. Those who have been taken to England would be eligible to come into our country."

Facts

Under the provisions of my bill, H. R. 4567, as it passed the House on June 2, 1949, no person who has been taken from a camp and brought to England would be eligible to come to the United States.

The only provision of the House measure pertaining to persons residing in England relates to the group of 18,000 former Polish soldiers who are in possession of individual affidavits of support, who are not considered displaced persons within the meaning of the existing law, and who have been included into the new bill at the insistence of a considerable majority of the Members of the House who desire to offer an opportunity to come into the United States to the veterans of an Allied army unable to return home because of the fact that Poland has been taken over by a communistic government.

VII. STATEMENT

"As we take them out of the camps, the camps fill up again, and they will continue to fill up."

Facts

The figures quoted above under IV refute this statement.

Recess at Lausanne

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 2, 1949:

RECESS AT LAUSANNE

The recess that has been taken at Lausanne in the job of turning the armistices in Palestine into peace instruments is a most curious one. The theory was that the conciliators and the parties at interest would seek fresh instructions. But no such activity is reported. There were three conciliators, an American, a Frenchman, and a Turk, and all three conciliators have returned to their domestic hearths. For instance, the American, Mr. Mark Ethridge, is back in his office at the Louisville Courier-Journal, of which admirable newspaper he is the publisher. As for the Arabs and the Israelis, they are still at Lausanne, marking time very pleasantly in the Swiss sunshine. In the meantime, Washington and Tel Aviv seem to be firing splenetic notes back and forth which will promote Arab do-nothingness and nothing else.

Let us take what the soldiers in wartime called a fresh reading. The conciliation commission is the agent of the General Assembly, but the members of it seem to have been working much more closely with their home governments than with Lake Success. This is a striking departure from the precedent supplied by the armistice negotiations. Dr. Ralph Bunche in his role as mediator was a United Nations official, and he reported to Lake Success, not to any individual government. He succeeded in his task, partly because of his personality, partly because of the framework in which he operated. Except for Syria, where there has been an overturn in the government, he arranged armistices between Israel and the rest of the Arab countries and left Rhodes, where he worked, with a high standing in the eyes of Arabs and Israelis alike. The question that comes obviously to mind is how this experience can be put to use to complete the task of peacemaking.

The first lesson of that experience is that the only way to get any progress is by the bilateral approach. When all the Arabs come together, fears and jealousies enter the conference room, and Dr. Bunche quickly realized it. Each has his own particular problems with Israel. For instance, Transjordan wants either a sea outlet or use of Haifa as a free port, but there is no point in discussing the Transjordan aim in the presence of Transjordan's rivals, some of whom are anxious to curb and not to increase Abdullah's influence. Should we leave Transjordan and Israel to come together of their own volition? Only if we are not anxious to get any peace. If peace is what we need, then the full force of diplomacy should be exerted in favor of bilateral talks; and if Dr. Bunche was able to promote such conversations, surely the chancellories, particularly the State Department, can.

The appearance is being given that the State Department is opposed to bilateral conversations till the problem of the Arab refugees has been settled. Here, to be sure, is the only issue that is common to all the Arab countries. It is more than that. All of them, along with Israel, have a responsibility toward the Arab refugees—the Arab nations for precipitating the war and Israel as the sovereign over the vacated homes of the individual refugees. As to this problem, there is a solution—a solution that, it is said, Mr. Hoover is quietly advocating. This is to bargain human settlement against a scheme of economic reconstruction in the areas admitting the refugees.

However, there is no need (and no warrant in the UN mandate of conciliation) to delay conversations on other aspects of peacemaking till these details have been worked out. What is required is a fresh start. Given some declaration of a common responsibility for the refugee problem, the Conciliation Commission could apply the hero of the armistices as well as the lesson of those negotiations to the problem in hand—that is to say, depute the management of bilateral talks to Dr. Bunche. In that event some progress could most certainly be achieved. The Arab governments will never demonstrate any initiative so long as they see no leadership among the great powers which they can display to their hoodwinked peoples as the reason for conversations. Drift and recrimination, combined with the gun-running that the western nations are now indulging in, can have only one result, and that is to invite a much more serious explosion than the one Dr. Bunche stopped.

Automobiles for Disabled Veterans

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Senate bill 2115, to authorize payments by the Administrator of Veterans' Affairs on the purchase of automobiles or other conveyances by certain disabled veterans, and for other purposes.

I have introduced a companion bill, H. R. 5323:

Be it enacted, etc., That, subject to the conditions hereinafter set forth, the Administrator of Veterans' Affairs is authorized and directed to provide or assist in providing an automobile or other conveyance, by paying on the purchase price of such automobile or other conveyance not to exceed $1,600, including equipment with such special attachments and devices as the Administrator may deem necessary, for each veteran of World War II who is entitled to compensation under the laws administered by the Veterans' Administration for any of the following:

(a) Loss or permanent loss of use of one or both feet;

(b) Loss or permanent loss of use of one or both hands;

(c) Permanent impairment of vision of both eyes of the following status: Central visual acuity of 20/200 or less in the better eye, with corrective glasses, or central visual acuity of more than 20/200 if there is a field defect in which the peripheral field has contracted to such an extent that the widest diameter of visual field subtends an angular distance no greater than 20 degrees in the better eye.

SEC. 2. The benefits of section 1 shall be granted under the following conditions:

(a) That under such regulations as the Administrator may prescribe the furnishing of such automobile or other conveyance, or the assisting therein, shall be accomplished by the Administrator paying the total purchase price, if not in excess of $1,600, or the

amount of $1,600, if the total purchase price is in excess of $1,600, to the seller from whom the veteran is purchasing under sales agreement between the seller and the veteran.

(b) The United States shall not be liable for the repair, maintenance, or replacement of any automobile or other conveyance provided under the provisions of the first section of this act and shall not be liable to any person by reason of any damage caused by the use of such automobile or other conveyance.

(c) No veteran shall be entitled to receive more than one automobile or other conveyance under the provisions of this act; and no veteran who has received or may receive an automobile or other conveyance under the provisions of the paragraph under the heading "Veterans' Administration" in the First Supplemental Appropriation Act, 1947, shall be entitled to receive an automobile or other conveyance under the provisions of this act.

(d) The benefits provided in this act shall not be available to any veteran who has not made application for such benefits to the Administrator within 3 years after the effective date of this act, or within 3 years after the date of the veteran's discharge from the armed forces if the veteran shall not be discharged until on or after said effective date.

(e) Any automobile or other conveyance furnished any veteran pursuant to this act shall be exempt from the claims of creditors and shall not be liable to attachment, levy, or seizure by or under any legal or equitable process whatever.

(f) After enactment of this act, any automobile or other conveyance heretofore furnished any veteran under the provisions of the paragraph heading "Veterans' Administration" in the First Supplemental Appropriation Act, 1947, as amended, shall be exempt from the claims of creditors, and shall not be liable to attachment, levy, or seizure by or under any legal or equitable process whatever.

Let There Be Light

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, July 8 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Let There Be Light," delivered by Ron Snyder, a young man of La Porte, Ind., and which won for him the 1949 Indiana American Legion and State bar association oratorical contest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET THERE BE LIGHT

Imagine yourself standing in Constitution Hall. Behind you is a spacious window, with curtains drawn, so that the hall is dark. At the end of the hall on the paneled wall is a framed picture of our complete constitutional system of government. You gently pull the cord which opens the curtains so that you can see the document more clearly. Suddenly, a thin shaft of light penetrates the darkness as the curtains first begin to part, and as your eyes follow the narrow beam, you see that it rather poorly illuminates just a section of the complete picture, a section entitled "The Constitution of the United States."

In a measure, this first, hazy, indistinct glimpse of that historical document bears a striking resemblance to first impression the early Colonists were given of the Constitution when it was created. To the common man, of 1787, the new Constitution seemed unclear and confused, for even though it states that its purpose was to promote the general welfare, in actuality it did not, but rather it created an aristocracy as real as any in foreign lands. It was the belief of Jefferson and the other creators of our Constitution that the offices of the Government should be held only by the educated, the elite, and the well-bred. The purpose of the Constitution was just and right, but in practice we had not yet realized that the very foundation of our Government is the common man, whose rights were being suppressed

Men had left the tyranny of Europe and arrived on the eastern shores of America with burning hopes of freedom. Puritans had fled persecution in England, Quakers had sought America as the land of free worship, and excessively taxed debtors had begun life anew on the rocky soil of New England with memories of the London prisons still fresh in their minds. Yes, men and women had come to America determined to find the freedom they were entitled to. And to obtain it, they had fought a war against a well-trained, well-organized, and more adequately equipped foe. But they had won their struggle against all those odds, because those Colonists, fighting side by side, possessed one quality that the red-coated enemy did not—they were fighting for freedom. Yes, they had won their struggle, but as they examined the newly created Constitution, they asked, "Was it for this that we fought? This document that establishes a National Government but does nothing to keep that government from becoming just as intolerable and oppressive as did the English rule? No, we want rights, the rights of self-government, yes, but also individual rights which will protect us, the common people, from our Government, and which will grant our liberties."

And so, the first 10 amendments were added to our Constitution. These first individual rights, adopted in 1789, are just as important in the lives of Americans today as they were in the time of Jefferson, because they are basic rights which all free men should possess.

Provided in this section are such major rights as: the right of religion, the right of assembly, the right to petition, and many others, all of which have proven their importance throughout our history. But perhaps one of the most important of all is the right to be free from such incidents as the arrest of John Peter Zenger, a printer of 1735. Zenger had come to America at the age of 13 from Germany. He had worked long and hard to become a printer, and finally he obtained a position as editor of one of New York's leading newspapers. Being an honest man, he exposed the tyrannical acts of New York's Governor Cosby. In the face of Zenger's convictions Cosby charged the printer with seditious libel, and set his bail at 400 pounds, a sum which was almost impossible to pay at that time and so, he was taken to jail to await trial. However, through an eloquent appeal by Andrew Hamilton, a noted attorney of that day, John Peter Zenger was ruled "not guilty". And from town to town was whispered the praise of the New York printer who had fearlessly fought tyranny. So, the people, remembering the John Zenger trial and many others like it, established through the Government the Bill of Rights which we now see before us in Constitution Hall.

But as our frontier expanded, and our pattern of life became more complex, new problems arose challenging our Constitution, problems of rights and men's freedoms, problems not answered by any of the first 10 amendments. For example, in a southern Ohio tavern of 1857, a group of ruddy, weather-beaten men sat around a table talking in earnest tones. Finally one of the men said, "But they're human, same as you and me. It ain't proper that one man should make another work like an animal just cuz his skin's a different color. That's why I say Dred Scott oughta go free." They were right, these men that sat around a pine table in 1857. Just as right as the Negro who said, "If I'm dirty I can cleanse myself. If I'm illiterate I can educate myself. But if it is the color of my skin that you find fault with, take your grievance to God, for he made me that way." However, to prove such ideals it took a terrible civil conflict. Standing upon a blood-soaked field, his voice full of emotion, a tall, lean man with a tanned face and kind eyes expressed perhaps one of our history's greatest dedications to freedom when he said, "The world will little note nor long remember what we say here, but it can never forget what they did here. It is rather for us to be here dedicated to the great task remaining before us, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we have highly resolved that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people shall not perish from the earth."

Abraham Lincoln fought and died for that freedom from slavery and that unity of strength in which he so devotedly believed. He died with the prayer that the abolishment of slavery, for which he too had given the last full measure of devotion, would some day be realized. His prayer was answered in the adoption of the thirteenth amendment, which recognized the freedom of the Negro, and proved that the old farmers of southern Ohio were right when they said, "Just cuz a man's colored don't mean he ain't human."

But we have examined only the first section of our constitutional picture. So let us separate the curtains even further and allow additional light to enter Constitution Hall. With this increased amount of light we see the title of the next section to be the Supreme Court's Interpretations of the Constitution.

The early decisions of the Supreme Court conformed with the ideals of Chief Justice John Marshall, a stern Federalist, who believed that the Central Government should be made as strong as possible through court interpretations. But as time passed and experience matured our country, our courts came to recognize as a far greater basis for their decisions the welfare of the common man. Illustrations of this can be found in many of the Supreme Court's past decisions, but for one specific example let us return 12 years to 1937. It was in that year that the Supreme Court ruled the Wagner Act to be constitutional. Why had our Judicial Department in the face of challenges hurled by big business, upheld the constitutionality of this labor act? Why? Because the Wagner Act provided for the rights of the common man. With the passing of this act men could unite and thus oppose the money-hungry capitalists. Their demands for fair treatment and decent conditions could no longer be neglected or laughed off, their wives and children no longer would have to go hungry. And so the Supreme Court supported this act, for after all, what democracy would there be if the rights of the common man were not upheld?

But there remains one other section in the picture, a section which has been just as necessary in creating our present democracy as either the Constitution and its Bill of Rights or the judicial decisions. Therefore, with a final movement we open the

curtains fully, and as the sun's rays elucidate the complete picture, we read the title of the third and final section, which is, "Customs and Usages of Our Constitution."

Included here are all the many different traditions which have become part of democracy. Here are found such things as voting on second Tuesday of November; standing at attention when the American flag passes by; and observing Armistice Day. All just part of our everyday life, just customs. No one has forced them upon us. They've merely grown out of our beliefs and our ideals. We have been called foolish sentimentalists by certain other governments because of our beliefs. But then, in a totalitarian state, our beliefs probably would seem foolish and sentimental. Because there, respect of the common man does not exist, there the state is first, not the individual. That is why such men as Hitler and Mussolini have laughed at our beliefs, but then, that too, is the one characteristic that has made America greater than any other single nation in the world, that belief that respect of the common man is the foundation of a government. Americans have always held that belief, and not only have we maintained it, but several times we have gone to war when aggressors threatened to change our faiths and ideals. That has been the greatest proof of the worth of our beliefs, the fact that men have been willing to fight and die for an institution called democracy. These men believed that being an American is not based on birth, language, race, or religion. For in the beautiful cemeteries of Salerno, Normandy, and Belgium lie both white and Negro soldiers who gave their lives for our democracy. But the crosses marking their graves do not discriminate between Negro and white, they merely carry this inscription, "Here lies an American soldier." Because to be an American is to have a faith, a belief, and a conviction about freedom.

Americans fought because they believed in the rise of the common man. And they died so that that picture, which is now flooded with glorious light, could be complete.

And so, standing here in Constitution Hall, we have watched the picture of freedom and democracy gradually grow to completion. We have seen the common man raised from a point of obscurity to his rightful place as the foundation of our country. And we have seen the sun shining upon a completed picture of freedom, equality, and justice. So our prayer for the future must be the prayer of Daniel Webster, who once said, "When my eyes shall behold for the last time the sun of the heavens may I not see it shining on the broken and disordered fragments of a once-glorious nation, but rather upon the glorious flag of a republic now known and honored throughout the earth; not a stripe missing; not a single star obscured, bearing for its motto that sentiment dear to every true American heart—liberty and union, now and forever.

Resolution of Young Republican Federation

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 29, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I include a resolution passed by the Young Republican Federation at its 1949 convention held June 23–25 at Salt Lake City. This is powerful support of the concurrent resolution to the same effect already introduced by more than a hundred Members of Congress of both parties. The resolution follows:

Be it resolved, It is the sense of this federation that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation and enforcement of world law.

Soviet Guilt Indicated

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an article appearing in the New York Herald Tribune of July 4, 1949.

This is the second of two articles on the massacre of Polish officers in the Katyn Forest early in World War II. The author, Julius Epstein, a journalist in Europe for many years, served in the Office of War Information:

SOVIET GUILT FOR KATYN MURDERS INDICATED BY MASS OF EVIDENCE—NEUTRAL INQUIRY UNDER UN IS URGED TO VERIFY FATE OF THOUSANDS OF POLISH OFFICERS

(By Julius Epstein)

The still unsolved mystery of the mass slaying of many thousands of Polish officers in the forest of Katyn, near Smolensk, during World War II had its beginnings long before the Germans announced discovery of their graves in April 1943. The Polish Government had been trying for at least 2 years earlier to learn the whereabouts of the missing officers.

To understand the situation it must be remembered that the Russians held about 250,000 Polish prisoners in 1939. These were in more than 100 camps in eastern Poland and the western districts of the Soviet Union. In the latter part of October of that year three of these camps were transferred into special concentration points for officers. Population of these camps was approximately 15,000.

Stanislaw Mikolajczyk, former Premier of Poland, gives one reason for this shift in his book, The Rape of Poland. Referring to a clause in the Nazi-Soviet agreement of September 28, 1939, which called for an exchange of nationals of the two countries, he says that the Soviet Government sought the return, early in 1940, of 30,000 Ukranians in Hitler's training camps. They offered the captured Polish officers in exchange, but the Germans refused to accept them. Thereafter, according to Mikolajczyk, the officer camps were evacuated.

POLES SOUGHT EXPLANATION

By 1941 the Polish Government began to press for an explanation of the disposition of this officer group, but was never able to obtain a satisfactory answer. Molotov and Vishinsky insisted that all Poles had been released. Premier Stalin suggested to General Sikorski on December 3, 1941, that they might have escaped to Manchuria, but told General Anders some 4 months later that "I do not know where the officers are." A fourth Russian answer was that the men might have been captured by the Germans.

An earlier incident seems now to have been more significant. Ambassador Stanislaw Kot broached the matter to Stalin on November 14, 1941. The latter telephoned the NKVD and inquired about the release of the officers. After listening for a few moments he hung up and dropped the subject entirely.

Mikolajczyk now fills in this part of the story on the basis of information received from a Russian officer attached to the Soviet Embassy in London. This man says that a general in charge of the camps was afraid to take any steps on his own initiative and sent an aide to the Kremlin for advice on what to do with the Poles. Stalin heard the officer's story, then took a piece of his personal stationery and wrote the single word "liquidate."

Upon one receipt of the one-word order, Army officers decided that this was a matter for the NKVD. The Russian officer in London said later that "liquidate" could have meant "release" in this case of even the transfer of the Poles to camps in Siberia. To play safe, the NKVD took the most usual meaning and had all the Poles shot.

STALIN AVOIDS SUBJECT

Later, according to the story, Stalin remembered his order but did not know how it had been carried out. Approached by Ambassador Ket, he called the NKVD, was informed of the executions and then refused to discuss the matter further.

"This is as much of an admission as probably will ever come from the mouth of a Russian of any importance," writes Mikolajczyk. "It confirms the Russian guilt."

The former Premier points out that the Russians have never presented convincing evidence of their innocence in the Katyn murders. He says that the only investigation was made by a commission composed exclusively of Soviet citizens and that no scrutiny by a neutral or international board has been permitted.

He describes also an occurrence in postwar Poland when he returned there in 1945. He was approached by Polish General Prosecutor Sawicki with a query as to whether it might not be a good idea to stage a hearing on the Katyn case in order to clear the Russians of any guilt for the murders. When Mikolajczyk outlined the testimony which he would give to such a hearing, however, Sawicki was visibly taken aback. This was especially noticeable when Mikolajczyk told him that there was indication that documents concerning the case had been recovered by American forces.

A more recent effort on the part of the present Polish government to whitewash the Russians was disclosed when I followed the hint of Dr. F. Naville of the University of Geneva, a member of the German investigation commission, that there was a dossier on the Katyn murders in Sweden. I found what I sought in an article in the Swedish paper Dagens Nyheter for February 13, 1948.

LAWYER'S FINDINGS

Early in 1947, according to this article, a lawyer by the name of Reman Martini, from Cracow, was commissioned by the Polish Minister of Justice to carry out an investigation which would be the basis for a trial in Warsaw to establish definitely the guilt of the Germans in the Katyn massacre. Martini was given permission to reopen the graves and was given access to documents and witnesses.

"Soon it was obvious to him," the article continued, "that the investigation would lead to an entirely different direction from what the man who had given him the assignment

thought, but he continued just the same and by fitting together, the many divers pieces of information he had received, he succeeded in establishing the fact that all the officers who were killed in the Katyn woods were shot during March, April, and May 1940, when the Russians still held the Katyn territory." * * *

The article went on to describe how Martini identified six NKVD officers who were in charge of the executions and described the condition of the bodies, many of which bore stab wounds typical of those made by Russian bayonets. The NKVD men were from Minsk, Martini said, identifying them as Lew Rybak, Chaim Fineberg, Abraham Bomsovich, Boris Kutcov, Ivan Siekanov, and Osip Lisak. In charge was a seventh NKVD man named Burianov.

Martini established also that the men had been shot by German-made pistols of a type—GECO, caliber sign 7.65D—which were shipped to the Soviet Union under the terms of the Rapalle agreement of 1928. He pointed out that the Germans, then in possession of large stores of Russian arms, would scarcely have used German weapons if they wanted to pin the massacre on the Russians.

INVESTIGATOR MURDERED

"Roman Martini's fears when he presented his report to Minister Swiatkowski proved to be not unfounded," said the Swedish newspaper. "A few days after * * * he was murdered at his home by two fanatic Polish young Communists. * * * The murder created too great a sensation to go unnoticed even in Russia-controlled Poland. The perpetrators of the atrocity were arrested, but slipped away after a few days by 'escaping' from the St. Michael penitentiary in Cracow, one of the most heavily guarded prisons in Poland."

It is important to note that Martini, connected in a friendly way with the Communist Polish Government, came to the same conclusions as the earlier commission appointed by Hitler to investigate the murders. Furthermore, he added further proof of Russian guilt by establishing the names of the NKVD officers who organized the massacre.

It is on the basis of these disclosures that a reopening of the entire case seems necessary. An American committee for the investigation of the Katyn murders, composed of legal and medical experts, should be appointed to sift the case thoroughly. If its conclusions are same as those of earlier investigations, the Soviet Government should be called upon to permit an on-the-spot study by the International Red Cross, as the Poles in London proposed in 1943. The latter phase of this proposal might well be handled through the United Nations.

This is the only way to clear up one of the greatest crimes ever perpetrated.

Europe's Crisis—America's Opportunity

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, July 8, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Christian Science Monitor, Boston, Mass., Thursday, July 7, 1949:

EUROPE'S CRISIS—AMERICA'S OPPORTUNITY

This is not just more of the same. The crisis now reported as gripping most of western Europe, with a financial storm center in Britain where buying from the United States has been suspended to save precious dollars, has important new aspects.

Europe's present difficulties are not simply the ones to which the Marshall plan was addressed. They do not signify inadequacy in the European recovery program. It can more accurately be said that they bespeak success of basic ERP aims.

That realization should be a source of some satisfaction, but a source of no complacency. What has happened since that pregnant June 5, 1947, when the then Secretary of State George C. Marshall outlined a salvage plan for Europe to a commencement-day audience at Harvard, is mainly this:

A Europe whose productive capacities were left by war partly in rubble and totally in chaos has been industrially rebuilt. To such an extent, indeed, that the latest United Nations studies of Europe's economy find a threat of overcapacity in some lines.

The problem of the pre-Marshall plan days was almost solely production; the problem now is chiefly trade.

But one major similarity does exist between the present crisis and the former one. That is the trading world's lack of dollars, gold, or hard currencies, which is to say currencies exchangeable for dollars or gold. This similarity gives the United States a handle to the European crisis.

There is yet another similarity between this crisis and the former one which should be stressed. That lies in the almost unimaginable postwar difference between American economic power and that of Europe.

Today American power is being exercised, sometimes prematurely but on the whole with wisdom and tact, to create freer trade conditions in which Europe's producers and those of the United States would find maximum world outlets. There are many signs that European leaders are ready to listen and to cooperate in this aim. But they can point out that the United States is pushing harder to free trade in other nations than in the United States itself. And they can plead that they are compelled to cling to trade methods which do not jibe with American or their own long-run interests.

Since the trade and currency aspects of the problem are so intertwined, it is logical that American efforts to help Europe should aim at freeing currencies from controls, and at establishing normal relationship between the various national currencies which change hands in international dealing.

In a word, the American attack must be on the broadest possible front, and it must avoid upsetting delicate political balances in other countries. Europeans are looking for such leadership. This is plain from the attitude of French officials who have just talked with Treasury Secretary Snyder.

When the French, for example, speak hopefully of American aid beyond the Marshall plan, they do not mean just more and more money. They mean a program in which increased competition in world trade will become possible. In this goal the British are momentarily less interested because of their critical dollar shortage, the stark facts of which have just been stated in the House of Commons by Sir Stafford Cripps.

The over-all situation is one in which the United States must not only exercise a big share of the vision but shoulder a considerable investment. That is why Secretary Snyder's visit to Paris has set that capital to talking as the visits of few Americans have. That is why his London trip is keeping all Europe on the qui vive. It looks like one of those moments when American influence can be decisive in world affairs. If that is to happen, the American people must sense the urgency, and the opportunity.

Mission: Atomic

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 27, 1949

Mr. CASE of South Dakota. Mr. Speaker, under permission heretofore granted, I place in the RECORD the following remarks by Capt. James S. Russell, United States Navy, Deputy Director, Division of Military Application, United States Atomic Energy Commission, before the American Legion Convention, at Yankton, S. Dak., June 14, 1949:

Let me start by thanking you for giving me the opportunity to come out to South Dakota to make this talk. It is pleasant to be here, it is pleasant to talk to the American Legion—and it is pleasant to get away from the humdrum in Washington, D. C. It gives me a chance to lose some of my Washington pallor.

I came out here to tell you something about atomic energy and particularly the military application of atomic energy. Let's see if we can take a look at some of the fundamentals. What is atomic energy? Where does it come from? How can it be used?

A LOOK INSIDE THE ATOM

Let's take a look inside the atom and review the current concept as to its structure. Strangely enough the atom appears to be mostly empty space. At the center is a heavy conglomerate mass called a nucleus. It sits at the center, much as our sun sits at the center of our solar system. Spinning at high speed in circular or elliptical orbits around the nucleus, and at relatively great distances from it, are very much smaller particles called electrons. These would correspond to the earth and the other planets spinning around the sun. The nucleus is made up of a tightly packed number of heavy particles,—some carry a unit positive charge of electricity on them and are called protons, the others have no electric charge and are called neutrons. The unit positive charge on the proton equals the unit negative charge on the spinning electron, the attraction between them holds the spinning electrons in their orbits, and the net charge on the atom as a whole is zero. The number of positive charges (the number of protons) in the nucleus is called the atomic number. It determines the number of electrons in the extra-nuclear structure, and this in turn determines the chemical properties of the atom. The extra-nuclear electrons in the atom arrange themselves in successive layers or shells according to well esetablished laws. The outermost electrons are subject to minor rearrangements which permit atoms to combine to form molecules of various substances. Remembering, now, the nucleus at the center of the atom, which it is made up of heavy particles, some protons and some neutrons, and that neutrons carry no electric charge to change the chemical nature of the atom—I think it can be seen that heavy atoms can occur by having more neutrons at their centers. Please remember the name neutron for I will refer to it later.

Fission, at least nuclear fission, may be an unfamiliar term to you. To attempt to explain nuclear fission let me go back to uranium with atomic number 92 and an atomic weight which averages around 238, and talk specifically of that atom of uranium which occurs on the average of only 1 in 140 times, the uranium atom of weight 235. This atom is a so-called fissionable atom. When

its nucleus or center is struck by a neutron, it splits, with the release of a tremendous amount of energy. In splitting, it breaks up into fission fragments which form atoms of entirely different and lighter elements, and additionally throws off one to three free neutrons. If these neutrons, which are kicked off at very high speed, can find a target in the nuclei of other atoms of uranium 235, those atoms in turn will fission, and, in fissioning, will set off others. This process is known as a chain reaction, and is basic to the generation of atomic energy.

I have said that when an atom of uranium 235 splits it gives off tremendous energy. Let me try to explain to you the magnitude of this energy. This can best be done by comparing it to the energy which is given off in the chemical burning of a molecule of one of our best high explosives, namely TNT. The energy given off when an atom of uranium 235 undergoes a nuclear reaction is roughly 20,000,000 times as much as that given off when a molecule of TNT undergoes a chemical reaction. Twenty million times is a factor not to be regarded lightly.

Now this tremendous energy release given off in the fissioning of the light-weight fraction of uranium can be applied in two ways. You can either put it together in such a way as to get a slow reaction so that you develop power in a so-called nuclear reactor or atomic pile; or, on the other hand, you can put enough of it in one lump, let the chain reaction take charge, and get a very big explosion.

You may ask if there are other fissionable materials. The answer to this question is yes. There is a particularly good fissionable material which can be made basically from a neutron which strikes the center of the big fraction of uranium, namely that which has an atomic weight of 238. Here the neutron is absorbed into the heavy center whose weight then goes up by one to make a uranium atom which weighs 239. This is an unstable atom which kicks up quite a fuss and automatically changes itself over to a different element, one which does not occur in nature. This man-made element has been given the name plutonium. Plutonium is an element which will fission and behave quite similarly to uranium 235. Like uranium 235 it can be controlled to give useful power or a chunk can be put together to generate a very big explosion.

SPEED ADDS WEIGHT

You may ask where the energy in fission comes from—I am glad the point came up for it will allow me to add the proper scientific atmosphere to this talk by dragging in the name of Dr. Einstein. In pursuing his physical and mathematical studies of the behavior of things in nature, Dr. Einstein came up with the thought that there is an equivalence between energy and mass. In the scheme of things as they occur in nature there was an inconsistency between what was the ordinary concept of mass as being something fixed, and what actually happens. He expressed his thought in a mathematical equation: Energy equals mass times the square of the velocity of light (186,284 miles/second). This means, if you like, that something which goes faster (has greater energy) weighs more.

Now let us return to the fission of an atom of uranium. I have said that when the atom of uranium fissions it splits into atoms of lighter elements and gives off a couple, more or less, of chargeless particles named neutrons. If you gather together all these pieces and compute their weight you will find that the original atom of uranium weighed a little more than the sum of all its fission fragments. What accounts for this difference in weight—where is the loss? You've guessed it—matter changed into energy.

Before I leave the subject of fissionable material I should like to point out, and emphasize, that fissionable material is a material of the very greatest value. It is valuable both as a peaceful source of energy (or power) and as a military explosive. As to power, the fission of all the atoms in 1 pound of uranium will release about the same energy as the burning of 2,600,000 pounds of coal. This would be about 1,300 tons or 25 carloads of coal. On the military side you can use it in a bomb, as those used against Japan, where one airplane carried one bomb the explosion of which released energy equivalent to the explosion of about 20,000 tons of TNT.

I hope my explanation has led you just far enough—not to the point of boredom—so that you may have a general feeling for atomic energy and have a fair impression of its importance.

Let us return to the atomic bomb. On the 16th of July 1945, the first test bomb was exploded. This was the first of eight atomic explosions which have taken place to date. The second was that over Hiroshima, Japan, on August 6, 1945; the third, over Nagasaki, Japan, on August 9, 1945; the fourth, in the air over the target fleet assembled at Bikini on July 1, 1946; the fifth, underwater at Bikini on July 25, 1946; and the sixth, seventh, and eighth at Eniwetok in April and May 1948.

The first five of these explosions have been fully described in official reports.

As for the sixth, seventh, and eighth explosions, I can give you a first-hand account.

The Eniwetok tests differed from the Bikini tests in that the Bikini tests were for the primary purpose of determining the effects of the weapons, while the Eniwetok tests were for the primary purpose of studying the weapons themselves and the improvements made therein.

The entire operation at Eniwetok was geared to the scientific plan of Dr. Froman, the Scientific Director. To support this plan a joint task force was formed. This was Joint Task Force Seven under the command of Lt. Gen. John E. Hull, United States Army. The work of the task force comprised two phases, first, the rehabilitation of the old wartime facilities at Eniwetok and the additional construction necessary to fit out the proving ground, and, second, the conduct of the tests. The task force provided the command structure, the military and internal security, the means for an overseas movement to a base 4,500 miles from the continental United States, the construction force and the operating force for the Eniwetok Proving Ground. It was a completely unified operation of our scientists, our Army, Navy, and Air Force, as well as personnel assigned from the Coast Guard, Public Health Service, and the Coast and Geodetic Survey.

In order to understand the importance of the operations of Joint Task Force Seven it is necessary only to consider the reasons why these tests were held. During the period of wartime development of atomic energy, the one goal relentlessly pursued was the creation of an atomic bomb which would work—and work in time to be effective in World War II. It had only to work; it needed not to be too efficient, and the related problems of engineering and production were dealt with in the urgency of wartime conditions.

The bomb did work. It worked initially at Alamogordo, N. Mex., where the first test took place on July 16, 1945. It worked again at Hiroshima and Nagasaki, then the following year at Bikini. But all of these weapons, as far as their state of development is concerned, were about on a par. They were the wartime weapon—designed under extreme pressure and without regard for many problems which in the long run are of great importance in the military application of atomic energy.

THE NEW GOALS

In its January 1948 report to congress, the Atomic Energy Commission said its goal in the field of weapon development was the scientific and engineering perfection of improved designs, and that thorough testing of weapons and components is necessary to improved design.

In any program of developing and producing weapons, the need for proof testing, or for conducting full-scale experiments, is natural and obvious. Failure to test new developments would soon throttle the design of improved weapons. America's preeminence in the field of atomic weapons is not a static thing, it depends upon achievement—day to day, year to year, and test to test achievement.

Such were the experiments conducted in 1948 at the Eniwetok Proving Ground. A question which is always asked about these experiments is: "Did you get a bigger bang than ever before?"

The forthright answer is "yes," the Commission has stated, "Extensive study and analysis of the results of the tests have firmly established that a substantial gain in energy release was obtained."

Atomic weapons—or bombs, if you like; I use the words interchangeably—differ from conventional explosive weapons in two principal ways. First, they produce an enormously more powerful explosion; and second, this explosion is accompanied by intense radiation effects.

In examining the first difference, if you gage the explosion of an atomic bomb by comparing it with the energy released by an equivalent amount of TNT, you must recognize the difference between exploding that amount of TNT at one time and the same total amount in many smaller bombs. Without recognizing this difference you are apt to come up with the erroneous concept that walking down the steps of a tall building is the same as jumping off the roof.

The second difference, the radiation from the bomb, is something a part of which is new to us. Of course, we know the flash and heat from a conventional bomb. These forms of radiation are present in atomic bomb explosions, too, but are many, many times more intense. But there is an unfamiliar sort of radiation, too. It is like the stuff given off by the X-ray machine or from radium. This type of radiation is given off in large quantities at the time of the explosion, and it is also given off by the radioactive debris in the bomb cloud and by induced radioactivity in materials close to the explosion. This kind of radiation you don't see, or feel, or smell, but it's there just the same, and if you are exposed to enough of it, or a little of it for a long time, it has a lethal effect, too.

In an air burst practically all of the radioactive debris from the explosion goes billowing up into the upper atmosphere, and the radiation danger is limited to that first flash, the so-called direct radiation from the bomb.

An underwater burst presents a different situation. Here the radioactive debris and the induced radioactivity mix in the water and remain in the spray. Given the right wind the falling of this spray might give a good-sized path of contamination over an area downwind. This is a feature which has come in for a lot of ballyhoo since the underwater burst at Bikini. But let's look at this proposition a little closer. If you burst the bomb under water, it is evident that you lose a lot of the blast effect (unless you want to crush things which are floating in the water like ships or submarines) and you lose almost all the direct radiation. It's a case of "what you make on the apples you lose on the bananas."

And now I come to the end of my talk, and I'd like to leave with you a handful of thoughts to take home.

IMPORTANCE OF TEAMWORK

From the technical end I give you this thought, to repeat something I have already said, but something I think many of us do not realize—that the stuff which makes the big bang in the A-bomb is the same stuff which can be used to generate power for peaceful purposes. And if God will give us peace on this earth, we can remove the stuff from the bombs and put it into atomic engines to produce power.

From the viewpoint of world politics, I give you this thought: I regard, and I think you regard, our present lead in atomic weapons as a tremendous power for preventing war, and, God forbid that it come, a tremendous power for winning a war. Atomic weapons in our hands are not a threat to world peace, for we have no designs for aggression. We have no slave labor, we have no concentration camps, we have no dictatorship here. Ours is a land of freedom, of opportunity, and of respect for the dignity of the individual man.

Next I would give you this thought—and it is a serious one—it is in regard to maintaining our lead in atomic weapons: We cannot complacently sit back and observe the accumulation of atomic weapons in stock pile. This is not enough. To maintain our lead, we must aggressively pursue the business of getting better and better weapons. We must have tomorrow's weapon, today. And this is not enough. To maintain our lead, we must have the courage and skill in our fighting man and the technical excellence and performance in his machines to ensure that we have the means for employing the weapons. To maintain our lead involves the finest sort of teamwork between a public-spirited civilian commission in Washington and the National Military Establishment. Do you see what I mean by teamwork? The best atomic weapon is only as good as the means of delivering it. Both elements are of the greatest importance. Our present edge, or ace in the hole, demands a dynamic effort to preserve it. We will stay in the forefront by the vigor, the knowledge, the understanding, and the teamwork which we apply.

And my last thought, and one very dear to my heart, is this: That I should like to enlist your support for the recognition of that group of public-spirited scientists and engineers who, at considerable personal and professional sacrifice, are working in the irksome shroud of secrecy to ensure that we shall always have the best atomic weapons. Here is the group who had the fortitude, the industry, and the brains to give us atomic weapons. Here is the group who will continue to keep us in the forefront in any race for atomic weapons. They are worthy of our respect, our admiration, and our support. Did you ever stop to think why the scientist who works in the United States has been successful? It's because he works in an atmosphere of intellectual and personal freedom. There's no political commissar standing at his elbow, telling him that those truths he finds in nature must conform to the party line. Let us swear to keep the faith, to keep strong, and to preserve that freedom which is so necessary to scientific progress.

Why Government Health Insurance?

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 7, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Alfred Baker Lewis entitled "Why Government Health Insurance?" which appeared in the Survey for June 1949. This article is of particular interest because of the author's professional experience as president of the Union Casualty Co., a commercial firm specializing in health and accident insurance. The article follows:

WHY GOVERNMENT HEALTH INSURANCE?

(By Alfred Baker Lewis)

Our country has the highest standard of living in the world. Judged by the number of automobiles, radios, or telephones per capita, by the average food consumption, or the proportion of the population who are able to go to college, we easily outrank all other countries.

Naturally, then, we should have the finest medical care in the world. And this should be reflected in our sickness and death rates. For health, and to some extent even life too, can be bought, and we have the money to buy it.

We are indeed up among the leaders—which speaks well for the work done by our medical men—but we are not out in front in lowness of death rates nor in rates of health improvement. World Health Organization reports show that five countries have lower general death rates than ours and that three surpass us in low infant mortality rates.

One reason is that in this country medical care is not distributed even roughly in proportion to need. Because it is costly, many persons do not have the money to buy it. In some entire areas, with low average income, adequate medical personnel is not available, and in a few such areas a bare minimum of medical attention cannot be had.

Government health insurance seems the only way of providing widespread medical care at low cost. Such a system is the backbone of the current Federal administration's national health program.

A great many highly civilized governments, including those of England, Australia, New Zealand, and the Scandinavian countries, have laws making medical, surgical, and hospital care available to everyone through a compulsory insurance program. But in no part of the United States does such a program exist, though a few progressive States, notably Rhode Island, California, New Jersey, and New York, provide a government disability insurance—cash benefits for persons not able to work because of illness or nonindustrial accidents. In such instances collection costs are kept at a minimum, as contributions are paid through a pay-roll tax as in unemployment insurance.

Government health insurance is in line with the steady advance of social security in this and other countries. Various causes may interfere with the earning power of the wage earner, and might, unless provided for through Government action, throw him to the tender mercies of charity, public or private. Among them are industrial accidents, old age, unemployment, premature death of the wage earner, and sickness or non-industrial accidents. Through our State workmen's compensation laws, the Federal old age and survivors' insurance system, and Federal-State programs for aid to dependent children and assistance to the blind and aged, we provide in varying degrees of adequacy for many of these contingencies. However, except for the disability programs in the four States just mentioned and a few medical-care programs for persons on public assistance, sickness and nonindustrial accidents have so far received no Government recognition.

There is no logical reason for this gap in our social-security protection. Common sense would seem to require provision for wage earners who cannot work because of illness even more than for those who cannot find a job. In illness there is the double economic problem of loss of wages and additional expense.

Some sincere people argue that the cost of Government health insurance would be too heavy for the country to bear. However, they overlook the fact that nothing in such insurance increases the costs of sickness to the community, which as a whole already pays in full. Today, however, illness is paid for by wiping out the savings of the sick person and his family; or by putting him in debt and mortgaging his future earnings; or by letting a doctor give his services free; or, if the sick person is "indigent," by municipal aid financed chiefly by taxes on real estate. Union members may pay for the health-insurance protection in their contracts by dropping or reducing their demands for wage increases. And in some instances the sick person pays in unnecessarily prolonged illness and possibly even in premature death because he could not afford to pay in cash.

Rather than add to the present burden of sickness borne by members of society, compulsory health insurance would simply redistribute the financial burden. It would do this partly by collecting small weekly contributions from employers and employees similar to the contributions for unemployment insurance, and partly by general taxes imposed by the Government. The latter will be particularly necessary if proper medical care is to be provided for persons not covered by pay-roll taxes.

There is no such thing as truly free medical care. It has to be paid for by someone. If the individual in need of care cannot pay, then—if he gets any medical service at all—the community pays by taxes, local, State or national, or by private or institutional charity. Or else the doctor himself pays by doing the work without charge.

While doctors attend many people who cannot or do not pay their bills, and while hospital clinics are available in larger cities, nevertheless a large proportion of people actually go without proper medical care because they cannot afford it. In 1946, nearly half (47 percent) of the families in the United States had annual incomes below $3,000, an income under which it is difficult and sometimes impossible to pay the full cost of medical, hospital, and surgical care.

Even for the 30 percent of our population in the $3,000 to $5,000 income class, the cost of any serious or prolonged illness can be disastrous to family finances. The inevitable result is that people tend to gamble with their health. They delay seeking medical advice and treatment when they first feel ill in the hope that the trouble will disappear. Such delay can be fatal with tuberculosis, cancer, or syphilis, or other diseases amenable to treatment only in the early stages.

There can be no question that many deaths and much disability and illness occur every year because dread of the bill keeps people from consulting a doctor soon enough, or because insufficiency of funds prevents people from receiving the kind of care they need.

Good medical care is costly. Aseptic cleanliness is important but not cheap. Laboratory and X-ray tests, and periodic check-ups are all expensive. The diagnosis and treatment of mental disturbances through psychiatry is particularly prohibitive in price because of the long series of sessions involved. Rest, important in the treatment of many illnesses, is out of reach of the wage earner who must support a family. Special diets are also frequently expensive.

Because illness or accidents are, for any particular individual, not easily predictable, there is a natural human tendency to take a chance and not budget ahead of time for medical expenses. Yet when these misfortunes occur they come with a crushing blow.

Not only are new expenses incurred, but the income from which they must be paid stops immediately—at least for manual workers, paid by the hour, who get knocked off the payroll the minute they are ill.

Many persons have attempted to meet this situation by nonprofit insurance, such as the Blue Cross hospitalization plans. But with few exceptions the Blue Cross does not pay for medical or surgical fees, nor anything to make up the loss of the wages.

Variants of the Blue Cross, not nearly so widespread, are the medical prepayment plans. Sometimes these are set up by a number of doctors engaged in group practice; sometimes they provide a panel of physicians from which the patient can choose. Though these plans provide for medical expenses they do not make up for loss of wages. So far, they include very few industrial workers and are available only to a small proportion of the urban middle class. Without a large and expensive selling campaign it seems unlikely that they will expand rapidly. Such a campaign would necessarily add to the premium costs.

An increasing number of trade-unions have attempted to obtain employer-paid health insurance for their members as part of collective-bargaining arrangements. These union plans vary in type and effectiveness. The best of them provide cash benefits, hospital fees, surgical fees, and medical fees, but such complete coverage is rare. Moreover, only a few include the workers' wives and children in the benefits.

Union programs have the merit of reaching people who could not otherwise afford to pay for adequate health protection. However, the promotion of union health insurance plans cannot solve the problem of providing satisfactory medical care for the entire population. In the first place, even if they were universally a part of union contracts, which is far from the case, they would be likely to cover union members only.

Many employers who do not now object strongly to providing health insurance for their workers would be more apt to resist plans including their employees' dependents. Yet from the point of view of public health and the family man himself, such benefits are as important as benefits for the actual wage earner. In practice, only the stronger unions have bargaining power enough to get such benefits. The weaker unions do not get them, nor self-employed nor employees without union contracts.

Private health insurance plans sponsored by insurance companies, whether through unions or otherwise, are usually inadequate medically and unnecessarily costly. They do not reach those who have the greatest need. Since the companies must protect themselves, they reserve the right to reject individual applicants whose health is poor and to decline responsibility for medical costs due to conditions existing before the issuance of a policy.

Furthermore, in commercial insurance the premium charged must cover administrative costs—the expenses of keeping records, mailing out the benefit checks, paying the staff of doctors to check illness reports. But this is not all. To get reasonably healthy people to take out such policies at all, or to insure with one company rather than another, requires a good deal of selling. Therefore, private voluntary health insurance policies are inevitably loaded with costs that from a strictly functional point of view are completely unnecessary. Known in insurance parlance as "acquisition costs" these include such charges as brokers' commissions, general agents' commissions, solicitors' and collectors' salaries and commissions, advertising costs, costs of entertaining prospects and less legitimate costs commonly included in "entertainment" charges. Such charges usually run to 40 percent or more of the premium. Then the insurance companies, unless they are mutual companies, take another bite out of the premium for profits.

Even as a part of a government health program the use of commercial insurance companies will swell the cost. Experience in workmen's compensation has shown that privately written insurance is far more expensive than Government insurance.

According to Arthur B. Reede in The Adequacy of Workmen's Compensation, handling costs in privately written insurance of this type amount to over 40 percent of the premium. It is 6 percent when the program is exclusively a Government operation.

Too many physicians have been led by the statements of the American Medical Association into a misunderstanding of the subject. The AMA maintains that Government health insurance is socialized medicine. This is certainly not true of the administration's present proposal. Under socialized medicine the Government would take charge of the medical profession, put the doctors on salary, and assign them to treat certain patients without any freedom of choice on the part of either. But the President's program as spelled out in bills recently introduced in both Houses of Congress specifically provides that patients shall have the right to choose their doctors, and doctors their patients.

Furthermore, the proposed plan provides that doctors in each community can decide whether they should be paid on a fee basis for service rendered, on a per capita basis for each patient, by salary, or by a combination of all three methods. Individual doctors who prefer a method of payment other than the one agreed upon by the majority will be given opportunity, insofar as possible, to follow their preference.

Actually, some doctors are already employed by agencies of the Federal Government, cities, towns, counties, or States, and for them Government health insurance obviously would mean no change in medical practice. Other physicians charge fees for services rendered, but they too would undergo no change in medical practice though their fees would now come from the health insurance fund. Moreover, many of them would receive pay for services they now render free of charge.

Perhaps this in itself would provide some incentive for more people to take up medicine as a career and to choose their place of practice in terms of need rather than of possible prosperity. Other incentives are needed of course to encourage more people to go into the medical profession and to spread the available doctors more evenly throughout the States; for the shortage of physicians and specialists and their concentration in a few areas of the country, is one of the serious deterrents to better health in this land. For this reason the administration's program includes grants for education and for construction of the hospital facilities that are so important to a physician's work.

The administrative problems involved in almost any large scale social program are bound to be considerable. A wide-spread and comprehensive health insurance program would certainly be no exception. But such difficulties ought to be regarded as a challenge rather than an insurmountable block. There is no reason to suppose that health insurance administration need be more complicated than the problems involved in handling AAA payments to farmers, unemployment and old age insurance, the wartime draft, or the numerous kinds of benefits for veterans now handled by the Veterans' Administration.

Politics is necessarily the art of compromise. While we must aim at providing the best health services for all our people regardless of economic conditions or place of residence, it is unlikely that we can attain such a desirable aim overnight by one law. It appears probable that health insurance, like unemployment insurance, will begin with persons working for wages and salaries and their dependents. And perhaps for the dependents it may be limited at first to surgical, hospital, and maternal care, supplemented by preventive medical care for children through school health programs. Even for the wage earners themselves it may be limited at first to medical, surgical, and hospital care connected with disability serious enough to prevent work.

Unemployment insurance and old-age and survivors' insurance are not yet complete in coverage, though movements are under way to extend benefits to those left out in the beginning, mainly because of administrative difficulties—agricultural and domestic workers, employees of nonprofit organizations, the self-employed. Perhaps under health insurance it may also be wise to begin with a limited program until other parts of President Truman's recommendations have been put in effect—particularly the construction of hospitals.

However, such a modest introduction of health insurance would reduce the effectiveness of the program. Certainly as the advantages of health insurance are more widely understood, the administrative difficulties will shrink in importance.

Last year, the National Health Conference in Washington estimated that of the approximately 1,400,000 deaths in this country each year about 325,000 or over 20 percent are preventable on the basis of present medical knowledge. The conference recommended that we increase our medical expenditures by approximately $4,100,000,000 under a national health insurance program—a recommendation joined in by all the delegates except the representatives of the American Medical Association. Thus we could save 325,000 human lives each year, whose worth cannot be calculated.

The same conference estimated that the loss of time due to short term sickness, incapacity, and partial disability, when applied to the average earnings of the population, results in a loss of approximately $27,000,000,000 annually in potential production and wages. If only 20 percent of this sickness and loss of time were preventable by better medical care, we could have over $5,000,000,000, or more than enough to cover the cost of health insurance.

Most people recognize that expenditures for the conservation of natural resources are not truly net expenses from the point of view of the Nation, but investments which will yield rich returns in money and well-being as the years go on. Precisely the same reasoning applies to expenditures for health, for they help to conserve our most precious resources, the lives and vigor of our people.

National Youth Assistance Bill

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 6, 1949

Mr. JAVITS. Mr. Speaker, as the problems of our country become more complex, greater attention is fixed on the youth whom we are bringing up to deal with them. My bill, which has been the subject of a survey of governors and mayors throughout the United States and has won substantial support ought to have a committee hearing. Federal assistance to youth activities would follow a pattern now successfully established in the State of New York as shown by the appended editorial from the New York Herald Tribune of July 6. It is a proper and necessary extension of the activities of the Federal Government in

relation to children. It is necessary to take this activity one step further into the field of youth, and this is no longer experimental as we have practical experience in some 27 States, including New York, Texas, Connecticut, New Jersey, California, North Dakota, Oklahoma, Oregon, Washington, Wisconsin, Wyoming, Arkansas, Colorado, Kansas, Louisiana, Michigan, Minnesota, and Mississippi:

SCIENTIFIC FRIENDSHIP

The city of New York has been committed since the beginning of this year to the proposition that juvenile delinquency is best attacked by prevention. The idea is to help the coming generation before the individual problems of guidance suddenly and belatedly flare into problems for the police. Now this seems such good sense that one might have assumed that there was nothing new about such a program. But not at all. The details have been slowly molded since 1947. A close-knit plan was authorized by the board of estimate in January, and just now the New York City Youth Board begins its first full fiscal year of building for the future.

The youth board's activities are best described as a scientifically organized campaign for friendship. The cost is roughly $2,000,000 a year, half of which is supplied by the State. The application of this money is extremely detailed. Recreation activities are sponsored in schools and public housing projects. Dozens of play streets are operated by the Police Athletic League. These fields are familiar enough, but that is far from the whole story. Potential delinquents, easily recognized in school, are being tackled by "referral units" of the board of education in 11 "areas of greatest need." Psychiatric teams give help where help is needed, both to the young and their families. This is real guidance, supplementing and coordinating existing facilities. By thorough organization, which has been developed through extensive experimentation, the aim is to make tomorrow's youth New Yorkers happier and more productive. Such a goal inevitably, by any criterion, makes for the improvement of the entire population.

Taxes

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. ROBERTSON. Mr. President, on June 7 last, Hon. Walter H. Carter, an able lawyer of Amherst, Va., addressed the veterans' agricultural class of the Amherst High School on the subject of taxes. His discussion of the history of taxation is both interesting and timely and it gives me pleasure to ask permission for it to be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TAXES

I believe it was Benjamin Franklin who said, "There is nothing certain but taxes and death," or words to this effect. I think we will all agree with this statement.

Until recently, economists had little to say about the effects of tax systems upon the general economic structure. However, in the last two decades this subject has become a major issue of public discussion and professional study. Tax rates have risen to heights that a short time ago would have seemed fantastic. It is inevitable that, in such magnitudes, taxes vitally affect the country's entire economic, social, and political life.

Going back to ancient history and the Bible, we find that secession of the Ten Tribes of Israel, and thus the disruption of the Jewish monarchy, was in large part a tax phenomenon. The revolt is said to have been due to the refusal of Rehoboam to reduce the heavy taxes of his predecessor, King Solomon, who had embarked on an ambitious program of public works, and this brought about the stoning to death of some tax collectors in that day.

The poll tax was one of the first taxes imposed by organized government, and under the poll tax system each persons pays the same in a given locality. During the days of the Roman Empire the Roman Emperor forced the Jews to come each year to Jerusalem to be assessed with a poll tax to help support Rome. It is recorded in the New Testament that Joseph and Mary went to Bethlehem to be enrolled for the poll tax because Caesar Augustus decided that all the world should be taxed. The poll tax was introduced in England in 1377 and included all males and females over the age of 15. In 1623 it was imposed in the Virginia Colony in order to finance military operations against the Indians, and it remained a principal source of revenue until it was abolished in 1816. But it was revived again in 1850 in the form of a dollar per head tax on free Negroes to help pay for a Negro colonization program in Liberia. In 1860 the tax was made uniform and applicable to both white and Negro males.

In its modern form in the United States, all but six States either provide for or permit its use in one way or another, and in some States the individual is permitted to work out his tax and it ranges from 25 cents to $12 per year, with $1 to $2 being most common. Seven States, including Virginia, require the payment of poll taxes as a condition to voting. In Virginia the State poll tax is $1.50 on each individual 21 years of age or over, and as stated the payment is a prerequisite to voting. Of this sum $1 goes to the State for school purposes and 50 cents is returned by the State to the localities to be used as the local governing bodies see fit, usually for school purposes. The poll tax is not now a large source of revenue. The States received in 1947 about $6,000,000 from poll taxes.

Coming to more modern times, we remember the Stamp Act and the tax on tea and the American Revolution. The French had an interesting excise tax at one time known as the Gabelle, or salt tax, which required every man, woman, and child over 7 years of age, to consume 7 pounds of salt each year. Taxes were often collected in and from the products of the soil, and still is in many countries, especially Russia and her satellite countries, and the Government takes so much of the crops that the people hardly have enough to live on.

The first known taxes in England were land taxes levied by area and determined by the character of the land, and later the personal-property tax came into existence and later the various kinds of taxes, of which there are now many covering almost everything.

Our own tax system developed following the American Revolution and indeed most of the tax burden of the world stems from the costs of wars.

One of the first States to provide for a general property tax was Tennessee and in 1796 the Tennessee Constitution provided that all lands liable to taxation shall be taxed equal and uniform in such manner that no 100 acres shall be taxed higher than another except town lots, which shall not be taxed higher than 200 acres of land each.

While most nations now impose an income tax, that is a comparatively modern scheme. Our original Federal Constitution did not authorize the Federal Government to levy an income tax. It collected import duties and excise taxes on liquor, tobacco, and so forth.

In 1861, as a revenue measure during the Civil War, a 3-percent Federal income tax was levied on incomes in excess of $800 and this continued in various degrees of success until 1872, when it was dropped. In 1894 the Federal Government experimented with it again, and in 1913 the ratification of the sixteenth amendment permitted the levy of a Federal income tax and the Second World War stabilized it, and as of early 1948, 29 States and the District of Columbia, and three cities levied an income tax in addition to the Federal income tax. An estate Federal tax was imposed in 1916. Some of the States began levying a State income tax as far back as 1840, including Virginia, and during the Civil War all the Southern States levied an income tax. At first the income taxes were a comparative failure and only for the last 35 years have such taxes had an important place in State tax systems. In the American colonies, they had at one time a combination property and income tax known as a faculty tax, but this gradually gave way to the general property tax.

The sales tax, now currently being discussed, goes back to ancient times, and was a very profitable source of revenue. In Roman times it was employed by Augustus, who laid a tax of 1 percent upon all articles, movable goods, or fixtures, sold in the markets or by auction.

In the United States in modern times West Virginia pioneered in the modern sales tax in 1921, and Georgia and Mississippi followed in 1929; Kentucky in 1930, and in 1933 12 other States accepted it, and in 1948 27 States and 7 cities have it. In 1948 the sales tax in New York City alone amounted to $140,000,000, and in some of the States about 50 percent of the State tax revenue comes from the sales tax.

Motor vehicle fuel tax: President Wilson in 1915 recommended a Federal tax on motor vehicle fuel but apparently it did not become a law until 1932.

Among the States, Oregon in 1919 was the first to impose a State tax on gasoline and during the same year, Colorado, New Mexico, and North Dakota levied such taxes, and 10 years later every State had it. The State rates vary from 2 to 7 cents, plus Federal tax of 1½ cents, and in some States where an additional local tax is allowed it amounts to 10½ cents. During 1948 the motor-vehicle license tax and the motor-vehicle fuel tax yielded the States $584,000,000 and $1,300,000,000 respectively.

Tax reform began in Virginia in 1902. In 1915 partial segregation came and the State tax was reduced on real estate and tangible personal property from 35 cents to 10 cents, and intangibles were separately classified with fixed State rates and maximum local rates fixed. Money was taxed by the State in 1914 at 20 cents, but that tax was repealed in 1948.

Full segregation came in 1926 with the State releasing all tax on real estate and tangible personal property and taking over intangibles exclusively, leaving the localities to tax real estate and tangible personal property.

A State tax board was first created in Virginia in 1915. This was an ex-officio board composed of three members. In 1924 a State tax commission was created as the successor of the State tax board. This was likewise an ex-officio body. In 1926 the old State tax commission was discontinued and a new State tax commission was created.

The Governor and auditor of public accounts were members ex officio. The chairman was a full-time member and conducted the affairs of the commission. Under the State Administrative Reorganization Act of 1927 the State tax commission was abolished and all its powers and duties were given the State tax commissioner, which commission exists today.

Real estate in Virginia is assessed by land assessors appointed by the court at intervals and the commissioner of the revenue adds to the real estate the value of buildings and improvements as they are made. The commissioner of the revenue assesses tangible personal property for taxation on the personal property books. The physical properties of all public service corporations, such as railroad, telegraph, and telephone companies and other public utilities are assessed by the State corporation commission and certified by the commission to the localities for the extension of local levies thereon, except that the rolling stock of steam railroads is subject to State taxation only, at the present time at the rate of $2.50 per $100 of the assessed valuation. The local rate of taxation is fixed by the governing bodies of the local ties, such as, the county board of supervisors and the councils of the cities and towns. The State tax rate is fixed by the legislature.

GROWTH OF THE TAX SYSTEMS OF THE UNITED STATES

From 1890 to 1913 American tax collections rose from $875,000,000 to $2,200,000,000, a 150 percent increase. Federal war tax collections and some expansion of State and local tax systems lifted total tax receipts to a peak of approximately $9,200,000,000 in 1920. Three years later Federal taxes had been reduced by $2.700,000,000, State and local taxes had increased $700,000,000, and the total figure stood at $7,200,000,000. Federal tax receipts during the next 7 years were held relatively level, while State and local receipts continued to increase. By 1930 total tax collections had reached a new peak of $10,300,000,000. Three years of business recession carried the figure down to $7,500,000,000 for 1933. From then until World War II, the movement was steadily and rapidly upward. By 1940, before Federal "defense" taxes were registering any effect, total tax collections for the country came to $15,600,000,000. The war revenue acts catapulted Federal tax collections and they reached a peak of $44,300,0000,000 in 1945. State and local taxes in that year amounted to about $11,200,000,000. Subsequently Federal taxes declined slightly to $42,300,000,000 in 1948, but State and local taxes tended to increase. Total tax payments in the 1948 fiscal year exceeded $56,000,000,000. Gross national income for this period was about $232,000,0000,000. About 80 percent of the current expenditures are for past wars and future defense. Some six to seven billion per is spent on veterans.

The personal income tax is now the most important element in the American tax system, accounting for 30 percent of total tax revenue, and is most important as a Federal source, even though an occasional State gets as much as one-sixth of its funds from a personal-income tax.

Business taxes are next in importance yielding 20 percent of the total, not counting property and pay-roll taxes. If the employer's part of social-security pay-roll taxes is added, business taxes make up almost one-fourth of the total. The major item of this group by far is the Federal corporation income tax, which yielded $9,900,000,000 in 1948.

Next in importance is the sales taxes and commodity and service excise taxes. Not counting gasoline taxes, this group brought in over 17 percent of the 1948 total, with liquor and tobacco taxes accounting for almost half of the $9,800,000,000 total. If gasoline and motor vehicle licenses are included, the broad group of consumption taxes accounts for over one-fifth of the country's tax revenue.

In the fourth place today, although until the early 1940's it was the most important, is the property tax. It is still the all-dominating element of local finance. It produces over 40 percent of combined State and local tax revenue, but only 10 percent of combined Federal, State, and local tax receipts, rather than 30 percent as in the 1930's. Of the $6,800,000,000 of local tax collections estimated for 1948, about $5,500,000,000 was derived from property taxes. Property taxation attained its fullest development in the United States, to the point where the so-called general property tax is sometimes considered a purely American form of taxation.

The United States Supreme Court in 1899 declared:

"The power to tax is the one great power upon which the whole national fabric is based. It is as necessary to the existence and prosperity of a nation as is the air he breathes to the natural man. It is not only the power to destroy but also the power to keep alive."

Socialism in Britain

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Enough Is Enough," published in a recent issue of the Indianapolis Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENOUGH IS ENOUGH

"Work or want" was the slogan coined by Sir Stafford Cripps when he and the Labor government launched Britain on a program which was designed to get her on her feet by 1952. It was a good slogan. The British people had to produce in order to get their heads above water. But the Labor government soon made it clear that while the people were expected to work, they would not be allowed to want, whether they worked or not. It promised the British people all sorts of benefits, free medicine and social security but they did not condition the granting of these benefits on more production first.

During the first few years of socialism in Britain the Government financed Socialist experiments with American money, $7,000,000,000 worth of it. The money is still flowing in to Britain from the United States, but the Labor government is still continuing to live beyond its means in its attempt to fulfill the promises of Socialist heaven that the politicians had made before election. So now Britain is almost broke again. Its industry is still a high-cost, low-production industry which cannot compete in world markets that have finally become competitive. Its nationalized enterprises are all losing money. Their free medicine program is costing the British nine times as much as is collected in fees from doctors. Their currency is artificially pegged at a high price so that British goods are overpriced in world markets and British exports are declining because cheaper goods from other places are taking away their markets.

Sir Stafford Cripps has only one answer for the British people. It is more of the same. More controls, more barter agreements, more pegged currency, more nationalization, more austerity for the British people. He said nothing about cutting back the Socialist benefits that are costing the Government so much.

We respectfully suggest that the best way for Britain to start producing enough to take care of its own needs is to stop experimenting with socialism, largely with American money to date. The British should cut back the free benefits which are costing them more than their income, they should devalue their currency, give incentives to their industries to compete in world markets at world prices, and drop a lot of the cartel arrangements, the exchange controls, the restrictions on free trade.

We also suggest to our own Government that we stop picking up the check for British socialism and tell Britain that we will continue our aid only on the condition that she, and the other Marshall plan nations fulfill the agreements made with us when the program started. They were going to unify their economic lives, lower trade barriers, get together and save themselves. They were not to keep on coming to Uncle for more and more and more as their social planners' schemes went awry.

The Star has ardently supported the Marshall plan. We still do. But we do not intend that it should perpetuate inefficiency, maintain Socialist programs, support free medicine for others which we cannot afford ourselves. We should now tell Sir Stafford and the Labor government to get Britain's house in order, and to pick up the next check themselves.

Report of Projects Committee to Rivers and Harbors Congress

EXTENSION OF REMARKS

OF

HON. SID SIMPSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following report of the Projects Committee to the recent Thirty-ninth Annual Convention of the National Rivers and Harbors Congress, which was held in Washington on April 7, 1949:

REPORT OF THE PROJECTS COMMITTEE TO THE THIRTY-NINTH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

WASHINGTON, D. C., *April 9, 1949.*

HON. JOHN L. MCCLELLAN,
President, National Rivers and Harbors Congress,
Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the president, your projects committee met on April 7, 1949, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 38 proposals embracing all resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, and on the basis of information submitted, this committee is convinced that 10 constitute projects, sound in conception, needful, and sufficiently advanced in status to warrant en-

dorsement, involving a total estimated cost of $711,069,100. Five proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 14 proposals, surveys have been authorized but the reports on such surveys have not been completed and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find nine proposals, which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

The projects committee through its hearings and otherwise has been made intimately aware of the growing public demand for more rapid and far-reaching public improvements for navigation, flood control, reclamation, and allied developments. It is in full accord with and strongly supports the action taken to accelerate the long-range programs of needful projects for the orderly development and beneficial use of our water and land resources. In this era of continuing rapid advancement in all fields of endeavor, any lag or retardation in the development of our natural resources at this time could be detrimental to the country's welfare.

Your committee notes with approval the introduction of legislation in the Eighty-first Congress (S. 1104 and its companion bill H. R. 3492) which would provide for the recognition of significant national defense values when such are found by the Chief of Engineers to exist in any river or harbor project. The enactment of such a law will be of far-reaching importance in the intelligent evaluation of this group of public works.

Cognizant of the number of projects already underway or authorized, your committee urges that the appropriate agencies concerned give careful consideration to and promptly report on essential new projects still in the proposal or study stage. It reaffirms the view that in general recommended projects should be authorized without undue delay upon completion of the agency reports and thereby be available for appropriation and construction as the circumstances may warrant. This will permit highly important new projects to be placed in the active construction schedule.

The committee has been apprised of the extended lapse of time to complete studies and reports on meritorious projects due to the lack of sufficient survey funds. It is informed that the surveys now authorized for navigation, flood control and related purposes will require from 5 to 8 years to complete at the present rate of appropriations for such purposes. The engineering and economic studies which are necessary to produce sound projects, upon which the Congress of the United States can act with assurance, have become more complex and costly. The Federal agencies quite properly investigate all water uses and problems that are related to navigation, flood control, reclamation, and conservation of our water and land resources, so that completed plans will be truly comprehensive in scope. It is unavoidable that the carefully coordinated investigations now being prosecuted should require increased costs. On the other hand the amount of funds requested and appropriated for this purpose have either remained constant during recent years or have been reduced substantially. It is therefore the proposal of this committee, Mr. President, that you convey to all agencies concerned and to the Congress of the United States a recommendation that sufficient funds be requested and appropriated each year with which to carry out the survey programs on a sound basis and on timely schedules.

In conclusion, your committee recommends that the National Rivers and Harbor Congress actively and forcefully foster the early completion of those projects essential to the future well-being of the Nation.

Respectfully submitted.

SID SIMPSON,
Chairman.

NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time, upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I—Endorsed, such status continues, and it is unnecessary to follow up at subsequent sessions with new applications. All projects "Endorsed" by the Congress, upon the recommendation of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPENDIX A

Letter "R" following the project number indicates revision of a previous application)

Class I—Projects endorsed

(Endorsed: This means that the committee is convinced that the project is sound, needful, and sufficiently advanced in status, and should be promptly constructed in the public interest.)

Project No.	Name of project	State	Division
181-A-R-2	Tennessee-Tombigbee inland waterway	Mississippi	Ohio River.
427-R-3	Green River flood-control project	Washington	North Pacific.
715-R-2	Passaic Valley flood-control project	New Jersey	North Atlantic.
774	Oologah Dam and Reservoir (Verdigris River)	Oklahoma	Southwestern.
775	Okeechobee waterway from Stuart to Fort Myers	Florida	South Atlantic.
776	Intracoastal Waterway from Miami to Key West	do	Do.
783	Toronto Dam and Reservoir (Verdigris River)	Kansas	Southwestern.
784	Central Valley project	California	South Pacific.
786	Ouachita River	Arkansas and Louisiana.	Lower Mississippi Valley.
787	Overton Lateral Red River Canal	Louisiana	Do.

Class II—Projects classified as meritorious

(Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.)

Project No.	Name of project	State	Division
722-R	Cape Fear River at and below Wilmington	North Carolina	South Atlantic.
736-R	Taylors Creek	do	Do.
781	Raystown Reservoir, Juniata River and tributaries	Pennsylvania	North Atlantic.
790	Improvement of Hudson River from Albany to New York City.	New York	Do.
791	Atchafalaya River to Gulf of Mexico	Louisiana	Lower Mississippi Valley.

Class III—Expeditious report on authorized survey requested

(Expeditious report on authorized survey requested: This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.)

Project No.	Name of project	State	Division
740-R	Annisquam River	Massachusetts	Northeastern.
744-R	Oregon Inlet and related channels	North Carolina	South Atlantic.
745-R	Masonboro Inlet	do	Do.
767	Cape Cod Canal	Massachusetts	Northeastern.
768	Chelsea River (Creek)	do	Do.
769	Weymouth Fore River and Town River	do	Do.
770	Saginaw River Basin	Michigan	Great Lakes.
771	Burns Harbor	Indiana	Do.
773	Waccamaw River	North Carolina and South Carolina.	South Atlantic.
777	Northeast (Cape Fear) River	North Carolina	Do.
782	Buffalo Creek and tributaries (Monongahela River watershed) flood-control project.	West Virginia	Ohio River.
787-A	Red River navigation above Shreveport	Louisiana and Texas.	Lower Mississippi Valley.
788	Waccamaw River diversion canal and channel improvement for flood control.	North Carolina and South Carolina.	South Atlantic.
792	Cincinnati Harbor flood-control project	Ohio	Ohio River.

Class IV—Projects recommended for survey

(Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.)

Project No.	Name of project	State	Division
725-R	Carolina Beach	North Carolina	South Atlantic.
728-R-2	Morehead City Harbor	do	Do.
772	Suwannee River Valley flood control	Florida	Do.
778	Lockwoods Folly Inlet	North Carolina	Do.
779	Wallace Channel	do	Do.
780	Little River Inlet	do	Do.
785	Grand River Basin flood-control survey	Michigan	Great Lakes.
789	Michigan City Harbor improvement	Indiana	Do.
793	Cleves flood-protection project	Ohio	Ohio River.

UN Debates Use of Prayer in Assembly

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD the attached article by Homer Metz, chief, United Nations News Bureau, the Christian Science Monitor, entitled "This World—UN Debates Use of Prayer in Assembly":

THIS WORLD—UN DEBATES USE OF PRAYER IN ASSEMBLY

(By Homer Metz, chief, United Nations News Bureau, the Christian Science Monitor)

LAKE SUCCESS.—Secretary General Trygve Lie's plan to have opening sessions of the United Nations General Assembly open with a minute of silent prayer or meditation is in the earliest preliminary stages of discussion, but already it appears headed for trouble—as expected.

Two extremely powerful nations in UN affairs, Russia and France, have serious reservations about injecting a religious note into the proceedings of the world organization.

They also have their doubts about the wisdom of having a prayer chamber or a quiet corner in the UN's permanent headquarters in Manhattan.

Soviet opposition comes as no surprise. But the French attitude is something else again.

According to Russian representative Alexander A. Soldatov, Mr. Lie's proposal is likely to emphasize differences already existing among UN members. There are, he says, innumerable beliefs and religions represented in the UN. And, he added, there are some member states where no religion at all is professed—meaning, of course, countries in the Communist-controlled world.

SETTING TERMED TOO WORLDLY

The French position, summed up by Pierre Ordonneau, is as follows:

The UN is essentially a nonreligious organization. Its functions are entirely on what might be called the material or worldly plane. Therefore, it is not the place for prayer or religion, however universal or noncontroversial the form of observance may be. Prayer is proper only in churches or shrines dedicated to it.

Moreover, says M. Ordonneau, the 60-second period suggested by Mr. Lie would be too short if the delegates used it to meditate on divine support for the UN's ideals and too long if they employed it to think of nothing.

However, M. Ordonneau says his government will go along with the idea if a majority of the UN's member nations favor it.

As is clearly felt by many people, the objections raised to the Lie plan are scarcely convincing. Rather than emphasize the existing differences, as Mr. Soldatov asserts, even the slightest concession to spirituality is likely to deemphasize differences.

And as for Mr. Ordonneau's point, the Deity remains the Deity in nonreligious edifices and organizations as well as in churches and shrines. It can be argued that true prayer will be heard, whether it originates in the chambers of the UN or in a church.

It is earnestly hoped here that the differing viewpoints brought to light in the preliminary discussions are not a forecast of a determined and prolonged fight against the proposal. As one official has warned, this could lead to the most dangerous sort of complications, including dialectical arguments on the merits of various forms of religion and on the existence of God.

WIDE BACKING BY PLAIN PEOPLE

Mr. Lie's proposal to open some UN meetings with a period of reverent silence, as well as the plan to include a prayer chamber in the new headquarters, is the direct result of the wishes of thousands of ordinary men and women throughout the world who feel that an organization dedicated to the welfare of men and nations should necessarily take some formal cognizance of divine power.

These men and women in recent weeks have flooded UN officials and delegates with letters and other communications expressing their point of view.

No organization in the world is more susceptible to the power of public opinion. If the proposal advanced by Mr. Lie is to avoid rejection or bitter controversy, the spiritually minded men and women of all nations must continue to express their wishes articulately and in all ways possible.

Even so-called Godless Russia cannot ignore a determined and powerful manifestation of world thought.

Happily, both the United States and British Governments have indicated they will give the plan their strongest support.

But more is needed than the support of governments.

The plain people of the world were responsible for the genesis of the Lie plan. They are also responsible for its fulfillment.

Stop the Subsidy and Pay the Postman

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. LYNCH. Mr. Speaker, I had the pleasure last Friday, July 8, to be the guest speaker of Local 10, Federation of Post Office Clerks, on their radio program over WMCA in New York. I understand that this is a weekly program originated by Mr. Patrick Fitzgerald, the energetic and enterprising president of local 10, to bring to the attention of the public generally and the postal employees particularly the facts and status of the various bills pending in Congress which affect the welfare of postal employees.

Under the leave unanimously granted me, I desire to include the address I gave in making known my position on the pending legislation which is as follows:

STOP THE SUBSIDY AND PAY THE POSTMAN

It is from a sense of profound conviction that I appear here this evening to champion legislation that has to do with the welfare of the 400,000 postal employees in the service of our Government. I have long believed that they were entitled to better pay and better conditions of work than they have received.

I have had occasion to express my views on this subject before committees of both the House and Senate. At the time of the Chavez-Langer hearings I advocated an across-the-board increase of $1,000 for postal employees in the belief that such an increase was justified by the type and manner of work done, by the standard of living to which our postal employees were entitled, and by the unprecedented increase in the cost of living. The legislation that was finally formulated as the result of those hearings gave an increase in pay to postal employees of $450 per year. It was inevitable that postal employees, in the face of this modest increase, should be compelled again to come to Congress and ask that they be given more adequate compensation. To my mind it is merely a matter of simple justice.

The very regularity of our great postal system causes the American people too frequently to forget the postman who daily trudges from door to door, from house to house, from one business establishment to another, bringing tidings of joy or sorrow and keeping the wheels of industry moving. The ease with which a letter is dropped into a mail box in New York, the certainty of its quick arrival and early delivery in San Francisco, too often obscure the personalities that make our postal system the efficient organization it is. With that obscurity comes forgetfulness of the tireless effort of the postal worker. It is to the advantage of the American public, which the postal system serves so well, that the postal worker be paid a wage that will enable him to maintain himself and his family decently and with dignity. It is false economy to believe that the country can save money by underpaying its Government employees. It does not make for good morale or efficient service to have the 400,000 postal employees feel, not only that they are underpaid, but that they are not being treated as are other Government employees with respect to vacation and sick leave.

I presume that the average American citizen believes that all Government employees enjoy the same benefits and privileges. Such is not the case. There is, however, pending legislation which would put the postal employees on a par with other Government employees by giving postal employees 26 days vacation and 15 days cumulative sick leave. That legislation should be enacted at the earliest opportunity. It is long overdue, and the quicker these inequities are eliminated, the better it will be for the service and the public.

I realize that this legislation means an increase in cost to the Government. I further am aware of the fact that there is a strong demand for economy in government, but it does not seem to me that we should economize at the expense of the faithful servants who are employed by the Federal Government.

We spend—and properly so—millions of dollars abroad to rehabilitate the countries of Europe and to establish for them a sound economy. We do this, not through an altogether altruistic spirit, but because we know that it will aid our own economy. Let us spend a few million dollars on our postal employees, not only for their good, but for the good of the entire country. As a member of the Ways and Means Committee of the House of Representatives, to which is assigned the task of raising revenue for the operation of the Federal Government, my correspondence is heavy with requests to repeal taxes. I do not believe that this proposed legislation for increased pay and for lengthened vacation and sick leave would necessarily entail a heavier tax burden on the country. The increased cost can and should be met by an adjustment of our postal rates.

It is well known that there are certain classes of mail that are carried at a distinct loss, running into many millions of dollars annually. Actually, the Government is granting a subsidy to those business interests that are favored by these inadequate rates, at the expense of the men who carry the mail. To my mind there is no reason in logic or justice for such a situation to continue longer.

The people of my Congressional District—the Twenty-third, New York—are aware of the inadequacy of the compensation paid to the postal employees and are in favor of

the proposed legislation. They have let me know how they feel about this legislation by sending to me hundreds of letters and petitions signed by them, urging that the legislation granting increased pay, vacation and sick leave be favorably acted upon. These people who wrote to their Congressman were not all postal employees, on the contrary, the great majority were the people who are served by these loyal postal workers and who realize that they are underpaid for the great service which they render to the public.

I think the following letter which I received some time ago well typifies the plight of the average postal employee:

"DEAR MR. CONGRESSMAN: As a disabled veteran of the past war and a clerk in the post office I earnestly appeal to you to appear before the House Civil Service and Post Office Committee to support an increase in pay for us. I earn $2,300 per year, which is $39.92 take-home pay per week, after deductions. I am going steadily into debt, trying to support my family, and I do not know where to turn any longer. In 4 years of fighting on the front lines I never once failed my country. I beg you not to allow Congress to fail me and my loved ones now."

I want to say to the writer of that letter and to all postal employees that I think their request for increased pay, for longer vacations and sick leave and the other legislation advocated by their postal organizations are moderate and reasonable and I shall be glad to assist them in their cause, remembering that "Neither snow, nor rain, nor heat, nor gloom of night stays these couriers from the swift completion of their appointed rounds."

Government Deficit

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Government in the Red," published in a recent issue of the Washington (Ind.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOVERNMENT IN THE RED

At long last Congress and the administration in Washington are face to face with the hard fact that there must be a reduction in Government expenditures. The United States ended its fiscal year at the close of business last Thursday with a deficit of $1,811,440,047.68.

That is three times the deficit that was forecast by President Truman last January and is even larger than the deficit that was predicted by such an economy-minded Senator as Senator BYRD.

The deficit was brought on by the greatest peacetime spending in the history of the United States ($40,057,107,857.79) plus declining revenues. At the present rate of spending and income the deficit for the fiscal year, which began yesterday is estimated at from $3,000,000,000 to $5,000,000,000.

At the end of the fiscal year June 30, 1948, under a spending and revenue program provided by the Eightieth Congress, there was a surplus of $8,419,000,000.

Instead of reducing expenditures President Truman has proposed another record budget of $41,900,000,000 for the fiscal year now beginning. This compares with a budget of $3,800,000,000 in the prosperous year of 1929 and $7,300,000,000 in what was called the free-spending year of 1938.

Chief items in the President's proposed budget of $41,900,000,000 for this fiscal year are:

Foreign aid	$6,700,000,000
National defense	14,300,000,000
Veterans' aid	5,500,000,000
Interest	5,400,000,000
Social welfare	2,400,000,000
Regular expense	6,200,000,000

In addition there is a shadow budget which Congress will be asked to approve amounting to at least $11,000,000,000. This is to pay for such Truman recommendations as the Brannan farm plan, arms to Europe, expansion of social security, socialized health program, public housing, Columbia and Missouri Valley Authorities, etc., etc.

From the above figures it will be noted that the one item for the regular expense of Government departments is twice as large as the total cost of government in 1929 and almost as large as the total cost of government in 1938 when we were spending lavishly to stem unemployment and to prepare for war.

Can the President's budget be reduced? Senator CAPEHART and numerous other economy-minded Members of Congress say that it can be reduced by at least $8,000,000,000 without interfering with any essential function of government. The cuts that they propose are:

Government pay roll	$1,500,000,000
Military expenditures	3,000,000,000
Foreign aid	2,000,000,000
Adoption of Hoover plan	2,000,000,000

There is no more important consideration before Congress at the present time than to reduce Federal expenditures to a level of receipts in order to maintain the financial solvency and stability of the Nation. It can be done but it is a job that both Congress and the President seems reluctant to tackle.

What Socialism Is Doing to British Freedom

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES

Tuesday, July 5 (legislative day of Thursday, June 2), 1949

Mr. TAFT. Mr. President, some days ago I asked unanimous consent to have printed in the Appendix of the RECORD an article entitled "What Socialism Is Doing to British Freedom," delivered by Cecil Palmer, of London, England, author and publisher, before the Economic Club of Detroit, at Detroit, Mich., on May 11, 1949. I find it is estimated the article as submitted will cost $243.75 to be printed in the RECORD. The cost will be somewhat less in view of the fact that I have since stricken out certain portions of the address. I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT SOCIALISM IS DOING TO BRITISH FREEDOM

Chairman HILL. Mr. Crow, members of the Economic Club, and guests, I take great pleasure in introducing to you today Mr. Cecil Palmer, of England.

Mr. PALMER. Mr. Chairman and gentlemen, I am very sensible of the honor you have accorded to me in accepting me as your guest at this luncheon. I am also very sensible of the tremendous responsibility which I am voluntarily shouldering in trying to give you an objective picture of the English scene. In a word, I have lived through socialism in practice in Britain, and I can begin by assuring you that there is a mighty difference between socialism in theory and socialism in practice.

I can perhaps state my rather individualistic point of view by asking you to believe that it is my conviction that socialism will work only in heaven, where they don't want it, or in hell, where they have got it already.

Your chairman has been very flattering to me—far too flattering. He has given you a catalog of my achievements, necessarily abbreviated, but even so I fail to recognize most of them. The only one I am prepared to admit to, and I do that with becoming modesty, is that I am an author. But I recognize that only because I wish you to know that in all my long life I have never yet met anyone who has ever read any of my books.

I wonder what you would think, Mr. Chairman and gentlemen, if you could see with your own eyes the picture that is in my imagination and mind at this moment. But let me say in parentheses that I am not a politician. If I were, I am sure I would go down on my bended knees every night and ask God to forgive me.

I am a 100-percent Englishman, and I hope and I believe that I am talking to 100-percent Americans. I have no interest in 99-percenters in any walk of life. I think we have compromised with evil far too long. If we had shown the fighting spirit, the position, for example, of my own country would not be the position that it occupies at this moment. Because I am prepared to say with a bowed head that we are socially and economically down, but I beg you to believe, gentlemen, that we are not down and out.

It seems to me impossible to envisage a country down and out, when it has on the horizon a man of genius of the caliber of Winston Churchill, with his potential leadership.

The story of our ungratitude is the measure of the success of the forces of evil. And I would say, if I may, at the beginning, that I am not intellectually prepared to make any fine distinction between socialism and communism. Socialism, it seems to me—and I have looked at it squarely in the face—seems to me to paralyze the human soul, where communism utterly destroys it. And that is the only line of demarcation that has any substance for me.

We are in a very bad state in Britain. We are frustrated; we are bewildered; we are perplexed, and we can't see the wood for the trees. But let me make one point perfectly clear—I find some misunderstanding about it.

The people of Britain did not put into power a Socialist government. In any case, it is a minority government. It received one and a quarter million votes less at the general election in 1945 than the other parties who contested, but the point that I would bring to your notice is that the word "socialism," in a direct and frontal sense, was never mentioned.

The present Government owes its power and its ascendancy over us to the fact that it

fought on what is called in Britain the labor ticket, and the bulk of the labor men and women in Britain, even today, are quite definitely not Socialists.

They want, of course, better conditions. What is wrong with them is that they are so enervated; they are so tired and so undernourished, that they are rather disposed to accept the man who is prepared to make the biggest promises, and especially if that promise is something for nothing.

They are bewildered; they are underfed, and I think that point wants emphasizing. I don't know whether you realize how we do live, but we get 3 ounces of butter a week, 6 ounces of margarine a week, 1 ounce of lard, 1 ounce of cheese, 1 ounce of bacon, 8 ounces of sugar, and 6 ounces of meat a week. You can't build much on that.

But the saddest thing is that our people thought that the promises that were made so glibly would be, under socialism, implemental; whereas, the fact is, Mr. Chairman and gentlemen, that our standard of living today in Britain is lower than it has ever been in the whole of my lifetime.

Socialism not only cannot maintain the standard of living which private enterprise gave to our people, but it is struggling with the help of foreign capital to bring it back to the level which they said at the election was too low.

Twenty-one percent of our working population of just over 20,000,000 are now engaged directly in state or local government employment, and if the schemes that are now lying on the table for further installments of nationalization are implemented—in other words, if this Government gets a new lease of political life next year, then it has been worked out actuarily that we shall have 25 percent of the whole working population of Britain directly in the employment of the state and local governments.

There won't be much chance for incentive, because these people, in the main, spend most of their time in issuing forms that no one can understand, which eventually are returned and pigeonholed, and then sent out in duplicate.

We are being run by power-drunk politicians. We are being run for ideological conclusions, which we call in Britain a planned economy. There is no plan in it, and it is very definitely not economical.

We are in the position, as Sir Stafford Cripps has had to tell us, that without your generous aid, and that of the Canadians, we should have had almost immediately a problem of unemployment reaching one and a half million, and that our existing low standard of living would have to be automatically still further reduced. In other words, socialism in practice in Britain today—and I say this with complete objectivity—is existing because it is a cripple, walking on the crutches of capitalism.

We have for four and a half years, tried the absurd experiment of what is called "soaking the rich," and we have done it. Do you realize that a $40,000 a year man in Britain receives in his net income, $1,000? Thirty-nine thousand dollars are taken in direct taxation; income tax, supertax, and so on. And even that isn't good enough. They have now reached the stage which we prophesied they would, that the soaking of the rich must end, and they have begun already after 4 years of socialism, to soak the poor.

We have done that; I am just wondering where we shall end. They are soaking the poor in this sense: A $40 a week man in Britain works 12 weeks in the year for nothing. That is the measure of his taxation under the PAYE. I know you are fond of alphabetical terms—[laughter]—that means "pay as you earn."

Is there any incentive in that kind of thing? And yet, Britain is still threatened with more and more nationalization, and more and more debt. I feel I should do a great service if I were to tell you the techniques of nationalization, because, never forget, Mr. Chairman and gentlemen, that nationalization is socialism in practice.

Many of the Labor members of Parliament, many of the leading trade-unionists, are terrified of it, but they have got themselves so involved politically, and they are run by a minority—the Communists—that they can't get out.

But let me make a broad generalization which I can prove; namely, that there is not one single nationalized industry in Britain which is paying its way. On the contrary, most of them are losing money heavily. We lost a hundred million dollars last year on civil aviation alone. We lost a hundred and eight million dollars on coal, and it is prophesied that we shall lose at least a hundred million dollars on the railroads.

But what happens under nationalization is this, that immediately an industry is nationalized, the price goes up, the quantity goes down, and the quality doesn't count.

In gas, in electricity, in railways, all those things have happened. For example, railways. The moment they were nationalized, the prices of passenger fares and the freight charges were immediately increased, in some instances, as much as 15 percent. And it was estimated that that would bring in an increased revenue of approximately $243,000,000. At the end of 10 months, the chairman of the Railway Transport Commission, who is the big dictator of railways today, had to admit that they had only been able to find increased revenue for a hundred and six millions. And so, as I said, there is a prospect when the figures are published next month, that the railways will show a loss of not less than a hundred million

Gas has gone up, and you can't get it. It is at a very low pressure. Whereas it took 5 minutes to boil a kettle, it takes 20 minutes today, owing to the pressure of gas.

Electricity is rationed, and is cut off at a moment's notice by merely a message on our one radio. That is the situation in which people in Britain are living.

You can't imagine, I am sure, what struck me so forcibly when I found myself for the first time in Fifth Avenue. It was your lighted shops. We have had no lighting in shop windows since 1939. At 5:30, there is a black-out, a complete black-out. Even now—they had just recently made a concession, but that is to you, mostly. They have opened up Piccadilly Circus. I don't admire your taste for going there so frequently, and I suspect your objects, but at any rate, we have lit it up so that you shan't do it in the dark.

Now, let me tell you about the techniques of nationalization. To you, as professional and commercial gentlemen, it should be pregnant and significant. This is how it is done. First of all, they threaten the industry they intend to take over, and they threaten it in a number of ways. They say, first of all, that it is inefficient—they are good judges of that.

They say that it is not producing enough, and usually they add that the relationships between capital and labor are unsatisfactory. We have had more strikes under socialism than under private enterprise, to my knowledge. That is their first move.

Then, their second move is that they set that industry what we call in England a target, but I believe you call it a goal. I prefer, if you don't mind my saying so, the word "target," because a goal to me is a sports term; it seems to be something you kick into, not kick out.

They set target which is pretty well impossible. For example, the production figures of coal in 1939, were 218,000,000 tons. In steel, it was 10,000,000 tons, and they set both those industries—the one, as you see, nationalized, and the other under private enterprise. They set them targets or goals.

In the case of coal, because it was nationalized, they reduced the target. They asked it to reach a figure which was roughly 16,000,000 less than coal production in 1939. But for steel, they said, "You produced 10,000,000 tons; you must now produce 14."

Well, at the end of 1948—that was the year they set the target, last year—it was discovered that coal couldn't even reach that low target. They failed by over 3,000,000 tons. But steel, which is still, for the moment, under private enterprise, reached its target, and passed it by over a half a million tons. Well, that's their second move.

And then, their third move is interesting and psychologically subtle. They say that we must now have what they call working parties. It consists of governmentally sponsored persons, and looking at the personnel of them, I am bound to say that usually they seem to consist of people who know nothing whatever about the industry, going down and telling the people how to do it, or not to do it.

Anyway, in due time their report is presented to the governmental high command, and as they are governmentally sponsored, you can imagine the work they achieve. Then, Mr. Chairman, comes the next move in this political chess. I would call it "a bishop's move"—it goes right across the board, and it is one that you should take to heart, if I say so, humbly.

They bribe the brains, and believe me, when you are in the throes of a paternal state, a bribe is very easy to offer and very difficult to resist. There are all kinds of privileges and prerogatives which a bureaucracy can offer to the individual. For example, do you realize, gentlemen, that our gas allowance—we call it petrol—is 90 miles a month? But that doesn't apply to government, state officials.

That is one way, and there are many others. But the point is, that they get at the administrative and executive heads; they get at the capitalist himself, and many of them, I have to admit, fall for it. And so, such an institution as the Bank of England, with all its obvious complexities and ramifications, can be made to work under socialism because it is being worked by the brains that worked it under private enterprise. At last, in England there are industrialists who are refusing to cooperate, and I believe that that fighting spirit is growing every day.

But already, I have no need to tell you, a great deal of terrible mischief has been done. But in the main, these nationalized industries are run, for a large part, by precisely the same personnel as ran them under private enterprise. If men of your grade, in my country and in your own, would resist those bribes, those allures, socialism would have failed ignominiously in its first year of operation.

Well, that's the next move. And then, they are getting near the end. They then take capital, itself, and it is done this way—they have done it to every industry that they have nationalized. They say to the industry, "You must now limit your dividends, because if you don't you will be encouraging the inflationary spiral. You will be releasing purchasing power, and there will be more and more money chasing fewer and fewer goods." And yet, at the very moment that they are making that appeal to a threatened industry, they often concurrently get a demand from the trade-union, a demand for increasing wages.

So much for that argument. Now they are ready to pounce, because, gentlemen, a barometer has been registering every one of those moves, and you professional and businessmen know what it is. I refer, of course, to the stock exchange. And changes in those industries threatened in those vari-

ous ways and means, have passed from 90 to 80; 80 to 70; 70 to 60; and 60 to 50.

Then the nationalized Bank of England, which represents the Government in the city, advises the Government that the breakdown price has been reached, and they buy.

Two things must be said about that; they will worry you a lot. I assure you, they worried a lot of people in Britain. Two things—the first is, that in the twinkling of an eye, by a stroke of the ministerial pen, the capital has been reduced in many cases to one-half. And the second thing is that they don't pay for it.

That's perfectly true. Socialists don't believe in paying for anything. One of our Cabinet Ministers said that money is a meaningless symbol. So it is, if you haven't got any. But they don't pay for these nationalized industries in the sense in which any honest businessman would mean pay. They offer script, paper. For example, Mr. Chairman, they bought the railways. They paid $4,000,000,000 for them and they issued script, bearing a fixed interest of 3 percent, redeemable at par at either 30 or 40 years, whichever the Chairman of the Transport Railway Commission decided.

And so, you see, that the stockholders faced two things. First of all, their capital was watered down, and secondly, the prospect of getting any of it back in their lifetime is exceedingly remote, because if you take government script to your bank, the bank will say, "What about a collateral"?

That is the situation of nationalization in Britain today. There isn't, as I repeat, one of the industries that is on an economically sound foundation. They are paying for their losses through a cruel taxation, which is driving incentive and enterprise right out of the hearts and souls of every man and woman in England.

There is no object in working. Income taken from you as fast as you make it, and faster, sometimes.

I want, if you will allow me, to tell you something about socialized medicine, not because it is necessarily your subject, but because it enables me to put to you in America a theory of my own which I think throws some light on this conspiracy to reduce all men to a common level.

Socialism is built up on benevolence, at the other fellow's expense. They tell us in Britain that they are working for the common good, for the common man—a term which I personally loathe. I don't believe in the common man, and I notice that not even Socialist politicians have ever yet dared refer to the common woman.

My attitude is that every man, woman, and child in the universe is unique, and I like the state only when it leaves me alone. Socialized medicine, Mr. Chairman and gentlemen, in my humble judgment is an integral part of socialism in practice. Lenin said that if he could have the doctors, he got the people in his pocket, and he meant it.

And our people have got that idea fixed in their minds. I do not remember in my lifetime any piece of legislation that has been put over with so much ballyhoo. All the emphasis, of course, was put on the fact that it was to be a free medical service, and only the other week our Minister of Health had to go to the House of Commons and ask for a supplementary estimate to tide him over the remaining 2 months of the fiscal year, and the supplementary estimate alone was for $238,000,000. If that's a free medical service, I as a businessman say, let's have one that isn't—it might be cheaper, and it couldn't be dearer.

But I am prepared to waive all that, except to say this, that the hypocrisy of that claim is immediately apparent when I can tell you that the patients' contributions to health service alone—and I disregard unemployment, maternal benefits, family allowances, death burials, and all the rest of it—but health service alone, the patients' contributions are $2,800,000 per week.

And I would ask you also to recognize that the scheme is compulsory; that you cannot get out of it, and rich and poor pay alike. Indeed, you pay if you are unemployed, because they give you the dole with the left hand and take the insurance contribution with the right.

But I am prepared to waive all the financial aspects of socialized medicine, because I think there are far deeper and far more serious implications to be considered. In the first place, gentlemen, socialized medicine in Britain has done two things. It has revolutionized the status of the doctor. His livelihood, his professional advancement, and his allegiances are now commandeered by his new master, the state, which pays him quarterly a salary from the contributions that the state collects each week.

Secondly, it has destroyed the relationship between the doctor and the patient. I don't know how it is in the United States, but the medical profession in Britain is bound individually by an oath, and that oath is the Hippocratic Oath, and it binds every medical practitioner to preserve secrecy and privacy regarding anything that transpires between himself and his patient professionally. And in the words of the oath, they are called sacred secrets.

That has gone completely under socialized medicine. The Minister of Health was challenged in the House of Commons on that point, and he gave a categorical assurance that the relationship between the doctor and the patient would, under socialized medicine, remain private and confidential. But our cabinet ministers have great autocratic powers, powers that I think you hardly can envisage. And within 3 weeks of the act becoming operative, he utterly disregarded the assurance he gave, and without consulting Parliament, which he could well do, he has the power—he issued what is called a statutory instrument, and you will see how many are being issued, when I tell you that this particular statutory instrument is No. 506.

And I shall tell you that it has the full force of law; that it cannot be challenged in the courts, and it is not debated in the House of Commons. And under that statutory instrument 506, within 3 weeks of the act becoming operative, he issued this wording—and it was issued to every practitioner in medicine in the whole of Great Britain and Northern Ireland.

It was headed, "Terms of service." Requires that every practitioner shall keep records of the illnesses and the treatment of his patients and shall make such records available to the local lay council. The doctor's situation is just tragic. He is no longer his own master; he has a committee, a local lay council in every area, and they, in turn, above them, have regional councils, which can and do override his decisions as to prescriptions, for example.

The doctor's dilemma is that under that statutory instrument, he must now disclose the nature and the treatment of the illnesses of his patients. And the women in Great Britain, Mr. Chairman, are increasingly revolting against it for obvious reasons. Let me give you an example.

Mrs. Brown lives in block A, and she is the patient. Mrs. Smith lives in block B, and she is a member of the local lay council. And I leave to your imaginations—[laughter]—the potentialities for a bit of gossip at Mrs. Brown's expense. And the women in England are saying—rather sillily, I grant—that they will not go to a doctor, no matter how ill they are. That is silly, of course, because they have to go, but the fact is that it registers their terrible reactions to it.

I say that socialized medicine is a swindle, certainly in Britain, because they cannot deliver the goods. We haven't enough hospitals; we haven't enough clinics; we haven't enough doctors, and we haven't enough nurses. In Britain, today, there are over 200,000 urgent cases for institutional treatment, which can't get into the hospitals at all, and at the same time, we have got 57,000 vacant beds. Those beds are vacant because there are neither nurses nor doctors to service them.

Our doctors today are earning $3.25 per patient per annum. They are compelled, economically, to take 4,000 patients in the large industrial areas, each, and in the smaller areas where there is more traveling, they are compelled to take 2,500, and the British Medical Association publicly stated recently that it was not possible for any doctor in Britain, in the service to devote more than 5 minutes to both diagnosis and treatment, to any patient, anywhere.

In other words, it has compelled the doctors to degrade their own profession and vocation. The standard of medicine is falling day by day, because it is impossible to operate it under conditions that are being laid down by our Socialist government.

But I am going to tell you something much more serious before I sit down. I am going to tell you why socialized medicine was so imperative to the present Socialist government. The architect of socialized medicine in Britain is Lord Beveridge, an old man, a very able man, and I think a very sincere man. As a student and research student, I suppose he is almost unbeatable anywhere. He found a good deal of his inspiration in the German insurance schemes, and it is on his report that the present act is based, almost clause by clause.

But in his report there were two assumptions. They were called assumption A, and assumption B—and I beg you to listen to this. Assumption A was that it is the duty of the citizen to keep well, and assumption B was that it is the duty of the doctor to exercise harsh certification, which in plain English and plain American means, Get your patient back to your job as quickly and as cheaply as possible.

Now, I am going to put those two assumptions, which are pivotal to socialism, alongside one other fact which I find is not known in this country. We have, under our autocratic powers, or rather, under the Government's autocratic powers, we have an order, and it is called the Control of Engagements Order, 1947. Under it, every man and woman in Great Britain between the ages of 18 and 50, can be and is directed by the state to any job it chooses for him or her, anywhere, anytime. And I submit, Mr. Chairman and gentlemen, that if you join industrial conscription in peacetime, with those two assumptions, you have got socialism precisely where the Socialists want it, which is that they have reduced us to a form of state paternalism, which is only a brief step short of the servile state itself.

Mr. Chairman and gentlemen, if I may sum up, I would say this, that it seems to me that in our socialistic experiment in Britain, we are trying to do something that is quite fallacious and quite fatuous. We are trying to strengthen the weak by weakening the strong. We are trying to legislate unsuccessful people into prosperity, merely by legislating the successful out of it. It does not add up. We have been poisoned by the theory that in this wicked world you can get something for nothing. Again, it just does not add up.

The recent municipal and borough council elections in Britain are tremendously significant. They show a distinct and pronounced tendency and trend back toward the center and the right, and I believe, myself, as an Englishman, that it is due to the fact that despite our enervated condition, people are becoming aware of the fact that unless you produce you cannot hope to share wealth.

In Britain, Mr. Chairman, today there is a poster almost on every street corner, and it has three terrible, tragic words on it. It is, "Work or Want." And apropos of your own brilliant announcement of me, I can reinforce it by telling you that we have a slogan, 'Empty heads put them in; empty bellies will put them out." That gives me no kind of satisfaction to quote, but that is where we stand. And I will ask you to believe from me that although in Britain today life is gray and colorless, it is not entirely hopeless.

What kind of contribution you can make to bring us back to political sanity is for you to decide and not me. But I must say this, that when I came to the United States 4 months ago, I came with the somewhat cynical intention of depressing you. But having met your Senate and your Congress, you have brilliantly succeeded in depressing me.

We shall come out, but it is later than you think.

Mr. CROW. We have a lot of questions here. There are two, however, that I would like Mr. Palmer to answer, although we may not have time for the others, unless some of you may desire to tarry following the adjournment.

Will you tell us first, Mr. Palmer, about the amount of taxation on dividends? You have told us what the taxation amounts to on earned income, but will you tell how heavy is the taxation on dividends. Secondly, will you tell us what opportunity there is, or what incentive is given to own one's home, and what is being done to promote public housing?

Mr. PALMER. May I answer the second question first, because it is easier. There is virtually no incentive for home ownership in Great Britain today. Our housing problem is just simply tragic and disgusting. We are terribly short of houses. Those that are being built are being built on the rental basis, and I can perhaps best explain in a short way the whole situation by telling you one aspect of the policy that is being adopted.

The National Savings Committee of Britain were disturbed a couple of years ago by the fact that our savings were falling rapidly. Withdrawals from savings banks exceeded deposits by no less than $92,000,000. And so, it was decided that they would intensify a savings campaign, and one of the ideas was to poster the country.

One of these posters depicted a young couple with a rather pretty suburban house in the background, with a slogan which made it perfectly clear that by practicing a little thrift you could become the owner of the house in the background. That was put up all over Great Britain, but in 3 days it disappeared, and when the government was challenged, the answer was that they were not encouraging home ownership. I think that answers the housing problem, or the potentialities of it in Great Britain today.

With regard to the first question, of course, our income-tax laws and adjustments and valuations are very complex, but so far as unearned income—and all dividends, by the way, are unearned income in Britain—they are paid at an excessive rate.

If your net income exceeds $40,000 a year, including your dividends, then the dividends are taxed 125 percent.

Mr. CROW. There are a number of other questions. Mr. Hill and I have looked them over and feel that this one should be the only one we shall consider, in view of the limitations on our time.

To what extent has the capitalistic United States financed the socialization of Great Britain?

Mr. PALMER. I knew I shouldn't escape being put on the spot.

You will forgive me, Mr. Chairman and gentlemen, if I refuse to give a direct answer to that question, because if I may say so, with great humility, it seems to me that the questioner himself has found his own answer. All I am prepared to say is what I have said, and that is, that I do believe that crippled socialism is walking about on capitalistic crutches.

Address by Hon. Edward Martin, of Pennsylvania, Before Pennsylvania Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the annual convention of the Veterans of Foreign Wars, Department of Pennsylvania, at Philadelphia, Pa., on July 9, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor to salute you as veterans who have served our country with loyalty and fidelity in many lands across the sea.

You are fighting men. You have been tested in battle. You have accomplished great things for the United States.

As an organization you have grown strong in influence and prestige because your objective in war and peace has been the defense of the most precious thing in the world—American freedom.

Your convention is dedicated to the highest ideals of Americanism. It is therefore appropriate that your meeting is held in the city of Philadelphia where individual freedom took root and flourished for the first time in the world.

Here in the wilderness, William Penn launched his holy experiment in government, recognizing the basic human rights of social, political, and religious liberty.

Here the world's greatest document of freedom—the Declaration of Independence—was drafted and adopted. Here is the Liberty Bell and the birthplace of our flag.

The Constitution of the United States, written here in Philadelphia, was based on the proposition that governments derive their just powers from the consent of the governed. Prior to its adoption no people on earth enjoyed that type of government.

Here men were free to think and speak, to meet in peaceable assembly, and to petition their government for redress of grievances.

They were protected in their God-given rights of life, liberty, and the pursuit of happiness. They had the right to work at the job of their choice.

Above all, each individual was free to worship God in the manner dictated by his own conscience.

You all know these historic truths but they are worth retelling in meetings such as this. They are forceful reminders that individual freedom is the foundation of American greatness.

My comrades, when that freedom was threatened by foreign tyranny and aggression, America called upon you for service and sacrifice.

Today it has become necessary to sound another call for the defense of America. Not because we fear a foreign foe. American freedom will never be lost through foreign aggression. If disaster should ever overtake us it will have been created in our own midst.

There are three dangers that threaten America:

First. State socialism or the welfare state. That can destroy the American system of free enterprise. It would mean dictatorship and the loss of all freedom.

Second. Depression and national bankruptcy. Through wasteful and extravagant spending by Government and excessive taxation we are traveling along the road to financial collapse. Again the end result would be dictatorship and the loss of all freedom.

Third. A bungling policy in foreign affairs. This has robbed millions of people of their hope for freedom and now threatens our American way of life.

We are under fire on these three fronts. The time has come when we must fight to safeguard the whole structure of American liberty.

Let us consider the so-called welfare state which is another name for state socialism or its tough brother, communism.

Under that system the state is all powerful. The government regulates, controls, and directs the lives of the people under a planned and regimented economy.

It deprives the individual of all freedom in return for the false promise of security and an easy way of life.

Hand-outs from the government take the place of self-reliance and initiative. Work and thrift become forgotten virtues.

The people become soft. Living standards become low.

That, my comrades, is the way to dictatorship and enslavement. Hope of security without loss of liberty is a cruel delusion.

Germany and Italy are tragic examples. The financial difficulties in which England finds herself today are the direct result of her experimentation in socialism.

Without American aid England would be cold and hungry, facing a hopeless situation.

Are we to be led along the same disastrous course?

Or shall we mobilize the forces of freedom, the veterans' organizations, the rank and file of labor, the businessmen, our churches, and educational leaders in a crusade to preserve the American system? The one element responsible for the vast productive capacity of America and its foremost place in the world was freedom of the individual.

Other nations had resources equal to ours or even greater. But none has enjoyed the rights and privileges guaranteed to every citizen under the American system.

The present trend toward a socialistic pattern of government threatens those precious liberties. So-called welfare programs have been proposed that would make everyone dependent upon government.

These socialistic proposals sound attractive. They are presented as something the Government is giving to the people free of cost.

That is false. The Government has nothing to give except what it takes from the pockets of the taxpayers.

That is why I plead with you, my fellow veterans, to examine the history of the nations that have tried these same experiments.

Organizations like this must spearhead a drive to arouse the American people. It is most important to have the courage to say "no" when demagogues offer something for nothing.

In the battle against advancing socialism individual freedom can be preserved only if we are imbued with the spirit of work, thrift, and self-reliance. We must have confidence in our country, confidence in each other, and faith in God.

Now let us turn to the second threat to our freedom, the danger of a ruinous depression and national bankruptcy.

Ten days ago, when the Federal Government closed its books for the fiscal year 1949,

we were $1,811,000,000 in the red for that year alone.

This shocking, peacetime deficit shot the national debt up to almost two hundred and fifty-three billion.

In the fiscal year of 1949 the Federal Government spent more than $40,000,000,000, a new high record for peacetime.

Remember—this deficit followed the calendar year of 1948 when we enjoyed a record-breaking national income.

In the face of this alarming situation a budget has been proposed increasing the cost of Government to forty-two billion in the new fiscal year.

In addition, a great variety of new and expanded spending programs would add many more billions to the proposed budget figure.

Surely, no one will predict that the high level of national income of 1948 will be maintained in the current year.

Already we have seen a steady increase in unemployment and a serious drop in industrial production. Many plants have shut down. Thousands of workers have been laid off. Others are working part time.

The Department of Commerce reports, as of July 1, that nearly 4,000,000 people are out of work.

National income is dropping, but the cost of government keeps climbing higher and higher.

Are we to increase taxes and dry up initiative and investment capital?

The best economists are authority for the statement that the veterans and their families will pay 80 percent of all the taxes.

Are we to go deeper and deeper into debt? Are we to sacrifice the high standard of living of American workingman to support the high cost of government?

My comrades, if we are to avert a disastrous depression and save ourselves from national bankruptcy, we must not adopt any of these methods.

There is only one sound, common-sense way to meet this problem. It is the same way you would meet it. That is to cut down expenses.

The cost of Government must be reduced. Waste must be eliminated. The recomendations of the Hoover Commission for efficiency and economy must be adopted.

Government spending must be held to a minimum.

Unless we adopt this policy—like the individual who spends beyond his means—we must go broke.

If we are to retain our freedom we must return to sound fiscal policies. A strong, solvent America is a free America.

The third danger arises from the confused and bungling foreign policy which lost the peace after your victory on the battlefields of the world.

That victory was paid for in the blood and suffering of your comrades. They fought and died to bring freedom and the God-given rights of mankind to the victims of cruel tyranny and oppression.

Instead, by secret agreements and double dealing at Yalta, Tehran, and Potsdam, millions of those who looked to us for liberation are now imprisoned. They are enslaved behind the iron curtain of Godless Russia.

Those secret agreements may have planted the seeds of a third world conflict. God grant that your sons may not be called into the hell fire of war to correct the mistakes of the bungling diplomats.

Today the same type of foreign policy is threatening our own economy and the welfare of the American worker.

The so-called reciprocal-trade-agreement policy is being so mismanaged that thousands of American workers are being driven out of their jobs by a flood of goods produced by cheap foreign labor.

Right here in Pennsylvania rayon, watches, glass, china, pottery, leather goods, and oil are being imported to the detriment of our own workers.

All of these industries have been hard hit by foreign competition, most of it built up by American dollars.

We must not reduce American wages or the American standard of living to meet competition from the cheap labor of foreign countries.

I do not opppose genuine reciprocal trade agreements, beneficial to both contracting countries.

But I am opposed to the planners who want to improve conditions in every country but our own.

It is time for the American people and those in authority to start thinking about America and the welfare of the American worker.

Surely, all of us want to help restore prosperity to the needy nations of the world. We want to raise their standard of living. But if we must lower our own living standards, and take jobs away from the American worker then it is high time to call a halt on such a policy.

As for me, I shall cast my vote on the side of the American worker and to protect his opportunity to have a good job at good wages.

That is another step in the preservation of American freedom in which your organization can play an important part.

I have reviewed briefly three of the principal dangers to the future of America.

I know that every one of you, as members of this great organization, is dedicated to the preservation of our Republic and the God-given rights which it guarantees.

One of the sacred causes to which the Veterans of Foreign Wars is dedicated is to assist our disabled comrades and to care for the dependents of those who made the supreme sacrifice.

If we fail to safeguard our Nation against the dangers of state socialism, national bankruptcy, and a bungling foreign policy we shall betray our solemn obligation as members of the Veterans of Foreign Wars and as Americans.

Again, I say to you, we are in a time of crisis. I appeal to you to go forward in the service of our country with the same patriotic courage as you did when you faced the enemy in battle.

We will lose everything if we shirk our responsibilities.

We must work for a strong economy through gainful employment for all our people. We must strive always for a strong, dynamic, solvent America.

We must be strong financially and in military power.

And most important, our country must be strong spiritually, emulating the tolerance, good will, and love of God, of William Penn, and the pioneers who built the foundation of freedom in our beloved land.

Action by National Education Association Against Employment of Communist Teachers

---

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an account of the National Education Association convention recently held in Boston in which a clear-cut ban against permitting Communist Party members to teach in the Nation's public schools was adopted by this convention.

This is most heartening action and demonstrates that the educational leaders of the Nation realize the danger of permitting Communists to teach in our schools and educational institutions and thus infiltrate their doctrines and teachings into the minds of the youth of this country.

It is gratifying to know that such outstanding educational leaders as President Eisenhower, of Columbia; Conant, of Harvard; and 18 other leading educators have joined in the report recommending that all Communist Party members be barred from teaching in the schools, colleges, and universities in the Nation. This recommendation should be seriously considered by those in charge of all our educational institutions, and I wish to applaud the action of the National Education Association in taking this definite and sound position with reference to teachers in our schools.

The article appeared in the Charlotte Observer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEACHERS VOTE TO OUST REDS

BOSTON, July 6.—At a tumultuous session that frequently got out of hand, 3,000 delegates attending the National Education Association convention today voted a flat ban against permitting Communist Party members to teach in the Nation's schools.

With a scattering of voices raised in opposition—not more than three or four could be heard—the teachers of America made educational history with its action. The National Education Association, with a membership of 425,000 and an affiliated membership of 800,000, is the most powerful and influential school organization in the United States. Its policies are frequently put into practice in schools throughout the land.

A total of 5,000 teachers, superintendents, administrators, and key school officials are attending the eighty-seventh annual summer assembly of the NEA. Only the 3,000 delegates have a right to vote or participate in the discussions.

Actually, the vote on communism was not scheduled to come up until Friday, when the resolutions committee will present its report. Today the report of the educational policies commission, headed by Dr. John K. Norton, of Teachers College, Columbia University, came before the delegates for the first time. This report, prepared by a membership of 20 prominent educators, including Presidents Eisenhower of Columbia and Conant of Harvard, recommended that members of the Communist Party be barred from teaching posts.

REPORT HIGH LIGHTS

At the business session this morning, Dr. Norton gave a summary of his report, citing the high lights.

After he had read portions of the report, Dr. Norton made a slashing, vigorous attack on communism and on the role of Communist teachers. His remarks were punctuated with frequent bursts of sustained applause, which became more and more enthusiastic.

"Communism is more than a political party," Dr. Norton told the teachers. "It is a movement which would take over and regulate, according to a despotic ideology, every phase of a citizen's life. Freedom of religion and conscience go out the window when communism comes in. Any means, no

matter how it outrages human personality, is moral under the Communist code.

"And it assigns a special role to the teacher who joins this movement—it is his duty to destroy the loyalty of the child and youth and to indoctrinate him with Communist ideology.

"Do we want to admit to this great calling and privilege those who have officially pledged their allegiance and their support of the doctrines and the methods of communism, by joining the Communist Party, and who renew that pledge and that support every time they pay their party dues?"

Citation of Wayne Coy by Sons of Indiana of New York

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a citation by the Sons of Indiana of New York designating Wayne Coy, Chairman of the Federal Communications Commission, as the outstanding Hoosier of 1949, together with Mr. Coy's response.

There being no objection, the citation and response were ordered to be printed in the RECORD, as follows:

Triumphant over the rigors of his adolescent years in Franklin, Ind. (named for the man whose kite and key unlocked the mystery of electricity), then groping stanchly for maturity in Delphi (named for an ancient oracle of miraculous divination), it was only natural that, sooner or later, Wayne Coy would be Chairman of the Federal Communications Commission. However, in recognition of the distinguished manner in which he has fulfilled the complex functions of his high office, we, the Sons of Indiana of New York, proudly acclaim him the outstanding Hoosier of 1949.

Newspaper reporter, editor, publisher, governor's good right hand, unemployment relief director, WPA Administrator, Assistant United States High Commissioner to the Philippines, organizer of the Federal Security Agency, Assistant Director of the Budget, and one of the two most important men around the President in the critical early days of World War II, Wayne Coy was asked in December 1947 by President Truman to contrive, among other things, to bring about a harmonious courtship and happy marriage, satisfactory to all the in-laws, between a rich and garrulous old gent named Radio, who popped off constantly day and night, and an eye-filling young widow across the street named Video. The surprised neighbors say she's already wearing a ring.

Every task Wayne Coy has undertaken in the past two eventful decades he has done superlatively well. Thus he merits a promising future. Our fondest hope for him is that, as experience ripens into wisdom, a happy future will find him one day back in Indiana—in a soft chair surrounded by hard problems in a gloomy stone pile on Capitol Avenue in Indianapolis, if he will, or (if his wisdom is truly boundless) in a harder chair surrounded by the softer chores of a Hoosier editor—but, in any event, back home in Indiana, where a man can be so happy and so poor.

Attest:

SONS OF INDIANA OF NEW YORK,
GEORGE B. WELLBAUM, *Founder.*
PHILIP D. TAYLOR, *Secretary.*
ROBERT G. SPENCER,
Assistant Secretary.
ROBERT L. BATCHELOR, *President.*
PAUL E. TOBIN, *Vice President.*
DAVID MARSHALL, *Treasurer.*
CLAUDE G. BRODHECKER,
Past President.

In response to the award, Mr. Coy made the following statement:

"I like the spirit of Indiana. I like the ability of Hoosiers to share the vicissitudes of their fellow Hoosiers and their fellow men. I like that capacity of Hoosiers to differ with others—in politics, in business, in religion, in sports—and not lose respect for their opponent. I like the courage of Hoosiers in adverse times. I like the boldness of our people in developing the economic and social life of the State. I like Indiana.

"My affection for my native State is always quickened by my faith in the democracy of Indiana. We are all bound together by our unbounded belief in and support of freedom. The spirit of democracy in Indiana is so widespread as to be universal. Men have dignity in Indiana and are respected by other men. I am proud to have your respect and pleased to receive your award."

Definition of the Welfare State

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, there appears to be a lively propaganda campaign on foot in this country to disparage the Truman program and misrepresent the Fair Deal and welfare state.

In this connection, I should like to call attention to a very able article by Nelson H. Cruikshank, the distinguished economist and director of social-insurance activities of the American Federation of Labor, appearing in the New York Times of July 10, 1949. In this article Mr. Cruikshank defines the welfare state, and I ask unanimous consent to have it printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WELFARE STATE DEFINED—CONCEPT ADVANCED OF PEOPLE'S USE OF RESOURCES OF GOVERNMENT

(The writer of the following letter is director of social-insurance activities, American Federation of Labor.)

To the EDITOR OF THE NEW YORK TIMES:

In the last few weeks former Secretary of State James F. Byrnes has delivered two addresses concerning the nature of the "welfare state" which have aroused considerable comment.

It is a matter of profound concern to me and the organization I serve to analyze the reason that the term "welfare state" has now become a fighting term.

The reason is that it has taken on two quite opposite meanings. There is one meaning ascribed to the term which is based on a concept of the state or government as something foreign to and removed from the people and which seeks to control, direct, and provide for all the people's needs. Such a program of Government action—whether prompted by good or bad motives—removes incentives from the individual, stifles initiative and becomes inevitably the master of the people that it set out to serve. Recent history abroad provides extensive support for that view.

That kind of all-inclusive Government activity labor opposes, and we will oppose with all the force at our command any attempt by any government to control the details of daily living and our relationships with each other even if it is alleged to be for our own good. That is why we are against the Taft-Hartley Act.

Both employers and labor must oppose despotism in any form. There is no such thing as a benevolent despot.

CONCEPT OF STATISM

There is another concept of the welfare state, however, that is rooted in a quite different idea of the nature of the state. This is the idea that the state can be the servant of the people. The idea that Lincoln expressed as "a Government of the people, by the people, for the people," is not three ideas of government but one. The only kind of government that can genuinely be for the people is one that is by and of the people. The state is made for man and not man for the state.

If a people succeed in maintaining this concept of government, the state then becomes the instrument through which they do those things for themselves which they cannot do individually. Though they use the instrumentality of government they are still performing these functions for themselves. Under such a concept individual opportunity can be maintained and enlarged and individual initiative can be encouraged.

Now under such an idea of the nature and the purpose of the state the concept of the welfare state takes on quite a different meaning from that which I first described. In line with this idea, which was that held by the founders of our Government, it is no question as to whether we should have a welfare state. That question was settled in 1789 with the adoption of the Constitution. The purpose of government in the United States of America was set forth clearly in the preamble of that document where "We, the people of the United States," are committed until such time as that document is changed to six enduring programs. The fifth of these action programs to which we are committed is to promote the general welfare through the National Government.

POWERS OF CONGRESS

This is reinforced in article I, section 8:

"The Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States."

It is significant that the first defense of a broad power of Congress to act for the general welfare was conducted by Alexander Hamilton in reference to the question of the establishment of a national bank. Opponents of the bank argued that no power was given by the Constitution to the Congress for such a purpose. But Hamilton supported his argument by reference to the general welfare clause.

Since that date there has been a host of enactments sponsored by every political party that has been developed in our history, of both liberal and conservative persuasion, to implement the welfare activities of our National Government. Every time that Congress has passed a tariff act we have engaged in an activity of the welfare state.

HISTORIC MILESTONE

In this long development there have been some historic milestones. One of them was the enactment of the Homestead Act of 1862. After a long and bitter battle this was a decision on the part of the people's representatives in Congress to dedicate the vast resources of the public domain to the needs of plain people as it provided for the settlement of public lands in quarter-section units. I would like also to point out to those who allege that the idea of social security is a foreign concept that actually we launched on a social-security program through the enactment of this act. When we so dedicated the public domain we were actually providing a combined old-age security and unemployment compensation program, as a study of the waves of migration from the eastern industrial areas to the valleys of the Middle West in their relation to successive periods of unemployment in the industrial areas will show.

We need only to look at the budget of the United States Government submitted for the fiscal year 1950 to find that the activities of the welfare state are by no means confined to the extension of aid to unfortunate individuals. A ship operator, for example, has available detailed and expertly prepared charts and tide tables printed by the Hydrographic Office of the Navy at an expense of $4,451,000. In contrast to that, those who seek aid from the Federal Government, either from management or labor's standpoint, in the development of sound labor standards have to rely on the Bureau of Labor Standards in the Department of Labor, whose total budget for the year is only $391,000. The Bureau of Labor Statistics operates on an annual budget of $5,450,000.

BUDGETARY PROVISIONS

A navigator of ocean-going vessels has prepared for him by the Government annual tide tables that will tell him for every day and every hour of the year the status of the tides and the flow of the currents in every port in the world. But a citizen who is responsible for steering a course in sound labor-management relations finds that the item for printing and binding in the Department of Labor is exactly zero. Twenty-five million dollars is set aside this year for the Agricultural Extension Service. In 1947 we had a tiny budget of $37,000 under which the Department of Labor was providing similar aids to American citizens responsible for furthering understanding of collective-bargaining processes. The Eightieth Congress wiped out even this minute item.

When the frontier was exhausted and public lands were all settled or given away and we found ourselves still faced with the insecurity of old age and unemployment the Government simply continued its basic policy of dedicating its resources and instrumentalities to the aid of people to provide through a system of social insurance against these contingencies. That is how our Social Security System came into effect as an activity of the welfare state.

PUBLIC HOUSING

According to the report of the Senate Committee on Banking and Currency (S. Rept. No. 84 of the 80th Cong., 1st sess.), we must be prepared to build or rehabilitate an average of at least 1,300,000 nonfarm dwelling units and between 200,000 and 300,000 farm units each year over the next 12 years if substantial progress is to be made in bettering housing conditions of American families. The record of the private building industry, particularly since the war, establishes conclusively that it cannot handle the job alone, since nearly two-thirds of our families who have incomes of less than $4,000 are completely out of the housing market in terms of being able to buy or rent the homes constructed by the private building industry.

In the field of education we decided over a hundred years ago that the education of our children is not properly a field for business enterprise operated for profit and we established a system of free public schools. In the course of our national development we are now faced with the fact that we cannot leave the support of these schools dependent entirely on the uneven financial resources of the localities and States. It has, therefore, become imperative that the Federal Government must be used to give assistance in meeting the cost of educating our young.

HEALTH INSURANCE

Another common need is for a method of meeting the high and unpredictable cost of medical care through an extension of the principle of social insurance. We do not wish to see the Government in the practice of medicine. We do not wish to regiment doctors or patients. We do not wish to socialize medicine, and no bill supported by organized labor in the United States calls for any such thing. We seek simply to promote the general welfare by using the instrumentality of government to establish a fund contributed to out of our own wages with like contributions from our employers to remove the ever-present dread of doctor and hospital bills that can drive us to the relief rolls and the loan shark.

Experience has taught us that every forward step in the field of social and economic welfare brings some dangers. Advances in this field are no more free from hazards and pitfalls than was the conquest of a continent by our pioneer forefathers. As we seek to utilize the services of Government we must be on guard against Government becoming our master. But we also recognize that people cannot guarantee their freedom by such a simple formula as limiting and crippling the power of their Government.

NELSON H. CRUIKSHANK.

WASHINGTON, *July 7, 1949.*

The Welfare State: Where Do We Go From Here?

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial from the Richmond News-Leader of Friday, July 8, 1949, entitled "The Welfare State: Where Do We Go From Here?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The Nation's lawmakers, if they want to be consistent in their espousal of the welfare state, had better spit on their hands and get to work. Enactment of the national housing legislation, held up momentarily in a conference committee, will open up vistas as yet undreamed. The beautiful Utopia wrapped up in line 3, page 2, awaits the questing Congressman who seeks new socialistic worlds.

That language, which will be embodied in the final bill, puts Congress on record that "governmental assistance shall be utilized where feasible * * * to realize the goal of a decent home and a suitable living environment for every American family." Now, "environment" is defined in our dictionary as "surroundings," or specifically, "the aggregate of all the external conditions and influences affecting the life and development of an organism." And "suitable" is defined as something that is pleasing or satisfying, something that is suited to one's needs or wishes. It follows that Congress thus has asserted the Federal Government's dominion over a mouth-watering world of external conditions and influences; over vast undertakings that must be aided or guided, or in that exquisite verb from the President's economic advisers, "maximized."

To be sure, legislation already is pending toward a few acres in this utopian land. The Brannan farm plan would cover the rather important factor of food; it would undertake to provide consumers with "a continuous and adequate supply of agricultural commodities at fair prices." The Dingell public health bill, which opens with the remarkable observation that "ill health is a major cause of human suffering," would cover the "preservation and improvement of the health, vigor, and security of the American people." Thus, three bills already at hand could be utilized to cover the essentials of shelter, food, and medical care.

What about clothing? Surely that is an external condition involved in man's environment. Consistency demands that a bill be drummed up at once to provide 810,000, or perhaps 810,000,000, suits and overcoats over the next 6 years. At the outset, all blighted, substandard, inadequate, or overcrowded garments would be done away with, and grants-in-aid would be provided to replace them with new suits and overcoats at not to exceed, say, $100 apiece.

And what about transportation? That, too, is an external condition of immense importance. The happy subject of the welfare state, about to be sheltered in a five-room house that could cost up to $12,500, must have a suitable environment. Nothing less than a $2,000 car should be considered.

There is the matter of communications. Even the lowliest environment would be considered unsuitable these days without at least one radio and a daily paper. Can there be a suitable living environment without a telephone?

Time is short. Congress will be in session for only one more month. Haste to the drafting bureau, and there draw up the external influences bill. Let there be created the commissioner of suitable living environment, with bureaus, subbureaus, and regional offices. Onward and upward to the welfare state. Away with the shadow of national bankruptcy. The new utopia lies ahead.

The Brannan Plan

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hassil Schenck Is Right," published in a recent issue of the Indianapolis Star; also an article entitled "Schenck Raps Brannan Plan," published in the Indianapolis Star of July 7, 1949. Mr. Hassil E. Schenck is president of the Indiana Farm Bureau and a member of the executive committee of the American Farm Bureau Federation.

There being no objection, the editorial and article were ordered to be printed in the RECORD as follows:

HASSIL SCHENCK IS RIGHT

One of the most telling attacks on the Brannan farm program since it was launched was made by Hassil E. Schenck, president of the Indiana Farm Bureau, in his testimony before a congressional committee on Wednesday. Mr. Schenck said: "We farmers are convinced that more freedom of choice for farmers would result in better allocation of resources and more efficient farm production than can be obtained through continuous rigid controls over production and marketing." The history of American farming proves Mr. Schenck 100 percent right. Our free farmers have outproduced the world. They are growing and selling more crops with considerably less manpower on the farm than any other nation in the world. State-controlled farming in other nations has never produced as abundantly and efficiently as our free American farmers have done.

A trial run of the Brannan plan on hogs, said Mr. Schenck, would be a foot in the door for the whole program. It would discriminate against producers of other products and begin demands for immediate extension of the subsidy program to all other phases of farming. Once the Brannan plan gets started it would have to be extended throughout the United States almost immediately, carrying with it rigid controls and Government directions over what, when, and how the farmer shall produce his crops.

Like most other farmers who want to stay free of Government control, Mr. Schenck is opposed to making the farmer dependent on Government hand-outs for his living standards. If his income depends on congressional appropriations, the farmer's very livelihood will be at the mercy of politicians who are unpredictable, and economic conditions over which the farmer has no control. He will have no dependable protection against politicians who wish to subject him to their own purposes. We believe that most American farmers agree with Mr. Schenck. We do not believe they are willing to sell their economic and political liberty for the insecurity of such a position.

SCHENCK RAPS BRANNAN PLAN—"DEPENDABLE" PROGRAM WANTED, SOLONS TOLD

WASHINGTON, July 6.—Hassil E. Schenck, president of the Indiana Farm Bureau and a member of the executive committee of the American Farm Bureau Federation, today delivered to the Senate Agriculture Committee a scathing denunciation of the Brannan farm security plan.

He said, as he testified before the committee, that he was speaking as a representative of the 1,325,000 American families who are members of the American Farm Bureau Federation."

He voiced, first, the fear that the farmer will find himself "in an impossible situation" if there be any Federal farm program which finds itself dependent upon Federal appropriations.

"Farmers want and desire a new dependable program," he said.

His second attack was directed at the proposed hog subsidy, with a declaration that farmers generally are concerned about the effect of such a program on beef, mutton, lamb, poultry, and cheese for which there is no price support.

"It is our firm conviction," he said, "that if such a plan were tried on hogs, producers of other livestock would find themselves in serious price trouble.

"If this happened, as we believe it would, recommendations would presumably be made to extend the subsidy to these other products. This has been the pattern of development in foreign countries which have had experience with this type of program."

He said that the Farm Bureau Federation had favored the immediate application of the flexible price features of the Hope-Aiken bill last January.

"The philosophy of the Brannan plan," he concluded, "is so dangerous to agriculture that we vigorously and unanimously oppose any 'trial run'."

The Hoosier farmer attracted more senatorial attention than any other witness who has appeared in recent months before the Agriculture Committee. He was questioned in detail by the committee Senators, but stood firm on his ground that "We as farmers are convinced that more freedom of choice for farmers would result in a better allocation of resources and more efficient farm production than can be obtained through continuous and rigid controls over production and marketing."

Wants Another Henry To Lead Nation

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter under the heading "Wants Another Henry To Lead Nation," written by Russell Keiningham to the editor of the Richmond (Va.) News-Leader, and published in the July 9, 1949, issue of that newspaper.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WANTS ANOTHER HENRY TO LEAD NATION

EDITOR, THE NEWS-LEADER:

SIR: Senator JAMES P. KEM, of Missouri, has introduced an amendment to the ECA appropriations bill now pending before the Senate Appropriations Committee. Here is the text. "Section 202. No part of the appropriations contained in this act shall be furnished to any participating country, the government or any agency or subdivision thereof, which shall after the date of the enactment of this act, acquire or operate in whole or in part, any basic industry thereof, other than the industries the acquisition of which has been completed prior to the date of the enactment of this act."

The object of this amendment seems to be to prevent further adventures into socialism by England and France. England has socialized some of her basic industries and she is losing money on every one of them. She will socialize her steel industry by 1951 and the British Labor Party stands ready to socialize other industries if they are returned to power in the election. Clement Attlee seems to be a double talker. He denounces communism out of one side of his mouth while out of the other side he blows a trumpet for socialism, the greatest swindle ever to be perpetrated on civilized man.

The situation in France is no better. France is reported to have socialized about five of her basic industries including the five largest banks in that country. Before socialization the banks were heavy taxpayers but in the first year of government operation they are reported to have lost the equivalent of $30,000,000. France is down on the original Marshall plan for $3,701,000,000 and on May 7, 1947, the International Bank loaned France $250,000,000. She now has the impertinence to tell us we cannot stop the Marshall-plan idea when we so propose but we must keep it up. France cannot even govern herself, yet she tries to tell the United States what to do. The Marshall plan does not now seem to be a recovery program but a relief program to underwrite socialism and communism in Europe.

To say that the European countries will collapse unless we underwrite their socialistic advantures is absurd. Look at little Finland. That valiant little country lost 77 of her most important industrial plants to the Soviets and she must pay better than $300,000,000 in reparations. The Finns, without Marshall-plan assistance, have repaired 3,000 miles of roads, 1,000 bridges, restored over 5,000 homes and dwellings in northern Finland, along with some industrial plants, all torn up by the Russians and Germans. In sharp contrast, a third of the Marshall-plan money goes to England, and England has an average workweek of 42 hours.

What this country needs is another Patrick Henry to rise in old St. John's and to scourge with his tongue until he saves us from the stupid, the vain, and the greedy; saves us from the same fate that has befallen France, ruined by waste and mutilated by subversive propaganda, bled white, and sold down the river.

RUSSELL KEININGHAM.

Rent Controls

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials published in the Cleveland Plain Dealer, one entitled "Eyes of United States Are on Texas," published on June 25, 1949, and the other entitled "Rent Control Marches On," published on June 28, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer of June 25, 1949]

EYES OF UNITED STATES ARE ON TEXAS

According to the Associated Press, Gov. Beauford H. Jester has signed into law a measure under which rent controls will be abolished in Texas 90 days after the State legislature adjourns. Recently the Nebraska Legislature voted to abolish rent controls, effective in 1950. These two States have a combined area of 344,576 square miles, more than one-tenth of the total area of the United States.

The rest of the United States will watch with interest what happens in these States when rent controls are no longer in effect. The results in Texas will be particularly revealing because this State had a phenomenal population growth during the war, and a duplication of conditions existing almost anywhere in the United States can be found there.

If Texas finds that the elimination of rent controls does not cause undue hardship and that rent increases commensurate with the rise in building costs and other prices bring about a more economical use of existing housing and stimulate new construction for rental purposes, the result no doubt will be

that other States will follow the example of Texas and take advantage of the home-rule provision of the Federal law to end controls.

It was this possibility, unquestionably, which alarmed National Housing Expediter Tighe Woods to such an extent that he made a surprise flying visit to Austin to urge Governor Jester personally to veto the Texas decontrol bill.

Woods is one of those Federal bureaucrats we hear so much about. Congress is accustomed to their lobbying and propagandizing activities, at the taxpayers' expense, of course, in behalf of their pet projects and to maintain or to expand the agencies they operate. But it is something new when a Federal bureaucrat attempts openly to influence the governor of a State.

Apparently Texans generally did not appreciate Woods' visit to their State. The Fort Worth Press commented that "for pure insolence and bureaucratic interference with the functions of the State government, this incident is unmatched. It will be a dark day for our State when its own elected public officials bow to this kind of dictatorial interference."

Why was Woods so concerned because the Texas Legislature voted the abolition of Federal rent controls? The answer seems to be clear. When the law goes into effect there will be no need for Federal agents in Texas to enforce rent controls and Woods will have that many fewer employees on his pay roll. He won't be quite such an important fellow in Washington as he is now, and if other States should follow Texas' example, eventually he wouldn't be very important at all.

What Woods tried to do in Texas is exactly what the local rent-control gauleiter, Karl Duldner, has been trying to do in Cuyahoga County by appearing in opposition to rent decontrol ordinances in Orange and Bay Village.

Woods and his subordinates are supposed to enforce the rent-control law, not to lobby against home rule. Congress put the home-rule provision into the rent-control law because it didn't trust the Federal bureaucrats to decontrol areas which no longer needed to be controlled. It is absolutely beyond the province of the Federal bureaucrats to attempt to influence or interfere with the actions of State and local governments.

We presume that Woods paid for the cost of his flight to Texas out of his own pocket. If he didn't, the General Accounting Office ought to disallow any claim for expenses for this purpose and Congress ought to impeach him for the misuse of Federal funds.

[From the Cleveland Plain Dealer of June 28, 1949]

RENT CONTROL MARCHES ON

The new rent control policy announced by Federal Housing Expediter Tighe Woods is designed to encourage landlords to spend money on the improvement of their properties. From now on those who do so will be granted permission gladly, instead of grudgingly or not at all, as in the past, to increase their rent charges.

Woods pointed out that if only $100 were spent improving each of the 14,000,000 housing units under control, the total expenditure would be $1,400,000,000. "The effect of such spending on the labor and materials market would be terrific," he said.

The new regulations even go to the extreme length of instructing the local rent control officials to recognize the 1949 costs of materials and 1949 wage rates in computing the amount of rent increases that are to be allowed. This represents an unheard-of concession on the part of a Federal agency which, until recently, has contended that rents should be based on 1942 costs and wage scales.

Actually promulgation of the new policy amounts to a confession on the part of the Rent Control Authority that its past policy has been responsible for the unprecedented deterioration of rental property. Landlords have not only neglected maintenance and repairs but have declined to consider making improvements in their property as long as the Government required them to subsidize part of the living expenses of their tenants by making an unreasonable limitation on the amount of rent they could charge.

There is a catch in the new regulations, however. The tenant must agree to permit the landlord to make the proposed improvement. Then, after obtaining plans, specifications, and estimates, the landlord must get them approved by the local rent control authority in order to qualify for an increase in rent. At that time the rent control official will render an opinion as to how much of an increase in rent the proposed improvement would justify. The increase specified in the opinion will then go into effect when the improvement is completed.

In our opinion, this is a lot of additional red tape, the principal results of which will be to extend Government controls over rental property and increase the number of Federal employees required to administer the new regulations.

If the objective of the rent control agency has now become to encourage landlords to spend money improving their properties, there is a much simpler way to achieve it—just abolish rent controls entirely. We venture the prediction that the owners of rental properties would spend a great deal more than $1,400,000,000 to renovate and improve them if the rent ceilings were lifted. Also space hogging, which is one of the principal causes of the housing shortage where such a shortage still exists, would be discouraged, and builders would have some incentive to construct new housing units for rental purposes

---

The President's Economic Report Summarized

EXTENSION OF REMARKS
OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. O'MAHONEY. Mr. President, there has been prepared a summary of the President's Economic Report by Dr. John D. Clark, one of the members of the Council of Economic Advisers. It is so brief and definite that I feel it should appear in the RECORD. I therefore ask unanimous consent to have it printed in the Appendix.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

THE PRESIDENT'S ECONOMIC REPORT SUMMARIZED

(A statement prepared for the chairman of the Joint Committee on the Economic Report by John D. Clark, one of the members of the Council of Economic Advisers.)

In his midyear economic report, the President observes that the postwar inflationary forces have abated, that the inevitable and desirable drop in prices is having the expected temporary effect upon production and employment, and that our new problem is to prevent the moderately declining economy from falling into a depression. The factors of employment, production, personal income, and market demand for goods have receded very slowly. They remain strong enough to be quite adequate to support business activity at the prosperity level if the process of adjusting prices can be completed in the present orderly fashion.

In previous deflations, three explosive danger spots where crises arise have been disclosed in financial markets, in speculative markets, and in agriculture. For 16 years, we have been preparing the program which, by stabilizing these points of vulnerability, will gain time for price adjustment to be completed. As a Senator and as the Chief Executive, the President has participated in establishing Government policies for the very purpose of preventing the march of recession into depression, and now he puts his faith in them. His is not a wait-it-out policy. It is a policy of positive action on many fronts, and it is ready.

We are now protected against a financial crisis by changes in our laws affecting money and banking which insure cheap and abundant credit under conditions which have before caused credit to tighten and almost disappear. The deposit insurance law has exercised the spectre of bank runs. We have modified the bankruptcy laws to preserve continuity of enterprises rather than to compel liquidation. We have reorganized mortgage credit upon a basis of long-term amortization which minimizes the stream of foreclosures. We have established the Reconstruction Finance Corporation and other Government agencies to supplement private credit at the very places where credit tightens most when business declines have set in. We need no longer fear financial crises such as those which hurled the country into the great depressions of the nineteenth century.

We were plunged into our worst depression when a very moderate recessionary movement following a slow advance was turned into a vigorous deflation by the collapse of a violent speculative movement in the securities markets in the fall of 1929. We have protected the Nation from another crisis of that character by establishing effective controls by the Securities and Exchange Commission and by the Board of Governors of the Federal Reserve System. The greatest peacetime boom in our history has been free from dangerous speculation in the securities markets and there is now no threat from that quarter.

We have provided that there shall be no disastrous collapse of agriculture by adopting a farm price-support program, and have already tested its value. Early in 1948 the speculative price structure on the grain exchanges crumbled in the way it did in 1920. The same consequences did not follow. Farm price support not only protected farm income from spiralling price decline, but it assured the business world that no collapse would occur and relieved all other businessmen of fear that markets in rural America would disappear. On account of this policy, these markets are now unshaken.

Unemployment insurance, including that provided for veterans, relieves the distress of the innocent victims of declining industrial production, and together with the Minimum Wage Act and the labor-relations laws which protect the right of collective bargaining it neutralizes the increase in the number of unemployed. Shortsighted employers cannot use growing unemployment as a tool to force downward the wages and the purchasing power of workers. That policy of management has contributed to spiraling deflation in the past.

These are the major features which have been introduced into our economy in the past 16 years to hold within narrow limits the downward swings which cannot be wholly avoided. The Council of Economic Advisers finds proof of their effectiveness in the fact that although our greatest postwar boom continued for longer and rose much higher than the point at which experience indicated critical danger of collapse, its abatement has been moderate and orderly and in some lines of business there are

already signs of renewed expansion. The recommendation of the Council to the President, therefore, has been that his program be to permit the adjustment of prices to be completed without interference by Government action, and that the Government support and improve the antidepression policies already established.

This is the program which the President has presented in his midyear economic report. It includes withholding tax increases affecting business; increasing the minimum wage and extending the duration, coverage, and weekly benefits of the unemployment insurance and other social-security laws; liberalizing the policies of Government credit agencies; and maintaining at the level proposed in his budget the public expenditures which our domestic and international needs have lifted to be a factor of great importance in sustaining consumer purchasing power.

This being done, we shall have protected the economy from the shocks which turn a slump into a bust. With the completion of price adjustment, business will be in condition to resume the course of expanding production and employment.

The TVA Has Friends

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by Mr. Hodding Carter which appeared in the Washington Post of July 3, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOKING AT THE SOUTH—THE TVA HAS FRIENDS

(By Hodding Carter)

GREENVILLE, MISS.—The story of the Tennessee Valley Authority's vast contribution to the Nation's economy and security has been told hundreds of times; but there remain skeptics, even without axes to grind, who are unimpressed by the written or spoken word and who still see a socialistic specter in what was once called an experiment.

I wish that all such doubters could have taken the second annual TV-HO cruise along the Tennessee River from Paducah, Ky., to Knoxville, Tenn. I have just completed that 10-day cruise as a guest of one of about 50 cabin owners from nine States, and I say flatly that no open-minded person could be other than a TVA backer at the end of the journey up river.

My companions were holiday-minded business and professional men. Most of them had taken the trip before. Their interest lay in the recreation offered by the chain of connected lakes created by the TVA dams, lakes which they proudly describe as the Great Lakes of the South.

NEW ENTERPRISES

There was recreation in plenty along the river that was once unpredictable and troublesome and so frequently inaccessible to all but the smallest craft. We passed hundreds of large and small pleasure boats. Everywhere on the 650-mile journey fishermen were casting or pole fishing in the most prolific game waters in the country.

Swimmers and water skiers, picnickers and sightseers abounded in the beautiful, wide stretches between towns and dams and in the parks and clubs that have been developed in every community. New and thriving business enterprises—capitalist enterprises—have grown up to cater to the boaters and fishermen and hunters who come to the valley.

But the recreational business is still in its infancy, though the infant is growing rapidly. And it is only a happy byproduct of TVA's primary accomplishments: Flood control, navigation, and plentiful and cheap power. The last-named accomplishment provides the principal target for the program's critics. Yet here again it is the capitalist system which profits from TVA; capitalism and 9,000,000 human beings whose living and health standards and job opportunities have been so greatly bettered by the electrification of the Tennessee Valley.

Private industry could not have financed the harnessing of the Tennessee on such a scale, and it would not have developed the valley in as many directions. The Government did the job instead and hence the charge of socialism. But from the governmental base, private enterprise, and the individual have advanced together.

OBVIOUS GAINS

The people of the valley just don't listen to the critics. They know what has happened and what is yet to happen. They have seen the malarial rate of the lowlands cut from 65 percent to virtually zero under TVA's malarial-control program. They point out the recovered lands where farm income has trebled under the land-use programs of the valley States working together with TVA.

They watch the towboats and the pleasure boats multiply and the new industries rise. They know such stories as that of Decatur, Ala., to which 72 industries have come in 14 years. And it is impossible for these valley individuals to believe that they are the creatures of a dangerous benign paternalism.

I talked to many of them. I remember especially what one of them said. He is a transplanted Pennsylvanian, operator of a large industry, a strong believer in private enterprise, and the Republican Party. He came to the valley 13 years ago, when new vistas were just beginning to open.

"The TVA has given both the profit system and the people a chance down here," he says. "There ought to be more developments like it all over the country."

To which 9,000,000 people would say amen.

The Hawaiian Shipping Strike

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the July 7 issue of the Brewery Gulch Gazette, of Bisbee, Ariz., covering the strike situation in Hawaii; and with it I ask that there be printed an editorial entitled "Hawaiian Relief, Courtesy of Bridges," appearing in the June 26 issue of the Los Angeles Times.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Brewery Gulch Gazette, Bisbee, Ariz., of July 7, 1949]

THE BREWERY GULCH PHILOSOPHER SAYS

Some 12 years ago Harry Bridges held a strike meeting of his Longshoreman's Union; he called for a standing vote on the strike and then he said, "Now I'd like to have any S. O. B.'s that don't want to strike stand up." No S. O. B.'s. That's the way he operates. Now his dock workers are striking in Hawaii: They have been out for 2 months, and the only way to get in or out of the islands is by plane. Ships loaded with food that lie in the harbor cannot be unloaded and perishable foods rot in the ships' holds while people go hungry. Unemployment is at a new high and many businesses are being ruined; the $70,000,000 pineapple industry is going on the rocks. Communist Bridges' union, which is tying up business, has 2,000 members, of which only 500 are American citizens. Thousands of citizens of the islands have petitioned Congress to do something about the distressing situation, but the only response so far received has been the statement of House Speaker SAM RAYBURN in which he said, "I don't think that Congress should stick its nose into a matter of this kind." President Truman disclaims any desire to intervene in this particular case, although he has shown no backwardness in trying to solve the problems of various parts of the world where the American flag is not flying.

[From the Los Angeles Times of June 26, 1949]

HAWAIIAN RELIEF, COURTESY OF BRIDGES

(By Kyle Palmer, political editor)

Depressing news dispatches and indignant reports by returning mainlanders; statistics on dangerously low food supplies, on business failures and job losses; and slow strangulation of the economic life of an American community of more than 500,000 men, women and children are incidental items in the tragic story of strikebound Hawaii.

Merits in the dispute between striking dock workers and their employers are secondary considerations.

In the light of the far greater issue raised by the situation in Hawaii—an issue as vitally related to the welfare of all the people of this country as to that of the helpless Hawaiian population—the question of which side is right, or partly right, in arguments for and against wage increases loses much of its significance.

Hardships of those in far-away places, the sufferings we read about, but do not ourselves experience, even the distress of a distant community in which our own friends and relatives are among the hapless victims, never seem quite as real or as unbearable as the ills and evils we share or have immediately before us.

But the fact remains that the country's mainlanders are sitting by complacently while more than a half million of their fellow citizens are experiencing an ordeal—now well into its second month—which would not be tolerated overnight by public opinion within the continental United States.

Whether Harry Bridge represents to you a species of Red devil bent upon destroying the economic, political, and social system of this country, or in your estimation is an inspired defender of the rights of his underprivileged fellowman, Mr. Bridges by calculation and design has been able, for all practical purposes, to isolate the Hawaiian Islands from the rest of the world.

Again, it seems to me that his motives are relatively unimportant; whether he seeks

to better the lot of his union members, as he maintains; whether he is carrying out a deliberate Communist scheme to dominate territorial politics and economics, as many believe, or whether he merely intends to solidify his position as a dominating figure in management-labor relations.

The important thing, from the standpoint of any citizen who has due regard for his own rights, freedom, and welfare, is that Bridges has been able to accomplish his objective; that he has been permitted to accomplish it, first by an unaroused public opinion, and, second, by a remarkably and inexplicably indulgent national administration.

A dock strike in Hawaii, backed up by refusal of dock workers on the mainland to handle cargoes destined for Hawaiian ports, represents in all respects what a joint shipping, trucking, and railway strike would mean to a mainland community. To Los Angeles, for instance.

And in view of the distances involved, the Hawaiian dock strike is even more crippling; for Honolulu and all other Territorial areas are absolutely dependent for adequate supplies of virtually all essentials upon waterborne commerce.

Not a freighter may be loaded or leave port or discharge its cargo except by the grace of this union boss; and while one branch of the Federal Government marshals its forces to prove him a perjurer and an active Communist leader whose original alien status should be restored preliminary to his deportation, other divisions of the Government profess themselves powerless to interfere with his destructive program.

And once again, a discussion of this situation need not inquire into his reasons, nor seek answers not related to the basic question that should appeal to all:

"If Harry Bridges and his union members can bring the people of Hawaii to their knees by reckless and ruthless exercise of arbitrary power, what is to prevent him—or others—from exercising that power elsewhere?"

True, neither Bridges nor any other union leader, even with the collaboration or collusion of a prolabor national administration could get away with such tactics on the mainland now.

But how about next year, or the year after that, or 10 years hence, if the Hawaiian experiment succeeds?

The dock strike in Hawaii is an object lesson, both of what is happening and of what can happen. Yes, what can happen here.

Dock strikers have demanded a specified pay increase and their employers, offering less than the union demands, must eventually come to a decision.

Compulsion by Government agencies exerted against either side will not meet the issue, nor will a one-sided victory by either prove beneficial. Somewhere along the line a fair meeting ground can be discovered.

In the meantime, Bridges keeps his thumb on the jugular vein of the Hawaiian people—the maritime commerce.

And in the meantime the constructive and productive activities of the islands are withering.

Pineapple and sugar industries in Hawaii are big business. That such industries are periled is not, perhaps, a matter of great concern to Bridges and his island lieutenants.

Yet the economy of the islands rests upon these two major operations, and the livelihood of tens of thousands of families depends upon their success.

There were less than 10,000 persons listed as unemployed in Hawaii when the strike of longshoremen and warehouse workers started on May 1. Now the unemployed number almost 20,000.

And this expanding army of the enforced idle may suddenly reach disastrous proportions if unionized sugar and pineapple workers—controlled by Bridges—carry out threats of strikes in those industries.

The Federal Government is ever on the alert to break up and penalize the threat of industrial monopoly, but here is a monopoly—a monopoly of power, of political pressure and of economic control—that can say "stop" or "go" not only to business, but to the workers, to the politicians and to Government itself.

Surrender to such a threat, on any basis, might bring temporary labor-management peace to Hawaii and a resumption—on Bridges' terms—of the commerce of the islands.

The evils thus halted for a time in Hawaii, however, would reappear in more malignant form. Their spread could not be stayed.

Thus, Harry Bridges has challenged the right and the capacity of the people—not of the Territory of Hawaii alone, but of the Nation itself—to conduct their ordinary and proper affairs unhindered by the particular interests or the special objectives of any man or set of men.

Make no mistake about this dock strike in Hawaii. It goes far beyond the limits of an employer-employee dispute; is more fundamental than any struggle between capital and labor. It is a supreme bid for power by a resourceful and highly intelligent man who, if he succeeds, will never be satisfied by one or two such triumphs.

The solution to this puzzle does not lie primarily in Hawaii, where the people are under siege. It is really up to the people on the mainland to take cognizance of an unbearable and an insufferable condition which, as it affects the fundamental rights of a few, affects the rights of all.

How far shall the oppression of Bridges be tolerated

To date, milk production in Hawaii has been curtailed about 10 percent.

More than 350 business establishments, in the face of dwindling supplies and dying trade, have been forced to lay off hundreds of workers.

Salaries have been reduced in some firms by managements hoping to weather the storm without curtailing their staffs.

For the first time in many years, dividend payments to investors have been cut.

Many little businesses either hang upon the edge of bankruptcy or are about to take the plunge.

In some instances poultry growers have slaughtered flocks, destroyed baby chicks and hatching eggs because of empty feed bins.

Passengers and mail arriving on transpacific ships are being unloaded off the port of Hawaii and lightered ashore.

The record of petty annoyance and major outrage is endless.

A relief ship is on the way. Harry Bridges permitted it to be loaded and allowed it to sail. The ship will be unloaded, Bridges willing.

The Little Telephone People Favor H. R. 2960

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a number of letters which have been received from independent telephone operators all over the Nation. These letters make it plain that a great number of these telephone people realize the need for a rural telephone bill and that they recognize that the pending bill would be of tremendous value to them as well as to farm people.

Mr. Speaker, the letters follow:

ALABAMA

COLLINSVILLE, ALA.

I realize this is the only salvation for the rural telephone companies in our State. Our State association of which I'm a director passed a resolution unanimously as going on record in favor of this bill.

PEOPLES TELEPHONE CO.,
M. G. WEAVE, *President.*

ORVILLE, ALA.

I am intensely interested in securing financial aid in building a rural line 8 miles long from my exchange in Orville.

HOME TELEPHONE CO.,
MRS. MYRTLE S. DAVIS, *Manager.*

ARKANSAS

WILMAR, ARK.

I am 100 percent for the telephone loan as included in Senate bill 121 and the House bill 2960, and that the REA should be the lending agency as the RFC is bound up by too much red tape.

The independent telephone association is dominated and controlled by the Southwestern Bell Telephone Co. and their cohorts, AT&T, which have done all in their power to freeze out the small independent exchanges by misleading them on every possible point of the bill. They realize if they defeat the Poage bill it will be but a short time before all the independent telephone companies will be absorbed by these powerful monopolies.

WILMAR TELEPHONE CO.,
W. B. CLARK.

PEA RIDGE, ARK.

I could serve several people which I am not financially able to serve. I also need to improve the whole telephone system and would if this plan goes through and if I could borrow the money. I am serving 130 people, but I have people who are almost crying for phones. I could built up my exchange to nearly 300. If this plan should pass, I see no reason why our people here at Pea Ridge could not talk to anyone in a few minutes in the United States. I am a man without the means to go ahead and build our system the way it should be run.

Phones, I think, are badly in need in our rural homes for doctors and other cases that would be called emergencies.

I think the small exchanges should have the means to help prosper our country and make it prosper.

PEA RIDGE TELEPHONE CO.,
W. F. KELLEY, *Manager.*

WICKES, ARK.

In the first place I am not in favor of socialism, or any form of government which leads or tends to lead to communism. I am really not in favor of rural electric cooperatives. However, in this case I see no other alternative. I am in favor of long-term loans, with low interest, which will enable the small independent telephone industry to furnish the remote rural population with telephone service. The people cry to me all the time for telephones, and I do my best to furnish them as fast as I can. I never have a day off, and I put every dollar of income back into the system, and for that reason I never have a dollar to spend for recreation.

WICKES TELEPHONE CO.,
C. L. SMITH.

ELKIN, ARK.

We of the independent companies need such help and very much so—since individually we are not financially able to build lines to all of our people now in or within our franchises.

I expect to borrow if such a loan passes. I know it means growth and actually serving the people as we should according to our franchises.

THE ELKINS TELEPHONE CO.,
OLNEY W. A. DRAVES,
Owner and Manager.

COLORADO

ECKLEY, COLO.

We can only service about 50 percent of the people in our area.

ECKLEY-HAPPYVILLE TELEPHONE CO.,
G. D. SILVIUS, *President.*

KIOWA, COLO.

I have vast areas within the limits covered by my PUC certificate of public convenience and necessity, where there is no telephone service at all, and most rural lines here are very unsatisfactory, being farmer-owned and maintained. And most of those lines are anxious for me to take possession of them and rebuild them. This is impossible without capital, and capital for telephone expansion has never been available at a cost any independent exchange owner can afford.

I know positively that neither Bell nor the larger independents will develop any sparsely settled rural section unless forced to it, and I also note that Bell companies have purposely refrained from making increases in rural rates while applying for increases in all other areas, apparently hoping to discourage the very kind of legislation you are sponsoring.

KIOWA TELEPHONE EXCHANGE,
FLOYD I. HALL.

FLORIDA

SNEADS, FLA.

I don't know the problems of the other telephone companies, but this bill would sure solve my problems.

I would like to ask one question. As it is now, I am paying 8-percent interest on the balance that I owe on this company.

SNEADS TELEPHONE EXCHANGE,
W. E. QUATTLEBAUM, Jr.,
Owner-Manager.

ILLINOIS

WOODLAWN, ILL.

We received your circular letter in regard to the rural telephone bill, H. R. 2960. Will say that I am glad that you sent them out. I have read a lot on the other side of the question. The bill might not be just right, but why did not our association sponsor a bill that did fit the situation, seeing that we were in so much need of long-term loans. To state briefly our situation, we are a small company with 220 subscribers. We started about 8 years ago by taking over the sad remains of an old mutual outfit that had fallen down around their ears. We have only three stockholders, wife and I and her brother, who hold one share to make the corporation. No one else wants to or would put any money in it. We had enough capital of our own to build at a reasonable rate, with my wife working the switchboard and myself working the outside plant. We have made a reputation for ourselves that has caused committees from most of the neighboring towns to come to us, asking that we build them a system like the one we have here. But we do not have the money and there is no place that we can get it. We want to convert this Woodlawn exchange to dial this year, and try as we may, a 3-year loan with 5½ percent was the best that we could find, notwithstanding that the company is in good shape. We own good property clear of debt, life insurance, and have sold some property of late on a conditional sale to be paid over a period of 5 years. The notes coming due over the 5 years would more than pay what we need to borrow. The local bank would loan it to us on a 1-year note, telling us that they thought that it could be renewed as long as conditions stay as they are, but if they should have to call the note, the company and us would both be ruined. And I am sure that the Illinois Commerce Commission would not approve any such financing.

Therefore, if H. R. 2960 passes, I wish you would send me one of the first application blanks, so we can borrow enough money to convert this system to dial and take care of the rest of our farmers. Maybe we will try to take care of some of the neighboring towns that have been begging us to build for them.

WOODLAWN TELEPHONE CO.,
D. A. STEPHENSON,
President and Manager.

DUNLAP, ILL.

I am in favor of S. 1254 and H. R. 2960 and sincerely hope that Congress will pass these bills, so we can borrow money at 2 percent and pay on a basis of 3 percent over a 35-year period. I am not afraid of REA. In 1936 I negotiated a loan of $84,500 from the REA known as Illinois 4 Peoria. This loan was liquidated in 1938 as the utility company with whom I was connected was sold.

Hoping that the above legislation will be enacted into law, I am

SUBURBAN TELEPHONE CO.,
W. C. TEGTMEIER,
President.

INDIANA

ROSEDALE, IND.

We feel this is the only way that the rural telephone system will be able to do the improvement that is needed.

ROSEDALE MUTUAL TELEPHONE CO.,
W. A. HOPPER, *Manager.*

KENTUCKY

WINGO, KY.

I am very much interested in this bill being passed. I am operating a small farmer-owned exchange at Wingo, Ky., and several of the farmer lines are the old grounded type and very noisy because of the new REA electric lines. This can only be eliminated by replacing these lines with metallic lines of good construction. We are trying to serve about 400 farms and could give them good service with help, as I can see in this bill.

WINGO TELEPHONE CO.,
G. A. WEATHERLY,
Manager.

BIG CLIFTY, KY.

I hereby offer my support in favor of that bill. It will not only aid in the conduct of my own business, but it will also facilitate emergency calls and further the operation of artificial cattle breeding cooperatives that we are trying to establish.

DAVID H. SPAETH.

MAINE

MATTAWAMKEAG, MAINE.

In this territory, we serve an area of approximately 450–500 square miles, and have a lot of farmers in our out-lying districts. We would be very much in favor of the passage of this bill which would permit independent companies to borrow whatever funds we need in the rural expansion and improvement program of the telephone industry. We would, ourselves, like to serve a great many more customers but cannot do so at the present time, as we do not have the funds to construct long rural lines to reach them.

The writer owns both the Winn Telephone Co. and the Lee Telephone Co., at Lee, Maine, which are adjacent to each other, and if funds were only available to us on the basis mentioned in your memorandum, we would be able to extend our lines and gain many more customers, who would be enjoying good 24 hour telephone service.

We would appreciate it, if you will keep us advised, if this bill is passed, in order that we may borrow enough funds to give efficient service to all of our farmers, by the construction of additional circuits.

WINN TELEPHONE CO.,
WM. H. WEPPLER,
President-Manager.

MASSACHUSETTS

GRANBY, MASS.

This bill, providing for low interest, long term loans to telephone companies and others is of great interest to the telephone industry. For some of the small independent companies like ourselves this may be a new lease on life and an opportunity to provide needed improvements and extensions of services.

In common with practically all other small independents, our company has had a constant struggle against economic odds since its beginning in 1903. Our service admittedly is below par and outlying areas here are not served with telephones owing to our inability to finance the required facilities. No dividend has been paid our stockholders since 1927.

We favor the Poage bill because we expect that its enactment may make available low interest capital with which we can improve and enlarge our services.

GRANBY TELEPHONE & TELEGRAPH CO.,
ALSTON D. MUGNIER, *President.*

MINNESOTA

BRANDON, MINN.

We are very interested in their passage and this would certainly give us a chance to give the people in this community a lot better class of telephone service. We are trying to get under way an expansion program at the present time to better our services, but lack of funds is the cause of our delay.

We are convinced that Senate bill 121 and House bill 2960 would help us and are certainly looking forward to their passage.

GARDONVILLE COOPERATIVE TELEPHONE ASSOCIATION,
PAUL EKSTRAND, *Manager.*

NEW LONDON, MINN.

Most certainly I approve of the Poage bill (H. R. 2960) and am unable to understand the opposition.

NEW LONDON TELEPHONE CO.,
J. M. BOLSTAD.

ERSKINE, MINN.

The coming of the REA well nigh ruined us. With satisfactory financing as proposed in legislation now being considered, we should be able to get solidly back on our feet and give adequate telephone service to our rural subscribers.

We have been too busy worrying about ourselves to do anything about the REA except to cuss them out at times because of the trouble they have brought on our heads. And, don't misunderstand this last statement. We are still for the REA as it represents betterment of rural conditions. We can see that a little teamwork would be good for both of us.

GARDEN VALLEY TELEPHONE CO.,
CARL M. OSTBY, *General Manager.*

MISSISSIPPI

SALTILLO, MISS.

I have in three or more directions a group of farmers that want good telephone service. I think that if lines can be built according to engineer specifications, I can likewise get better rates without friction.

The increased company revenue would eventually liquidate the cost of the loan. A wider development of rural service would

likewise increase the demand for town service.

SALTILLO TELEPHONE CO.,
JAMES F. BRADY.

SOSO, MISS.

Words cannot tell you just how deeply I am interested in the rural telephone bill. It would mean so much to small independent companies like mine.

I have above 200 telephones now. Some get fair service and others very poor. If I had sufficient funds to build and expand, they would reach 1,000 easy with much better service.

I know that Mississippi has the smallest percentage of rural telephone in the United States, and I would like so much to see it grow. A small emergency can run into a very serious one just for the lack of efficient telephone service.

You can rest assured that I am 100 percent for the bill. I would like to be among the first to get an application in for the loan.

SOSO TELEPHONE CO.,
CHELOUS SUMRALL.

CALHOUN CITY, MISS.

As owner and manager of a small telephone company I am convinced that without proper financing we will never be able to give telephone service as requested by the people.

CALHOUN CITY TELEPHONE CO.,
E. R. CREEKMORE, *President*.

MISSOURI

MIAMI, MO.

I am 100 percent for this legislation. I don't quite understand the attitude of A. T. & T. and the larger independents.

Probably not more than 10 percent of the farmers have efficient service, and some of the larger independents are not furnishing any better service than we smaller ones.

If this legislation gets through Congress, I for one would be glad to be among the first to make application for a loan because without it we will never be able to rehabilitate our system. And we are running out of time.

MIAMI INDEPENDENT TELEPHONE CO.,
ROY A. JOHNS, *Manager and Owner*.

NEBRASKA

ARAPAHOE, NEBR.

Would repairing old and installing new cable be considered in this line of work? You can't get your farm lines to your central office without going through town in your cables. We need to have considerable cable work done, and we also need a lot of new poles and repair work done on our farm lines; also a number of new farm telephones.

It is my understanding that this bill has not yet been passed by Congress. Have you any idea when this loan will be available? We need this money now.

ARAPAHOE TELEPHONE CO.,
CHAS. A. PATTERSON, *Secretary*.

NORTH CAROLINA

MEBANE, N. C.

We have been 100 percent for the rural telephone bill ever since Senator HILL of Alabama introduced one several years ago and we made a trip to Washington about 2 years ago and talked the matter over with all three of our Congressmen and Senator and all three talked in favor of the bill.

We had a letter from Clyde Bailey of Washington who claims to represent the telephone people, and his association is fighting the bill, stating that he was a lawyer and that the bill would allow anyone to compete with the present telephone companies. So we sent him a copy of the bill and asked him to read it as the wording is plain enough for anyone to understand who can read, lawyer or no lawyer, that the present bill fully protects the small telephone companies from outside competition.

We are enclosing a letter that we received from Mr. Clyde S. Bailey who represents the United States Independent Telephone Association there in Washington. The letter is the one we received from him after writing him a scorching letter about fighting the legislation that the small telephone companies have wanted for a long time, and we told him if that was the service that we were to get from the association that we would consider withdrawing from the organization. We small companies are in desperate need for some financing at a low rate of interest as most everybody seems to want a phone in the city and country and as you know, it calls for lots of money to pay for equipment and labor.

MEBANE HOME TELEPHONE CO.,
S. M. HUPMAN, *Manager*.

NORTH DAKOTA

MARTIN, N. DAK.

I'm for it. I'm working on an expanding program too.

MARTIN TELEPHONE EXCHANGE,
HERBERT ZWEIGLE.

NOONAN, N. DAK.

The switchboard we are using was installed about 1906. It was manufactured by the Dean Electric Co. whom we understand have been out of business for at least 20 years. It is too small and we have applications for at least 50 additional phones and cannot supply the service on account of our inadequate equipment. We will also have to change from ground to metallic circuit on account of rural high line interference, and in installing a new switchboard, it would appear advisable to install the dial system which would enable us to reduce our operating expense by reducing the number of operators now required using the old system.

We estimate it would take between fifteen and twenty thousand dollars to put in the new switchboard and run additional lines we need, and we believe the revenue from the additional business would provide an interest and sinking fund sufficient for the retirement of the loan.

We are ready to go ahead with our expansion program whenever the money is available.

NOONAN FARMERS TELEPHONE CO.,
ARTHUR P. CLEMENS, *Manager*.

FORBES, N. DAK.

I received your letter in regard to the proposed telephone legislation, and I am heartily in favor of it. This bill would be a great boon to small independent telephone companies like our own, since it would enable us to expand and bring our system up to date. Due to the coming of the REA, we are forced to change to a metallic line, and the cost of that, together with any expansion, would bring such an added expense that we would have to have a high increase in rates to stand the cost of this.

SHIMMIN TELEPHONE SYSTEM,
G. R. SHIMMIN, *Manager*.

OKLAHOMA

ELMORE CITY, OKLA.

I have been in the telephone business ever since 1912 and am 100 percent for the proposed law to promote the rural telephone business. I have talked to several telephone men in this part of the country, and they are all for it. Some provision of that kind is the only way a majority of farmers will ever be able to obtain telephone service.

This bill is the only solution for the deplorable condition of the rural telephone situation. I can see no legitimate reason for anyone to oppose it. The small exchanges throughout the country would have business that they do not now have if the farmers built their own lines or if they built the lines for the farmers. The farmers don't ordinarily want to go into the telephone business and won't if they can help themselves, but they do want and need telephone service.

I have had thirty-odd years' experience in the operation of small telephone exchanges and have seen the rural population deprived of adequate telephone service as they formerly were of electric service. The REA is existing proof of the value of such legislation which is now conceded to be a good thing throughout the entire country.

ELMORE CITY TELEPHONE CO.,
R. C. SIMPKINS.

WILLOW, OKLA.

You are hereby advised that I am doing all I can to see that these farmers get telephones, as I realize the urgent need for them, and I personally don't care if it's the REA or who, that furnishes this needed service, but I am convinced that the Bell and other big independents are not interested in this farm problem, or it would have been gobbled up as all towns of any size are now and have been for some time.

I will do anything in my power to help get this or any other bill passed that will help these farmers get the service.

WILLOW TELEPHONE CO.,
C. E. BERRY, *Owner*.

GEARY, OKLA.

The bill seems 100-percent O. K. from where we stand.

GEARY TELEPHONE CO.,
PETE WALLING.

JAY, OKLA.

We, of course, have no paid lobbyist in Washington and no other way of expressing an opinion even edgeways. I am for the bill just even-up 100 percent, and of course, all the other small companies that I have discussed the matter with are the same way. We have all been getting barrels of letters, propaganda, and calls from the associations fighting the bill, but I was never able to see even one point to justify a small independent to be against the bill.

We have an investment here of around $30,000, with a note at the bank here for $2,500, which is far above the average for a little country bank to loan to one man, in fact, more than he can afford. If the money was available, I would apply for twice that amount today.

We have so much rural business that we simply can't handle on account of the financial end of it.

As for the argument about the Government fixing to go into the business, that doesn't bother me at all, as I would be glad to cull them out some territory here to start off with.

CORYELL TELEPHONE CO.,
E. D. SIMPKINS.

TYRONE, OKLA.

In the first place I don't believe the independent telephone associations speak for the really independent companies such as ours. I believe they speak for the ones who are large enough that they don't need the boost that it would give us. Also, most large companies don't care whether they serve the farmer or not.

Our position is this, if we don't get this legislation, and soon, the small independent like ours will in a matter of a very few years be absorbed by the large independents or Bell.

TYRONE TELEPHONE CO.,
JAMES A. ROBERTS,
Owner.

SOUTH CAROLINA

CAPE, S. C.

In reading over Senate bill 121 and House bill 2960, I have become very interested. I think it is what we need, as having been a

farmer and living in a rural area I know the handicaps of not having a telephone. It retards the farmer's progress in many ways.

Having owned a small telephone (Cape Telephone Co.) exchange for about 10 years, I know that these rural areas cannot be expanded without money to build these lines and repair or rebuild the ones that now try to operate. With this money being loaned to us (exchange operators) at a low rate of interest and to be repaid over a longer period of years, there is no reason why we cannot give the rural areas telephone service that they so badly need.

I would like for you to advise me as to how I would go about making a loan of this type.

I have an exchange that is now serving about 40 telephones. There are a number of farmers in this area that would like to get service and the others have improved service.

CAPE TELEPHONE CO.,
J. L. WILKES, *Owner.*

SOUTH DAKOTA

AVON, S. DAK.

The 2 percent finance over a 35-year period would be a godsend to small telephone companies, if there are not too many strings attached.

As far as financing through the RFC, we all know that is impossible from several standpoints.

AVON TELEPHONE CO.,
BEN HALL,
Owner and Manager.

WINNER, S. DAK.

This company has no indebtedness but we are planning to have REA line extensions in that vicinity. Therefore, we will be required to metallize the line, and as this so small a company has no available cash on hand to finance the reconditioning of their lines, I wish to obtain information, applications, and suggestions as to the manner to proceed when it will become necessary to raise funds to properly replace this line in condition when REA service is started.

IDEAL TELEPHONE CO.,
J. S. LUNN,
Secretary-Treasurer.

POWELL STATION, TENN.

We would like to go on record as favoring the pending telephone legislation. In the last 7 years we have seen at least 15 small telephone companies in east Tennessee go into bankruptcy because no funds were available to rebuild and finance their systems. Many of the people that these companies were serving are without service.

We sincerely hope that the legislation is passed in the near future.

POWELL TELEPHONE CO.,

DECATUR, TENN.

I am sure there is a large number of small independent telephone companies throughout the country who are not represented by USITA and the views expressed by USITA are not those of many small independents.

The Meigs County Telephone Co. has experienced great difficulty in obtaining money for a very limited amount of expansion.

Extension of telephone service into rural areas is out of the question unless money is available in quantity at a low rate of interest. We have practically exhausted all normal means through regular channels to obtain funds for expansion into rural areas. Our local bank has cooperated to the fullest extent of their legal limitation.

We investigated the possibility of obtaining financial assistance from RFC. Their representative from Nashville agreed that our proposal for expansion is economically feasible; but, under the circumstances, RFC could advance us only 10 percent of the funds necessary to carry out our plans.

MEIGS COUNTY TELEPHONE CO.,
JAMES T. GIBBS, *Partner.*

KNOXVILLE, TENN.

We are heartily in favor of this legislation, mainly because it provides the only way we can hope to get sufficient finances to rehabilitate and extend our plant or facilities.

We are now serving approximately 200 families with overloaded, dilapidated equipment and lines. With a new plant we could serve six or seven hundred. We have investigated every known source of financial aid and have found nothing we can use.

HALL TELEPHONE SYSTEM, INC.,
J. E. WOLFKIEL, *President.*

ARDMORE, TENN.-ALA.

Have been interested in this but had no hope it would pass since the big shots whipped it down once. Yes, I'm in favor of it.

ARDMORE TELEPHONE CO.,
F. C. MERRELL.

MOUNT JULIET, TENN.

The large independents and the Bell system are interested in only one thing and that is dividends to their stockholders. For that reason the farmers are suffering and the small independents are gradually becoming a thing of the past. I can name a number of these companies that have folded up within the last 3 years which could have been averted if such a bill had been in effect. That one fact seems to me is much more to get alarmed over than the "Government getting in the telephone industry" as it has been so termed.

MOUNT JULIET TELEPHONE EXCHANGE,
JAMES D. AND W. O. PHILLIPS.

MINOR HILL, TENN.

If we had this legislation, we would be able to improve our rural telephone exchange and give much better services to our subscribers.

MINOR HILL TELEPHONE CO.,
T. E. HANEY.

TEXAS

WETMORE, TEX.

Our community is very badly in need of adequate telephone service. Our company, which is farmer owned, has been organized since about 1911 and is pretty well obsolete by now. It seems that this bill would be greatly beneficial to the rural communities. As it progresses, we would like to have a chance to get in our application as soon as possible to avoid much further delay.

CENTRAL BULVERDE TELEPHONE CO.,
ALVIN HEIMER, *Secretary.*

TURNERSVILLE, TEX.

I am in favor of the loan. Take my application and send me a blank as soon as it goes through.

TURNERSVILLE TELEPHONE SYSTEM,
GILLIE WALLACE.

SUTHERLAND SPRINGS, TEX.

We can't see anything wrong with this proposition as it takes lots of money to build telephone lines today and as the financiers know absolutely nothing about the telephone business, it is almost impossible to get money to expand on.

SUTHERLAND SPRINGS TELEPHONE CO.,
HENRY WILLIAMS.

PINE HILL, TEX.

I think it (the proposed telephone legislation) is the best thing that could happen for small operators in rural districts. I know what American Telephone & Telegraph and the larger independents claim, and I also know exactly why they make these statements. They don't want to build and maintain rural lines.

They are by this telephone legislation like the power and light companies were by the REA. They want all the cream and would keep the small operator's nose on the grindrock. Example: In our county when one of the larger independents was organized they bought a small rural exchange with around 150 telephones. In later years they have installed rural dial equipment, discontinued the local office, and are serving the subscribers from a larger town, but are serving only about 20 percent of old subscribers and are collecting twice the revenue formerly collected. These conditions exist all over the Nation.

I've had over 30 years' experience in the rural telephone business.

PINE HILL TELEPHONE CO.,
J. F. HOLDER.

WISCONSIN

OXFORD, WIS.

As manager and secretary of Marquette & Adams Telephone Co., I am heartily in favor of these bills.

MARQUETTE & ADAMS TELEPHONE CO.,
HENRY O. JANKE, *Secretary.*

OSCEOLA, WIS.

We are very much in favor of having this bill passed as we are in need of finance to give service to a number of farmers that are in bad need of telephone service, but we do not have the funds to make this extension.

I personally cannot see why this is not a good thing to help the local telephone companies extend their service to the farmers. The Government helped the banks when they were in need of help and did not take them over. It is a small excuse when the statement is made that the Government will take them over.

OSCEOLA FARMERS' MUTUAL TELEPHONE CO,
EUGENE L. BEYL, *President.*

WYOMING

BAGGS, WYO.

I own the Lower Snake River Telephone System, which is a grounded system. The REA are building in here and my lines are inadequate. I am metalizing them and rebuilding, rerouting and clearing tree interference. When I get through this fall, they will be rugged and lasting, as I've had 16 years' experience with the Bell Telephone and our service will be as good as the best. There is nothing against it now and I am just finishing a nice large home and no mortgage on it. We have 75 telephones and requests for several more. I have about 30 miles of farm lines.

I need $2,000 and need it right away.

LOWER SNAKE RIVER TELEPHONE SYSTEM,
DON C. AUSTIN.

The Judge Kaufman-Hiss Controversy

EXTENSION OF REMARKS
OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. POTTER. Mr. Speaker, because questions have been raised about the conduct of Federal Judge Samuel H. Kaufman in the Alger Hiss trial, the question has been raised in my mind, and I think in the minds of many others, as to how Mr. Kaufman got on the bench in the first place.

My inquiry, limited though it must be at this time, has nevertheless produced some interesting facts which I think ought to be brought to the attention of the public.

President Truman's nomination of Mr. Kaufman was announced in the spring of 1948. The nomination was not confirmed by the Senate, being laid aside along with several others. Shortly before adjournment of the Eightieth Congress, Mr. Truman then gave Mr. Kaufman an interim appointment and he went on the bench pending rejection or confirmation by the Senate when it reconvened. In January 1949, the Democratic-controlled Senate confirmed the nomination on which the Republican-controlled Senate had declined to act 8 months earlier.

Of the five major bar associations which interested themselves in the appointment, four refused to endorse Mr. Kaufman. They were the American Bar Association, the New York State Bar Association, the Association of the Bar of New York City, and the Federal Bar Association of New York, New Jersey, and Connecticut. The last named association at first endorsed him and then rescinded the endorsement on the basis of more complete information and opposed Mr. Kaufman's nomination. The Association of the Bar of New York City, felt so strongly that Mr. Kaufman was not qualified for the bench, that it sent representatives to Washington, I understand, to intercede.

The fifth major organization, the New York County Lawyers Association, proved to be the exception. It endorsed Mr. Kaufman. Inquiry shows that its president was I. Howard Lehman, a New York attorney. The chairman of its judiciary committee, which considers such endorsements in detail before they are made, was one Lloyd Paul Stryker. Both men appear to be lawyers of wide reputation. However, since he has taken the bench, Judge Kaufman has given Mr. Lehman, the trusteeship of the bankrupt Third Avenue Transit system in New York City, a case that will probably mean up to a quarter of million dollars to his firm. Mr. Stryker is the attorney who headed Alger Hiss' defense staff. I wish to impute nothing to anyone involved in this sequence of events, but these are facts, and they appear to me pertinent to the questions that have been raised by Members of Congress.

Give the UN Some Real Teeth

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mason City (Iowa) Globe-Gazette of July 7, 1949:

IT'S HIGH TIME TO GIVE THE UN SOME REAL TEETH

There is before the Congress a resolution calling for the establishment of a world organization equipped to deal sternly with aggressor nations and maintain world peace. Bearing the name of 91 representatives, it is worded as follows:

"*Resolved*, That it is the sense of Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation, open to all nations, with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law."

Its sponsors, who include Dr. WALTER H. JUDD, of Minnesota, Republican, and BROOKS HAYS, of Arkansas, Democrat, have made it clear that the measure extends the powers of UN only in the direction of world peace. It does not place other limitations on the individual nations. It does not seek to dictate the form of government or the system of economics. Nor does it interfere with basic human rights in any way.

As recently as 10 years ago anybody who would identify himself with such a proposal would be set down as a starry-eyed dreamer. But today, in the light of the march of world affairs, he's the true realist.

Several fundamental truths are self-evident. Among them these:

1. The UN, while useful in many ways, simply is not equipped to maintain world peace. No effective penalty is provided for the nation bent on war.

2. As matters stand, the United States has been cast in the role of world peace guardian. A UN with teeth would provide us with a host of allies.

3. The proposal contained in this resolution is no more than a logical extension and sequel to the North Atlantic Pact into which we are now entering.

There is every reason to believe that the entire peace-loving world is looking to the United States for leadership in this important forward step.

All of Europe, all of the Western Hemisphere, and substantially half of Asia would welcome the plan set forth in this significant house resolution.

In short, only Russia and the nations which she dominates would find it unpalatable—and the door is left ajar for their inclusion at their own will.

American public opinion, we are sure, would support Congress in a quick adoption of this resolution looking to a potent world organization for peace.

Address by Hon. Karl E. Mundt, of South Dakota, at the International Convention of Kiwanis Clubs

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the international convention of Kiwanis Clubs, Atlantic City, N. J., on June 20, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A NEW CHALLENGE CONFRONTS KIWANIS

President Belmont, distinguished platform guests, ladies and gentlemen of Kiwanis, it is indeed a high honor and a distinct privilege for me to come up from Washington today and to have the unique opportunity of talking to this marvelous gathering of men and women of Canada and America who actually do things in their respective communities under the banner of Kiwanis. I have been a member of Kiwanis for a great many years and have attended a great many conventions, but as I stand here looking at this great audience and marveling at your capacity to thump your way along the boardwalk all night long and still toddle over to a meeting here the first morning of the convention, I know that I am talking to a sturdy band of men and women as I address you.

I have been thrilled, as I know you have been thrilled, by the stimulating, courageous, and instructive address with which our great international president has just opened this convention. I want to continue the theme that he so nobly began. I want to present to you under the title which I have selected, "A New Challenge Confronts Kiwanis," some ideas which I have been mulling around in my mind for a good long while; ideas for which I have been searching to find an army that would associate itself with these ideas and actually do something to make the ideas get out and work, because ideas won't work unless we work with them and at them and on them.

I read the other day of a very interesting exchange of correspondence which allegedly took place between two men who in my opinion are the masters of the English language of our day. Both of them come from across the sea, and they speak the English language with a different accent from ours, but they speak it and they speak it effectively and well. I am talking about George Bernard Shaw, the great Irish playwright, and master of letters, and Winston Churchill, that highly dynamic orator and leader of democratic forces in England, Winston Churchill, who recently honored our shores with a visit, so recently, in fact, we are not yet quite sure how much the visit is going to cost us, but we are mighty glad he came. [Laughter.]

It seems that these two highly eminent masters of the English language are good personal friends. George Bernard Shaw is not only a splendid playwright but fancies himself as being something of a Socialist. In fact, he insists he is also a Communist.

Shaw had written a new play and was trying to attract for it as wide a box office as possible, because George Bernard Shaw, despite his histrionic ability is no different from most pseudo-liberals and synthetic progressives and Communists and Socialists that I know. They all disapprove of the private-profit system for you but they relish enjoying its benefits for themselves. [Laughter.]

Being a Socialist and a Communist, Shaw did not want to pay the high advertising rates insisted upon by the metropolitan journals of London, so he decided to write an open letter through the newspapers, inviting Winston Churchill to attend the opening of his play, thus achieving the results desired. He wrote a letter like this:

"DEAR WINSTON: I am opening a new play of mine in London next Monday night. I think it is one of my best. I hope you can attend it. I think you will enjoy it. I am enclosing a complimentary ticket so you can come as my guest. In fact, I am enclosing two complimentary tickets so you can bring along a friend, if you have one left in England." And he signed it, "George Bernard Shaw."

Well, Winston Churchill is himself no mean master of the fine art of repartee; and while he saw through the thin veneer which brought about that particular readers' letter from Shaw, he decided to answer it with another letter in the newspapers. So, Churchill wrote him and said:

"DEAR GEORGE: I received your thoughtful invitation to attend the opening of your show in Londontown come next Monday night. Unfortunately due to an earlier commitment, it is going to be impossible for me to come. However, I am retaining your complimentary tickets and I assure you that I shall be very happy to come to the second performance of your play—if there is one." Signed "Winston Churchill." [Laughter.]

I want to direct my remarks this morning to what I consider a second opportunity for Kiwanis. We had one opportunity once before right after World War I to do something about making the world a fit place in which to live, and a world in which peace could be preserved. It was a war that we have been told was fought to "make the world safe for democracy." We had a chance, then, as the leaders of the outstanding communities of Canada and the United States to make our influence felt so that we could get some dividends from that war which would be worth while and make peace permanent, but we failed.

I think we have a reasonably good alibi for our failure. After all, Kiwanis as we have been told by Belmont Mosser a few minutes ago and as we know from our study of Kiwanis literature is only 34 years old, and so after World War I we still were in our swaddling clothes. We had not attained our maturity. We had not reached voting age. We were not yet adults as Kiwanians.

We have no such alibi today, however, as we face this second challenge following the Second World War. If the world fails to produce from this war the kind of society in which we want to live, it is nobody's fault but yours and mine as Kiwanians. We cannot claim immaturity as an alibi. I believe we have not reached the age of senility. We are mature, vigorous, red-blooded Americans and Canadians in the prime of our life individually and as an organization. Thus, I want to toss out to you this challenge, hoping with some confidence that some of you, at least when you return to your home communities, will grapple with the problems I propose to describe.

As I recall, the inception of Kiwanis some 34 years ago, our organization originally came into being with the idea that one of the things it could contribute to community life was to eliminate the evils of too much competition, too much selfishness, and too much animosity among people living in a community. We set out to reduce the conflict growing out of too much difference of opinion. Therefore, we brought in two people of each profession, business, and trade and got them to call each other by their first names. We set up ethics of conduct and established standards in attempting to eliminate the evils of competition. Today, in my opinion, the wheel has gone the full turn and the big problem we have to worry about today is not the evil of too much competition, but the evils which come from too little competition, because in the final analysis, too little competition is tyranny.

THE ISSUE IS TYRANNY

I think the issue before the world today is tyranny. I think it is as simple as that. I think it is as direct as that, and I think it is an immediate issue which we have to meet without delay.

We in the United States have had since our beginning as a government the idea of checks and balances between the judiciary, the legislative, and the executive branches of government, which is just another way of spelling out competition: That no one of them should get too much power. Folks in Canada and the United States and every place else in this world have had kindred types of competition between the private enterpriser and the politician, one checking the other, one competing with the other—the man who has the desire and the right to have and to hold and to own and to operate in competition with the politician who would like to tax those things that he has or appropriate them or confiscate them or borrow them or utilize them. Where we have maintained a balance of competition in this world between man and the state, we have maintained freedom in one of its innumerable forms; we have either had some kind of lenient monarchy or some kind of friendly representative government giving the people freedom to a greater or lesser degree so that men could continue to enjoy private enterprise and political independence because such competition has been maintained.

Any honest and observant man must recognize that this element of competition between man and the state all over the world is being decided by and large in favor of the state, and in many areas man as an individual has ceased to be a competitive force at all. In some places they call this new philosophy communism; in some places they call it nazism or fascism. In some places they label it socialism or collectivism or nationalization, or just plain, simple statism.

THE ACTION FORMULA IS "THE PLANNED ECONOMY"

In the final analysis, each and all of these different types of "isms," these philosophies of absolutism, are identical because actually they all rely upon the formula of a planned government economy.

I submit to you that a "planned economy" is one of the most seductive phrases of them all. It sounds so good, especially when you say it fast and don't think very hard.

I recently had a debate in Washington with a Harvard professor who has a Government job—I just selected one at random because you can find them all over the place. The debate was on the question of whether we should have a planned economy in the United States of America. I said I was against a planned economy, and this professor looked at me with the profundity which comes from a man with a Phi Beta key on his watch chain and no watch in his pocket—that kind of profundity—this fellow looked at me as though I were something that should not have been down there in Washington at all.

He said, "Senator, certainly you can't say you are against a planned economy for government?"

I said, "I am."

He said, "Certainly you believe in a planned economy for yourself and your family. You make a plan for a budget for each month of the year. You make plans for education. You make plans for life insurance and old age, don't you?"

And I said, "Yes."

"Well," he said, "if a planned economy is essential for an individual or a family, isn't it just that much more essential for the Government?" And he said it with a delightful and convincing Harvard accent, which made me feel pretty small and unimportant. Incidentally, I shudder to contemplate what a Harvard accent has cost this country in the past decade or two. [Laughter.]

I said to him, "Now, let me ask you a question, Professor." I said, "Will you accept this suggestion that a planned economy is of no use to anybody anywhere unless the plan is put into operation? So long as the plan remains on the drawing board or in a professor's notebook, until and unless it is put into operation, it is of no possible avail to anybody. Will you accept that?"

He said, "Yes, of course."

I said, "Let me ask you another question. Isn't it true, Professor, that any program of a government-planned economy once put into operation is of no use to anybody or any community or any nation until you give somebody the power to compel people to comply with the plan?"

He hesitated a long time before he answered that one and finally he said, "Yes." He said, "I agree that there is no possible value in having a planned economy if after you put it into operation people are still going to follow the inclination of their own nose. They, of course, have to follow the plan."

I said, "Professor, that is why I am against a planned economy, because a planned economy to work has to eventuate in tyranny. A planned economy to work has to eventuate in a police state. A planned economy to work at all, in the final analysis, means that you have to give somebody the right to push people around, and I'm against that kind of 'pushy' government." [Applause.]

I am eager to get people to register competition against that kind of "pushy" government. I am eager to get people to realize that a planned economy any place it has ever been tried has always ended either in communism, or in fascism, or in nazism, or in a military dictatorship, or it has resulted in anarchy and failure, because it has to have that great power to bring about coercive cooperation or it is doomed to impotent failure.

If we as Kiwanians arrive at a few basic convictions of that type in our respective communities in Canada and the United States, perhaps here in this great bastion of freedom and political independence in the Western Hemisphere we can turn back the tides of totalitarianism that seem to be engulfing the world. If we can't do the job, if you can't do the job in your communities, I give it to you as my best opinion we are never going to get the job done. It is going to require somehow a formula of action, a pattern of performance, a voluntary revival of the spirit of freedom on the part of the men of Kiwanis and others like you, or we are not going to win a battle here that free men have failed to win contemporaneously anywhere, including England.

The issue, I say, is tyranny, and its source and size and scope and significance are pretty well summarized by the fact that they all grow out of communism.

COMMUNISM IS THE SOURCE OF OUR TROUBLE

What is communism anyhow? We hear about it all the time. You hear about trials taking place in New York and Washington, about Communists who are alleged to be desirous of overthrowing the Government by force and violence, or about Communists who formerly worked in the State Department conveying secret documents to other agents of Russia, or of Communists who sort of epitomize the mixed metaphor of a "red herring" gone home to roost, because they wind up in the office of the Attorney General down in Washington. Whatever they are, we hear a lot about Communists and communism.

What is it? In the first place I want to be sure you know that communism is not simply an economic theory. If it were just that and nothing more, just like Karl Marx and Friedrich Engels wrote about in Germany a century ago, an economic philosophy which said you shall take from those who have the ability to pay, I would say, "All right, it is a theory. I don't think it is going to work, because it is going to have to result in some kind of "pushy" government. But if it is an economic theory, try it out. Let it succeed if it can. If it is not good, if it fails, we will try something else." You couldn't get very excited about that kind of contest and that kind of conflict and that kind of attack on our freedoms, if all it advocated was to share and share alike.

There would be nothing particularly dangerous about that.

Certainly, if that is all there were to communism what chumps we would be, what chumps you and I would be as taxpayers to subscribe to a government program, to which you and I are going to subscribe this year, which is going to require us to spend virtually one-half of the whole National budget—virtually $21,000,000,000 out of the $42,000,000,000 the President has asked for the fiscal year 1950 to fight back the attacks of communism.

Were there no such thing as communism in our world today we could reduce our national expenditures for defense from the suggested sixteen or seventeen billion dollars to three or four billion dollars. We could eliminate the national expenditures for aid to Europe and Asia and elsewhere from the prevailing six or seven billion dollars to one billion or one and a half billion dollars. We could eliminate the cost of security at home from a proposed billion and a half to two billion dollars to one hundred million or two hundred million dollars.

If you will take the time to figure out why your taxes are so high, virtually half the money you are required to pay out in taxes for the fiscal year 1950 is paid only because in the garden of society has grown up a rank, dangerous, and aggressive weed called communism which has the biggest army in the world and the biggest air force in the world, which today has half the people in the world under its domination, which controls 10 countries and is about to conquer China to add another one. Communism out rates us and out ranks us in the business of natural resources. Communism is the only international force in the world today that has its agents placed in the government of every other country in the world. And still there are people who laugh about it, saying it is just an economic theory.

It is not an economic theory. It has become something entirely different, as it had to become something different from the experience it had in the first 90 days it served Russia, trying to operate as an economic theory. They found they had to have that state power we are talking about. They had to have the power of the state to push people into compliance. The fellow who had more than he needed did not believe he had more than he needed, so politicians had to have the power to take away from him that excess and give it to the fellow who did not have enough. It became tyrannical, dictatorial, as it always and historically and inevitably must. Three thousand years of written history fails to disclose one single exception to this rule.

When you start out with national socialism as our English cousins are doing in Britain, at the end of the road you are going to have failure or you are going to have statism. You have got to have the power to make it work and to grind people into subservience to the state, or you are going to have a breaking down all over the place, because if too many cooks can spoil the broth, too many individuals can spoil an economic pattern and a government plan unless you give somebody the right to push the people around. That somebody always has been and always must be the state. Therefore, the result is always tyranny.

THE COMMUNISTS DO NOT COMPRISE A POLITICAL PARTY

The second thing you have to learn is that communism is not a political party. One of the biggest difficulties we have in legislating against the menace of communism is because some college professor or some perfectly fine and profound religious leader says, "You must not do that, you must not legislate against a political party."

The fact of the matter is that communism is not a political party. If it were a political party, acting like a political party, I would come up to Atlantic City to discuss it with you Kiwanians and say, "We ought to give the Communists the right to function as a political party," but I can prove and you should know that communism is not a political party, has never acted like a political party anywhere, does not pretend to be a political party to any of its members who belong to it.

What is a political party? You know a political party when you see one. You know a fire department when you see one. You know a Kiwanis Club when you see one. And how do you know them? Because the fire department has certain identifying characteristics and so does a Kiwanis Club have identifying characteristics. So does a political party.

A fire department has its vehicles painted red. Usually it has some hose and squirts juice that puts out the fire, and it has firemen who slide down brass poles. It has a bell or siren and its function is to put out a fire. Everybody knows a fire department, and if somebody comes along driving a hearse and says, "Get out of my way, I am a fireman," you know he is lying and that he is not a fireman.

You know what a Kiwanis Club is. A Kiwanis Club is a group of fellows, a mighty fine group of hairy-chested, red-blooded fellows who get together the best people of the best communities of the best countries in the world. They get together to try to do something to make their community and State or province and country and world a better place in which to live. They wear buttons with some gold and blue on them and a "K" on them and sing a song, Men of Kiwanis.

They have a motto saying "We build," and they are a little better and younger and happier than Rotarians are. [Laughter.] You know how they function. They function in the luncheon club and they function through committees to produce constructive results.

Now a political party is just as easy to define and recognize. I don't know how it is possible to fool so many ministers, labor leaders, school teachers, editorial writers, average citizens, and commentators, although commentators are usually the easiest people to fool, but I don't see how they can fool all of them. A political party has candidates for office. It nominates them through a political convention or by petitions. It has campaigns. It does advertising. It believes in elections, and an election is something by which people elect through a series of decisions and voices. They elect Joe Smith or John Brown. They elect a platform or a policy or program, and they elect those things because they have a choice, and, above all, a political party achieves its objectives at the polling place by people pulling a voting lever or marking ballots. So we ought to recognize a political party, we Canadians and Americans.

Let us look at the Communist Party, so-called. It now rules 10 countries. So what? I will bet my last year's South Dakota fishing license—and that is the best in America—against your last year's straw hat—I'll bet you can't find a single Communist country in the world where the people in power got into power by holding an election, by acting like a political party, or stayed in power by that method, or gave people the privilege of electing between their candidates and the other fellow's candidates.

In the great Russia they got in by a revolution, a coup d'état, a show of force. That's the only way they got into office. If that is how we could get into office in America, we Republicans would be running Washington today. We made all the noise and showed all the power before the election. We had everything but the votes. That is all we didn't have. Votes are what you need in a political party. The other fellow had the votes, and he is President, and ought to be because he was elected in a fair election. I believe in that.

In Lithuania, Latvia, and Estonia, the Baltic Republics, the Red Army walked in and took over. That is kidnaping. It is not the tactic of a political party.

Then comes Albania, the next country. Little Albania was taken by force. Saturated by outside influence from Russia, revolution resulted, as in the case of the Russian predecessors, and the Communists took over.

That is one, two, three, four, five countries gone, and so far we have had neither an election nor a candidate.

The next thing we knew they had Bulgaria, Rumania, and Hungary in the Balkans. What happened there? You know what happened. In the closing days of the war the Russian Army trooped into the Balkans and at Yalta the Communists talked us into the idea that they should have the controlling sphere of influence in the Balkan countries. We said, "All right, we will be the controlling interest in the Western Hemisphere and you can be the controlling influence in the Balkans," and we came home. Before we got home the Red Army took over completely and the Communists are in charge.

And still we haven't had a candidate for office anywhere. Nothing yet has happened that even remotely resembles an activity of a political party.

And in Yugoslavia, Czechoslovakia and Poland—the remaining countries—the same thing happened.

In China you know what is happening. There the Communist leader Mao Tse-Tung is taking over, not because he is a better candidate for office than Chiang Kai-shek but because his army is winning a bloody war.

COMMUNISM DEFINED

Let us be realistic. If we are intelligent enough to belong to a Kiwanis Club, we should be intelligent enough to know a political party when we see one and recognize that whatever else in the world it is, communism is not a political party. In two words, it is an international conspiracy. In a few more words it is an international conspiracy that believes in a way of life which controls the entire economic fabric of the country. The farms, the factories, the railroads, the means of production, the control of the banks and building and loan associations, the home building organizations, the whole economic fabric of the country should be controlled in the capital city of the land, under the domination of one group, brooking no opposition, according to communism.

If you oppose them you get what Cardinal Mindszenty got, or what Draja Mihailovitch got, or the other people who opposed them who ended up in concentration camps, or were killed.

Under communism the belief is that the entire economic fabric of the country should be run from the capital city of the land under the domination of one group permitting no opposition whatsoever, and in addition communism holds that members of the organization called Communist, wherever they live, under whatever flag and in whatever country have to swear their loyalty to are dedicated to a program to bring about an international dictatorship of the world under the regime of the Communists in Moscow. That is what communism actually is. Just that and nothing less and nothing more savory than that.

You don't have to have a Senator come up from Washington to tell you that now because Palmiro Togliatti the Italian leader, Duclos the French leader, and Browder and Foster, the American Communist leaders now being tried correctly for treason in New York, when they were required to do so by Moscow some 90 days ago all answered the interrogatories of reporters in their respective

lands asking: "What would you Communists do in Italy, France, and the United States in the unhappy event of war between Russia and the United States?" and all of them said in their respective ways, in language that no individual can misunderstand, that in such an eventuality the Communists would be on the side of Russia, of course, because they consider the Communist cause to be right and our God-fearing Christian civilization to be decadent.

What will you and I do about it? Most of us don't do anything at all about this greatest menace ever to face civilization in the history of the world.

I submit to you, that is the challenge, confronting the men of Kiwanis today.

WILL WE FACE UP TO THE CHALLENGE

The Communists know where the lines are drawn. They know that the greatest enemy of communism is the church and the school and private enterprise and political independence, those four great lights of freedom, and so they attack with their greatest strength and vigor and energy the church and the school as Communist targets, number one and two.

Unhappily—but I didn't come to Atlantic City to try to deceive you—so I am going to say, unhappily the church in America and the school in America, at least, have not fought back against communism with one-half the energy with which communism has fought the church and the school.

Most of you are churchmen. Some of you are educators, but all of you are interested in private enterprise, bank accounts, family budgets, and insurance policies, and you all vote or should vote. Therefore, I should like to have private enterprise and political independence—that spells out Kiwanis pretty well—I would like to have us fight against the Communist movement as hard as they are fighting us.

A FORMULA FOR FIGHTING COMMUNISM

I want to submit for your consideration this morning the suggestion that when you go back to your Kiwanis club you organize another committee, one additional committee. I have called it in a speech or two the American Enterprise Committee, for lack of a better name. You might want to call it something else.

Maybe you don't want to do anything about it at all, but I would like to suggest you organize such a committee in your community and give it a four-point job to do.

In order that we may know what we are doing and so that we may define our job and work at it as a team, I want to suggest it to you in 12 words. A 24-hour, around the clock, year-long job in four sentences of three words each. I would like to see these committees do the following things:

1. Prepare the youth.
2. Publicize our creed.
3. Project our dividends.
4. Protect our freedoms—which exist in Canada and the United States.

WHAT YOU CAN DO ON THE HOME FRONT

Let me reiterate them quickly and supplement them very briefly, because I think this job—this challenge—is of tremendous importance. I feel sublimely confident this morning that if an organization, a great organization of patriotic people such as I am privileged to address today, somehow or other could be activated to do something besides talk against communism and do something except to cuss the Government and do something except complain and grumble and grouse and gripe, that if somehow, something I could say could get these men working in their clubs as a phalanx for freedom, trying their best, we would get to the top of the mountain and save freedom here.

1. Prepare the youth—one simple thing is all I suggest. Work with the schools of your community, the principal and the superintendent, and the teachers and the college president and the board of regents, to make sure that in your community the children going to school are taught the values and virtues of freedom, the importance of private enterprise, the reasons statism won't work. Teach them the prevailing historic inevitable deficiency of government planning as over and against private ownership. In other words, all I am asking is that in a 12-year course at public expense, for which you pay as taxpayers, you have your local high school spend one hour per week at least one year teaching what is right with America. I think you will find some things pretty good to teach and to applaud.

It is distressing to me to read the educational background of the traitors being tried for treason in America today. Two graduates of Harvard; one from Vassar; one from Barnard; a Rhodes scholar from Oxford University; and three from my alma mater at Columbia.

There is something wrong, I think. Some place along the educational road that they trod their souls were not set on fire for freedom and for America. I think the fault is not the fault of the educator alone. The fault is the fault of the taxpayer and the school board member and the individual Kiwanian who fails to interest himself in what is being taught in his home town schools. So I would have a local committee working on that project at the community level.

2. The second point—publicize our creed. Oh, what a thrill I got last Tuesday night, addressing a Freedom Day meeting in Philadelphia in Independence Square. Some eight or ten thousand people standing outdoors, heads bared in the shadow of Independence Hall—that tabernacle of freedom—rededicating themselves to the Stars and Stripes and the principles for which our Republic stands. And I thought how wonderful a thing it would be if my Kiwanian brothers in each of their communities would set aside one week a year to be added to Red Apple Week and Maple Sugar Week, Get Yourself a New Wife Week, and all the others—one more commemorative week which in your community would be spent in dramatizing freedom, dramatizing the basic principles of private enterprise and political independence, so that every shopgirl, every farmer, every laboring man, every teacher and preacher, everyone in the community could know exactly what rests down at the foundation of our great successful system of free enterprise.

I would have essay contests and oratorical contests with a good liberal prize going to the winner, and radio programs and editorials in the newspapers. I would open the week with a sermon in every church of the community in which the preacher, at least on that one Sunday, would not say one thing in criticism of a system of government such as we have both in Canada and the United States, which despite their respective deficiencies—and they have them—I would like to have every preacher in the land on that particular Sunday tell every churchgoer in the Western Hemisphere north of the Rio Grande the virtues and values of the way of life that has given the religious people of every denomination a better chance to do their good work than any other government in the world or any other era of history. If, on the rest of the 51 Sundays, they find things they should criticize, I would not complain about that, but I don't think it is asking too much for every preacher, priest, or rabbi on one Sunday out of the 52 to say nothing critical of our Government or our way of life and environment. On that Sunday we should get the people to make prayers and sing hymns for the fact we have as good a place as we have and let the people know what we are protecting and developing and what are the basic factors of our success formula.

I would have exhibits and put on such a week so that at the end of the week everybody would know what it is that makes freedom strong and what makes this area of the world the envy of all humanity.

How do we expect our immigrant visitors from abroad or our children to understand us if we don't teach them? If Kiwanians don't do it, who is going to do it? If nobody does it, how can we expect to have a citizenry that will go to the polls or if it does, that will vote in the best interest of society and of the world? It is our job and our action or our apathy, I think, is going to spell success or failure. I think the deciding battles for freedom in our generation are going to be won on American soil and they are going to be won without shooting. It will be a battle of wits and logic and persuasion. We will be successful by our activities or aid the satanic opposition by our apathy.

3. The third thing I would like to have this committee do is to "project our dividends."

It is true that everybody in Canada and the United States does not equally share the dividends of freedom. They are never going to share them equally, but anything we can do in our community to help the people get better homes, swimming pools, summer vacations, living and working conditions, and so forth, we should do. Kiwanis is already pretty good at some parts of this program.

Project the dividends of freedom to the less fortunate people of the community. As you make the dividends available increasingly to more people, you get recruits to help defend a way of life which has never been even approached by any other scheme anybody else has ever developed.

4. The fourth function of these American enterprise committees—"protect our freedoms." Protect our freedoms! My good fellow Kiwanians, by seeing to it in our communities that only good patriotic Americans hold positions of responsibility in the township, in the city, on the school board, on the county board; that good Americans get elected to the offices of the church and the school and the labor organization and the various activities. If you find un-American influences in your community, do not run away from them; expose them; identify them; quarantine them as you would the plague. I do not think you have to punish them. You do not have to put anybody in jail. He who preaches un-American doctrines, if you label him and expose him you will put him out of business. Utilize the system we used in the United States in 1905 when we passed the Food and Drug Act—label the poison and bottle for what it is. If you do that, with these un-American doctrines, you are going to see the splendid patriotic thinking of this area of the world get rid of that kind of treachery. I think you can do that.

Oh, if I thought you could do these things, how happy I would be. I look at that great sign up there over this platform. "Aggressive Citizenship—Our Individual Responsibility." Look at those first-person pronouns. "I" comes in there many times. If each of you could somehow get that thing in your hearts—what can "I" do? One thing I like about Kiwanis is the letter "I" which is repeated in our name. "I." And if each of you somehow would say, "I'll do it; I'll go back home and I'll start a committee. I'll do something about it. I won't just sit around. I'll start this thing myself." If even a hundred of you would say, "I'll do it," and mean it, it might bring victory to our cause.

I want to suggest one more line of thought to you in quick conclusion. I think the continuance of a solvent America, or of a solvent Canada—which can sustain itself and help the world and in which political freedom and private enterprise can continue to function is essential t opermanent peace and also essen-

tial to the preservation of freedom anywhere and everywhere. I know and you know that we have in this country today a lot of high-minded individuals, and they represent all different political parties, who somehow have conceived the happy notion that if we can transfer a local problem to the Federal Government in Washington you can solve it economically and efficiently and expeditiously. It is a theory apparently built on the idea that the whole is greater than the sum of all its parts. I think that it is in defiance of the immutable laws of physics. Even our modern-day political messiahs are not yet able to fly in the face of gravity and physics.

FIVE TESTS TO APPLY TO FEDERAL LEGISLATION

I want to suggest and mention five questions I would like to have you ask before you write your Congressman to appropriate money or to appropriate power for the Federal Government to do something which maybe you as Kiwanis leaders and private citizens might better do at home. If we cannot get the pressure off a few people more down in Washington, we will spend ourselves into oblivion, bankruptcy, and defeat.

I want to say that I believe that an organized government and a civilized society should meet the problems of its community which are important enough to be met and which the individual cannot solve. I think that is the job of organized government.

Before you come to us in Washington with these problems, however, how about asking yourselves these five questions:

1. Is the solution to the problem necessary?

We are moving rapidly into an era of deficit spending at a time when economic collapse in America might mean the eclipse of freedom throughout the world, because our Communist adversaries are betting on an American depression so that we cannot help ourselves or anybody else. Therefore, No. 1, "Is the solution to the problem necessary?"

2. Will it work?

Ask that question, "Will it work?" Is it sound, is it logical, is there any historic record on it? Is the record one of failure or success?

3. Can we afford it?

"Can we afford it?" There are sometimes things that seem to be necessary; there are things that we know will work that we simply cannot afford. We have to ask that because when anybody fails to ask that question long enough, he gets himself into trouble, either as an individual or a nation.

4. Is it impossible to solve the problem locally?

Have we explored all the possibilities? Is it impossible to solve it through the county or city or State, or perhaps a group of individuals acting cooperatively can do it? Is it impossible to solve the question without the National Government?

And last.

5. Is it impossible to solve the problem by Government encouragement and incentives, rather than Government ownership, operation, and mandates? It is impossible to solve the problem governmentally in Washington without resorting to some kind of State collectivism?

If we can answer all those five questions affirmatively, I would say our problem is within the province of the Federal Government. If one of them has to be answered in the negative, I would stop, look, and listen; and if more than one has to be answered adversely, I think we should avoid it like sin.

We Kiwanians in our maturity cannot escape responsibility for the national decisions which are going to be made in the next 10 years and which are going to determine the trend of history for the next 100.

When I was in Athens in Greece with Vice President BARKLEY and others on a congressional trip a little over a year ago, we spent some time wandering around the ruins where they are restoring the old market place where Socrates and the great philosophers used to speak. We visited the famous old Olympic Stadium and heard the legend of an old Greek who one time came late to the Olympic games and was unable to find a seat. Near-sighted and faltering, he walked stumblingly around the crowd and in the multitude finally wandered down near the center of the arena to a box seat. A fine strapping young man stood up and said to him, "Father, sit down and have my seat. I can stand better than you."

The old man tried to dissuade him. "No," he said, "Let me stand."

The young man insisted. He led him down to his seat with the crowd jeering and laughing at him, led him down and gave him the choicest seat in the stadium reserved only for the Spartan athletes, the best of their time.

As the old man sat down, he looked at this fine stalwart athletic figure and said, "Young man, all of the Greeks know what it were well to be done, but only the Spartans practice it."

I hope it need not come to this: that all Canadians and Americans know what it were well to do in the face of definable perils, but that only Kiwanians practice it. But if come to that it does, and if come to that it must, let it never be said, at least in those melancholic times, that Kiwanians failed to practice those things that they know it were well to be done. [Applause.]

Address of Hon. Joseph T. Ferguson, Auditor of the State of Ohio

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address by Mr. Joseph T. Ferguson, auditor of the State of Ohio, on July 4, at Columbus, Ohio:

It is a real pleasure for me to talk to the National Macedonian Youth Convention. The mere fact that your organization is composed of young people produces a challenge to us older people for you must carry on when your elders retire.

You are meeting here today in a period of confused world thinking. We Americans, as world leaders, and people all over the world are confused over human rights, property rights, ecnomic rights. The open forums of today debate momentous questions.

Therefore it is fitting that we discuss some of the best ways to preserve our basic freedoms. As young Americans, I know you want the type of Federal Government and world government that will guarantee world security, peace, and prosperity forever. As President Truman so aptly stated, "Our goal must be not peace in our time but peace for all time."

And, may I ask you, "How can we obtain that great objective—peace and prosperity?"

My answer is, participation in the political life of your community, the State, and the Nation. Bluntly, enter politics.

Politics is a high and noble profession. To be a real politician you must be interested in the science of Government. And to define Government, we must merely say, "Government is the business of the people."

Therefore, as young Americans, let me say that the strength of our American democracy is two strong party organizations. We want no single party in the United States such as Hitler's Nazi Party and Stalin's Communist Party. It is your duty to choose a party and participate in the activities of your party organization, either the Democratic or Republican Parties.

One of the sacred duties of an American is to cast his ballot in all elections.

We are in danger of losing our democracy if we continue to disregard our use of the ballot. The shocking shrinkage in total votes cast in our elections is startling. Let me quote you some facts:

In 1896, 83 percent of the people voted for President.

In 1916, 72 percent of the people voted for President.

In 1936, 57 percent of the people voted for President.

In 1948, 52 percent of the people voted for President.

In 56 years, 31 percent of the people have ceased to vote, until today only one-half of our people go to the polls.

Young Americans, it is up to you to remedy this bad situation. The youth of America fought the last war to preserve our Nation. The youth of America must individually and collectively wage an all-out campaign to increase the interest in voting.

It may sound rather far-fetched, but there is a possibility that we may lose our democratic rights because of our failure to use the instruments of Government which we have inherited from devoted, patriotic men and women of generations past.

It shows poor political ethics for us to point a finger of criticism at other nations of the world, when we individually fail to embrace our own democratic processes.

Therefore, young people, let me charge you that you must be living examples for the youth of the world, now composed of some 2½ billion people, and we are but one-sixteenth of the world's people. Yet, we have assumed world leadership. We must succeed in maintaining that leadership against Communist aggression.

No nation can ever again live to itself alone, nor die to itself. The world is too small. We are truly one world. But—one world with two ideologies. Only the future can record whether we can live together, or die maintaining our rights to live.

With the many differences between communism and democracy, let me state a single explanation:

Communism gives all power to one select, dominant, political clique, which declares war, makes peace, abolishes religion, establishes the party line the world over, dictates domestic and foreign policy with subordination of the individual and complete exploitation of the masses.

Democracy disperses political power among all groups, and, by such wide dispersion, it makes it impossible for any one group to get and keep the authority to exploit the masses.

American political parties are always on probation, and stand and fall on its record of performance for the masses of the people.

Communism suppresses opposition by a police state, while a democracy merely "votes the rascals out."

It is my understanding there are 10,000,000 Americans of Macedonian or Slavic birth or descent. What a powerful weapon this group can be in a battle for world Americanism, as proposed in President Truman's point 4, in his message to Congress last week.

And what a force this group of young Macedonians can be if they would support President Truman's bipartisan program "to assist the peoples of economically underdeveloped areas of the world."

You may be asking me, "What are these four points?" in which the youth of today should be interested.

Point 1: Cooperation with the United Nations to promote world peace and economic stability.

Point 2: Economic self-help and mutual aid in the European recovery plan for 16 nations.

Point 3: Collective security through the North Atlantic treaty with support by arms and men.

Point 4: Here is the challenge to youth.

Increasing world trade and raising living standards—by sending technical assistants and private capital from the developed areas to the underdeveloped areas of the world, for a long period of years, probably 50 to 75 years.

This is a big order. It is natural to think of this vast program of development as solely an economic enterprise. But it is more than that. It is the humane, Christian duty of a great people in conjunction with other democracies.

Think of the world divided this way: 400,000,000 people in developed areas—the democracies; 400,000,000 people in semideveloped areas—the Communists; 1,600,000,000 people in underdeveloped areas—no stable government.

The democracies or the Communists will eventually develop and educate these 1,600,000,000 people. This development means more than dollar investment. It means giving the enthusiasm and courage of youth. It means giving the skills of labor, the political skills of natural leaders, the technical skills of science, the best leadership in education, health, engineering, agriculture, and sociology.

Yes, the practically untouched frontiers of three-fifths of the earth's surface challenge the wildest imagination of our educated youth.

Your ancestors fled from the tyranny and oppression of your mother countries, and found opportunity, freedom, and justice in this great country of their adoption.

And now, the youth of Macedonians, trained and educated in our great institutions of learning of this great nation will carry out the program of economic development of nations all over the world.

And this bipartisan approach is not a continuation of the old colonial imperialism of the last century. Exploitation for profit has no place in this plan.

With two-thirds of the people of the world living in conditions approaching misery, food inadequate, floundering in disease, their lives primitive and stagnant—their economic life is a threat to our way of life. And people in this condition are not good customers for the rest of the world.

Therefore, from a purely selfish point of view, we must begin now to learn to live together in this world. Economic security for decade after decade depends upon the stability of all peoples of the world. We are one-sixteenth of the world. We want peace and security.

Making peace is not a matter of statesmen sitting around a table.

Making peace is proving the democratic system as stronger and more acceptable than the Communist system.

Peace rests in the hands of every citizen, particularly the youth within the democracies.

Peace grows by the application of intelligence, knowledge, and hard work of every citizen.

Our material resources are limited, but our technical knowledge is inexhaustible. Making available our vast storehouse of inventive know-how will achieve the peace we desire so much, and bring prosperity to all the peoples of the world.

Only by helping the least fortunate of the human family to help themselves, can the human family achieve the decent, healthful, full life that is the right of all people.

Young Americans of today, you are destined to be the creators of a good world government, and the future leaders of tomorrow. State your principles clearly. Work hard for the rights of the individual. The results will be the preservation of the heritage that is ours, so that you can hand it on in even fuller measure to future generations.

A Threat to Salem's Air Position

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Capital Journal, Salem, Oreg., written by Mr. Robert Letts Jones on the subject The Possible Removal of United Air Lines Service From That City.

This Nation-wide carrier has furnished our State capital of Salem with excellent service since it was instituted in 1941 and has carried an ever-increasing pay load from that city. It seems utterly foolish for the Civil Aeronautics Board to even consider substituting that service for one by a carrier which could furnish feeder service only.

I call this editorial to the attention of both the House and to the members of the CAB:

A THREAT TO SALEM'S AIR POSITION

Salem was startled by word from Washington, D. C., that the Civil Aeronautics Board was considering cutting the city off from United Air Lines service. United Air Lines was startled, too, for that matter. The CAB had a proposal before it to substitute West Coast Airlines for United.

The proposal contemplated a 5-year extension in operating authority for West Coast, which is a feeder line. The air fate of Salem is involved in the extension question. West Coast asked that present service to McMinnville be discontinued. Service to Salem presumably would be substituted, instead. Whether service to Everett, Anacortes, and Mount Vernon in Washington should be discontinued would be investigated, too. The Board would consider whether United Air Lines or West Coast Airlines should serve Bellingham, where both now stop. The CAB believes one air-line service there is enough.

The Aeronautics Board may seek, by this hearing, to cut down competition and thus save subsidy money to the air lines for air mail. But in the case of the substitution of West Coast, a feeder line, for United, a major line, there is no competition involved. West Coast has not been established yet in Salem. So the city would be the loser if United were told by the all-powerful CAB to pull up stakes here and leave the State's capital and second city to a feeder line for service.

Salem has an impressive standing on United Air Lines' list of stations. And this is the case even though the city has only a second-rate listing of flights, and has been served only since 1941.

Business for United here has increased 15 percent during the first 6 months of this year over the same period of last year. When the Nation's economy is starting to squeak a little now, that 15-percent increase is really something.

Of the 71 stations served by United Air Lines over the Nation, Salem stands twenty-eighth in the amount of air freight and express. In baggage, the capital holds an even better position.

In any appraisal of Salem's position in relation to air-line service, it would be foolish to lose sight of the future.

The Willamette Valley is growing as fast percentagewise as probably any other large section of the country. So, to eliminate the second city in size in that valley from transcontinental service (United) would be foolish and harmful to Salem and the valley.

Also, only last year was the city's master airport plan put into effect. This plan offers the basis for a field here that will be the equal of any in a comparable size city in the United States. A new administration building with air-line facilities is now on the drawing boards.

Not to be ignored either is the position that McNary Field assumed last year when Portland's Columbia Airport was flooded and knocked out of service. Both United and Northwest Airlines moved operations here temporarily. The runways at McNary Field were the only ones in the area suitable for the taking off and landing of the big DC-6's flying for United.

Instead of cutting the capital from the list of stations served by United Air Lines, the CAB could encourage even better air schedules for Salem by United. If West Coast also wants to come here, that is another matter, but one not to be considered as a matter of choice: United or West Coast.

A. F. of L. Demands New Positive Policy in China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extraordinary statement just released by the free trade union committee of the American Federation of Labor. Responsible people and organizations representing all parts of our national life are apprehensive about the apparent paralysis of our Government with respect to the continuing expansion of Communist control in China and Asia. Far-sighted labor leaders are acutely aware of the disastrous effect events in Asia will inevitably have upon our own future. How can responsible officials longer fail to act on the clear-headed analysis and recommendations contained in this statement?

SAFEGUARD CHINA'S NATIONAL INDEPENDENCE FOR DEMOCRACY AND PEACE IN ASIA

(Declaration by free trade union committee, A. F. of L., Matthew Woll, chairman, July 4, 1949)

Our country has become the primary democratic world power. In the critical international situation at hand, the main task and aim of our Nation's foreign policy must be the vigorous and consistent pursuit of a course which will be conducive to the advancement and assure the success of bona fide democratic forces willing and able to do their all in resisting the encroachments and aggression of totalitarian Communist reaction.

The first prerequisite for America's fulfilling its new international role of providing inspiring leadership and timely and ef-

fective assistance to the world-wide forces of democracy is for our country to have a global approach to the fundamental issues of the world crisis and needs of humanity.

In this light, the struggles and battles in China are inseparable from the strife and conflicts in Germany; every attempt to meet the problems confronting the civilized peace-seeking nations in one part of the globe, without regard for the tasks facing them in the other sectors, is doomed to disaster. In fact, an improvised piecemeal approach of this sort would only insure the all-around failure of our Nation's foreign policy.

Our concern over the crisis in China is far more than even a sincere and friendly interest in its domestic affairs. We are above all concerned with the drive of the Chinese Communists and their Moscow masters to line up China alongside of Russia as an aggressive force hostile to the democratic nations. The Soviet's chief stooge, Mao Tse-tung, has lost no time in denouncing the European recovery program and the Atlantic Pact.

The present phase of the conflict in China is not at all the rearguard and the concluding stage of a civil war rending one Asiatic nation. Even if we were to grant all the mistakes and shortcomings attributed to the Chinese Nationalist regime, its resistance to the bolshevik plague is essentially the vanguard phase of an international operation against communism. Moscow and its minions in China have realized this truth all the time. America and the other democratic countries have yet to realize fully this great truth and its far-reaching implications. That is why the Kremlin and its fifth column in China have been scoring successes. That is why our country and its democratic allies have yet to win in China.

We reject all notions and policies of defeatism in China. We categorically repudiate the notion that all is hopelessly lost in China. Though Russia's advance guard has spread its military tentacles far and wide south of the Yangtse, it has not yet consolidated its Communist control. Only in the northeast which has, since America's defeat of Japan, been under tight Russian control, is there any definite administrative state authority. Here is the former Manchukuo which has the only important munitions industry in all China. It is this Russian-controlled territory which has also provided the bulk and the backbone of the effective Communist Army in China. In our haste to put the sole blame on Chiang Kai-shek for the disasters which recently befell his regime, we must not forget that this highly strategic economic and military area was turned over to Stalin by our own Government with acceptance by the British at the fatal Yalta Conference.

We are convinced that, despite all previous costly domestic errors in Chinese Nationalist policy and mistakes of American policy in the Orient, the cause of democracy and peace is not by any means lost in China and the rest of Asia. In considering the present plight of China and its National Government, we must not overlook the fact that this national authority has been forced to wage civil war for more than 30 years and was left alone to fight a foreign war against Japanese imperialism for nearly 8 years. Under such circumstances, no one could expect a swift tempo of constructive social reform or an atmosphere free from terrific difficulties. In stressing this, we do not underestimate the gravity of the Chinese crisis. We are only underscoring the urgency of our country reviewing, revaluating, and revising its entire policy toward China. We cannot emphasize too strongly the burning necessity of America's coming forward with a positive, constructive policy making for peace, democracy, genuine national independence and social justice in China and throughout the Orient. Before our Government can adopt a sound policy toward China, it must drop every vestige of three false and fatal notions:

DISCARD THREE DANGEROUS NOTIONS

First of all, we must rid our policy of every idea that China is merely a vast market where white private entrepreneurs can get rich quickly. The first prerequisite for our preventing imperialistic incursions by any other power into China is for ourselves to be clear, clean, and free from every possible charge of imperialism. We must dramatize our belief in the Chinese as a great people who have much to contribute as an independent nation to the enhancement of human welfare, peace, and cultural progress in Asia and the world as a whole.

Secondly, our government should bury every remnant of past illusions that the Communist Party in China is not totalitarian, is not really Communist, but only a peculiar expression of agrarian reformers. The Chinese Communist Party has never deviated from the line laid down by Moscow for its Communist toadies and tools in all lands. In Moscow's looting of Manchuria, the Chinese Communists proved themselves to be menial agents of Russian imperialism. Not only did the Communists in China fail to protest against, but they even actively aided and abetted, this brutal theft by a foreign power of the resources of the Chinese people. Recently, flushed with military success, this Russian agency in China has become particularly vitriolic and virulent against the American people who more than any other nation aided the Chinese and saved them from starvation. No doubt the extreme viciousness and hostility of the Communists in China toward the Western democracies in general and the United States in particular can be explained by the desire of these Russian fifth columnists to hide their cowardly and treacherous role in the Kremlin's rape of Manchuria.

We must likewise drop the wishful thinking that the Chinese Communists will soon espouse Titoism and show a measure of independence from Moscow. Every declaration by every important spokesman of communism in China refutes this futile hope. For one thing, on the basis of its Yugoslav experience, Moscow has learned how to stamp out promptly and ruthlessly every manifestation of even potential Titoism. Besides, through its base of enormous Soviet power in China (Manchuria), Moscow can quickly mobilize overwhelming forces against all deviating Communists and disillusioned liberals.

Thirdly, we must shed every illusion that totalitarian Soviet Russia, with its vast slave-labor economy has the slightest desire or capacity to play a progressive or liberating role in its relations with the Chinese people. In a desperate attempt to salvage something out of the deal cooked up by the Big Three at Yalta at the expense of the Chinese people, their National Government signed a treaty of friendship with Russia. This treaty solemnly pledged Russia to the following: "support and assistance to be given fully to the National Government as the Central Government of China." Forthwith, the Kremlin proceeded to turn this treaty into the most tragic farce by cynically outraging every international law. In spite of this treaty, the Kremlin proceeded to dominate and plunder Manchuria.

The American Reparations Commission has conservatively estimated the value of Russian loot in Manchuria at $858,000,000. The total loss inflicted by the "liberating" Russians on the economy of Manchuria—through their seizure of all industrial installations, mines, and machinery as war booty—exceeds $2,000,000,000. It was none other than Stalin himself who thus brazenly boasted to the whole world in September 1945, after America's smashing defeat of Japan: "For 40 years the men of the older generation have waited for this day. And now this day has come."

This declaration represents more than a complete and shame-faced break with every pretense at revolutionary idealism which characterized the policy of the Bolsheviks during the Russo-Japanese War of 1905—when under the leadership of Lenin they worked for the defeat of Czarist Russia. This bold boast of having wiped out and avenged the humiliating defeat inflicted by Nippon on the old imperialist Russia in the Tsushima Straits and at Port Arthur constitutes a crass reversion to, and even an extension of, the rankest robber policies of czarist imperialism in China and throughout Asia. Already, the new imperialist Russia has extended its frontiers to the Yellow Sea.

But here we must add that the present-day imperialism of Russia is far more dangerous than the aggression of Nicholas II. Stalinist imperialism is much more dishonest and efficient. It hides its sinister purpose behind demagogic and high-sounding so-called radical phrases. Stalinist imperialism seeks not only economic and military domination—as did the czars of old—but also total control of the thoughts, faiths, and moods of the people. Here is not only an economic but also an ideological imperialism—ruthlessly driving to enslave the minds and souls of those under their "leadership." Moreover, alone of all the big powers, Stalinist Russia has a huge, well-financed, powerful fifth column operating through the W. F. T. U. and the Cominform. The dictatorship in the Kremlin has, with devilish skill and unbridled cynicism, harnessed to its nefarious aims and actions the good will, energies, and talents of many gullible liberals who persist in clinging to the unfounded belief that despite all its mistakes, the Soviet regime is today the very incarnation of a progressive state and society.

It is highest time that our country showed the way in atoning to the Chinese people for the Big Three sacrifice of their sovereignty. American leadership in stemming the tide of totalitarian communism and chaos in China is long overdue. We must frankly recognize that the victories of communism in China constitute the most important triumph of bolshevism since it seized power in Russia. We emphasize that the adoption of a new policy toward China must be in a spirit of sincere bipartisanship. No attempt should be made to gain partisan capital through raking up past mistakes and capitalizing them for factional purposes. In Asia, no less than in Europe, is a bipartisan policy essential to the welfare of the American people and the peace of the world.

FOR A CONSTRUCTIVE PROGRAM

It is in this spirit that we propose the following as guiding lines of a definitive constructive American policy to meet the crisis in China:

1. There must be no recognition of, trade with, or economic assistance to, the Communist forces in China. American commercial interests should be firmly admonished against the narrow, selfish, and short-sighted policy of strengthening the Chinese usurpers through doing business with them. The crisis in China can only be aggravated to the detriment of America and world peace and freedom by an attitude and policy of "business as usual." We must not aid or arm our enemies of today and tomorrow as we did in the case of Japanese imperialism.

2. Our Government must not extend any form of diplomatic recognition or economic help to any so-called coalition regime which Moscow may order set up by the Communist Party in China.

3. We strongly urge President Truman to consult with all the democratic nations of Europe, Asia, and Latin America so as to work out an immediate program of collective action to stem the tide of Communist tyranny and to bolster the democratic forces.

4. Our Government should place before the UN Security Council the entire question

of the role of Russia in fostering and financing the civil war in China, in conspiring against the legitimate government recognized by all members of the United Nations, in flagrantly flouting the solemn obligations of its treaty with China and thus deliberately undermining and endangering world peace.

5. We propose prompt and adequate American aid to the only government authorities recognized by the United States in China.

6. We propose that this aid should be rendered under the careful supervision of American military and economic authorities who can see to it that the soldiers get adequate food and weapons in time and that the truly democratic elements guide the national destiny of the Chinese people.

7. Toward this end, we propose that our Government should dispatch to China authoritative and competent military, industrial, agricultural, health, and labor missions to aid the Chinese in defending their homeland, in furthering democracy and free trade unionism, and in bettering their working and living conditions.

We earnestly plead for adequate and prompt support for the government of President Li Tsung-jen. To refuse such moral and material aid is to encourage and insure the demoralization of the remaining Nationalist armies and to multiply the desertions by ambitious weak-kneed provincial generals who feel that it is only the Communists who have international (Russian) support while no democratic nation supports the Nationalist government.

The Kwangsi troops, commanded by President Li and Gen. Pai Chung-hsi have all the potentialities of effective resistance. Likewise, the Kwangtung forces, led by Generals Chang Fa-Kwei and Yu Han-Mou have real fighting capacities and can prove a dangerous thorn in the sides of the Communists—despite the loss of Nanking and Shanghai. The Communists have been unable to secure control of the sea or air as they have done on land. With Formosa and the Chusan Islands in their control, the Nationalists are able to blockade the mouth of the Whangpoo through mines, air attack, or ships. Here is a serious obstacle to the Communist consolidation of their control of the Yangtse area. Our Government should do nothing to interfere with or mar the effectiveness of such blockade measures. Even if the forces of free China were to lose still more territory it would not be decisive. Continued democratic resistance would choke off the consolidation of a stable Communist regime on a national scale. We must not forget that once before, in 1927–28, China had two rival regimes, yet the national state was not officially divided and the fate of China was far from settled.

No particular pattern of developments is inevitable in China. To date the Communist Party successes have been almost exclusively in territories once occupied by Japan—in areas where the Kuomintang could not grow and stabilize, on soil in which only the Communists could grow, through their special adeptness in guerrilla warfare. Furthermore, today, with the most reactionary element of the Kuomintang out of power, there is all the more reason for our rendering military and economic aid and advice to the national government and encourage and advise it in improving the conditions of the people in urban and rural areas and furthering the progress of democracy.

FOR DEMOCRACY AND NATIONAL FREEDOM IN ASIA

8. Our Government should announce that it is its avowed policy to promote and aid permanent cooperation among the democratic forces of Asia—in line with the recent conference of Asian nations called by India—in order to resist and defeat Chinese and other Communist influence and encroachments. The extension of Chinese Communist influence is only the spearhead of Russian totalitarian aggression and imperialism.

9. Our Government should bring to bear its fullest moral pressure on France and the Netherlands to recognize the desire of the peoples of Asia still under their rule for national freedom, economic betterment, and social justice within the framework and through the methods of democracy. Otherwise, the Communists will demogogically exploit these unfulfilled legitimate demands for their own sordid aims and in the interest of Russian imperialism.

10. Our Government should appoint a special commission, on which labor is to be represented, to prepare jointly with democratic Asian authorities the application of President Truman's point 4 to these undeveloped areas in the interest of their native peoples, and the entire world.

CONCLUSION

The world cannot stay free and at peace without Asia being free and at peace. Furthermore, Asia cannot be free, peaceful, and prosperous with China in the Communist stranglehold. There is nothing inexorable or invincible about communism in China and the rest of Asia. But we cannot defeat communism with military weapons alone. Democracy has higher ideals and better ideas than communism or any other brand of totalitarian despotism. We must translate these ideals and ideas into positive deeds, into actuality.

In Indonesia, Burma, and Indochina there are strong democratic nationalist forces that are deadly enemies of Communist despotism. Besides, neither Russia nor the Communists of China either want to or can give the Asian peoples genuine national freedom, the necessary capital and machinery for developing their economies and improving their living standards.

In stressing the above, we do not seek to minimize the importance of the victories scored to date by the Communists in China. The consequences of these victories are enormous—especially and immediately for southeast Asia, and even the Philippines, Australia, and New Zealand. But grave as the resulting danger to freedom is, the worst danger we face today is a feeling of despair and a policy of do-nothing and drift. If we allow ourselves to be overwhelmed by fear, then we are lost. If we continue to do nothing in regard to the Chinese crisis, then we are bound to lose our remaining friends in China and to find it impossible to secure the cooperation of the developing democratic forces in every other part of Asia.

The Chinese crisis is very serious, but not at all hopeless. The tide can still be turned in favor of freedom and peace in China and for democracy among the peoples of Asia. Toward the attainment of these great goals, the free trade-union committee of the A. F. of L. has proposed the above program. We call upon our Government to give our proposals prompt, thorough, and favorable consideration.

Stop the St. Lawrence Folly

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. VAN ZANDT. Mr. Speaker, from the columns of the United Mine Workers Journal I have taken an editorial titled "Stop the St. Lawrence Folly," which attracted the attention of those of us in central Pennsylvania whose entire economy is based on the coal and railroad industry.

The St. Lawrence seaway is a folly. It is unsound and will destroy the jobs of thousands of coal miners and railroaders. It will give preference to foreign labor, and, above all, it will cost the taxpayers of America millions and millions of dollars.

The article, which appeared in the February 1, 1949, issue of the United Mine Workers Journal, is as follows:

STOP THE ST. LAWRENCE FOLLY

The New York Port Maritime Association, with a membership of 1,500, has renewed its opposition to development of the totally unnecessary St. Lawrence seaway.

Acting for the association, the membership of which includes shipping interests in ports of the Atlantic, Gulf, and Pacific coasts, Vice President Callaghan has circularized Congress setting forth in detail the calamitous effects on the shipping industry and the country as a whole if this unfortunate legislation is passed by the Eighty-first Congress.

Mr. Callaghan, in an interview, pointed out that "the canalization of the St. Lawrence River has been fully discussed before the American people for the past decade, and that the overwhelming mass of testimony and facts presented in opposition to this project in 1934, 1941, and again in 1946, clearly show the injury which would be inflicted on labor and the transportation system of the United States, as well as the decreases of property values in the great seaports on the Atlantic and Gulf coasts and the Great Lakes."

Continuing, Mr. Callaghan said:

"Because of the unsoundness of this proposed St. Lawrence seaway and power project from every standpoint, it is vital that this legislation be defeated in the Eighty-first session of Congress."

To visualize the extent to which a ruinous competitive price war involving shipping rates as between American and foreign and tramp steamers would result in disaster to American shipping and maritime employment, the turmoil in the shipping trade existing at the present time over the division of shipping American products under ECA sponsorship between foreign and American vessels furnishes good evidence.

Since it has now been demonstrated that we cannot control our own Government agencies in diverting traffic to foreign ships on our own give-away products, there would appear to be no chance whatsoever of securing the patronage of United States profiteering corporations and industry as a whole in favoring American ships.

The only answer to continued maintenance of an American merchant marine in the lanes of traffic that would be developed by the St. Lawrence seaway, which would penetrate the heart of the geography of the Nation via the Great Lakes, would be for the Government to subsidize beyond all reasonable concepts of a subsidy all freight that American ships carry through the St. Lawrence seaway.

It is thus plain that the taxpayer would not only be out the original cost of developing the St. Lawrence, opening up a trade lane for foreign ships and foreign products produced at wage rates from 50 to 75 percent less than those prevailing in the United States for the same articles, but the tax-suffering public would have to bear the politically imposed additional cost of uneconomic triple subsidies to maintain even the semblance of American shipping in this proposed water lane.

Certainly, the time is not opportune for the Nation to pay the freight to maintain the economic security which the reckless disregard of sound business is certain to destroy if the St. Lawrence project flowers into a reality.

Multiplying tax burdens without any economy benefits, in fact, creating a competitive situation that will decrease coal consumption, divert traffic from railroads, destroy property values of existing lake ports, increase unemployment of miners, railroaders, seamen, longshoremen, and labor in other industries, constitute a promotional endeavor which totally repudiates all semblance of common sense.

By every yardstick of political sanity and business acumen the intriguing St. Lawrence development should be defeated, even though both Truman and Dewey have been deceived into sponsorship.

Mrs. Frank W. Swanton

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. ANGELL. Mr. Speaker, the late Mrs. Frank W. Swanton was a long-time resident of my congressional district. For many years she served on the board and was the directing head of the Oregon Humane Society. For almost 20 years I have had the privilege of serving on the board of directors of that humane organization. We in Oregon are proud of the work and achievements of the late Mrs. Swanton in behalf of humanitarian work, particularly among dumb animals. I am certain that all of those who are familiar with the work of the organizations throughout America for the protection of dumb animals will be interested in the work of Mrs. Swanton, as we are in Oregon.

There appeared in the National Humane Review of July 1949 an interesting, noteworthy article on the contribution of American women in this great humanitarian work and particularly the work of Mrs. Swanton. I include this article as a part of my remarks:

LADIES HAVE MADE HUMANE HISTORY—ENTHUSIASTIC PERSONALITIES RECALLED AND DEEDS RECITED

(By Richard C. Craven)

The feminine influence in humane history has never been proclaimed. At odd times reference has been made in items of current incident, but in rather cursory manner. Women have been regarded with a certain chivalry that, according to custom, is expected of the male sex, but justice has never been done them adequately for the services rendered. Let us admit, graciously, that the humane movement would not be where it is today but for the contribution of the sweeter sex. Many societies for protection of children or animals would never have come into existence. The persistence of womankind, though at times perhaps a trifle exasperating to those of lesser enthusiasm, has too often conquered over male indifference to be overlooked in a series of reminiscent articles such as these.

Please understand, I have never laid claims to being what is termed a "ladies' man." If anything, the reverse. Hence, this tribute is at least impartial. And I think our people should know more intimately some of those whose crusading spirit has been built into the fabric of humane history. There is no attempt here to line up our famous ladies in order of merit; I could not do this even if I dared. Hence these things are set forth just as they happen to come to mind, with no attempt at sequence.

Early in my travels an assignment took me to the charming Oregon city of Portland. That involved the beginning of a lasting friendship with the Oregon Humane Society and its manager, Mrs. Frank W. Swanton.

Here was a lady who was bound to succeed in whatever she undertook, provided it had a certain appeal to her personal ambitions. She had that resoluteness and decisiveness that we ordinarily associate with military leaders, and the astuteness associated with political leadership. Probably her most dominating characteristic was her sense of justice, her love of animals, her sense of fair play, her championship of oppressed children.

It was natural, therefore, that she should find herself hurled into the work she loved. She was a widow at the time of this first meeting. The Oregon Humane Society was by no means her first venture into humane service. As she recalled, she had spent a few years in Nome, Alaska, where her husband had held the office of postmaster. She and her husband were distressed by the amount of animal suffering in Alaska. So, she headed a society for protection of animals in Nome.

PROTECTING ANIMALS IN ALASKA

Only a very few, such as Mrs. Swanton or Mrs. Huntington Smith, could have maintained such a society in Nome or other Alaskan settlement in those days. Where could one turn for a board of directors in a city of floating population? Where could one find the money to maintain such a movement? But Mrs. Swanton raised the money and did an excellent piece of work. How did she raise it?

Before anybody ventures criticism of her plan it is permissible to ask what he or she would have done under similar conditions. This writer makes no pretense of mentoring anybody's soul, or questioning anybody's methods provided those methods did not actually outrage public feeling.

Nome in those days was in the throes of the gold rush. The population was made up mostly of men of adventure, rough men, some with a past. They were largely of the type that makes money one day, spends it the next, always confident that more and more luck will come their way. They gambled at card tables, dice games, or in other ways. When they quarreled over such charges as crookedness, they settled matters in their own way, sometimes even with fatal results. There was little law and less order. Yet there was something about Nome that made it a likable place for those who lived there. And there was something about those rough men that suggested a finer nature beneath the rough exterior.

Mrs. Swanton saw possibilites in those strange fellows who had come from all quarters to seek a fortune. She saw an opportunity to help them, if only she could minimize the results of the gambling fever that had struck so many. She could not stop the gambling; nobody could. But she might suppress some of its evils, by improving its surroundings.

RAISING THE MONEY

Mrs. Swanton decided on an experiment. She threw open her home to the card players. They could come on Saturday evenings, play as long as they liked, but one concession she exacted, and to which they readily agreed. It was that the money in the kitty, yes it was poker they played, should go to the maintenance of the humane society. That way the society was kept operating. The men liked Mrs. Swanton, respected her, and most of the evils usually associated with card gambling were absent. The kitty raised substantial sums.

This story will come as a shock to some readers. But how would the average humane champion raise funds for animal protection under such conditions? As Old Bill said in that famous comedy—"if you know a better 'ole, go to it." This writer without attempting to pose as a censor rejoices only in the purpose to which the money was devoted in that wilderness of the north country.

In time Mrs. Swanton returned to the States, meaning Portland. She began the task of lifting the Oregon Humane Society to its feet, and seeing that it stood firmly upon them. She was a most likable person. She made hosts of friends for the society. She was on the best possible terms with many prominent newspapermen. They came to her home, spent pleasant evenings there. They appreciated her scintillating mannerisms, her sparkling wit and repartee. She never attempted to win their interest in humane service by talking them into boredom. Her personal pet animal was a lovely cat which became known far and wide under the name she fondly gave it, Nancy Hanks. The newsmen knew Nancy, and liked her as did Mrs. Swanton. Further, Mrs. Swanton, in her humane activities, seemed to do generally the things that appealed to newspapers, things that made good reading, and she kept them informed. The society became respected for the things it did.

At the time of my visit the society was in good odor with the authorities. She carried her service to distant sections of the State, and the Government showed appreciation by voting $10,000 to aid the good work. Among the moves she made for greater efficiency was appointment of Fulton Fleetwood as humane officer for eastern Oregon, with headquarters at Baker. Mr. Fleetwood was a man who had spent most of his years on the range. He knew cowboys, and they knew him. They knew, too, that there could be no monkey business with this officer. Many a time he rode through the night to be on hand for things that might start with daylight. Fleetwood had the respect of leading citizens of eastern Oregon, and especially of his own community of Baker, whose most prominent man, State Senator Strayer, was his ardent champion and for a time at least head of the branch of the society in that section. This was most fortunate, because Senator Strayer was one of the most highly regarded members of the State legislature and took care that the Government knew the value of the society to the people at large.

Many stories could be written of the power and influence of the society and its reputation for courage in any circumstances. Here is one that is typical.

A PUBLIC WATER HOLE

In the open range country where the land was given over, almost exclusively, to cattle raising and where the human population was few and widely scattered, was a water hole where cattle had been accustomed to drink for as far back as the humans could remember. It was the only source of water for scores and scores of miles. Some men in the western part of the State realized how valuable this water supply was in that parched region. So they homesteaded the land around the water hole and fenced it in. This kept the cattle out.

Within a short period the cattle began to lose flesh, and it seemed likely the cattlemen would lose heavily. Apparently there was little they could do about it, the homestead claims having been made in the regular way. The cattlemen held meetings, but with no benefit. Then somebody got the idea of appealing to the Oregon Humane Society. Mrs.

Swanton investigated, talked with the oldest inhabitants, learned that the water hole had always been open to the cattle of the ranchers.

Soon there was a gathering of interested parties at the fences of the water hole. Hundreds of cattle were bawling their heads off, begging for water that was denied them. To the astonishment of the ranchers Mrs. Swanton stepped forward. With a pair of wire cutters she had brought along, she cut through the fence wires and opened a gap through which the cattle charged.

The homesteaders swore out warrants, and Mrs. Swanton was arrested for willful damage to property, trespass, and so forth. The plucky lady demanded a jury trial. The only men available for jury service were either stock owners or indirectly interested in others who were stock owners. When the trial got under way, Mrs. Swanton called witness after witness, old inhabitants, who testified that this had always been a public water hole. Further, Mrs. Swanton urged that to keep cattle without water was violation of the humane laws of the State.

The case ended in complete victory for Mrs. Swanton. She had done more than was possible by the combined efforts of the stockmen—she, a woman. The case was fully reported in the Oregon papers. Congratulations were showered upon her and the society. She became something of an idol of the big stockmen.

AN ENDURANCE RACE

Another significant victory came about as a result of one of those crazy long-distance endurance races. A lot of ranch hands organized a race over the highways, to end at the city hall in Portland. They would ride their horses to test their endurance, settle who had the horse with greatest reserve power. And much similar nonsense. Horses would do all the work, cowpokes would take the glory, be the acknowledged heroes, with or without the blush of pride. The whole thing was about as silly as other such contests, or the crackpot buffalo hunt with bow and arrow at Rawlings, Wyo.

Mrs. Swanton said the race must not take place. Who was she, the cowpokes wanted to know, to tell them what they should or should not do? Fancy, a woman telling them—a woman. Of all things. Well, they had handled women before, ever since they got married, and they were not going to let up now, just when fame and glory were in their grasp.

It happened that the last lap of the race was to be from Salem to Portland. Mrs. Swanton was at Salem in good time. She had her officers, veterinarians, horse ambulances, deputy sheriffs and was all set before the first rider entered Salem. Big crowd. Seemed like something was brewing. It was.

As rider after rider came in on weary horses, widely scattered as to time, they dismounted for a breather. Horses were stripped of saddles on orders from the humane society officers. They were in miserable shape, worn and distressed. Tired and sore. First, a horse was ordered into an ambulance for the balance of the race to Portland. Others were ordered into stables to rest a couple of days. Protests and grumbling came in sorry tones from the cowpokes. Mrs. Swanton was accused of scuttling a historic event, of preventing this or that rider from winning fame and glory. Mrs. Swanton and her helpers merely chuckled, went merrily on with their work.

Shame was heaped on those whose horses were in better condition than the worst. Yes; they could proceed to Portland, for the grand and glorious finish, but they must walk the horses, holding the bridle reins. Let nobody dare, under penalty of immediate arrest, put one foot in a stirrup or vault into a saddle.

Were those fellows sore? Not alone physically from the long ride, but mentally also. They had been licked. Licked by, of all things, a woman.

A few walked their horses the rest of the way. That race had depreciated into a human bunion derby.

A crowd had assembled at Portland city hall to witness arrival of the victor. They had visions of a handsome rider galloping up to the steps on his charger to receive the token of championship. It would surpass that other great ride of history exemplified in the exploit of one Paul Revere.

UNHAPPY COWPOKES

Instead of the grand finale and the surge to the winning post, the spectators after a very long wait saw a horseman, weary as his animal, head bowed in shame, slowly approach the city hall. There was no glory. He and his fellows had striven for nothing. That was the end of endurance contests in Oregon. A victory for a woman. Mrs. Swanton was the winner of that race. And she let it be known that if anybody else tried to organize any such foolishness in the future, she had a lot more tricks in her bag.

Much more could be told of the exploits of this resourceful lady. In her heart children had as warm a place as animals, and she moved speedily to protect them against abuse. There was one time when she learned of cruelty in a small school where the teacher believed that the rod was good for children, if given in generous portions. Mrs. Swanton, after being convinced as to actual cruelty, without waiting for a lot of case work and examinations of various sorts, put an end to the severity by taking the teacher to court. It was another triumph for the society and, if memory serves, the school was closed.

A social note. Mrs. Swanton remained a widow, by preference, until the end. A secret known only to a few was the fact that among those who sought to woo her was a high political figure of her State. She might have become the first lady of Oregon, but she was not impressed by the prospect of becoming the wife of a governor.. A governor's wife must be circumspect, must be a slave to her husband's high office. Glory? She had all the glory she wanted, or could have wanted, in her achievements as humane leader. So, she carried on, scored her triumphs in the sphere that best suited her.

Mrs. Swanton had a premonition of death. She felt certain it would come suddenly, and it might be at any time. Her deepest concern was for the future of the Oregon Humane Society. She had plans as to what should happen in the event of her death. Two people she took into her confidence as to what should be done immediately following her passing. I know because I was one of those persons.

Death did come suddenly, in the night. Next morning this great humanitarian was found lying dead on the floor of her bathroom. Heart trouble, aggravated by the worry arising from a mistake which brought on a lawsuit, had resulted in exactly what she had forecast. As to the plan for the future of the society, this failed to materialize. I was unaware of her passing until after other plans had been shaped. But permit me to say that the Oregon Humane Society is doing an excellent public service, a credit to its management. And if you ever go to that beautiful city, by all means visit the society and see for yourself the imposing shelter which replaced the one destroyed by fire some 10 years or so ago.

Wheels Within Wheels

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune, reprinted in the Washington Times-Herald of July 9, 1949:

WHEELS WITHIN WHEELS

(The Chicago Tribune devoted its entire editorial columns in its Friday editions to a discussion of the Hiss trial, declaring it to be the most lucid portrayal yet of the operations of the New Deal.)

Verdict apart, the trial of Alger Hiss has been the most astonishing and revealing spectacle of the New Deal era. Hiss was tried for perjury in his testimony before a Federal grand jury because, under the statute of limitations, he could not be tried on the charge that he used his official post in the New Deal State Department to feed secret documents to Russia's espionage ring in the United States.

The task of reporting a verdict was entrusted to 10 men and 2 women on the jury, but it is probable that almost every literate citizen in the United States arrived at a conclusion of his own. Yet the effect of the evidence, the sharp conflict between accusation and denial, the exchange of charge and countercharge, have perhaps tended to cast a murky cloud over much of the proceedings.

There were complicated, interlocking forces working all through the trial and, indeed, even before it began, for a verdict of acquittal. This obviously partisan interest was dictated not only by the fact that Hiss has held a succession of very high offices under the Roosevelt-Truman administration, so that its reputation stood or fell with his own, but because in his own person he epitomized the foreign-mindedness of the covert forces which have largely controlled New Deal policy.

He was accused of being, in secret, a Communist in the service of Russia. The question which his case posed was this: Was he representative of a general willingness on the part of the New Deal to sell our America?

This trial started with Judge Samuel H. Kaufman on the bench. He was the junior in the Federal judiciary in the southern district of New York. He had intimate New Deal connections, first as special counsel for the Federal Communications Commission, later as associate general counsel, by New Deal selection, in the congressional investigation of the Pearl Harbor catastrophe.

In that capacity he played the administration game, and when Mr. Truman appointed him to the Federal bench, over the protests of both the Association of the Bar of New York City and the Federal Bar Associations of New York, New Jersey, and Connecticut, there were grounds for suspecting a political reward for services rendered.

How the Hiss case was assigned to this judge merits thorough investigation.

Hiss had come to the New Deal by recommendation of Felix Frankfurter, former professor at Harvard Law School, now Associate Justice of the Supreme Court by appointment of Roosevelt.

Frankfurter was an original stockholder of the left-wing periodical, the New Republic,

recently under the editorship of Henry Wallace, the crypto-Communist candidate for President last year.

His original patron in Government before 1910 was Henry L. Stimson, who in 1933 secretly won Roosevelt's endorsement of the policy dealing with Japan's foray into China through the applications of sanctions.

In 1941 this brought war, and Stimson was there as Roosevelt's Secretary of War—a post into which Frankfurter is credited with pushing him—to "maneuver" Japan into "firing the first shot," as Stimson himself expressed it.

As sponsor of Hiss, Frankfurter appeared to testify for him as a character witness, and he and Judge Kaufman ostentatiously shook hands as he mounted the dais.

Frankfurter gave forth with an amazing line of double talk, but was protected by Judge Kaufman when Government counsel attempted to bring out that, in addition to Hiss, he had promoted numerous other graduates of pro-Communist inclination from Harvard Law School into positions of influence in his personally supervised invisible government within the New Deal.

A second Supreme Court Justice, Stanley Reed, also volunteered as a character witness, while a deposition in favor of Hiss was submitted by Gov. Adlai Stevenson, of Illinois, former State Department official and representative to the United Nations.

The testimony referring directly to Hiss' activities produced tremendous sensations. Hiss' accuser, Whittaker Chambers, self-confessed former Communist courier, who once held a $6,000 New Deal job he said had been obtained for him by the Communist Party, had been senior editor at $30,000 a year of Henry Luce's Time magazine. By coincidence, Mrs. Priscilla Hiss had been assistant to Luce on Time 11 years before Chambers followed her onto the staff.

Chambers testified that he received State Department documents not only from Hiss but from Henry Julian Wadleigh, Oxford graduate, and fantastic corroboration came at the trial from Wadleigh himself.

Wadleigh, however, made it clear that he had passed on none of the secret papers Chambers said came from Hiss. Chambers also named three other New Deal officials as "sources" of secret documents.

One of them, Harry D. White, former assistant secretary of the treasury, died a few days after being questioned by the House Committee on the Un-American Activities on this charge.

Chambers related that in 1939 he had laid the story of the existence of the Red spy ring before A. A. Berle, former Assistant Secretary of State, in the belief that Roosevelt would act on it.

Berle testified before the House committee that nothing was done, although as late as 1944 there was still a pro-Russian clique in the State Department and that "Alger Hiss took the pro-Russian point of view."

Chambers, commenting on administration refusal to stir up snoozing red herrings, remarked, "Berle was told to go jump in the lake."

Again in 1945, after Mr. Truman's accession to office, Chambers repeated his story to the State Department Security Officer, once more without result.

Lloyd Paul Stryker, high-priced counsel for Hiss, submitted to Chambers a photograph from a Luce publication showing Hiss in the company of Senator VANDENBERG, leader of the Republican "bipartisan" foreign policy faction, the caption of which referred to Hiss as "one of the State Department's brighter young men," adviser to Roosevelt at the Yalta conference where Stalin wrung vast concessions from the President, and Secretary General of the San Francisco conference where the United Nations Charter was drafted.

With heavy sarcasm, Stryker asked whether, upon seeing the picture, Chambers had wired the President to beware, that Hiss was a traitor.

"I did not," responded Chambers. "I didn't think it was possible to interest anybody in the subject."

Hiss' own story was a denial of everything. He lent Chahbers his apartment, gave him his auto, accepted a rug from him, a token of appreciation, Chambers said, from the Soviet spy ring, rode with him to New York, had him and his wife and child in his home, met him an admitted 15 times—all true, but he never passed Chambers any papers.

Hiss and his wife denied ever seeing the Chambers family after January 1, 1937, although the strange fact emerged over Mrs. Hiss' denial that Mrs. Chambers knew her plans to take a nursing course in Baltimore 6 months after that date.

Yes, the defense conceded, all of the secret papers except four in Hiss' own hand were typed on a Woodstock typewriter the Hiss family had owned, but the story was offered that they had given the machine to some servants before the dates typed on these papers in the first 3 months of 1938.

Government testimony brought out that a repair shop where the machine was fixed was not in existence at the time witnesses for Hiss said they had taken the typewriter there, so that it must have remained with the Hiss family until much later.

But if the defense account were true, the alternative was that someone had still sneaked the papers out of the State Department and Negro servants, for reasons unknown and unexplained, had come into possession of them and copied them for Russia. It sounded rather unlikely.

Hiss threw big names around throughout his testimony. One of his associates in the State Department and at San Francisco, John Sloan Dickey, is now president of Dartmouth College. When former Secretary of State James F. Byrnes asked him about rumors of his Communist affiliation, he submitted himself to the FBI and then asked Dean Acheson, then Under Secretary, now Secretary of State, to assure Byrnes that the matter had been laid to rest.

While still in the State Department, he was sought out by JOHN FOSTER DULLES, Wall Street lawyer, foreign-relations adviser to Governor Dewey during the latter's Presidential campaigns, and American spokesman in UN, to become president of the Carnegie Foundation for International Peace at $20,000 a year.

With all of his State Department experience, with the added distinction of having been executive secretary of the Dumbarton Oaks Conference at which the World Bank and International Monetary Fund were conceived, Hiss felt himself well qualified to head this propaganda agency in the cause of internationalism.

He had always taken an interest in such matters. Even as a young Government lawyer he had attended meetings of the Foreign Policy Association in Washington at which bright young New Dealers, some of whom were also later accused as Communists, listened to one another.

Throughout the trial there were curious overtones. The consistently tender treatment accorded Hiss by Judge Kaufman aroused comment. Mrs. Roosevelt, who months before had prejudged the case in her daily column, dropped in and again acquitted Hiss in print.

Other columnists and newspapers printed material intended to win him sympathy.

Yet it was not these that aroused Judge Kaufman's anger, but outspoken accounts of his partiality from the bench. He threatened contempt action or punishment by some other method once the case was closed.

The Department of Justice on other occasions had strenuously sought convictions, notably in the wartime mass sedition trial of 28 opponents of Roosevelt's war policy.

That case was prosecuted vindictively by O. John Rogge, who later attracted an impressive number of left-wing clients and was the choice for judicial office of the radical American Labor Party in New York, which is the next thing to the Communist Party.

But the Hiss case was brought by a reluctant administration. It could not be soft-pedaled, as was a similar case in 1945 involving the theft of hundreds of top-secret Government documents which found their way to the pro-Communist magazine Amerasia.

Two fines of trifling proportions were imposed in that case, but a Navy lieutenant, a State Department employee, and Mark Gayn, later a foreign correspondent notorious for his enmity toward General MacArthur, all went scot free.

The Committee on Un-American Activities had brought too much of the Chambers-Hiss story into the open to permit it to be surreptitiously dropped, but aside from the exertions of Assistant United States Attorney Thomas F. Murphy there was little in the Government's presentation to suggest a strong desire for conviction.

With so many circumstances in his favor, with a battery of five lawyers, a psychiatrist, and a corps of investigators, the normal expenses of which would mount into tens of thousands of dollars, Hiss might well have felt less than normal trepidation as the case went to the jury.

But, verdict apart, the American people have had a peculiar education in the underground government which has so vitally affected its life and future.

I Don't See the Justice in Passing Housing Legislation That Takes Care of the Boy Who Isn't in Uniform Without Passing a Housing Bill To Take Care of the Boy Who Is in Uniform

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. BOYKIN. Mr. Speaker, I am happy to learn that the House as well as the Senate Committee on Banking and Currency have unanimously, and with favor, reported from out of those committees S. 1184, and it will shortly come to this floor.

Moreover, I am happy to know that it passed the Senate on the very day it was reported out from the committee.

S. 1184 is a bill to encourage the construction of housing to lease at low rental by private industry and with private capital on or in areas adjacent to Army, Navy, Marine Corps, and Air Force yards, bases, or other installations.

Let me suggest to the consideration of this House that S. 1184 is not an act to provide employment to the unemployed, it is not a proposal to beautify cities, to wipe out blighted areas, or to eradicate slums. It is not a social program to afford so-called economic rent to certain low income groups. It is a piece of legislation that will do all these things.

It will, at the same time, solve a problem facing our armed service forces—on a sound basis—and do that without siphoning hundreds of millions of dollars collected in taxes out of the Federal Treasury—to do a job that can and should be done by private industry.

For more than 10 years I served on the old House Committee of Public Buildings and Grounds struggling with the problems of housing under the veritable catalog of Housing Administration that I have seen come and go.

This is the first piece of legislation ever advanced comprehending a plan which invokes the use of private funds—as well as private builders—to solve a housing problem.

I need not point out to my colleagues in this House that any record for the economic and provident administration of our National Government has been fully established.

Mr. Speaker, from the standpoint of my business experiences, as well as a Representative to this Congress, S. 1184 is—in my opinion—one of the most constructive pieces of legislation that has come before this body in many a day.

It is a fitting application of sound business principles addressed to a highly vexatious and pressing problem facing the Federal Government.

Mr. Speaker, I have a personal interest in this problem. In Mobile, Ala., there is a great military installation almost within the shadows of my home. It is substantially a wartime installation. The housing conditions which obtain at Brookley Air Force Base at Mobile, Ala., are as inadequate as they are any place in these United States. I have first-hand knowledge that conditions identical with those at Brookley Field exist adjacent to every military installation in these United States, and that means every part of the country in every State of the Union.

Need I recall the pictures published in Life magazine but a few short weeks ago which exhibited but some of the squalor and the unsanitary conditions under which thousands of the families of those in our armed services now live? And I mean the enlisted men just as much as I mean the families of commissioned officers.

Life magazine's pictorial presentation of these conditions was revolting. It is unthinkable that this Congress had not sooner discovered some economically and financially sound method of solving the housing conditions of our armed service forces, and especially so with respect to housing family men charged with the uprearing of their youngsters.

Hundreds of millions of dollars, if not billions, have been placed at the disposal of the FHA, the Veterans' Administration, and other agencies of Government to provide housing for veterans and other civilians during the past two decades. It is high time, as the Honorable Secretary Stuart Symington so aptly points out, that this Congress do something to house the men who are still in uniform—and S. 1184 is a bill that will do just that.

Mr. Speaker, this Government has no harder headed, harder working, direct actionist and business-minded administrator than is the Honorable W. Stuart Symington, Secretary of the United States Air Force.

When Stu Symington tackles a job you can expect that that job will not alone be well done but that it will be done with both economy and dispatch. We have on innumerable occasions seen him apply business administrative principles to the solution of the many vexatious problems of government that he has handled in the half dozen Federal activities he has headed up at one time or another.

Less than 10 days ago, silently, quietly, and effectively, he again went into action. A great aviation strike had been in progress for 10 long weeks at the Bendix plant at South Bend. Every effort at compounding the differences of management and labor had failed to bring a solution. After all negotiations had broken down, Secretary Symington called Malcom P. Ferguson, president of the Bendix Aircraft Corp., to Washington. At the same time, he also sent a plane out to Detroit to pick up Mr. Walter Reuther, head of the striking union. After receiving them and stating the hazard that this strike offered to national defense to each individually, he brought them together for a meeting in his own office. He then called in the Assistant Secretary of Labor, John Gibson, and his own director of public relations, Steve Leo. The conference, as reported by the press, although it started at about noon time was still snarled up at 3 o'clock the next morning.

Although Conciliator Symington's attitude was adamant, he pointed out that the differences would have to be settled sometime and that they can well be settled, here and now. Again the negotiators started, this time it was on the road of understanding. It was something over 23 hours later that settlement was reached, and the problem of the strike solved by the Secretary of the Department of the Air Force.

Now, Mr. Speaker, it was no accident that Secretary of Defense Forrestal named the Honorable Stuart Symington to handle the difficult age-old problem of obtaining adequate barrack quarters and housing for all military personnel, Army, Navy, Air Force, and Marines, which has long plagued those charged with administering the affairs of the Armed Service forces.

In appearing before the Senate Committee on Banking and Currency, Mr. Symington made a clear, brief, and concise statement urging the passage and adoption of S. 1184.

Let me here introduce pertinent parts of his statement that evidence the urgent need for this legislation.

Secretary Symington spoke, in part, as follows:

> Mr. Chairman, and members of the committee, I appreciate this opportunity to appear before your committee on behalf of the National Military Establishment in support of this legislation to provide homes for our military personnel.
>
> The National Military Establishment considers that the enactment of this legislation is essential to the efficiency of the armed services. Present housing facilities for military and civilian personnel of the National Military Establishment are so totally inadequate in numbers as to fail utterly in meeting the demands. This proposed legislation would greatly stimulate construction by private enterprise of housing units needed by the National Military Establishment.
>
> In order to attract and hold the highly trained, experienced and technical personnel now required by the Departments of the Army, the Navy, and the Air Force, it is essential that this personnel be afforded an opportunity to live comfortable and normal lives insofar as military duty permits on a reasonable parity with the average American citizen. Most of them do not now have that privilege.
>
> For example, in my recent travels to various bases, some of the conditions we have found are almost unbelievable. At Mather Field, Calif., families are living in converted barracks-type buildings where it is necessary to use community bath and cooking facilities. The same applies to Mitchell Field, N. Y. At Chanute Field, Ill., there are several families living in a converted mid-Victorian house where only outside toilets are available. I could name many more specific examples of which the above are typical.
>
> At this point may I deviate to say that at Muroc Lake, jointly operated and used by the Army, Navy, and Air Force, and possibly the most important base of all because it is where we do most aircraft testing, conditions are simply unbelievable. I saw 17 families living with one wash basin and one toilet. I do not mean one group of wash basins and one group of toilets, but just one wash basin and one toilet.
>
> By the very nature of the service, military personnel must always be on order. They must proceed to designated places at designated times for varying durations. As a result, they are considered transient to whatever community in which they currently reside. Under the terms of the existing National Housing Act transients are not considered sound business risks for housing. Many of our people are unable to find quarters at all. Others are forced into slum areas or makeshift dwellings too inadequate to have been considered a part of the available and livable housing facilities of the community in the first place. Moreover, any adequate accommodations that may be available command a price far beyond their means. With the enactment of this legislation, we intend to give priority to caring for the need of quarters for junior officers and noncommissioned officers who are most affected by these conditions.
>
> The result of this situation on the effectiveness of our armed forces is incalculable. Separated families and squalid living conditions combine to produce very poor morale. The resulting problems of replacement and excessive training costs seriously jeopardize the effectiveness of our efforts to provide adequately for the defense of the Nation. The same housing difficulty also greatly retards our efforts for personnel procurement.
>
> In short, Mr. Chairman, there are three very pressing reasons why the National Military Establishment feels that this legislation is urgently needed. First, there exists a morale problem that seriously bears upon the effectiveness of our defense measures. Second, we are having grave difficulty in acquiring the personnel that we need; and third, we are having equal difficulty in keeping those that we do get.
>
> Modern warfare demands a much higher percentage of qualified specialists than at any time in the past. Such men, stable and serious as a class, are deeply interested in their homes and families. They are also amply qualified to succeed in civilian life. It is these men, the ones we need most, that we cannot attract or expect to keep if military careers prove a handicap in providing adequate homes for their families.
>
> The housing created as a result of this legislation would not alone solve our entire housing problem any more than adequate housing alone would suffice to attract into service the number of competent engineers

and technicians that are urgently needed. The measure being considered today, however, is designed to provide immediate relief. The basic requirement is, of course, for the erection of a sufficient number of adequate public quarters to house all military personnel. This is also a long-range requirement, the fulfillment of which is of necessity a lengthy process. But the problem is immediate and pressing. This legislation would operate, in the shortest possible time, to provide an invaluable aid in easing this grave difficulty.

This plan has the approval of the entire National Military Establishment. The Federal Housing Administration will suggest certain technical amendments and the Bureau of the Budget has advised that the objectives of this with the proposed amendments should be considered in accord with the program of the President. * * *

Through this present bill, it appears we may solve something which is costing the American taxpayers tens of millions, if not hundreds of millions of dollars through failure of reenlistment. * * *

Take a place where the reenlistment is 90 percent because they have adequate housing and are happy, and then at other commands other boys reenlist only on a basis of 7 percent. We go to them and says, "Why do you not come back to the Air Force?" They reply, "Because my wife and children will not accept this type of living in such housing."

So, we know this bill will improve that if we can pass it, because then we can get decent housing to keep people who are skilled. * * *

You see, the trouble is that on this basis the boy who goes into the Air Force almost automatically knows his life is going to be wrecked, because either his wife is going to refuse to live with him in such quarters, or he is being forced month by month, into bankruptcy.

Senator CAPEHART. Suppose you save nothing but you made available good housing. That would be worth while would it not?

Secretary SYMINGTON. Yes. May I say what this bill will do, Senator, and I am as sure of it as I am here this morning. It will save a lot of marriages and homes, and it will give a far better Air Force for less money; and a far better Army and Navy. I want to emphasize I am testifying for the three services.

Senator WHERRY. As you said, you would save a lot of marriages and homes. You would also save a lot of airplanes.

Secretary SYMINGTON. No doubt about that.

Senator WHERRY. Because you will keep the experienced men in the service.

Secretary SYMINGTON. Yes, sir; and therefore the Air Force and Navy would save a lot of lives.

Secretary SYMINGTON. May I make one more statement * * * I don't see the justice in passing housing legislation that takes care of the boy who isn't in uniform * * * without passing a housing bill to take care of the boy who is in uniform.

Mr. Speaker, S. 1184 is fundamentally and factually a sound bill.

It is such a bill as you might well expect Secretary Symington to endorse and approve. I have heard it stated repeatedly in this House that thousands upon thousands of Army, Navy, and Air Force personnel upon which the Government had spent hundreds of millions of dollars in training and education—have left our armed services because of the insufferable housing conditions which they and their families have been compelled to endure during the past 5 years.

I state, and I do so without fear of successful contradition, that the enactment and approval of S. 1184 by this House will not only strengthen the security and defense of this Nation by retaining in the armed services highly trained and skilled personnel, but it will save the future expenditure of untold millions of dollars of tax funds that have been spent in training and retraining men in order to maintain the strength of the forces—as determined by this Congress—only to have them quit the services because of intolerable housing conditions.

The bill was reported unanimously out of the Banking and Currency Committee and the same day it passed the Senate. It has but recently been reported and without a dissenting vote by the Banking and Currency Committee of the House.

This House would, in my opinion, be remiss in its duty if it failed to pass S. 1184 and do so with dispatch.

The Marines Are No Luxury

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Chronicle:

THE MARINES ARE NO LUXURY

Because there are obviously people in high places in Washington who need it, we are going to deliver a little homily about the spirit of the United States Marine Corps and its worth to the Nation.

We—and we believe a great many others—have stood by in growing consternation while the behind-the-scenes campaign to abolish the corps has gone forward. Those who would like to scuttle the corps talk in lofty, misty terms about the waste involved in two services doing the same job; of detrimental rivalries; of the neatness that could be achieved by letting the Army simply soak up the Marine Corps ground units and the Air Force take over the Marine air units. On paper it looks good, perhaps. But we can't remember that the paper attractiveness of any battle scheme ever contributed to the winning of a Pacific beachhead. What won those beachheads was the courage, the spirit, the guts, the coolness, and efficiency of the individual fighting man.

It has been the specific assignment of the Marine Corps for nearly 175 years to spearhead attacks, to wade into the tough spots and clean them out with whatever it took in the way of readiness to die. An outfit with that kind of assignment couldn't be large—it had to be close knit, specially picked for ruggedness of body and spirit. Perhaps it was inevitable that such an outfit would come to be considered—and consider itself—a sort of corps d'elite. We think the corps earned that slight vanity on its record across a century and three-quarters, and recently on its performance at Guadalcanal, Tarawa, Saipan, Guam, Palau, Iwo Jima, and Okinawa.

Four years have passed since the last of those operations. It seems a short time for a Nation to forget its tremendous debt to the relatively small corps that did those ugly but indispensable jobs. We don't think the Nation has forgotten; we don't think the American people have failed to grasp the fact that they owe a considerable part of the Pacific victory to the fact that these men regarded themselves as Marines, and therefore the defenders of a long, proud tradition.

Yet the Nation seems content at this moment to sit back and acquiesce in an obvious, organized effort to wreck the corps, to toss overboard all of that spirit and pride, to throw away an arm of defense which stands to prove as useful in any future war as it was in the last.

Apathy, in this case, can amount to tragic shortsightedness. The Marine Corps isn't out for applause; it's asking only the chance to preserve its proved usefulness, and its fight is against a combination of greed, envy, and sheer obliviousness. We urge support for the corps in this struggle; it will pay dividends in the greater security of the Nation.

Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. JENNINGS. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include as a part thereof an editorial in the Saturday Evening Post of June 11.

Russia's renewal of her blockade of Berlin, the beating of and insults heaped upon our representatives in China by Russian-controlled Chinese Communists, the march in England of English radicals carrying placards proclaiming their dislike of Yanks, as they term our armed forces, over there for their protection, the trade agreements made by Britain's Labor Government with Russia, the growing unrest in Japan, all call for frankness on the part of our State Department. These alarming conditions place a heavy responsibility on all Americans in and out of Congress.

The American people should be told the unvarnished truth. And there should be action taken along the lines suggested in the editorial I have placed in the RECORD:

THE GOP MUST STAY AWAKE ON FOREIGN POLICY

There's no reason why the Republican Party should either tag behind the administration's foreign policy or take haphazard pot shots at it. A basically bipartisan policy is well and good. But that doesn't mean the GOP must continually waddle in the tracks of the Democrats, shouting "Me too" at suitable intervals.

Statesmanship means leadership. It's about time the Republican Party proved once more that it has both. It can show that best by keeping its eye on all foreign matters on which poth parties are agreed, and by pointing new ways toward strengthening this country's world position.

Here are some of the points that look important to us in developing a militant GOP stand on foreign policy:

1. It should be stated clearly that our effort to halt the march of Soviet communism takes precedence over all regional and local problems. Wherever in the world the fight against Moscow's agents is obscured by other issues, the over-all policy of halting communism must have priority.

2. The Republican Party should press for equal representation, official and private, between the United States and Russia. We are now permitting Soviet diplomats to roam about our country while our diplomats and correspondents are kept caged up in Moscow. Sometime we may want to show some Russians how democracy works in our land. The

privilege should be reciprocal. The same goes for dealing with all Soviet satellites. The Communist countries must be made to understand that world relations are not a one-way street.

3. The Republican Party should draw public attention to the fact that the Soviet Union is represented by three delegations to the United Nations. For the past 4 years we have got used to the hypocrisy of seeing delegates from the Ukraine and Byelorussia get away with the fiction that they represent sovereign states. Even if it proves difficult to oust them from the UN, the record must be kept clear at all times. The GOP has the job of keeping the truth alive and to see to it that no Soviet fraud is accepted as internationally legal.

4. The whole of our sorry performance in Asia needs to be brought into the open. The Republican Party might prepare a thoroughly documented white paper about the influence of Communist fellow travelers on the State Department's Far Eastern Division. The country has a right to know just why we failed so miserably in China, are at odds on Japan, and insist on hitting ourselves over the head with a bamboo stick in Indonesia.

5. Our prestige in the Middle East is full of holes that need mending. The American position should be restated somewhat like this: We want to see a prosperous and healthy Near Eastern region, reasonably free of rivalries that sap the strength of small young nations. Only an economically integrated Middle East, with the Arab Nations, Iran, Israel, and Turkey contributing their share to stability, can withstand the fifth-column tactics of communism.

6. Is the Marshall plan succeeding as a giant relief operation, or is it helping long-range recovery? The GOP should try to find the answer to that question. No flamboyant Congressional speech can do that job. What is needed is a careful Republican report to the people of the United States, measuring the effect of this bipartisan venture into Euroepan economic life. The Marshall plan, the North Atlantic Treaty, and our arms-for-Europe program call for constant checking on efficiency in performance and control of expenditure.

7. The GOP's militant foreign policy should bring the facts of our role in the world into every precinct. We need an informed electorate in 1952 as well as right now. Neither a great nation nor a great party can afford to be swept along by events. Men make history. And history is waiting for the men of the Republican Party to help make it.

To Prevent a Recession

EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. PACE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Fort Gaines (Ga.) News-Record of July 7, 1949, by the publisher, Ivey E. Peebles, former writer on the staff of the Manufacturers Record, and for several years a member of the staff of the Maryland Public Expenditure Council:

BUY WITH CONFIDENCE TO PREVENT A RECESSION

When the public stops buying it soon stops working. When surpluses pile up the factories shut down, causing unemployment. Since the unemployed are not able to buy, the recession drops into a depression.

In general it appears that if we do not spend what we earn we are eventually deprived of the right to earn.

Because a recession, which begins with a refusal to buy, soon leads to unemployment, we are apt to become confused as to cause and effect.

The traditional ounce of prevention needed just now is to keep buying stimulated.

But why have people slowed down in their purchasing? In part it may be due to the drying up of wartime savings sooner than expected because those savings never were worth what they appeared to be. Or, it may be as generally alleged, the public has decided to wait for reduced prices. If so, it is a mistaken policy.

There will be no general reduction in commodity prices in the foreseeable future. There will be reductions here and raises there but no reduction in the price level.

This fact is easily understood when we reflect that a price concerns two values, the value of the commodity and the value of the dollar. We have a dollar that is now fairly stabilized at a very low value.

After the dollar was depreciated to about 60 cents in the early thirties the effect was not reflected immediately in higher commodity prices because of the prolonged depression and the wartime price controls. By that time a further depreciation in the buying power of the consumer's dollar had been effected through Federal taxation. According to fiscal experts the dollar had dropped to about 29 cents in buying power. At about that value it appears stabilized.

So long as nobody in authority even discusses a strengthening of the national currency there is no prospect of a general price drop.

A good illustration of how this principle works is apparent to those who as far back as 15 years ago may have had occasion to visit Old Mexico. They noted that the Mexican dollar, although containing more silver than our own, would buy in Mexico only one-fifth as much. Mexican restaurant patrons had to pay $5 (pesos) for the same meal that United States' restaurant patrons were accustomed to buy for $1. After 15 years that same rate prevails. The Mexican people have experienced no general price reduction, because long ago their dollar (peso) was stabilized at a level which made, and has kept their commodity prices constantly five times as high as ours. What looks like high prices to them is only cheap money. The same thing is true for us.

Since currency manipulation and Government spending caused high prices, only a reversal of these steps can cause a reduction in the general commodity price level. And who expects either step to be taken?

Insofar as the hope of price reductions is a deterrent, we may well go on spending for what we want and need. It will stop all appearance of a recession.

Byrnes Breaks With Truman

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook of June 21, 1949:

BYRNES BREAKS WITH TRUMAN

Last week former Secretary of State James F. Byrnes came out more strongly against the entire socialistic program of President Truman than any present leader of the Republican Party has so far done. Delivering the principal address at the commencement exercises of Washington and Lee University in Virginia, the man who was appointed by Franklin D. Roosevelt to be the country's wartime stabilization chief declared: "We are going down the road to statism. Where we will wind up no one can tell. But if some of the new programs seriously proposed should be adopted, there is danger that the individual—whether farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state."

That was James F. Byrnes speaking, former Representative from South Carolina, former Senator, former Supreme Court Justice appointed by F. D. R. and former Secretary of State appointed by Harry S. Truman. He said, "Too many people are trying to transfer power to the Government. We are not only transferring too much power from the individual to the Government, but we are transferring too many powers of State governments to the Federal Government. We should not have the Federal Government regimenting our lives from the cradle to the grave." Adding that "too many people want more pay for less work," he called for a reduction in Federal spending and Federal powers, and pointed out that "our first line of defense is a sound, solvent American economy. The only wise course is to reduce expenditures and live within our income."

The Nation has had such warnings before, but it is novel and significant to have them sounded so strongly by a former chief servant of the Roosevelt and Truman administrations. Here is startling evidence that conservative Democrats in the South and elsewhere are in full and passionate agreement with the Republicans on the major issue before this country today. Only political sectionalism, and the long shadow of a quarrel between North and South which should have ended 80 years ago, have prevented an alinement from taking place which would unquestionably make for conservative leadership of the United States. With so much at stake, it will be strange if some political leader does not soon discover a formula which will permit conservatives in all parts of the country to unite and to elect a President. They have the voting strength to do it, if the issue can be drawn in such a way as to unite them, and if the handicap of the Republican Party label could somehow be removed in the Southern States.

A Dirt Farmer Looks at the So-Called Farm Programs—Past, Present, and Proposed

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. GROSS. Mr. Speaker, in an effort to obtain the views of actual farmers on the so-called Brannan farm program I have sent out many copies of the bill containing Brannan's proposals and asked for the opinions of these dirt farmers.

I submit herewith for the consideration of Members of the House of Representatives the reply received from D. K. Webster, a farmer residing near Cresco, Iowa, who operates a farm of 240 acres. With the exception of the period he served in World War I, Mr. Webster has spent his entire life as a farmer and has been a producer of purebred hogs and cattle. Mr. Webster's letter follows:

I hope that someday someone will introduce a bill which is intended to be beneficial to agriculture, which will be drawn up in such a way that we farmers can understand the provisions therein and not be compelled to guess at it. H. R. 4753 has created about as much enthusiasm in our community, up to now, as a recruiting officer would receive in an old soldiers' home. What little discussion I have heard seemed to be to the effect that "You better watch out."

But I might add that the average farmer on the street doesn't seem to understand it—most of them are agreed that it would mean quotas being forced onto us once again, which is something that most farmers do not want. We haven't forgotten our quotas on the number of sows we could keep and the number of pigs we could farrow (corn-hog program) and I (personally) can still see the little pigs scooting out from under the gates in the stockyards in South St. Paul, Minn., and off on their merry way into the willows along the Mississippi River where the packing-house workers went early mornings, late afternoons, and Sundays, to catch pigs to carry home to raise more pork.

We (the Iowa farmers) haven't forgotten the change of program whereby they, the AAA, told us how many acres of corn we could produce, so many acres in beans—whether we wanted beans or not, and clipping the heads off the oats—and we are in no hurry to get back to that type of dictatorship just yet.

I notice in the farm publications of late that they all seem to think we are due for quotas within a short time. To me, most of this AAA business has been a pain in the neck, and, I might add, that I have not received a so-called Government check for a good many years, nor do I want one now.

All the average farmer wants is what Milo Reno advocated years ago, namely, cost of production, plus a fair profit. That is asking no more than the banker, the plumber, or any other trade asks.

If the Government would spend more time and money providing adequate storage facilities to take care of the crops produced on surplus years and less money in AAA payments to farmers for building dams, dikes, and irrigation ditches such as I have seen constructed in western South Dakota, which will never hold any more water than your hat because they have been constructed in arid regions (they were built for one reason only, that being AAA checks) the Iowa farmers would like it. They would also like to have surplus grains, such as corn, wheat, etc., stored in bins and cribs built by the Government and located in the areas in which these crops were produced and in which areas these grains will eventually be fed to livestock.

Not many years ago there were quite a lot of grain bins located here, and they were full and along came a short crop year and presto—those bins were empty and we were crying for more grains to carry our stock through. This business of bumper crops cannot continue indefinitely—we are bound to have crop failures, as we have been having every so often, as far back as I can remember and I am 50 years old. Four years ago practically the entire corn crop in the State of Iowa was hit by killing frost on September 28. There was no carry-over from the year before, and there wasn't enough dry corn in Iowa to make corn syrup for babies, let alone corn whisky for adults. Maybe I'm getting Iowa and Kentucky mixed up now.

It's as good business for us to have corn in the cribs (Government surplus cribs) as it is for me to have money in the bank and I might add here that I have about as much of the latter as the Government has of the former.

If one of you Congressmen in Washington could figure out a plan whereby the farmers of the United States could get on an even keel, and remain there; some assurance of a fair price at all times for the crops we produce, some sense of security—then, and only then, would you, in Washington, and every other city in the United States, be able to keep the farmers' kids on the farm without resorting to trickery. Think it over, I'm too old to change my way of making my livelihood—my children are not.

In August 1948, top cattle were selling for $40 per hundredweight; top hogs brought $30 or better—within the last few weeks top cattle brought us $20 to $24 and top hogs around $18. Harry's pre-election promise to farmers didn't stand up, did it? We can get a new tractor today for $2,450—if we want it, and we don't have to go before the AAA Committee in order to be allowed to purchase one, as we had to do a few short months ago. Tractors are plentiful, trade-in's are poor property. No waiting lists now. The buyers are getting choosey.

Wonder what would happen if the oil, steel or rubber dealers' prices were cut from one-third to one-half and they still continue to pay double or triple for their raw material? Would they holler?

I have 70 young pigs and 17 more sows to farrow; 55 acres of corn; 5 acres of soybeans, 34 acres of oats, and 1,800 bushels old corn in the crib. What am I offered? What is it worth? I wish I knew.

Retirement of Dr. David J. Price

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. FENTON. Mr. Speaker, the Department of Agriculture has announced that Dr. David J. Price, distinguished chemical engineer and expert on the causes and prevention of dust explosions and agricultural fires, retired from service in the Bureau of Agricultural and Industrial Chemistry on June 30 after more than 37 consecutive years of Federal service. Last May, climaxing his career in the Department of Agriculture, he received a superior service award from Secretary Brannan for his outstanding research accomplishments and educational efforts in improving fire-fighting methods and in preventing dust explosions and fires in the harvesting and processing of farm products.

From 1942 to 1944 Dr. Price was president of the National Fire Protection Association, and in 1947 was a member of President Truman's Committee on Fire Fighting Services. He has been active in the National Safety Council, the National Fire Waste Council, and many other national and State fire and safety organizations.

Dr. Price has long worked closely with firemen's groups throughout the country as a training consultant on fires involving chemicals and farm products. Widely known for his work in promoting accident and fire prevention in industrial centers, on farms, and in rural communities, he has been honored by membership in the International Association of Fire Fighters, the International Association of Fire Chiefs, and many State and local firemen's associations.

He is a native of Ashland, Pa., in the anthracite coal region, in my district, and worked for a number of years with various mining companies in both the anthracite and bituminous coal regions. As a young mining engineer, he laid out the town of Clymer, in Indiana County, Pa., and developed a number of mining operations in that section.

Entering Government service in 1912, Dr. Price was first employed at the Pittsburgh experiment station of the Bureau of Mines. He joined the Department of Agriculture's Bureau of Chemistry in 1914 and inaugurated the Department's research and educational program on the prevention of grain-dust explosions and farm fires. He is the author or coauthor of more than 300 publications on these subjects.

He is a graduate of the School of Mines, Pennsylvania State College, and holds two degrees—bachelor of science in 1925 and engineer of mines in 1927—from that institution, and has advanced academic degrees from George Washington University—master of science, 1927—and American University—doctor of philosophy, 1931. His college work and graduate studies were all completed after he had passed 40 years of age and during his service in the Department of Agriculture.

When the four regional research laboratories at Philadelphia, New Orleans, Peoria, Ill., and Albany, Calif. were authorized by Congress in 1938, for research on the industrial utilization of agricultural products, Dr. Price was made chairman of the committee that prepared the plans and specifications for their construction.

Research in the Department of Agriculture under Dr. Price's direction has yielded fundamental data on the explosibility of dusts from farm products and made possible the development of effective measures for preventing dust explosions. As a direct result of his work, losses of life and property from dust explosions have been decreased. Dr. Price represented the Department in its work in this field with other Government agencies, national safety organizations, and various State and local groups.

By direction of the Secretary of Agriculture, he participated in the investigation of a number of national fire disasters. At the request of Gov. James V. Allred, he investigated the cause of the New London, Tex., school explosion in 1937 which took the lives of 293 pupils and teachers. His report of this disaster was presented to the Senate by Senator TOM CONNALLY and published as a Senate document.

Dr. Price is internationally known for his outstanding contribution in promoting accident and fire-prevention work

for the greater safety of workers in industry and agriculture. His many friends in the Congress as well as in the executive departments will extend their well wishes for continued success as he terminates his Federal Government service to continue his research work for the benefit of the general public in his specialized field of dust-explosion and fire prevention.

Present and Future Market Channels for Western Wheat

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. STOCKMAN. Mr. Speaker, under leave to extend my remarks, I include the speech given by my friend and constituent, Mr. E. J. Bell, administrator, Oregon Wheat Commission at the Western Regional Wheat Improvement Conference, Pullman, Wash., on June 20, 1949.

It is very important to the economy of this country to maintain a sustained market for wheat and wheat products, and Mr. Bell has pointed out some factors which may influence the present and future market. I commend his message to the attention of every Member of the House .

The address follows:

In discussing the subject of present and future channels for western wheats, it will be a little easier for me to direct my remarks primarily toward the region in which I have been working intensively for the past 2 years. We refer to this as the Pacific Northwest wheat region, which includes all of Oregon and Washington and Idaho, north of the Salmon River. It is a fairly distinct physical and economic area.

With the exception of the Big Bend, the wheats of this region are primarily low in protein, or perhaps I should say high in starch content. They seem to have peculiar properties for the manufacture of pastry flour, cookies, cake, crackers, and biscuits. We do not know, however, just what it is that gives some of our varieties grown in some localities their peculiar properties for speciality purposes. There is considerable room for fundamental research in the factors affecting the physical and chemical characteristics of the wheat kernel. So far as I know, no one can explain why different varieties of wheat grown under different conditions behave the way they do in the mill and in the bakery. An intelligent marketing program requires more fundamental information than we have been able to obtain about the wheat we are trying to sell.

Now let us see what has happened to our wheat in the past. During the 16 crop years, 1927–28 to 1942–43, the average production of Washington, Oregon, and northern Idaho was about 76,000,000 bushels of wheat a year. The millers in the region purchased annually an average of about 6,000,000 bushels of Montana hard wheat for blending purposes. About 35,000,000 bushels were used in the area for food, livestock feed, and seed. Another 18,000,000 bushels were shipped to California and other parts of the United States as wheat or flour. Exports averaged about 27,000,000 bushels. This accounts for a total of about 80,000,000 bushels, and the remaining two million were added to the carry-over.

In recent years production has been considerably higher than the prewar average of 76,000,000 bushels. The crops of 1946, 1947, and 1948 amounted to 114,000,000 bushels, 98,000,000 bushels, and 114,000,000 bushels, respectively. Condition of the crops as of June 1 indicated a 1949 production of 101,000,000 bushels in Washington, Oregon, and northern Idaho. With improving farming methods, higher yielding varieties, weed control, and other technological improvements, it seems likely that we can expect a production of ninety to a hundred million bushels in the future.

At the present time the chief outlet for the wheat and flour of this region is through sale to the United States Government. Consumption within the region for human food continues at about prewar levels. Shipments to California and to market centers in the eastern part of the United States have declined materially because of a combination of high transportation costs and price relationships. The amount fed to livestock is considerably less than it was in previous years. Sales by private exporters have been very small. The remainder of the crop has been purchased or acquired by the Government in the form of wheat or flour for shipment overseas.

Now what about the future? Our most profitable market is for wheat as human food within the United States. Any increase in the consumption of wheat products within the region will be beneficial. The millers and the bakers are spending considerable money in programs to increase the consumption of wheat products in the United States. These are long-range programs and will probably be considered successful if they stop the downward trend in the per capita consumption of wheat flour which has persisted for the past 30 years. In our own region human food consumption accounts for about 13,000,000 bushels annually.

Shipments to California and eastern United States have been another outlet for Pacific Northwest wheat. Here we must compete with other areas which have increased wheat production materially in recent years and which are temporarily in more favorable positions to supply markets to which our products formerly moved. In times past, considerable quantities of our wheat and flour were shipped into the area south of the Ohio and east of the Mississippi. Flour for pastry and other specialty products has also been shipped to New York, New England, and other markets on the Atlantic coast. According to data published by Louis D. Cannell, of the State College of Washington, shipments east averaged about 10,000,000 bushels of wheat and flour and shipments to California averaged about 8,000,000 bushels for the period 1927–42.

East-bound shipments have been large in years when there was a short crop of soft red winter wheat or when the export demand has been low. It is not likely that our area could compete with the wheat of the Great Plains in supplying eastern markets with high-protein flour for bread making but to the extent that we have soft wheat which is superior for other purposes, we can expect to develop outlets for a certain amount of wheat and flour in the eastern part of the country. This will depend, however, upon changes in transportation rates and price relationships which will permit our wheat and flour to move east in substantial quantities.

Livestock feed is another important domestic outlet for our wheat. The amount fed to livestock and used in processing commercial feeds averaged around 18,000,000 bushels during the prewar period. In recent years it has dropped to less than 10,000,000 bushels. Increasing this amount will depend upon price relationships. At the present time wheat is priced out of the feed market. In the future, it must be available at prices comparable to other feed grains in order for us to increase materially the amount used for livestock and poultry.

Over a period of years we have thought of the Pacific Northwest as an export region. As I indicated before, exports from this area averaged about 27,000,000 bushels of wheat and flour during the prewar period. During the past several seasons the Commodity Credit Corporation has exported or sold to the Army for distribution abroad around 60,000,000 bushels annually. The size of our export market in the future will depend on a number of factors: (1) Dollar exchange will determine the total size of our export market; (2) consumers abroad will need to be shown how to prepare and use wheat and to understand its value in the diet; (3) wheat will have to be supplied to them in a form which best fits into their dietary habits and method of food preparation; (4) it will have to be sold at a price which they can afford to pay and which will compete with wheat from other parts of the world and with rice and other grains.

The possibilities for developing larger outlets than we had before the war are not hopeless. There are many more people in the Orient now than there were in 1939. Some of those people have already learned to eat wheat where they used to depend entirely on rice. Our kind of wheat may be found to meet their requirements as well or better than wheat from other areas. Perhaps we will need to supply it to them in a form whereby it can be cooked and eaten like rice, rather than in the form of flour which must be prepared and baked in ovens. Perhaps, on the other hand, our best outlet will be in the form of products prepared in commercial bakeries rather than in the home. I am not at all satisfied that we as a Nation, or as a region, are doing all we could and should be doing right now to develop demand for our wheat and flour in the future. I fear that we are losing some excellent opportunities to build a market for our wheat in Japan, India, and other countries in the Orient.

Another possible market channel for western wheat is through what we have often called industrial uses. Under this heading, however, we include starch and glucose for human food as well as for laundry, paper, alcohol, and other products. This would depend on getting wheat at a price comparable to that for corn and other grains. It would also depend upon finding outlets for wheat gluten and other byproducts that would help to stand part of the cost of manufacturing. A number of other problems such as power, transportation, and distribution of the finished product will need to be met.

I suppose you have noticed that I have not attempted to estimate just how much Pacific Northwest wheat we will be able to sell as human food within our own region; that I have not attempted to estimate how much we will be able to ship to California or other parts of the United States; that I have not attempted to estimate how much we will be able to feed to livestock and poultry, nor have I attempted to estimate the size of potential outlets abroad. Perhaps all of these outlets added together will not equal the total amount of wheat we will have for sale. Developing adequate market outlets depends upon finding out just what kind of wheat will best meet each of the different types of market use and then producing the quantity required to supply that use. We must also be willing and able to devise a marketing and distribution program which will make the wheat available at prices which the buyer can afford to pay. The other alternative is to continue to depend upon the Government to take the wheat off our hands as it has been doing in the past.

The British Crisis

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of July 10, 1949:

WASHINGTON REACTING TO THE BRITISH CRISIS—IN CONGRESS, THE ECA AND THE TREASURY UNDERCURRENT OF CRITICISM OF LONDON POLICIES IS BECOMING STRONGER—EFFECT SEEN ON MARSHALL AID

(By Arthur Krock)

WASHINGTON, July 9.—If the British Government and people conclude from the soothing comments of Secretary of State Acheson and the passage by Congress of an adequate second-year appropriation for the Marshall plan that no firm issue over their social-economic policies will arise with the American Government, every indication is that they would be badly mistaken. Questions addressed to officials of the Economic Cooperation Administration by Congressional committees, private conversations at the ECA and talk in the cloakrooms of the Capitol support the opinion that continuation of the Marshall Plan will be imperiled next year unless the British show real determination to remove the causes of the issue and make progress in doing so.

In Congress, which alone can provide continuing economic aid, and in more moderate degree at ECA and the Treasury, the criticisms made of British policy are these:

1. Despite billions in gifts and loans, the British seem unable to attain a wholesome economy or find any other ways to deal with their troubles than tighten rationing and the erection of new barriers to world trade. The recent grain-and-meat bilateral treaty with the Argentine and the coarse-grains pact with Soviet Russia are examples of the latter.

FACTOR OF SOCIALISM

2. Though a powerful body of opinion in the United States and elsewhere attributes Britain's basic difficulties to its Government's socializing program, that Government blames everybody but itself and the program.

3. The chief reason that the United States loan to Great Britain, which preceded the Marshall plan, was ineffective is that at least $2,000,000,000 were used to expand the nationalization of industries.

4. That Sir Stafford Cripps in one breath can say British production is the highest in history and exports as high as they have ever been, and in the next confess a threat of insolvency, indicates much of the fault is that the Socialist Government is determined to pursue its theory, whatever the cost.

5. This leads to the conclusion that United States resources are being used to keep in political power a regime repugnant to the American free-enterprise system, a conclusion, however, which President Truman's administration urges Members of Congress not to state because it implies interference with Britain's right to any kind of government it wishes.

6. The net of British policy is that it is defeating the principal purposes of the Marshall plan.

SOME LEADERS DISMAYED

These criticisms are being frequently heard from persons of great influence on legislation and public opinion here. The British Government would be well advised to accept this as a fact, which, according to reports to officials here from their agents in Europe, it has either been disposed to question or disregard, or disparage as to possible disastrous consequences. The hope in Washington is that Secretary of the Treasury Snyder will be able to make more of an impression; also Paul G. Hoffman, the Administrator of ECA, when he can get away from congressional hearings long enough to visit Great Britain.

Several examples of this mounting feeling of disapproval have come to the surface. When Senators heard of a floating proposal, attributed to British sources, that the United States make to Britain a gift or loan of Fort Knox gold to boost its dollar account, cloakroom discussion was deeply resentful. When Senator O'MAHONEY, questioning Assistant Secretary of State Thorp on the British-Argentine pact, said this was another instance of the philosophy that "Downing Street can do no wrong," he ended with the significant but unanswered inquiry how the State Department can condone for the short run what it opposes in the long run.

On the other hand, some critics of Britain here who cite its high production costs, inefficient industrial methods and cartelization are sympathetic toward resistance to devaluation of British and European currencies at this time. It would, they say, flood the American market with low-priced competitive goods and increase the flow of what is being called the sleeping depression here, which would in turn distress the rest of the world. They point to the fact that the dollar, on the contrary, cannot be specifically devaluated because it is composed of 100 cents, whereas foreign currencies, being valued in the world market in their relation to the dollar, can be changed by fiat in the number of cents they represent per unit. Of the two nonspecific ways to devalue the dollar, Mr. Snyder has announced there will be no tinkering with the price of gold, and Congress would not agree to an issue of greenbacks.

BRITISH VIEWPOINT

At the ECA, which next to Congress is the most important office in Washington from the British viewpoint, the feeling on the general subject was described to this correspondent by a close observer as follows:

There is real fear that British economic policy may be fundamentally incompatible with the broad objective while the Government remains in its present hands. British and European recovery can be achieved only by breaking down trade barriers, and British recovery cannot be attained without breaking down restraints of trade within that country. Cartelization, and the restriction of competition and production to preconceived market demand, are other illustrations of the contrary policy; and officials are apprehensive lest Great Britain become one big, glorified cartel.

The disposition of the British people is to regard commerce and industry as a necessary evil, a boring interference with the best way of life. Hence they fall back on probable demands for goods and services over 5-year periods and longer. Americans, however, enjoy production for its own sake, and know from experience—the Ford car, television, aircraft, refrigeration, etc.—that new products constantly can be expected and create new trade demands.

PRICE PROBLEMS

The British have priced themselves out of their own home market as well as the export. While the Americans in those circumstances would say "We must produce cheaper and more," the British go halfway on that road and try to compensate for the rest by cartelization. Also their Government is attempting to maintain a higher living standard than the British can afford, and announce that it is untouchable. With all respect and sympathy for the British, they must think of other remedies than Cripps proposes or the Marshall plan will either have to be abandoned or accepted as a more costly UNRRA.

Such are impressions and criticisms here which the British Government would be wise to recognize, and try to eliminate by putting much more give in the give-and-take machinery of the Marshall plan.

Time for a Challenge

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Monica (Calif.) Evening Outlook:

TIME FOR A CHALLENGE

Since the Democratic conference at Des Moines officially adopted the Brannan farm plan, enough time has elapsed for the Republican leadership to show some reaction. But although the scheme offers the best opportunity since the 1948 election to seize an issue and make the most of it, the idea has apparently not occurred to GOP policy makers. The fallacies in the Brannan plan are those which the opposition party has traditionally resisted, and against which all its elements can unite. It involves at the same time an overwhelming financial outlay by the Federal Government and the planned regimentation of our basic producers.

Surely the 1948 campaign showed the Republican Party the folly of compromising principles in an attempt to splinter votes away from the Democrats. If the opposition party does not act like an opposition, if it soft pedals its own ideals and follows faintheartedly in the wake of administration initiative, it must expect to remain a minority party. On some of the most pressing issues of the day, GOP leaders have been less interested in forming public opinion than in appeasing it; if the Democrats have won on these issues, it has been by default.

It would be a cynical mistake to assume that all the farmers of America desire the Brannan type of subsidy. Two of the great farm organizations have not endorsed it, and one—the National Grange—has strongly opposed the scheme as against the best interests of both the country and its farmers. If some of the latter have seemed to accept it, the reason may be found in the lack of any other general program for farm security. There will be no better time for the Republican Party to take up the administration's challenge and open up a vigorous fight against this country-style paternalism.

But mere opposition will not be enough. It cannot be denied that there is a farm problem requiring a positive solution, and a sound alternative plan must be put forward with the same vigor with which the administration scheme is opposed. In answering this need the GOP may profit by the Democratic mistake of ignoring the farmers when the Brannan plan was devised.

If a general conference of representative farmers and agricultural groups were called to frame a farm program, the move would give the American farmer an opportunity to voice his own views on his own problems, and at the same time convince him that the

GOP is making a positive approach to a solution. Both the Republicans and the farmers need an agricultural plan of their own. Initiative on the issue will then be in the hands of the opposition party, which may find it successful enough to apply to the whole battle against the welfare state.

Home Rule in the District of Columbia

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

JULY 9, 1949.

To the CHAIRMAN OF THE HOUSE DISTRICT COMMITTEE:

The Kefauver bill for home rule in the District of Columbia was passed overwhelmingly by the Senate on May 31, 1949, and sent to the House. The bill was referred to the House District Committee on June 1, 1949, almost 6 weeks ago.

During the past 6 weeks the Judiciary Subcommittee of the House District Committee has held only three morning sessions to hear witnesses on home-rule legislation. Only a handful of the many witnesses requesting to appear have so far been heard. The Judiciary Subcommittee has not yet set a date for its next hearing.

If the subcommittee does not take prompt and effective action to speed up its hearings and reach a decision, the House of Representatives will be denied the opportunity to take action on the measure before adjournment.

We, therefore, urge the District Committee to do everything in its power to hold successive daily hearings and make a decision on home rule. If it will assist the committee in any way to wind up its deliberations, we feel confident that the fifty-odd remaining witnesses requesting to testify in favor of home rule would be glad to submit written statements and limit themselves to brief 5-minute appearances before the committee. Home rule has been exhaustively studied and debated in the House District Committee for the past 2 years, and every member of the subcommittee must now be familiar with the issues involved.

We are confident that the House of Representatives will vote overwhelmingly in favor of home rule as soon as it gets the chance. We hope that the District Committee will allow the House of Representatives to vote on that question.

WASHINGTON HOME RULE COMMITTEE,
CENTRAL SUFFRAGE CONFERENCE,
LEAGUE OF WOMEN VOTERS OF THE DISTRICT OF COLUMBIA,
DISTRICT OF COLUMBIA CHAPTER OF AMERICANS FOR DEMOCRATIC ACTION,
DEMOCRATIC CENTRAL COMMITTEE FOR THE DISTRICT OF COLUMBIA.

[From the Washington Post of July 10, 1949]

FIVE GROUPS ASK SPEED ON DISTRICT HOME RULE—HOUSE COMMITTEE URGED TO CLEAR LEGISLATION FOR VOTE THIS SESSION

(By Edward F. Ryan, Post reporter)

Five Washington groups yesterday issued a public call to the House District Committee to speed up current hearings on the District home-rule bill so that the House may act on it this session.

The hearings are being conducted by the Judiciary Subcommittee of the House District Committee. Subcommittee Chairman Oren Harris (Democrat, Arkansas) said a day may be set early this week for resuming the home-rule hearings later in the week.

The appeal for a speed-up in the hearings came from the following groups supporting the home-rule plan: The Washington Home Rule Committee, the Central Suffrage Conference, the District League of Women Voters, the Washington Chapter of Americans for Democratic Action, and the District Democratic Central Committee.

HOPE FOR COMMITTEE ATTENTION

Members of the group said the appeal will be filed with House District Committee leaders in the hope that it may be brought to the attention of the full House District Committee when it meets at 11 a. m. Monday.

To help speed up the hearings, members of the five groups said their representatives would be willing to limit pro-home-rule testimony to 5-minute comments and to file their complete views in the form of written statements.

Chairman Harris said that plan would be all right with him. But he added that he would not want to say the procedure would permit bringing the home-rule hearings to a close next week. "I'd have to wait until I hear from the board of trade," Harris added.

This referred to the fact that the board of trade is polling its members, for the second year in succession, on the question of home rule. Last year's poll ran about 2 to 1 in opposition, based on returns of about 30 percent of trade-board membership.

Board of trade officials have said they expect to be ready to present the results of their poll to the Harris group sometime after July 15.

The junior chamber of commerce, too, is polling its 800 members on the home-rule issue. President Paul Matthews said yesterday he expects to testify at the next home-rule hearing with the poll results then available.

TEST OF STATEMENT

Following is the statement by the five organizations:

"The Kefauver bill for home rule in the District was passed overwhelmingly by the Senate on May 31, 1949, and sent to the House. The bill was referred to the House District Committee on June 1, 1949, almost 6 weeks ago.

"During the past 6 weeks the Judiciary Subcommittee of the House District Committee has held only three morning sessions to hear witnesses on home-rule legislation. Only a handful of the many witnesses requesting to appear have so far been heard. The Judiciary Subcommittee has not yet set a date for its next hearing.

"If the subcommittee does not take prompt and effective action to speed up its hearings and reach a decision, the House of Representatives will be denied the opportunity to take action on the measure before adjournment.

"We, therefore, urge the District Committee to do everything in its power to hold successive daily hearings and make a decision on home rule. If it will assist the committee in any way to wind up its deliberations, we feel confident that the fifty-odd remaining witnesses requesting to testify in favor of home rule would be glad to submit written statements, and limit themselves to brief 5-minute appearances before the committee. Home rule has been exhaustively studied and debated by the House District Committee for the past 2 years, and every member of the subcommittee must now be familiar with the issues involved.

"We are confident that the House of Representatives will vote overwhelmingly in favor of home rule as soon as it gets the chance. We hope that the District Committee will allow the House of Representatives to vote on that question."

[From the Washington Evening Star of July 10, 1949]

FIVE GROUPS URGE HOUSE TO SPEED HEARING ON HOME-RULE MEASURE—JOINT STATEMENT STRESSES NEED FOR ACTION TO GET VOTE AT THIS SESSION

Five groups advocating home rule for the District last night joined in urging the House District Committee to speed hearings on the Senate-passed home-rule bill to clear the way for House action during this session of Congress.

The groups proposed successive daily hearings on the measure and suggested that the witnesses still waiting to be heard would be willing to limit themselves to 5-minute appearances, if that would mean faster progress.

The joint statement was issued on behalf of the Washington Home Rule Committee, the Central Suffrage Conference, the District League of Women Voters, the Washington chapter of Americans for Democratic Action, and the Democratic Central Committee for the District.

PROMPT HEARINGS ARE URGED

In their effort to light a fire under the House District Committee's judiciary subcommittee, the groups declared that if the subcommittee does not act promptly to speed its hearings and reach a decision, the House will have no chance to vote on the home-rule measure before the recess.

Subcommittee Chairman HARRIS, Democrat, of Arkansas, set no future date after last Thursday's hearing. He said at the end of the hearing, however, that he understood the Washington board of trade was taking a poll on home rule and he probably would call a meeting to hear the results.

He added that if the board delayed too long, he would schedule a hearing without the board.

HOME RULE STATEMENT

The home rule proponents issued this statement last night:

"The Kefauver bill for home rule in the District of Columbia was passed overwhelmingly by the Senate on May 31, 1949, and sent to the House. The bill was referred to the House District Committee on June 1, 1949, almost 6 weeks ago.

"During the past 6 weeks the Judiciary subcommittee of the House District Committee has held only three morning sessions to hear witnesses on home rule legislation. Only a handful of the many witnesses requesting to appear have so far been heard. The Judiciary subcommittee has not yet set a date for its next hearing.

"If the subcommittee does not take prompt and effective action to speed up its hearings and reach a decision, the House of Representatives will be denied the opportunity to take action on the measure before adjournment.

"We, therefore, urge the District Committee to do everything in its power to hold successive daily hearings and make a decision on home rule. If it will assist the committee in any way to wind up its deliberations, we feel confident that the fifty-odd remaining witnesses requesting to testify in favor of home rule would be glad to submit written statements, and limit themselves to brief 5-minute appearances before the committee. Home rule has been exhaustively studied and debated by the House District Committee for the past 2 years, and every member of the subcommittee must now be familiar with the issues involved.

"We are confident that the House of Representatives will vote overwhelmingly in favor of home rule as soon as it gets the chance. We hope that the District Committee will allow the House of Representatives to vote on that question."

Capitol observers have taken the view that the plan for an elected and reorganized city

government would be sent to the House by the District Committee if it could clear the hurdle of the subcommittee.

More than 50 would-be witnesses are awaiting to be heard by the subcommittee.

On June 16, Chairman McMILLAN of the full committee ordered the Judiciary subcommittee to meet the next day on home rule. Mr. HARRIS is a declared foe of home rule.

So far, hearings have been held on June 28 and 29 and last Thursday, but most of the advocates of home rule are yet to be heard.

Down to Earth With Point 4

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. MULTER. Mr. Speaker, I am pleased to submit the views of a distinguished engineer with reference to the President's point 4. The article Down to Earth With Point 4, which appeared in the July 11 issue of New Republic, was written by Morris Llewellyn Cooke. He is a consulting engineer, has written many books and participated in numerous important governmental commissions. He was the American representative who settled the long-standing oil dispute with Mexico and head of a Government mission to Brazil to study the economy of that country, as he reported in his book, Brazil on the March. He was formerly Chairman of the Mississippi Valley Commission, Director of the Pennsylvania Giant Power Survey, head of the Storage Section of the War Industries Board, and first Administrator of the Rural Electrification Administration.

The article follows:

DOWN TO EARTH WITH POINT 4

President Truman's suggestion for a bold new program for making the benefits of our scientific advances and industrial programs available for the improvement and growth of undeveloped areas without regard to their location has once again put "the old imperialism—exploitation for foreign profits" very much on the defensive. For such imperialism we may now substitute the most positive and effective answer ever given to the age-long question, "Am I my brother's keeper" To point out that poverty, wherever it exists, is the common cause of all mankind, and to make constructive suggestions as to its amelioration mark a distinct and epochal step forward in world thinking.

Two types of reactions have greeted the President's suggestion. One is fault-finding, which is always on tap without much regard to the merits of any given proposal. Cynics and dinner-table philosophers said, with shallow wisdom, "Nothing new—we have always done it," "full of difficulties," "may take a lot of money," "pity no detailed plan was made prior to the announcement," and so on and so on. Even the London Economist dolefully asked, "Will it last?" Businessmen and bankers, for whom, in the long run, the development of backward areas will yield the most direct returns, questioned the security for the suggested investment and the extent of government guaranties.

On the other hand, the voice of the American people by and large has given an enthusiastic endorsement of the idea, hardly to be expected for an idealistic scheme that points the way, at least, toward elaborate expenditures for which the quid pro quo is not to be "cash on the barrel head." Coming after the Truman and Marshall plans, and the proposed expenditures for arming Europe, point four might well have seemed like piling Ossa on Pelion.

Without inside information, one may be sure that intense interdepartmental and interbureau battles have been waged as to where, in the executive departments, point four activities are to be located and who will be in over-all charge. Willard Thorp, Assistant Secretary of State, has been trying to coordinate departmental and bureau thinking through almost daily meetings of the representatives of a score and more agencies which hope to be included in the plan.

Experts in public administration act logically when they deprecate setting up an entirely new and independent agency—one not under an existing unit—to handle any new functional activity. Otherwise the new director—in this case the President himself—would be swamped with detail. But no rule is so sacred that it cannot be set aside now and then, at least temporarily.

Take, for instance, a matter as relatively simple as rural electrification. I am convinced that the legislative purpose would have been defeated if in 1935 the Rural Electrification Administration had at once been set up under the Department of Agriculture, where, after 3 or 4 years of a somewhat exotic development, it was—more or less logically—installed. In the early stages, especially, of an enterprise of scope, there are considerations that require an unusual degree of freedom of administrative action. The necessary élan will just not bloom under the rules and regulations which, probably with justification, have been developed through the years in agencies of long standing. Administrative machinery, admittedly necessary at later stages, may easily crush a tender young idea, and especially one embodying, as point four does, so much of promise to the peoples of the world.

From the beginning, therefore, all activities to be initiated or amplified under "the bold new program" should be headed up in an entirely new Federal agency giving unity to the specialized activities of the several bureaus and departments. In the beginning, this agency, which might be named perhaps something like the "Administration for International Technical Cooperation," should report directly to the President. The leader in any such enterprise will have to be an unusual public servant—generous enough to assume that whatever he does is intended to implement the President's vision, hard-headed enough to hold his planning within boundaries set by our national competence and resources, and sufficiently conversant and sympathetic with other cultures than our own to know that aspirations and techniques appropriate for the United States might be quite out of place in Timbuktu. Such personalities as the two great leaders of the Friends (Quaker) service committee—the late Rufus Jones and the present incumbent, Clarence Pickett—inevitably come to mind. The appointment of an administrator of this type will preclude undertakings designed primarily to give us special advantages, whether diplomatic, military, or business. Such special advantages were excluded from the President's inaugural address, in which point 4 was launched.

It will probably be harder for the typical American than for citizens of some other countries to adopt the only technique that can possibly succeed in carrying out the President's high purpose, i. e., lend a hand, so far as possible, to projects which a given native population thinks it wants, as opposed to projects which we think would be good for them—and perhaps, incidentally, good for us. This brings up a difficulty for which we Americans are only indirectly responsible.

Nearly all countries are backward, from the American standard of mass-production enterprises. They want a maximum of national self-sufficiency, both for military and for other reasons. They want to be like the United States of America, not realizing that our mass-production industries, located in a huge country with vast resources, politically unified and with a mass market, began in a modest way and only reached the mass-production stage after a long period of standardization both of equipment and products.

This widespread desire of backward countries for mass production necessarily brings up the question of large plants versus small. While of course there are situations, even today, in the less developed areas where a large plant may be justified, the place of the small-sized plant must be recognized. Otherwise we may overlook our best bet—the wide distribution of small plants, and even pilot operations. Small plants can be built and put in production in the shortest possible time. They can help many areas to become more productive by attaining a more integrated union among local raw materials, power and labor—production factors which often cannot be fully employed without small plants. They can alleviate local shortages of critical products with their quick production and their direct distribution to local consumers, involving little warehousing and transportation. (This last is normally a costly, if not prohibitive, factor in backward areas.) Such plants can serve large-scale operations by producing minor items which are in short supply. They operate with small-power equipment, now readily obtainable. They can be more simply financed, and can be allocated to establish communities.

Current investment banking methods discourage small plants. Other things being equal, the larger the plant the more attractive the flotation of bonds. Given a ten or twenty million dollar expenditure, the hanker prefers a single enterprise requiring the whole amount.

Our experience to date with large-sized plants in backward areas suggests that the local community gains little from them. Take, for example, Shanghai, a notable Chinese industrial center. In Shanghai, the capital invested comes from the outside; the profits leave the country, and so do the products. A few employees benefit, but the gain for the people is almost nil.

Local capital in backward areas, especially through the contribution of services, is much more apt to be attracted by small plants than by larger ones. Investment bankers have found by experience that securities based on plants in the local community are easier to sell than those based on a plant at a distance. The fact that interest on investments in some far-away land is apt to be low suggests that some dependable interbank or international agency might be set up to render opinions when a given project under point 4 is initiated and to keep investors currently informed as to progress made. Even some form of intercompany insurance is not out of the question. The banking fraternity has many opportunities for rendering aid of an unusual character to private investment, if its interest can be aroused. Many important kinds of work to be carried on under point 4 will apparently have no connection with business activities, as that word is generally understood. For instance, student and teacher exchanges, as now carried on under numerous and various public and private auspices, can be greatly expanded. One American export-import operator advocates setting up internationally recognized standards for agricultural products that are grown

in backward countries, to facilitate their exchange in world markets.

To raise the standard of living, the exchange of ideas is sometimes far more effective than sending machinery and equipment. The export of American know-how in regard to the employer-employee relationship, as is now being done so effectively by ERP labor advisers to western European countries, would cost relatively little and might immeasurably advance the world's productivity.

Perhaps one of the most effective ways of arriving at a workable plan is to send a well-balanced special commission to the region under study. Having observed quite a few such missions in action in foreign parts, it would seem to me the part of wisdom to have any such group begin its work in this country by making, perhaps a month or two before its departure, a dummy or pilot report, based on such information about the country to be visited as is readily available. In this way, the general character, at least, of the desired report can be plotted out and approved in advance. The members of the mission will thus start their work possessing a good deal of useful information, much of it not available in the country to be visited. It might easily be that some of the mission members would be shown, by this process, to have been unwise selections.

If disillusioning disappointments at home and abroad are to be avoided, we must attempt to realize the scope of the task to which we are addressing ourselves. Even the expenditure of $100,000,000 of public funds means only 5 cents per person for the world's population. To be most effective, whatever is done should be on the basis of long-term planning—20 years, as urged for Latin America at the last CIO convention, or in some instances a 50-year program for areas where the situation is so grave that little can be done in a hurry.

In some parts of South and East Africa the cost of providing adequate measures for conservation of soil and water is already so great that government cannot cope with it, and performs only token activities. During one recent rainstorm in South Africa soil erosion pushed the shore line 3 miles out to sea.

In the long run, and judged by dollar value, construction work of many kinds will constitute the great bulk of what is needed to get backward areas marching forward. We need full speed ahead if we are not to accept the defeatist attitude of the neo-Malthusians. In construction work the engineer is the key-man, and this forces us to face the fact that, competent as he may be on design and in building structures, the average American engineer has not been trained to be socially minded. He is as ignorant of international affairs as he usually is of domestic politics.

For the most part the engineers and applied scientists who are at the controls today were educated at a time when the social sciences, including economics, were all but excluded from technical courses. Only one or two engineers in a hundred interpret American know-how as anything more than the techniques by which structures are built in double-quick time and operated at minimum dollar cost in order to make the most money for somebody.

We engineers seem to be improving in our social outlook, but we are not conditioned yet for an aggressive frontal attack on the world's poverty and low standards of living. Engineers often call those who give thought to these matters dreamy-eyed.

To date, most American capital has been interested not so much in the development of the country itself as in exports and imports. It has often been demonstrated that pumping dollars into a country for this purpose does not necessarily result in beneficial development. The salmon industry in Alaska has done very little to contribute to the overall development of the Territory. Agriculture, industry, and population are still badly needed.

Standard Oil went into Venezuela around 1920. Twenty-nine years of large-scale oil exploitation, involving the export of millions of barrels of oil, have merely served to take the Venezuelans out of one form of production and put them into another. The tendency has been to break down, rather than to develop, the economy of the country.

Silver and tin mining in Bolivia is perhaps even more to the point. Years ago, mule trains shuttled between the lowland farm areas and the cities. Now the cities buy their sugar and other agricultural products from outside the country, using for this the dollars received for mineral exports.

The same story is true of coffee and bananas in Guatemala, meat in Argentina, copper and nitrates in Chile. These countries have become one- or two-crop countries, and when a war or a depression affects the markets for these, the whole economy is disrupted. In El Salvador, coffee constitutes 90 percent of all the exports; in Venezuela, oil is 89 percent; in Honduras, bananas, 82 percent; in Guatemala, coffee and bananas together, 95 percent; in Bolivia, tin and silver, 85 percent.

The TVA represents the general area of American know-how most available for export, judged by the reactions to it in foreign countries. Definite steps have already been taken toward adopting this over-all type of watershed development in Brazil, India, Mexico and Palestine. Partly because David Lilienthal's Democracy on the March has been translated into about 20 languages, the TVA has become our best-known, most highly appreciated institution. The TVA is almost custom-made for point 4 use, because its techniques can be employed on streams of varying size, because it affords the electric power needed to infiltrate agriculture with industry, and because the development provides an adequate foundation on which to base all phases of an enriched and growing economy. This culture, now developing in the valley of the Tennessee, if adequately safeguarded may easily result in such an unfolding of human progress as to compare with other historic river-valley civilizations; with the Tiber, Mother of Rome; with the Nile, monumental and deeply religious; with the Yangtze, cradle of the oldest surviving civilization; and with the Tigris-Euphrates, commercial, essentially practical, the birthplace of law. We have already done much to encourage TVA development in foreign parts. We must do more.

As we see it now, the Middle East, Latin America, and possibly India, afford the most promising areas in which to extend point 4 operations. The political situation in China at the moment permits only token activity. Unless and until native effort has given a more promising turn to the soil situation, Africa is not a promising field, although American businessmen are being told that fortunes can be made there. As to India, internal governmental complexities seem to rule out that area temporarily except for cooperation with the Damodar Valley authority, which is proceeding at a good pace with the enthusiastic support of Pandit Nehru.

In weighing the advantages and disadvantages affecting American participation in this world-wide altruistic program, one cannot be sure that an A rating for every recipient nation is warranted, especially during the early years of operations. Even so, we might wisely expend many millions in these enterprises without having much to show for our money and effort if thereby we gained useful insights into our own national deficiencies—technical, ethical, and spiritual—in pursuing these lofty adventures in internationalism. Let us do our part and hope for successful participation, even though we are less certain of the immediate outcome than we would be were this a military crusade—in which we have had so many illuminating experiences. We shall gladly do our share, because of a deep conviction that only through making the standard of living in the uttermost parts of the earth a common concern of all peoples can peace be preserved and the safety and dignity of the individual be advanced—causes to which we are dedicated above all others.

The Brannan Farm Plan

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. RAINS. Mr. Speaker, under leave heretofore granted to extend my remarks, I include an editorial by Mr. Walter L. Randolph, president of the Alabama Farm Bureau Federation, on the Brannan farm plan, which appeared in the Montgomery Advertiser. Mr. Randolph is an outstanding leader in American agriculture, and is well qualified by his long experience to speak on matters of farm policy. For that reason, I invite all Members to read carefully the attached editorial on the Brannan farm plan:

THE BRANNAN FARM PLAN

(Guest editorial by Walter L. Randolph, president, Alabama Farm Bureau Federation)

The proposal of the Secretary of Agriculture, Mr. Brannan, for a national farm program is not new.

It is not and probably never will be even a farm program, except in the imaginative minds of its sponsors. The reason for this is that there is hardly 1 chance in 1,000 that the Congress will provide the huge sum necessary to operate it. How much? Probably $10,000,000,000 a year or more.

In reality, it is a statement or politico-economic philosophy, a political maneuver, a cluster of promises, or a combination of two or all three of these. As such it is as old as politics.

It promises higher income for farmers. It promises cheaper food for consumers. It promises there will be little, if any, extra cost to taxpayers. Isn't that a bargain? It might be, if there weren't a catch to it. But it is an economic mirage.

The dollars it would cost may appear to some to be there but they are not. Those who see them are merely experiencing an optical illusion.

A very careful estimate is that the minimum cost of putting the plan into effect for fluid milk alone would be $2,480,000,000. Yes, billions.

Are the principal purposes of the Brannan plan to give farmers a fair deal and consumers cheap food? My answer is "No." The principal purpose of the plan is to get votes. As a farm program it is phony. As a political maneuver many keen politicians think it will backfire.

There is no good reason why a big part of the grocery bill of consumers—rich and poor—should be paid by the Federal Government. Would most consumers rather pay a fair price for groceries than get groceries cheap and pay higher taxes? If so, the Brannan plan may not corral enough votes. Whe farmers come face to face with depending for a large part of their income on the precarious possibility of annual appropriations from the Federal Treasury there may be

a good deal of political balking and maybe even bolting in the rural areas.

The main devices now used to support farm prices are loans and purchase of surpluses. Under the Brannan plan the main device for 75 percent, by value, of farm products (non-storables) would be direct payments. It appears obvious that it will cost far more to make a loan on or purchase a part, and in most cases a small part, of a farm product than to make payments on the entire production.

For the other 25 percent (the storables) loans and purchases might continue to be used.

Increased cost and discarding in major part the idea of fair farm prices in the market place are not the only objections to the Brannan plan.

It bluntly and boldly makes the farm program a partisan political issue. Past experience has shown that bipartisan support is a prime factor in getting and keeping good farm legislation. President Truman and his Secretary of Agriculture may have waded into water that is too deep and carried the farm program with them.

The food subsidy part of the Brannan plan has already been tried in Britain. The cost rose from $252,000,000 in 1940 to $2,272,000,000 in 1948. In his budget speech in early April, Sir Stafford Cripps said that such subsidies "have grown and grown and grown beyond anything that was ever contemplated." That is what might happen in this country if we choose to "look forward" with Brannan.

The Brannan plan ravishes parity. This idea has been the basis for agricultural unity for the past 20 years. The parity idea seeks to give farm commodities a fair exchange value in terms of things farmers buy. The Brannan substitute for parity (income support standard) would use as its main base the average of prices for the first 10 of the previous 12 years. This base would move each year—the oldest year would be dropped and a new year added. This may look high enough to farmers now. But it moves. It could be that for many years a high-price year would be dropped and a low-price year added. If so, the income support standard would become very low indeed. It is true this moving would cut the cost of the plan, but then it would mean Government supervised and controlled farm poverty. Consumers would get cheap prices but with an impoverished agriculture they would sink with the farmers.

The Brannan plan means more and more Government control. It is nearer to those who seek totalitarian collectivism than it is to those who believe in the inviolate individual soul.

More than 100 years ago a great orator said: "It shines and stinks and stinks and shines like rotten mackerel by moonlight."

What needs to be done is to amend the Agricultural Act of 1948 so it will provide a progressive, sound, and satisfactory farm program. The board of directors of the American Farm Bureau Federation at a meeting on June 30 agreed unanimously upon amendments to such act that will achieve this result.

Loyal Order of Moose

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. TOLLEFSON. Mr. Speaker, one of the finest organizations in the world, the Loyal Order of Moose, sponsors an institution at Mooseheart, Ill., of which all of its thousands of members are justly proud. The following article which appeared in the Washington Post July 10, 1949, describes briefly the history and work of this great institution:

MOOSEHEART, ILL.—Kids in this child city are never spanked.

The 800 children of the Loyal Order of Moose, sponsor of Mooseheart, live under a system of self-government. The 850,000 members of the fraternity have poured more than $28,000,000 into the project, set up to care for the dependent children of deceased members.

Malcolm R. Giles, executive director of Moose affairs, said that since Mooseheart was established in 1913, not one of its 2,000 graduates has run afoul of the law. More than 5,000 children have lived in the city. One-third of the graduates have gone on to college.

Founding father of Mooseheart was James J. Davis, United States Senator from Pennsylvania from 1930 to 1944. He took over leadership of the fraternity in 1906.

Davis envisioned a place where fatherless, motherless, or orphaned children of Moose members could be cared for until maturity.

BIG INVESTMENT

Mooseheart represents a $7,000,000 investment in property. The 1,200 acres with 10 buildings is a city by itself. Its 840 acres of rich farm land produce 65 percent of the food used. A prize Holstein dairy herd provides a quart of milk a day for each child.

Located 37 miles west of Chicago, Mooseheart is on the west bank of the Fox River. The model city has its own schools, stores, hospital, post office, and homes. Homes are named after cities and States.

The population ranges from infants to young men and women. They are taught cooperation, self-reliance, thrift, and industry. The only uniforms of Mooseheart are those worn by band members and athletic teams. Mooseheart children are not available for adoption.

Protestant and Catholic chaplains live in the child city. They guide the spiritual life of youths along religious paths followed by the children's parents.

Some 56 teachers in six departments train the boys and girls in separate groups. The same courses of study given in public schools is provided. Vocational training is emphasized.

A laboratory for child research, directed by Dr. Martin L. Reymert, serves as a psychological clinic for the community. The child's training is based on abilities discovered here.

An annual health examination is given each boy and girl. The 65-bed hospital is used more for preventative medicine than for the care of the sick, X-ray examinations, dental check-ups and other services are provided.

SERVED IN WAR

Some 700 Mooseheart boys and girls served in the armed forces during the war.

The children are housed in groups of homelike dwellings. Each house has its own cook and housemother. Meals, served family style, are planned by a dietitian.

Boys and girls work if they wish. Each child is given a plot of ground to care for during the summer. One day a week, each is assigned to a job for pay. It may be clerking in a store or gardening in the greenhouse. Earnings are credited to each individual's bank account.

After school, there are movies, roller and ice skating, dances, band concerts, plays, handicraft shops, basketball, and football.

Mooseheart's seven football teams, the Red Ramblers, played 29 games last fall. They were undefeated.

HAVEN FOR SEVEN

This is the place to which Mrs. Georgina Potter brought her seven children 2 years ago. Her husband, who became a Moose in 1944, died of pneumonia. The Sarnia, Ontario, Canada, Lodge of the Loyal Order of Moose sent her with the children to Mooseheart.

She now is on the pay roll. She sees her children, David 15, Agnes 14, Genevieve 11, Robert 9, George 7, Thomas 5, and John 4, everyday.

Agnes is ready to give a piano concert. David is looking forward to a career in accounting.

The spare-the-rod training for the 800 children is based on a system of self-government. Infractions of rules and regulations are recorded as demerits.

Too many demerits by the few who misbehave sends them to West Farm. This is an isolated farmhouse 2 miles from the center of Mooseheart activity.

A short stay here usually is enough to convince the student that ill-behavior doesn't pay, Giles said.

Addresses at Opening of Colonial Magazine and Guardhouse, Williamsburg, Va.

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix to the CONGRESSIONAL RECORD, I insert the remarks of Dr. H. M. Stryker, mayor of Williamsburg, Va., on July 4, 1949, introducing Lt. Gen. Walter Bedell Smith at Independence Day ceremonies held in Williamsburg, Va., in commemoration of the two hundred and fiftieth anniversary of that city.

These remarks were preceded by remarks of Mr. Winthrop Rockefeller at the opening of the Colonial Magazine and Guardhouse, Williamsburg, Va.

The remarks referred to are as follows:

REMARKS BY MR. WINTHROP ROCKEFELLER

Ladies and gentlemen, the announced purpose of colonial Williamsburg is to recreate accurately the environment of the men and women of the eighteeth century Williamsburg and to bring about such an understanding of their lives and times that present and future generations may more vividly appreciate the contributions made by these early Americans to the ideals and culture of our country.

To restore and revisualize a social order that has passed, and to present a full picture of the manners and customs, the ideals, the philosophy, and the pragmatic principles of the people of that civilization, we cannot limit our studies to any one phase of this subject. It is essential that all phases of the daily modes of living of the period in question be viewed. And so at Williamsburg, where an effort is being made to restore accurately and to preserve for all times the significant portions of a historic and typical city of America's colonial period, this restoration must reflect the manners and customs, the philosophy, hopes, and ideals of the people of that period. If the restoration presented only the lives of the nobility, as typified by the palace with its magnificent gardens and furnishings—the intellectual

life, as typified by the ancient College of William and Mary in Virginia—the political life at the colonial capitol, the tavern life at the Raleigh Tavern, the religious life at Bruton parish—then it would be presenting but a portion of the panorama necessary for a full understanding of the lives of the people. And, therefore, in the last year colonial Williamsburg has concerned itself in restoring a visual record of another phase of the eighteenth century life, as typified in the magazine about to be opened. This building is the first acquired by the Association for the Preservation of Virginia Antiquities and is the property of that association today, fully restored by colonial Williamsburg to its eighteenth century appearance.

I shall not attempt to review the history of this acquisition. But we must pay tribute to that valiant group of ladies who have preserved for posterity so many historic monuments and treasures in this Commonwealth. When the association obtained title in 1899, only four of the original eight walls of the magazine were standing. Although with limited financial resources, that association immediately reinforced the four original walls and replaced those that had gone, so that the building would remain in its original form. More recently the association while retaining title to this their first acquisition, has leased the property to colonial Williamsburg for restoration and interpretation.

Undoubtedly when the capital was first moved from Jamestown to Williamsburg in 1699, 250 years ago—which anniversary we are proud to join with the city in commemorating—a magazine of some sort existed in Williamsburg. But not until 1714, at the instance of Governor Spotswood, were the plans made to erect this building. Governor Spotswood reported to the house of burgesses that he had solicited and obtained a gift of arms and ammunition from her late Majesty Queen Anne and today, in spite of differences that may have arisen between the mother and the daughter in her adolescent years, that strong bond between the "old Dominion" and Great Britain is typified by the presentation on behalf of Great Britain of many of the arms and munitions you will find in the building today. The complete refurnishing of this building would probably have been impossible without the cordial cooperation of the Master of the Armouries at the Tower of London.

If this building today could talk, it would tell us of its beginnings as a noble magazine, then of its use as a Baptist Church where the ringing voice of Scervant Jones was heard, then as a market house, and again as an arsenal for a brief period during the War Between the States and finally as a livery stable. It was from the depths to which it had fallen as a livery stable that the Association for the Preservation of Virginia Antiquities secured this building. Today it stands, not only as a monument to and a visual record of the great struggle for American independence, but as a monument to the intelligent vision of those women of Virginia who organized and perpetuated that famous association.

Colonial Williamsburg is particularly happy to open this restored building during the year in which Williamsburg is celebrating its two hundred and fiftieth anniversary. We are also particularly happy at the good fortune we have in our guest speaker. And, as the years go on, it will be the policy of colonial Williamsburg to commemorate and celebrate the historic events that took place in this city with the sincere hope that those who come here will not only be inspired by the work and patriotism of those of the past but will also find hope and determination in the great men of today. For it is thus that we can continue to foster the great traditions of our country as a leader and a light of learning to guide all men to understanding and world peace.

REMARKS BY DR. H. M. STRYKER, MAYOR OF WILLIAMSBURG, IN INTRODUCTION OF LIEUTENANT GENERAL SMITH

Ladies and gentlemen, in the year 1699, 250 years ago, the General Assembly of the colony of Virginia passed an act directing the building of the capitol and city of Williamsburg at the place then known as Middle Plantation. The city built as a result of this act has played a historic role in the development of these United States of America. Here Patrick Henry cried out against unfair taxation; here was approved George Mason's Virginia bill of rights, here was adopted the first constitution written by representatives of a free people.

Today people from the world over come to visit Williamsburg to enjoy its magnificently restored colonial areas, to seek and find inspiration in the memory of the great events which have happened here, and to know better our country's brave past.

It is particularly appropriate that in the commemoration of the two hundred and fiftieth anniversary of this city, this latest restored building should be opened on this date.

And we of Williamsburg and Virginia are especially honored and gratified to have as our guest speaker one who has contributed so much, not only to our Nation and the world, but above all to world peace.

Born in Indiana, which, I might mention, was once a part of the Colony of Virginia, he has served our Nation as an officer in our armed forces for nearly 32 years. During the recent world conflict he accompanied General Eisenhower to the European theater of operations, and became Chief of Staff, Supreme Headquarters, Allied Expeditionary Forces, and Chief of Staff in the same theater. On behalf of General Eisenhower, he signed the surrender of Italy and the unconditional surrender of Germany. In February 1946 he was appointed United States Ambassador to Russia, remaining on a duty status while on this nonmilitary assignment. He was a member of the United States delegation at the Paris Peace Conference in 1946, and his work and devotion to world peace are well known to all of you.

I present to you Lt. Gen. Walter Bedell Smith, gentleman, scholar, patriot, and commanding general of the United States First Army.

ADDRESS BY LT. GEN. WALTER BEDELL SMITH

Mayor Stryker, Mr. Rockefeller, and distinguished guests, it is difficult to imagine a more suitable setting than colonial Williamsburg for the celebration by American citizens of our one hundred and seventy-second anniversary as a free nation.

Here to these same parks and avenues in which we now gather came the founders of our country—men of vision and courage, to propose their concepts of a new world and to formulate the basic structure of an independent, democratic nation.

From this colonial capitol in May 1776 the Virginia Convention of Delegates called upon the Continental Congress to declare the colonies free and independent. Thus colonial Williamsburg is a living symbol of the significance of Independence Day. Here individual freedom, as a standard for the people of the New World, was nurtured and given expression. In this remarkable restoration of the scenes of the eighteenth century it is impossible not to feel the thrill and urgency of the stirring times in which our American ideal was born.

Dr. William Goodwin, who envisioned the restoration, and Mr. John D. Rockefeller, Jr., who made it possible, deserve high praise for patriotic work. Their efforts, and those of the Association for the Preservation of Virginia Antiquities, have enabled millions of Americans to know this cradle of liberty—to create an atmosphere in which present and the future may learn from the past. Today the restored powder magazine becomes formally a part of the Williamsburg re-creation. And it is impossible for us to escape the particular lesson which the progress of restoration has provided for this occasion.

An event in the history of this powder magazine makes it one of the most significant buildings in our country. The Virginia Convention, fired by Patrick Henry's immortal words, had decided to form a militia. Their decision so alarmed Governor Dunmore that he ordered the removal of the powder stored in this magazine. On April 20, 1775, the day after the battle of Lexington, Patrick Henry himself led an armed company to demand return of the powder. This action was the first open resistance by the Virginia colonists to oppression. Six years later, on the Fourth of July, Lord Cornwallis withdrew his troops from Williamsburg and General Washington entered the city and established his headquarters. It was here, where he had begun his military career, that he assembled the forces and planned the strategy that brought about the victory at Yorktown and the end of the Revolution.

"Life, liberty, and the pursuit of happiness"—the goals which had fired flagging spirits in the darkest hours of the struggle—had finally and, it seemed, lastingly been won. War was already beginning to be thought of as an ugly thing of the past.

Probably very few among the cheering throngs that greeted Washington, as he led his victorious army through these streets, would have believed that almost every succeeding generation of the young Republic would be called to defend by force of arms the fundamental principles for which those early patriots fought so desperately, and which we sincerely believe should be every man's birthright.

After each increasingly costly war, we have hoped that we had eliminated, once and for all, the necessity of again taking up arms. Each time we have disarmed, in our traditional headlong manner, and each time, after a decade or so of peace, we have again suffered bitter disappointment and disillusionment.

Now we have recently ended the most bloody, devastating conflict in the history of mankind. Gigantic in scope and cost though it was, as compared with our war of Independence, the principles for which we fought were very much the same, and this most recent struggle, like the earlier one, was not in vain. By it we stopped the cancerous spread of the greatest threat to our cherished way of life that existed at that time. But even sooner than in previous postwar eras, we found ourselves frustrated and disillusioned—facing another, and potentially a greater, menace to our free institutions.

Our belief indulgence in the illusion that peace would naturally follow after war has already allowed that menace to spread its domination over most of the stricken areas left in the wake of war.

I think that now, for the first time in our history, we fully realize that we dare not relax into a state of unpreparedness, comfortable in the knowledge that no immediate threat to our security exists. Certainly we can no longer believe that should such a threat appear, we shall again have ample time to prepare for meeting it.

The time and space cushions that formerly kept the devastation of war from our own land, and allowed us to build our defenses after the menace developed, have little meaning in this atomic age. In the future we are as likely to be subject to sudden attack in our own homeland as were central European states in the wars of the past.

After our recent victory, the most powerful fighting machine ever assembled in the history of the world was in our hands. Had we been an imperialist nation, bent on aggression and domination, there would have been no limit to possible expansion. Instead, we disarmed and withdrew from the

area of conflict, leaving only token occupation forces, hardly sufficient to give necessary strength to the hands of our negotiators at international conference tables.

We did not merely dismantle our war machine; we wrecked it. If ever proof were needed of our intense desire for peace and our friendly, altruistic intentions, this should have been sufficient.

Of course, our new weakness was fully realized and fully exploited.

The forces of expansionism promptly filled the political and power vacuums left in the wake of war. More territory was brought under the Communist yoke in the postwar years by insidious infiltrations and short-of-war methods than was ever won on the field of battle by the Red Army.

We are now, as a Nation, confronted with the gravest challenge ever offered to our principles and our way of life.

When the leaders of the Soviet Union decided to turn away from the cooperation which we hope would prevail after the war, and instead to seek to impose communism upon the world, the United States, as the strongest of the free nations, became the citadel of freedom. Other free peoples of the world have turned to us for leadership and help. The major responsibility for world recovery, peace, and progress has fallen to us. That we, as a united people, have accepted this responsibility is known to all of you.

The President of the United States has announced to the Nation the basic principles of a wise, firm, and constructive foreign policy, which has already borne fruit. An impressive change has taken place in western Europe during the past year. Physical depletion and spiritual depression have given way to hope and renewed courage, and the free states have drawn together in the determination, if necessary, to defend their freedom.

In the United Nations we are exerting every effort to strengthen its influence as an effective instrument for preserving peace. We are working energetically, both inside and outside the United Nations, to promote the economic and social conditions that will remove the causes of wars. And, at long last, we are facing with calmness the inescapable fact of which this restored powder magazine of Williamsburg is the symbol—the fact that the best assurance of peace is our determination and strength to support our convictions; that it is not sufficient only to have the potential to defend ourselves if attacked, but that our strength must actually exist, and must be apparent to all, if it is to serve its highest purpose—that of preventing war and assuring peace.

By constant reorganization, our armed forces are approaching the semblance of military strength consistent with our world position and commitments. New training programs for our traditional reservoir of military strength, the National Guard and Organized Reserves, are beginning to produce units of trained citizen soldiers.

So, if reports from the far-flung battlefront, where the cold war of ideas is being waged in a struggle for men's minds, are encouraging, we must not be so fatuous as to believe that ideas alone are adequate weapons. It is our strength, actual and potential, and the realization that this strength has been growing, that has halted, at least temporarily, the tide of Communist expansionism in Europe, in the face of our determined opposition. We cannot relax our vigilance because of a temporary success, nor dare we despair over a temporary frustration. As a Nation, we are prone to indulge in a false sense of security. We must face the fact that we are engaged in a contest of indefinite duration, and that in this contest the prize of peace is to be won only by patience, firmness, resolution, and, above all by strength.

We have in the past always failed to find peace through weakness. We can have peace, I profoundly believe, but only by remaining stronger than potential aggressors. It is because of that profound belief that I find so impressive the restoration of this original arsenal of democracy. The homely frontier axiom, "Trust in God and keep your powder dry," has been so misused that it has become almost a byword, but if more dignified phrasing of the principle is desired, it exists in Washington's advice in this first message to the newborn Nation: "To be prepared for war is one of the most effectual means of preserving peace."

We have deep springs of faith from which to draw the strength necessary to carry out the responsibilities of world leadership that have devolved upon us. I believe we will express that strength and that we will never give others cause to doubt our sincerity and firmness of purpose. The stakes are too high for irresolution.

Situation Looks Better

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 11, 1949

Mr. RAINS. Mr. Speaker, under leave heretofore granted to extend my remarks, I include herewith a speech by Mr. Thomas D. Russell, president of the Russell Manufacturing Co., to his employees, which appeared in the Alexander City Outlook, Alexander City, Ala.:

SITUATION LOOKS BETTER

(Following is the text of the annual address by Thomas D. Russell, president of the Russell Manufacturing Co., to employees at the Fourth of July barbecue. Mr. Russell spoke to about 5,000 employees and families who attended the affair, making service-pin awards to 62 employees who have served the company for 10 years or more.)

Since this time last year we have gone through some tough times together. At the present time our over-all situation looks somewhat better. However, some of our units are still on short time and we are not running all of our machinery.

We have done everything we know how to do to correct this situation; but we cannot control the markets for our products or the general economic condition of this country.

If we do not sell our goods we cannot make them—our production has to be gaged to our sales. If we were to pile up a whole lot of goods which had not been sold we would be flat broke in a very short time and then everybody would be out of a job and no mills left to take care of us.

Some of our units which have suffered most are now running full time. Others who have been running full time are now being cut down. This is entirely dependent on the law of supply and demand and not on the action of the mill management.

The prices at which we were selling have been cut drastically. Our profits have taken a nose dive. We have been expecting this to happen, in fact, we thought it would have happened long before it did.

You all know the old saying, "Everthing that goes up is bound to come down." Well, it has come down, but we are not alarmed because we know that it will not stay down, and that as long as we can make products as good or better than our competitors, and as long as we can make them as cheap or cheaper, we are going to continue to stay in business.

Despite the hard times we have been through, our company is in excellent shape, financially and otherwise. Our goods are right, our prices are right and our costs are low. We have money in the bank and our credit is good. We don't owe anybody money that we can't pay.

We don't have a big stock of goods on hand that are not sold. We don't have to take a big loss to get rid of the finished materials we have on hand.

By any comparison with other mills we are in an excellent condition and we intend to stay that way for our protection, and for yours. As long as we are doing all right, you will be all right. Whenever we get in trouble, you will be in trouble.

Please remember this—I am not trying to get around the hardships that always come with a let-down in business. They are very real and cannot be bypassed or ignored.

Regardless of the reason—it is hard to lose your job through no fault of your own, or to try to make ends meet on part-time work. We realize this fully and I can truthfully tell you that not one single person has been laid off or a single job cut down until it became absolutely necessary.

It is a great responsibility trying to protect the jobs of over 2,000 people under conditions which exist in the cotton-mill industry today. It is impossible to keep everyone working. All we can do is to use all the sense and judgment we possess to make the best out of a bad situation. The good of all must be above that of the individual.

Most of our mills are running good. We have some tough spots where we are not able to sell the product produced in that particular department and consequently have to cut down or suspend production until sales pick up or we can find some other product which will sell.

We are far from pleased with the way we are running and you may count on it, that we will all do our dead level best to see that we will once again be looking for employees instead of have employees looking for work.

We are bound together in this company in a partnership where every partner is doing his full share to keep everything running and whenever one partner falls down, it hurts all the rest. We must all work together in order to keep our jobs going.

I am not going to attempt to be a prophet, and I would be foolish to stand up here and predict the future. I only know that we have been through hard times before and came through with colors flying and bigger than ever. I am confident that we will keep on running and that sooner or later things will get better. They are much better even now than they were a short time ago, and I believe that the future looks very bright after this readjustment is over.

I want to tell you that I have never seen a finer attitude displayed by any group of people anywhere than you have shown during the months just passed. You have accepted your lot cheerfully. There has been no griping or grumbling or hard feelings anywhere. You have shown your faith and loyalty to this company in such a way as to leave no doubt of your fine qualities. I am proud of you, and I am deeply moved by your attitude, and I give you my word that this company will do everything possible to try to repay you for your loyalty and understanding.

I will not make promises which I am not certain I can fulfill. But this I will promise: As long as I am head of this company, your interests will be considered above everything else, and we will keep faith with you as you have kept faith with us.

The Dead End of National Socialism

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, July 11 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Dead End of National Socialism," written by Felix Morley and published in the July 6, 1949, issue of Human Events.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DEAD END OF NATIONAL SOCIALISM

(By Felix Morley)

The American people are extremely charitable toward those who govern them. We maintain a truly remarkable tolerance while our substance is squandered by the officials of our own, and foreign, governments. A case in point is the manner in which we are subsidizing national socialism in various European countries, after having spent billions to destroy national socialism in Germany.

But there are signs—and they accumulate—that many Americans are weary of the role of patient Griselda. It is one thing to endure the trials that heaven sends us. To be stupidly apathetic in the face of the follies of our own politicians is quite another. Fortunately, there remains, throughout the Nation, a lingering trace of that rebellious spirit which led the signers of the Declaration of Independence to denounce the repeated injuries and usurpations of Government.

These usurpations are certainly more pronounced in 1949 than they were in 1776. And the week of July 4 is surely an appropriate time for taking stock. When this is done a definite technique of governmental deception becomes apparent.

This technique consists in leaping from one unstable policy to another—like Eliza crossing the ice—and holding firm to any policy only long enough to propagandize it as a bold new gateway to Utopia. Then, in the justified belief that the public memory is short, off we go at a tangent, gradually working round (as Eliza didn't) to a complete reversal of position.

Thus, in four short years, the Truman administration has moved to conclude a military alliance against the Government which so recently was its gallant and trusted ally. Thus, in the same short space of time, we have plunged from bitter denunciation of the principles of national socialism to official support of all its major economic tenets.

II

In all the essentials the Labor Government in Britain is now following the economic road constructed by the Nazis during the years immediately preceding the war. This is not less true because of certain secondary differences. One must not be deceived by the fact that the English are not seriously affected with anti-Semitism or other peripheral characteristics that made the Nazi doctrine obviously horrible.

In some other respects the parallel is not altogether complete. For instance, no English Socialist—most certainly not Sir Stafford Cripps—has demonstrated the ability that Hjalmar Schacht and his colleagues displayed in making autarky work in prewar Germany. Although it led to war, the Nazi closed economy succeeded temporarily even against bitter American opposition. In Britain it is failing, even with lavish American support.

Nevertheless the parallel is deadly and disconcerting. There is the same device of managed currency, artificially overvalued to hold down the cost of living at home. There is the system of blocked pounds, copied from the blocked marks that Dr. Schacht developed with such ingenuity. There is the same use of an inconvertible currency to force exports out of Britain which, like Germany, must export or die.

Finally the natural outcome of this single system is governmental barter arrangements, such as that which Great Britain signed with Argentina on June 27. This is a direct copy, on a somewhat larger scale, of the much-criticized trade treaties concluded by Nazi Germany with Bulgaria, Yugoslavia, Hungary, and other European states during the late thirties. It makes a mockery of our trade-agreements program.

Then, as a footnote, there is the same semi-apologetic official attitude for scrapping the principles of multilateral trade under the force of circumstance. Dr. Schacht always maintained that his barter arrangements were forced upon Germany because of its dollar shortage. Sir Oliver Franks, flying back to London for urgent conferences on the British crisis, used almost the same words as he left Washington last week. "The Anglo-Argentine Treaty," said the British Ambassador, "represents what two countries with a shortage of dollars had to arrange."

III

Shortly before the United States entered the last war many Americans read a book entitled "You Can't Do Business With Hitler." Its author, Douglas Miller, has been commercial attaché at our Berlin Embassy, and was thoroughly familiar with the economics of national socialism. On page 71 of this book he observed that "To the Nazi economists goes the credit for working out a system of living on their debts." Britain is trying to do that now. Then Mr. Miller wrote:

"The broad lines of Schacht's economic policy were, first, to segregate Germany's trade relations from participation in any international network of commercial and financial transactions, establishing a series of independent bilateral relations with individual foreign countries."

When Cripps is substituted for Schacht and Britain for Germany this remains as an accurate description of the foreign-trade policy now dominant in London, and to a lesser extent in other capitals of western Europe. So it is worth while to recall the conclusions which Mr. Miller drew in 1941 (pp. 210–211):

"If * * * we conform to the Nazi pattern and conduct special negotiations between Washington and Berlin, covering commodities on a barter basis, we shall have to upset our whole economy as we know it now. * * * We should be on a fair way to planned economy and a system of state socialism."

We refused to extend credits or to negotiate a barter treaty with German national socialism. We have extended lavish credits, thereby avoiding the necessity of a barter treaty, with British national socialism. But Marshall plan credits, even at the current rate of nearly a billion a year to Britain alone, are proving inadequate. So we are now searching feverishly to find some method of continuing governmental subsidies to bankrupt European governments when, as, and if the failure of the Marshall plan eventually becomes obvious. That is a part of the explanation of point 4, analyzed by Edna Lonigan in Human Events last week. Here is the latest come-on in the unending series of panaceas trotted out in quick succession as each earlier quackery is exposed.

The prospective failure of the Marshall plan is the more disastrous because, in stimulating production, it has undoubtedly been helpful. The recent comprehensive report of the Economic Commission for Europe shows that western European production, excepting Germany, was 13 percent greater in volume in 1948 than in 1938. But the same report makes clear that the problem of restoring trade within the boundaries of western Europe is becoming more difficult. All the beneficiaries of ERP have rigid trade barriers against each other, and optimistically rely on being able to dump their surplus production on the American market.

The buyers' strike in the United States—for that is the best description of our current recession—is now bringing this impossible situation to a head. For while we might either subsidize European producers indefinitely, or indefinitely absorb huge quantities of European products at moderate prices, we cannot simultaneously cut our purchasing power to subsidize Europe and buy from Europe at prices inflated by those very subsidies.

That is why the increase in European production is not enough. It must be followed by a decline in European production costs. But any such decline is intentionally and artificially prevented by the closed and controlled economies of western Europe, especially that of Britain.

IV

The current English hostility to competition is shown not only by the monopolization trend in nationalized industry at home, but also in the gloomy procedure of dismantling competitive Germany industry. It is no longer seriously pretended that dismantling is designed to prevent a resurgence of German military power, or to provide reparations. The underlying motive is seen in reports that when Hamburg shipyards were dismantled much of the material was dumped in the North Sea. Britain wants no restoration of German merchant shipping.

By dismantling competitive German industry—while we feed the unemployed workmen to keep them from going Communist—the British have doubtless acquired a few million dollars, which otherwise would have enabled Germans to buy British products. That the net gain, from the English viewpoint, has been infinitesimal is shown by the gathering financial crisis there. As the London Economist of June 11 frankly says: "British exports overseas have only increased by the percentage of Germany's loss."

For a time the socialistic sabotage of the European recovery program could be concealed from American attention. We are an easy-going people, and having squandered so many billions on Europe, at one time and another, the waste of a few more has seemed relatively unimportant.

But if the lush days are over; if the decline of business activity—and of tax receipts—continues, a very different mood will soon be apparent in the United States. It is in the highest degree unlikely that we shall continue to subsidize the competition of European producers who are themselves unwilling to admit the value of competition. Even with American subsidies of a billion a year Britain is in serious difficulties. What wil be its fate when those subsidies are withdrawn?

Clearly the only solution for western Europe lies in actual progress—not merely lip service—towards economic and political federation, including Spain and western Germany on an equal basis. If Europeans cannot see this for themselves they will eventually have to be told that is an indispensable condition of continued American aid.

We cannot do business with national socialism, even when it is operated by those who evidently dislike German competitive

ability much more than the Nazi economic theory which they have gone so far to adopt. The State Department's propaganda does not conceal the fact that we are subsidizing, in Britain, policies patterned upon those which we denounced, in Germany.

Stop Spending

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, every person in the Federal Government who has any responsibility for spending public funds ought to be deeply concerned with Secretary of Treasury Snyder's announcement that our Government is again operating in the red. I shudder at the budget picture for the next fiscal year.

Mr. Speaker, it is time that this administration and this Congress face up to the hard financial facts of life. Instead of staying up nights thinking of new vote-catching spending schemes, the planners of Washington ought to be spending a few days and night figuring out some ways of saving.

I ask leave to include a recent editorial on this subject from the Milwaukee Journal:

OUR NATION AGAIN IN THE RED

The Federal Government ended its 1949 fiscal year last Thursday with a deficit of $1,811,000,000—three times what the President predicted. The blame, says the President, must fall on the Eightieth Congress because of its tax reductions.

That explanation is too easy. The blame must fall on both the administration and Congress because of their failure to keep appropriations down. Income fell by a little less than $4,000,000,000, but costs rose by considerably more than $6,000,000,000. If costs had been held to the 1948 figure there would have been no deficit.

It is too late to do anything about 1949 now. There is, however, still a chance to do something about 1950 and 1951. We can refuse to rush into the highly doubtful Brannan plan for agricultural aids. We can postpone embarkation on a new policy of Federal aid for schools. We can stop thinking up other ways to increase Federal outlays.

It is predicted that the deficit for 1950 will be between three and five billions. Surely something can be done about that. We cannot, of course, neglect our Marshall plan obligations or our essential defense needs, but we can cut down the waste in our Military Establishment and in the other arms of Government. We can adopt the essential features of the Hoover program for the reorganization of Government departments. We can begin to show a real will to get our domestic programs on a basis which recognizes that, though this is peacetime, the costs incident to the last war and the insurance against a repetition are still tremendous.

Federal deficit spending is indefensible at this juncture. An increase in Federal taxes would be indefensible—especially in view of the fact that local and State governments, starved during the war, have found it necessary to increase their levies.

The only sensible, the only defensible, Federal procedure at this time is the maximum possible reduction in Government costs. Inflation, which the President was fighting only a few weeks ago, has now definitely turned into an orderly and probably beneficial deflation. That will mean a further loss in tax revenue.

With the national debt already beyond $250,000,000,000, the time has come to slow down—in new enterprises first, in waste second and, if need be, in services third.

Address of Hon. Gordon Gray

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, it is my distinct pleasure to include herewith an address by the recently appointed Secretary of the Army, the Honorable Gordon Gray, at the commencement exercises at the United States Military Academy at West Point:

General Moore, distinguished guests, and gentlemen of the corps, I would like to identify myself with you today, at least by saying that one of my forefathers was a graduate of West Point. Unfortunately, this is not the case. I did, however, have a great-uncle who graduated from your sister academy at Annapolis, who served in the Spanish-American War, and finished his days as a commander at Pearl Harbor. I guess that when I started my own military career, in and out of uniform, I may have had some slight resemblance to another great-uncle, who was a first sergeant and later a captain, and who was killed at Gettysburg with the Confederate Army.

My grandfather was likewise in the Confederate service. His career was somewhat less distinguished and heroic, inasmuch as he languished in a prison camp in this State for the major portion of his enlistment. So you see, I can establish a claim to some military heritage, although it is hardly of the sort which would allow me to say that I share in the West Point tradition by birth.

Yet, I would be less than frank with you if I did not say that I know something about the Army, having been in it as a private and junior officer and having served it as Assistant Secretary, Under Secretary, and Acting Secretary. I believe that I have seen a good deal of it from the bottom and from the top.

Inasmuch as West Point is, in a very real sense, the fountainhead of American Army spirit and tradition, and inasmuch as the Corps of Cadets will furnish the nucleus of our Army Officer Corps for the coming generation, I am happy, as a civilian who knows the importance of the Army—and who believes in its integrity—to participate in these exercises.

I am sure that each of us with large obligations in the Army, whether he be civilian or high-ranking general, takes great satisfaction in the graduation of each class of cadets. It means that we are bringing in another group of young men to help carry on the tradition and high responsibilities that have been and will continue to be those of the Army.

On this day of well-deserved triumph which is, for you, the climax of 4 years of unceasing, undiluted discipline and labor, I want to impress upon you the absolute need for preserving a healthy sense of humility. You no doubt have had all sorts of trials in your days at West Point—trials which were calculated to bring about this quality. Now that—in a sense—you are on your own, you must recognize the need for maintaining it.

What I am trying to say is that your careers will be what you make them. They are not made for you simply because you have accomplished this very important first task of meeting the test of West Point.

Let me cite some figures to prove my point. Take a look at the officer corps of the Army as it exists today. Out of approximately 75,000 officers on active duty, only 6,262 are graduates of West Point. You see that less than 10 percent of the officers now on active duty are from this school. In fact, during the present fiscal year, of the officers who will have come on active duty, only 3.25 percent are West Pointers.

The fact is that you are entering into competition, real competition, with other men of ability and integrity and intellectual background. You and I know that they will not be required to make way for you simply because you are a product of the Military Academy.

Let me also point out to you that this competition from those who did not attend West Point is formidable. Let me remind you that the great George C. Marshall was a non-West Pointer. Many of those now on staff duty in the office of the Secretary of Defense are not graduates of this school. It is interesting to note that of the 13 directors of the general staff and special staff divisions of the Army at the present time, six are non-West Pointers.

Times have changed. Had I addressed you 10 years ago, I would have told you that 45 percent of the officers then on active duty were West Pointers. Had I addressed you 20 years ago the percentage would have been 31 percent.

The reason for this is not a diminishing demand in the Army for men of your type—of your character and training and devotion to country and duty—and of your bright promise as future leaders. West Point is not becoming a relic of the past—an old symbol without meaning. West Point is still West Point.

The fact is that this great institution cannot supply the needs of the armed services. It is in part a matter of simple arithmetic.

In a troubled world in which the fruits of victory have not been peace and stability, strange contradictions have occurred. By the use of adjectives we are able to make opposites—deadly opposites—appear to be synonymous; witness: uneasy peace, cold war. And while we have not departed as a matter of principle and policy from the sound American tradition of a small regular establishment, to be augmented by trained citizen soldiers in time of emergency, nevertheless the inconsistency of the times dictates the largest peacetime army we have ever experienced.

While West Point, therefore, cannot supply the demand, I am one of those who views the situation as not an unmixed blessing.

I believe that the process of tapping sources other than West Point for officers for the Regular Army is an essential and beneficial process. It leavens the corps of officers, and it guarantees against the development of a military caste. It presents, in the officer corps, varying points of view; it makes for flexibility; it provides the materials for a healthy competitive spirit and also for other good influences which will help assure traditional American principles and attitudes. It is good for the Army and it is good for the West Pointer.

Nevertheless, the greater challenge—and as a result, the greater opportunity—is yours. You are marked for leadership. The Army looks to you primarily to set high standards, to lead the way in keeping alive and vital the code of conduct of the American officer.

Throughout the existence of the United States Military Academy, its graduates consistently have been men of honor and integrity who, in both war and peace—in the Army and out—have served their country with selfless devotion and high distinction.

For many decades West Point has justly enjoyed a high reputation for its scholastic standards, and for consistently adhering, in its teaching, to the fundamental principles on which this Nation was founded and has grown great. It has always been noted for the high caliber of its product, and I am certain that all thinking Americans are and will continue to be cognizant of the importance of West Point training and will continue to repose trust in the West Point graduate.

It is axiomatic to say that no army can be a good army unless it possesses a really hard core of officers, a professional cadre which has trained especially for its tasks. You are that core. You are that cadre.

You now have a great twofold mission—to live up to the honorable traditions molded by the men who have preceded you here, and to handle present-day and changing problems and duties with the acumen, the integrity, and devotion to duty which have been taught you here. If you meet this challenge, and I am sure you will—and if those who come after you continue to meet it—there can be little doubt about the success of your individual careers, or of the growing and continuing importance of this Academy.

As a soldier in uniform I knew the Army rather intimately at a level from which the Pentagon seemed as remote as Mars—and just as inaccessible. And as a civilian Secretary, I have come to know the Pentagon and its high brass—some day you will be part of it—rather intimately.

I think we—the Secretaries and the high brass—know the Army and understand it from the point of view of the individuals who compose it. If you have any notion that Omar Bradley, your great Chief of Staff, is not a soldier's soldier, let me disabuse your mind of that notion here and now.

We know that officers are people. We know their aims and aspirations, and their frustrations and disappointments. We know their virtues, and their human frailties.

As a civilian, then, and with some qualifications as an expert on the Army, let me speak to you from the heart for a few moments about the people in it, their rewards, intangible and tangible, and whether it is a worth-while career.

As a matter of deep conscience I resent the vilification and abuse which from many quarters is being heaped upon the so-called brass—which in essence really means the entire officer corps. All generals were once second lieutenants—and you are the generals of tomorrow. Perhaps these attacks are simply a recurring postwar phenomenon. I doubt that. But whatever their source and origin they are unfair and misinformed.

I should like to make one thing perfectly clear. I have a profound and abiding conviction that the Army is not a haven for the indolent—or for the venal the villainous or the vainglorious.

On the contrary, I believe the officer corps to be made up of people of more than the average degree of ability; of more than the average degree of integrity; and of more than the average degree of compulsion to serve. Of course there are exceptions. There are bound to be exceptions. But despite the fact that the spotlight always shines on this minuscule minority, I submit that the percentage is less than that found in any other profession, group, or category of persons.

I believe that those who enter the Army do so—as you did—with the primary motivation of service. I believe that can be demonstrated by conduct and performance.

But I believe that it also can be shown by a more materialistic and—in the minds of some—a more crass factor.

There has not been a realistic, comprehensive, or—what is more important—adequate overhaul of Army pay and allowances for more than 40 years. In a period when the income of those in virtually every type of profession, occupation, and endeavor has risen very materially, the average increase of the officer in the military service has been comparatively nominal since 1908. This lack of financial progress has no counterpart anywhere alse in the American economy.

It seems to me that the conclusion is inescapable that those who have entered the officer corps, and have continued to serve loyally and well, have not placed an undue emphasis upon material reward.

As one who has spent much of his adult life in public service, I know the satisfactions that derive from that service. I know that there are countless intangibles which are rewards in and of themselves. I know the pride and gratification which come out of the realization that one is serving his fellowman and is making his own small contribution to a more peaceful and more enlightened and happier humanity.

I believe that these considerations, as they have in the past, will continue to play the major part in the decisions of those who enter the military service. On the other hand, there comes a time when responsibility and compensation get so out of balance that gross injustice prevails.

I share then with you what I know must be your disappointment and anxiety that the all-service pay bill has not been adopted by the Congress. You are not members of a profession that could or would strike against the Government. You are not the type of man who would choose to serve other than on terms which have been prescribed by the people through their Representatives in Congress. You have exhibited, and I know will continue to manifest, patience, and restraint in your conduct.

However, I believe that the American officer can be expected to chafe under the continued delay of overdue reforms. There comes a time when the satisfaction of service and the desire to be the servant of the people cannot erase the hard fact of a month-end financial deficit. A code of conduct will not buy groceries, feed babies, or pay rent.

I feel confident that the pay readjustment which the President has asked for, and which the Military Establishment so wholeheartedly endorses, will be effected by the present Congress. The rates may not be those requested in the original bill, but it is my hope and belief that those finally enacted will be just.

The principal message that I would like to leave with you on this subject is simply this: The Secretary of Defense, the Chief of Staff of the Army, and all the rest of us with important responsibilities in the Military Establishment see the imperative necessity for the correction of the inadequacies and inequities and will do all within our power to assist in bringing it about.

The pay situation perhaps more than any other factor tends to focus attention on questions that you must have asked yourselves many times in your 4 years at the Academy, and may indeed be asking yourselves on this very day—is the Army a career of honor and dignity? May I consider the profession of arms one which will hold the respect and gratitude of the people of the United States? I have no hesitation in answering these questions in the affirmative.

Allow me to say that the Army has been and will continue to be an honored career, and it will continue to offer all of the intangible rewards which the opportunity for dignified service entails. It will fall into disrespect and will suffer a loss of confidence with thinking people only when the conduct of those who make it up deserves such deterioration.

As you step across today's threshhold into the future you may well inquire as to your country's aims, your Army's aims, and what should be your aims.

America's problem—stated simply—is this: Are we and our children going to continue to live in the kind of country our predecessors knew and loved, or will we allow the forces of a creeping and at times perhaps an imperceptible nihilism to consume and destroy the principles which made it great?

The shifting surface tensions of the world situation from day to day, appearing to be calm one minute and stormy the next, should not obscure from us the fact that we shall have to exert positive effort to preserve the culture which we have created in America. This nihilism to which I refer is a new and powerful expression of an ideology as old as mankind. Where it exists in full flower it is pitched in total opposition to the type of life which we call democracy. Today it is a more awe-inspiring enemy than ever before, for it has infected more people than ever before, and it is better armed in the physical sense than it has ever been.

Those of us who fought under its recent manifestations in World War II know that it shows no mercy because it does not believe that there is any such thing as mercy. It scoffs at justice because justice had nothing to do with its acquisition of power. It never hesitates to wreck the dignity of millions of individuals because it denies that there is such a thing as dignity. It never hesitates to lie within a lie will suit its purpose because it is convinced that there is no such thing as truth.

The seeds of its eventual downfall are sown in its own philosophy. Mercy, justice, honor, dignity, and truth do exist. Any system of thought which denies them makes the mistake of underestimating the opposition, and this is, of course, a fatal mistake.

Truth will always defeat untruth eventually. But we must realize that we must play our parts as citizens of a Nation which loves truth and freedom and democracy and their benefits and opportunities. We must do this to avoid perhaps long and extended eclipses of these things. Beyond that we must continually strive to assert these principles as members of a world which needs them more than ever before.

I am sure that the country's aims are to combat this type of nihilism in every way within our framework of democratic conduct, and if this is our country's aim it is necessarily our Army's aim as well. Indeed our Army derives entirely from the principles and traditions which have made our country great.

Beyond that, however, all the things for which the Army stands are the antithesis of nihilistic philosophy. The Army insists upon justice and courage and honor and dignity. These virtues must constantly characterize our conduct.

One thing we must understand is that in helping to bring about the aims of America and the aims of the Army, the American soldier today must be a better soldier than he ever was in history.

That is your task. Looking over the long list of the past, over the list of the men who have gone forth from this Academy to bring honor to their names and to protect their country, you must still be conscientiously able to say to yourself, "I must be better."

You are going to be called upon to do more than they had to do. You will have to develop skills which many of them never dreamed would be needed in soldiering. In addition, you will have to continue to use all of the skills which they developed and used.

The officer of today must not be primarily an officer of the Army, or of the Navy, or of the Air Force. First and foremost he must be an American officer, in the spirit in which he accepts his task as well as in the technical knowledge which he applies to it. The problem of American defense today will allow of nothing less than this. And to approach the task with anything less than this would be to place the great mission of national security as a sacrifice upon the altar of a blind, stupid, and unnecessary interservice rivalry.

One thing of importance remains to be said. If the past two wars proved anything, they proved that the dividing line between soldier and civilian is growing less and less capable of definition. In modern war the nation becomes an army, led by professional soldiers, and occupied with an almost infinite graduation of military and semimilitary tasks from the fighting line right back to the defense factory or the local bond drive.

This fact imposes upon the professional soldier a completely new awareness of an old responsibility—the responsibility of understanding the civilian, and what is more important, the responsibility of allowing the civilian to understand him, the soldier.

This is a process which must be initiated by you, the soldiers. You must always take the first step, because you will always be just what you are now—instruments of the civilian public of the United States. You, not the civilian members of the public, have the responsibility of creating public understanding of your profession.

And the first step in achieving public understanding of your profession lies in your own understanding. If a soldier does not understand his own motives, he will never be able to explain them to anyone else. In short, always make certain that you are oriented upon the important, basic facts of your career of service. The next group to be so oriented consists of the men you will lead, and I doubt that there will be any work you will do which will be more important than this—to lead your subordinates to a full understanding of the importance of their mission. No citizen is going to respect an Army which does not respect itself.

Any common-sense citizen will respect an organization which knows itself, believes in itself, and in consequence can explain itself.

Let me say in all seriousness that when I consider all that lies before you I am a bit envious of you. You will be called upon to do great things—difficult things—the kind of things that help to form really great men. And never forget that the really great man is always an integrated man—a man who knows himself and knows what he can and cannot do. Each of you will have the opportunity to find these limits in himself and to taste the reward of satisfaction which comes from knowing that the test was a complete one, carried out during a demanding period of history.

Remember always that selflessness and devotion to duty are qualities that are not confined to the Army alone—but remember also that such qualities will be expected of you in large measure. You must possess them, develop them, and refine them to a high degree if you are to live up to the traditions of West Point and the high standards expected of you.

Remember that even though you are few in numbers you have a great obligation to lead the way, and to keep the great traditions of West Point alive.

And remember, too, that every citizen in this Nation shares in the West Point tradition. It has come from the Nation which created West Point, and from the young men—like yourselves—who have been given to West Point by that Nation. The great work which must be done by your class consists of carrying that tradition to greater heights than it has ever before been carried, in the name of the people who have created it and nourished it through the years.

I congratulate you upon your accomplishment today, and I congratulate you upon the opportunity for even greater accomplishments in the tomorrows that lie ahead. I know that the task which history has set for you will not be too great, because you are taking to it not only your own courage, youth, and devotion, but all the courage, all the youth, and all the devotion given to this same task by the men who went before you.

We Can't Afford Poor Schools

EXTENSION OF REMARKS
OF
HON. ALBERT RAINS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. RAINS. Mr. Speaker, under leave heretofore granted to extend my remarks, I include an editorial which appeared in the July 6 issue of the Birmingham News, Birmingham, Ala., which is evidence of the need for Federal aid for education:

WE CAN'T AFFORD POOR SCHOOLS

"Poor schools cost more than good schools." That seemingly paradoxical statement was made in Boston before the eighty-seventh annual convention of the National Education Association by its president, Miss Mabel Studebaker. But it means exactly what it says.

America's most precious possession is the growing generation. Twenty years hence the children now in elementary and high schools will be the new leaders of the Nation. If they are well educated, they will be good leaders. If they are poorly educated, they may be bad leaders. And bad leadership may cause the political, social, and industrial failure of this country. Inadequate education may well be the costliest mistake the United States has ever made.

In every State where basic education is improved there has been, as an inescapable corollary, a better society. There has been an increase in average income. There has been better government. There has been better health for all persons. There has been a better understanding of national and world problems.

Every one of the 48 States is doing less than it could for its children. Yet not one of them but has the desire to do better. The less wealthy States are spending a larger percentage of the tax dollar for public education than are the richer States; but because many of the States have smaller sources of tax income than do some others, the educational systems have lagged behind what they should be or could be. There is a great lack of necessary equipment. There are some school buildings that are disgracefully inadequate. There are fewer teachers than are needed, and among those who labor for the betterment of the children, there are many—at least 1 out of 10, and in some States a higher percentage than that—who are insufficiently trained to do capable work.

Because of these facts, Miss Studebaker pointed out, there is an absence of serious scholarship upon the part of good students who might and should be our leaders. Too many are willing to become part of the average.

In America we are proud of our industrial efficiency. Given good raw materials, we make the best finished products the world has ever known. We have the raw material for leadership in our children, but we allow many of them to be formed into citizens in a careless, even a lackadaisical, manner. It is a great shame.

There is a way by which we can improve our schools and our teachers. It is by passing a Federal aid-to-education bill. Not to pass it and to fail to make use of the resources at hand is to fail in our duty to our children and to ourselves.

Resolution To Seek the Development and Strengthening of the United Nations

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 11, 1949

Mr. JUDD. Mr. Speaker, the following resolution was adopted by the annual 1949 convention of the North Carolina Department, American Legion, in Raleigh on June 21, 1949:

Whereas on June 7, 1949, a resolution was introduced in the House of Representatives of the Congress of the United States reading as follows:

"It is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the United Nations and to seek its development into a world federation open to all nations, with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law"; and

Whereas the American Legion has been and continues to be interested in the continued development and strengthening of the United Nations. Now, therefore, be it

Resolved by the North Carolina Department of the American Legion, in convention assembled:

1. That the North Carolina Department of the American Legion approves of the foregoing congressional resolution and desires its adoption by Congress.

2. That copies of this resolution be transmitted to the chairman of the foreign relations commission of the American Legion national organization.

Letter From Hon. Francis J. Myers, of Pennsylvania, to President Truman Regarding Midyear Economic Report

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I addressed to the President of

the United States yesterday on the subject of his midyear economic report.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

The PRESIDENT,
The White House.

MY DEAR MR. PRESIDENT: Your midyear economic report made public today represents, in my opinion, statesmanship of the highest order in outlining calmly but with complete clarity the lurking dangers to our economy from either complacency or a fear psychosis in reaction to the temporary declines now being experienced in employment opportunities and business activities.

This report by itself justifies the passage of the Employment Act of 1946, which provided you with this opportunity, which you have so expertly used, to call to the attention of the entire Nation the needs for a reasoned and unified approach to the problem of encouraging a steadily expanding economy in this great country.

I am particularly pleased by your decision to launch a continuing review by the executive agencies of procurement and construction activities and grant and loan programs with a view to guiding emphasis into localities where unemployment is heavy.

In this connection, I respectfully urge that particular attention be directed to the anthracite area of Pennsylvania where employment opportunities for male workers, particularly, have lagged and where there is a reservoir of skilled and willing workers seeking jobs. The economic situation in this area was worsened as a result of a warm winter which cut deeply into anthracite sales. Even under full employment in the mines, however, the anthracite area has been experiencing insufficient expansion of employment opportunities to allow for increases in the labor force.

Loan programs designed to help private enterprise in this area to expand, or to protect existing plants, particularly mines, against flooding or other physical dangers, would be of great assistance at this time. Such programs, I believe, could justifiably give added weight to the need for protecting and increasing job opportunities in such localities where economic factors might otherwise dictate greater caution.

I would also like to direct the attention of your aides in this matter to the need for temporary emergency action in maintaining production of necessary railroad freight cars in Pennsylvania and elsewhere. New orders for freight cars are alarmingly low and the backlog of orders from which the car builders had been working is falling off tremendously. As a result, many plants are now shutting down.

The railroads are either unwilling or, perhaps more accurately, unable at present to continue placing orders at the high level achieved during the past few years under a steel allocation program initiated by a subcommittee on which I served of the Senate Committee on Interstate and Foreign Commerce, in cooperation with the Office of Defense Transportation.

Again I want to express my sincere and genuine appreciation for the outstanding review of the current economic situation contained in your report and in the accompanying report of your Council of Economic Advisers. I know that with an Administration so alert to the problems of economic danger, half of the battle of achieving an ever-expanding economy is won. Similar alertness 20 years ago might well have averted one of the greatest tragedies of American history.

Sincerely and respectfully yours,
FRANCIS J. MYERS.

Address of Hon. Harry J. Davenport

EXTENSION OF REMARKS
OF
HON. WILLIAM J. GREEN, JR.
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of Hon. HARRY J. DAVENPORT, made at the Croatian Fraternal Union picnic, West View Park, Pittsburgh, Pa., July 12, 1949:

Mr. Chairman, members of the United Lodges Committee of Allegheny County, members and friends of the Croatian Fraternal Union of America, I do not feel a stranger talking to this large group of Americans of Croatian descent, because I was raised in McKeesport, Pa., which had a considerable Croatian population. It was there I became acquainted with the ancient culture and customs of this wonderful people. I went to school with Croatians, played with them, and attended their wonderful picnics and weddings. I early learned to have a great fondness for the hearty, wholesome, sociable ways of our Americans of Croatian descent.

If I were an American of Croatian descent, I would feel that I had much to be proud of, because it is an established fact that not only did the Croatians play an important role in stopping the hordes of Hitler, but in the United States they played a large part in the production of the sinews of war. Statistics bear out that 50 percent of the workers in heavy industry in the United States are Americans of Slav descent.

Many Americans are not aware of the fact that many Croatians, hardy seamen from Dalmatia came to America with Columbus on his first voyage. Croatians were among the first colonists, and that evidence has just been brought to light in North Carolina by the discovery of a Croatian Indian tribe. If anyone asks you if your forefathers came over on the *Mayflower*, you can with justification tell them, "No; but they met the boat."

The Croatians have enjoyed 12 centuries of independent statehood and in Europe have proved to be the most vigorous champions of freedom and democracy. They have everything that it takes to become good American citizens. Freedom loving, democratic, and hard working, they have contributed greatly to the growth and culture of our country. They were loyal followers of Franklin Delano Roosevelt and today they are in the forefront of the fight to achieve Truman's Fair Deal for all the people.

From my vantage point on this stage, I should judge that your celebration is a success in every respect and a notable contribution on this holiday eve of Independence Day to a better understanding among all peoples of all extractions in this great industrial center of our mighty Nation.

I know, both from experience and close study, that your Croatian Fraternal Union has been a most influential factor in the history of your nationality in this country * * * that its brilliant record of more than a half century of humanitarian service can be equaled by only a few fraternals.

I know that your society came to be organized on Pittsburgh's old Allegheny back in 1894 and has been a Pittsburgh institution—an American institution—ever since its inception before the turn of the twentieth century.

So, on this, your fifty-fifth anniversary, I want to offer you my warmest personal congratulations and extend you my very best wishes for many, many happy returns of this memorable day and year in your fraternal life.

America sorely needs organizations of your kind to maintain its democratic way of life. We need the concepts of fraternalism in our everyday dealings with our fellow men. We must uphold at home the precepts of brotherhood if we are to retain our station of respect before the world.

And by we, I certainly mean you and yours in this vast audience today. Yes; you must assume a share of these needs and these musts to help your Government in Washington thoroughly understand and pursue the cause of true peace in the world.

Your organization's membership is comprised of what is known in America as the little people. Make no mistake about it. These members of yours, these little people, are just as important to the present and future of these United States of ours as any given portion of our national population.

America needs your workingmen, your miners, your steel workers, your auto workers, your farm workers. America must depend upon your younger generation of intellectuals, professional men and women, politicians, artists, and white collar workers, for its future welfare in the world's family of nations.

Think of that might contained in your fraternal ranks and put it to work for your country and organization. Let no man rend assunder the good you have done as fraternalists. Let no man minimize your importance to the Nation. I say, in all sincerity, that you mean a great deal in the American picture. I ask you to continue your humanitarian work for the good of all of us as citizens.

I share in your pride over the all-time membership totals you are boasting of today. You most certainly are entitled to celebrate long and loud in this fifty-fifth anniversary year, ever thankful for your 100,000 strong ranks and assets worth over $17,000,000.

And I share in your pride over the fact that your organization is affiliated with no other organizations save such worthy ones as the National Fraternal Congress, that it promotes nothing save the Americanism contained in your program of humanitarian work and your promotion of athletic and cultural activities. More power to you and long may your fraternal kind live.

And now—as Americans—let us look at our Nation on this holiday eve of Independence Day of 1949 and acquaint ourselves with the pressing needs of every citizens of average means.

When our fledgling Nation observed its first independence day back on July 4 of 1776, the citizenry of those days was facing frontiers yet unconquered and political and physical barriers to try men's souls. Slowly, but surely, the little people came to triumph over the forces of nature and the often evil mind of man.

Today, 173 years later, we are facing barriers no less detrimental to our welfare than those met and eventually conquered by our pioneers of yesteryear. Throughout our history as a Nation, we have been called upon time and again to arise and seek the truth, to make our voices heard in Washington when the little people were being dealt with unfairly.

Such a time is again at hand, for I know that you, too, are deeply concerned—as workingmen—over the Taft-Hartley Act, the grave housing problem, adequate benefits for those sons of yours who fought in the last war, and many other governmental matters which are the needs of the people.

You know where I stand on the Taft-Hartley Act, right in the front ranks of those who

are marching with our President, Harry S. Truman, to remove it from the backs of the working class. And we won't cease fighting until this yoke against labor is removed—once and forever.

You know that I stand four-square for adequate housing and just as militantly against the real-estate lobby. You know that I believe in the needs of our veterans; that I will always fight to reward them for their heroic sacrifices.

You know that I believe in the little people, for you know that I came from their stock. I am fiercely proud of my heritage, of my background. And I want you to be just as fierce in your pride for yours. We, you and I, your parents and mine, helped build this wonderful Nation of ours and we're mighty proud of it.

And we're going to keep right on building it and stand beside it as it works for world peace and harmony among all nations. We owe that to our sons and daughters, the leaders of tomorrow. We dare not fail them again.

I know that you good people believe in peace and are willing to work—slave, if necessary—to secure it. I know that you are nauseated with the horrors of war and will never again permit them to snatch your loved ones from your midst. We must fight for peace, for a just and lasting peace for all mankind.

We have much to be thankful for on this Independence Day week end of 1949, but not so much—or too much—that we cannot give thought to our future. What that future holds hopefully for our children depends upon what we contribute toward it from day to day.

What shall we leave our children and generations yet unborn? Shall we leave them with onerous labor laws, slums, dire housing shortages, inadequate health protection, an insecure social security? Shall we leave them the atom bomb and the blueprints of war? Shall we leave them with a heritage of hatred against men?

Or shall we rededicate ourselves as Americans and leave our children with an America at peace with itself and the world? Surely no mother and father in this vast audience could will their children anything more wonderful.

Let us have faith in our Nation and strive to correct every evil which plagues it. Let us show this faith at the ballot boxes on election day. Let us realize our duties and responsibilities as citizens and speak up when they are being trampled upon. Let us stand up and fight when we must, no matter what the cost.

Above all, let us never lose sight of our own good judgment in times of national hysteria. The common sense of every person in this park—of every American—is needed to keep this Nation strong and running on an even keel.

And that common sense is the basis of fraternalism, the basis of your organization. Never let it become dulled or subservient to the wishes of others. We, in Washington, are depending upon you to exercise it at all times. Thank you.

The Alger Hiss Trial

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. VELDE. Mr. Speaker, yesterday the gentleman from New York [Mr. MULTER] and the gentleman from Ohio [Mr. HAYS] saw fit to rebuke Members of Congress for their criticism of the conduct of Federal Judge Kaufman during the Alger Hiss trial. This rebuke was entirely unwarranted and unfounded. The Constitution gives power to Congress, not only in the appointment of Federal judges, but also in the surveillance of their conduct after appointment. The Senate is given power and authority to confirm, or refuse to confirm, all appointments of Federal judges, and the House of Representatives is given the sole power to impeach. Congress is also invested with the authority to set up tribunals inferior to the United States Supreme Court. The framers of our Constitution were wise in this regard. They realized that Federal judges are the choice of one man, the President, and theirs is a lifetime appointment. A Federal judge is not an elective post, as most State judges are; therefore it becomes the solemn duty of the House Members to inquire into the conduct of the Federal judiciary.

As the Alger Hiss trial progressed through its 6 weeks course, there was a growing opinion among Members of Congress and the legal profession with whom I talked, that Judge Samuel H. Kaufman, by his rulings and his actions in the courtrcom, was showing a marked bias for the defense that, to say the least, bordered on judicial misconduct.

An examination of the record shows that there is considerable foundation for this opinion, and a sampling of qualified observers who were in the courtroom daily bolsters that opinion even more. Here are six flagrant examples that are in the court record itself:

First. Alger Hiss claimed that he had known Whittaker Chambers only as "George Crosley." Chambers testified he had not used the name and that Hiss had known him only as "Carl." When Mrs. Chambers was on the stand, Judge Kaufman injected himself into her examination and informed the courtroom and the jury that Chambers had testified that he had used the name of "Crosley." Despite what the New York Times called a "gasp" from the courtroom and cries of "oh, no," the judge allowed his unwarranted perversion of the testimony to remain in the record, damaging to the prosecution and helpful to Hiss though it was.

Second. Judge Kaufman permitted parts of the grand jury record, containing Hiss testimony, to be turned over to the Hiss counsel, despite heated protest from the prosecution that grand jury records are secret.

Third. Judge Kaufman permitted a psychiatrist retained by Alger Hiss, one Dr. Binger, to sit in the courtroom in a prominent spot as a prospective defense witness, and take notes on the behavior of Whittaker Chambers, supposedly on his mental condition. When the prosecution protested in the strongest terms, the judge in his chambers ruled that Dr. Binger would not be allowed to testify. However, on returning to the courtroom, the judge permitted Dr. Binger to take the stand and be sworn, although in all other instances where he barred a witness, he refused to let them reach the witness stand. Next, Judge Kaufman allowed the defense counsel to address perhaps the most remarkable question in legal history to Dr. Binger. The supposed question was 45 minutes in length and actually amounted to an illegal midtrial summation of every charge and fact that the defense had mustered against the credibility of Whittaker Chambers, the Government's chief witness. Then, Judge Kauffman formally ruled that Dr. Binger could not testify and ordered the question stricken. But as Prosecutor Murphy cried, in a raging protest against this most undecorous judicial conduct, the damage had already been done

Fourth. Although Judge Kaufman allowed the Hiss counsel to question Whittaker Chambers about a suicide in his immediate family, the judge refused the same privilege to the prosecution to question Hiss about two suicides in his immediate family, despite vigorous protests from the prosecution against such obvious bias.

Fifth. When Chambers was asked how had he first met Alger Hiss, he testified that he had been introduced to him by Harold Ware and J. Peters. When the prosecution asked for further identification of these two men, Judge Kaufman refused to allow an answer. Both were known Communist operators of Washington spy rings, but the jury was never permitted by Judge Kaufman to know more about these two men than their bare names, a ruling highly favorable to Hiss.

Sixth. On the third day of the 26-day trial, information reached the prosecution that the wife of the jury foreman, Hubert James, had stated her husband believed Alger Hiss innocent and would use his influence to convey this to the other jurors. Three days later additional information was received and this too was brought to the attention of the judge. Both reports originated with the FBI. Prosecutor Murphy, meeting in the judge's chambers with the defense counsel present, suggested that the foreman be excused and an alternate juror who had been present for 6 days, take his place. Judge Kaufman, after hearing a defense objection, declined to act, and, as was expected, Foreman James held out to the very end for acquittal of Hiss, assuring a deadlock of the jury that stood 8 to 4 for conviction when finally discharged.

These are a mere half-dozen examples; the record abounds with unusual rulings favorable to Hiss throughout the trial. But, according to qualified observers present in the courtroom, the most biased acts of the judge cannot be discovered in the record. His sarcastic and scornful voice employed when addressing key Government witnesses, and his impatient gesturings, chair-whirls, and head movements indicating disbelief of their testimony, do not of course show in the record, yet they are common knowledge and were the talk of New York during the trial.

On the other hand, Judge Kaufman's gentle, even friendly regard for Alger

Hiss and all witnesses who testified in his behalf was in shocking contrast to his treatment of prosecution witnesses.

One example of gross impropriety by Judge Kaufman which does not appear in the record will suffice: When Justices Frankfurter and Reed appeared as character witnesses for Alger Hiss, Judge Kaufman went to great lengths to lean down from the bench and shake hands with them approvingly before they took the stand, an act committed before the jury which could only be prejudicial to the prosecution and helpful to Hiss.

It is obvious to me that inquiry into the conduct of Judge Kaufman in this trial cannot be sidestepped. Nor can it be allayed by such statements as one issued yesterday by Robert P. Patterson, a former New Deal cabinet member and one of the original endorsers of Kaufman's candidacy for a judgeship, in which he attempted to rebuke Members of Congress who have seen fit to raise questions as to Judge Kaufman's lack of judicial conduct. I am confident if Mr. Patterson will reread the Constitution of the United States, which specifically imposes on Members of Congress—and no one else—the burden of surveillance on the conduct of Federal jurists, he will want to withdraw his untimely comment.

We Go Back To Deficit Spending

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 12, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following bulletin of the Council of State Chambers of Commerce:

WE GO BACK TO DEFICIT SPENDING

The 1949 fiscal year of the Federal Government ended ingloriously on Thursday, June 30, with the disclosure that the year's expenditures had exceeded receipts by $1,811,000,000.

Announcement of this sad news was made by Secretary of the Treasury John W. Snyder, who pointed out that the deficit was "a reversal of the trend of the two previous fiscal years when there were budget surpluses of $754,000,000 in 1947 and $8,419,000,000 in 1948."

Secretary Snyder's statement contained the following table summarizing budget results for the fiscal year 1949 as compared with 1948:

[In millions of dollars]

	Fiscal year—		Change, 1949 compared with 1948
	1949	1948	
Net receipts [1]	$38,246	$42,211	−$3,965
Expenditures	40,057	33,791	+6,266
Surplus (+) or deficit (−)	−1,811	+8,419	−10,231

[1] After deducting tax refunds and also pay-roll taxes which go into the old-age and survivors insurance trust fund.

SPENDING INCREASED, REVENUES DECLINE

Secretary Snyder explained that the $6,266,000,000 increase in expenditures over 1948 was principally due to increases for ECA ($4,041,000,000), National Military Establishment ($1,886,000,000), Commodity Credit Corporation ($1,789,000,000), and Veterans' Administration ($409,000,000). These increases were partially offset by spending decreases of $1,700,000,000 under the credit to the United Kingdom and $525,000,000 under the Export-Import Bank.

The $3,965,000 decline in 1949 receipts below 1948 figures was attributed by the Secretary principally to decreases of $1,595,000,000 in withholding taxes, $1,340,000,000 in sales of surplus war property, and $397,000,000 in miscellaneous receipts. Another factor, he pointed out, was an increase of $556,000,000 in the deduction from gross receipts due to refunds of taxes.

DEBT INCREASED BY $478,000,000

The Government's return into the shadows of deficit financing will not be welcomed by the American taxpayers. For 16 straight years—from 1931 through 1946—annual Federal deficits contributed to the piling up of a public debt on which today's interest payments alone exceed the entire total amount expended by the Federal Government for all purposes in any year between 1921 and 1934. The gross Federal debt in 1931 was $16,801,485,143. Sixteen years of deficit financing boosted it to $269,422,099,173 by the end of 1946. Rescissions of wartime outlays and 2 years of budget surpluses (in 1947 and 1948) reduced the debt to $252,292,246,513 by June 30, 1948.

Our return now to deficit financing starts the debt on another upward climb. By dipping generously into general fund balances the Treasury was able to hold the debt increase resulting from this year's $1,811,000,000 deficit to $478,000,000. The gross public debt as of June 30, 1949, therefore, is shown to be $252,770,359,860.

NO EFFORT MADE TO AVERT A DEFICIT

The 1949 budget deficit is a direct result of the administration's failure to pare Federal spending in keeping with the decline in Federal receipts which began to show up markedly last January.

The decline in Federal revenues was not the only portent of fiscal trouble ahead with the advent of 1949. The Federal Reserve Index of industrial production was showing a decline from 195 in November 1948, to 191 in January and 179 in April 1949. Shorter work weeks and lay-offs of workers began to produce a falling off of withholding-tax payments. Also, in January, a slight downward trend began in the income of the American people, as shown in personal income statistics published by the United States Department of Commerce. The month-by-month trend in the level of personal income since last July has been as follows: July, $214,800,000,000; August, $216,700,000,000; September, $217,300,000,000; October, $218,500,000,000; November, $219,900,000,000; December, $221,000,000,000; January, $219,200,000,000; February, $216,300,000,000; March, $214,600,000,000; April, $213,700,000,000.

The President was aware last January of an impending 1949 budget deficit. In his budget message he predicted a deficit of $600,000,000. Neither his message nor his subsequent actions, however, revealed any inclination to have the Government do what businesses and households must do when faced with an income shortage, namely, cut costs.

Instead, the administration sent to Congress deficiency appropriation requests which were approved in the amount of $1,975,000,000. These funds were thus made available for 1949 spending, in addition to sums regularly appropriated by last year's Congress.

Civilian employment in the executive branch rose from 2,095,559 on December 31, 1948, to 2,120,409 on May 31, 1949—an increase of 24,850—or about 5,000 per month.

Meanwhile, administration pressure for more than a score of brand new domestic and foreign-spending programs has continued unabated.

EFFECT OF 1948 TAX CUTS ON THE 1949 DEFICIT

Several of the prospending Members of Congress have sought to place the blame for the 1949 deficit on the personal-income-tax reduction bill passed by Congress last year. Their contention is not very convicing.

In the first place, there is reason to believe that the tax cuts have helped to bolster a peacetime economy which was already showing signs of sagging under the staggering wartime tax burdens still foisted upon it. To the extent that these tax reductions stabilized economic conditions, they also stamilized the tax base upon which governmental income must depend.

As for the $1,595,000 decrease in withholding taxes, it is quite evident that the decline in employment has taken a larger toll here than the increased tax exemption given to wage-earners under the tax-reduction bill. This is pretty clear from the most recent months for which statistics are available. It is probable that the $556,000,000 increase in tax refunds is less attributable to the current business decline than to the tax-cut legislation. On the other hand, to the extent that these refunds went into purchases of consumer goods, excise and other tax revenues of the Government were enhanced.

LOOKING AHEAD

In any event, the 1949 Federal deficit is now "water over the dam," except as it is used as an augury of what lies ahead. Senator HARRY F. BYRD, in his June 30 speech in the Senate, said that Congress "must soon make the fateful decision (1) whether to retrench drastically, (2) whether to impose staggering new taxes, and (3) whether to embrace deficit spending again."

He characterized the third course as the road to certain ruin and therefore discarded it. He believed that additional taxes would result in diminishing returns, revenuewise, for the Government. The only course remaining, he said, was "to reduce expenditures to the point of a balanced budget under existing taxes."

Senator WALTER F. GEORGE, chairman of the Senate Finance Committee, agreed with Senator BYRD's statement of the situation and said, "I wish to emphasize that I think the greatest service the President of the United States could render the American people today and tomorrow would be a clear, definite, and positive statement that at this time it would be inadvisable to undertake to increase the tax rates."

Research Director, Council of State Chambers of Commerce.

Study and Investigation of Monopoly and Antitrust Laws

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 12 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, early this year I introduced Senate bill 1008, known as the moratorium bill on the basing-point question. It was a bill to provide a 2-year moratorium with respect to the application of certain antitrust laws to individual, good-faith delivered-price systems and freight-absorption practices. I suggested that we should have a full and complete con-

gressional study and investigation of the antitrust laws. I was happy last night to learn that the House Judiciary Committee had launched such a long-overdue investigation into the antimonopoly and antitrust laws. On June 9, 1949, I issued a statement that I hoped such a long-overdue investigation would result in a clear picture of what those laws should do. I ask unanimous consent that the statement which I made on July 9 be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The confusion and contradictions arising out of Supreme Court and circuit court decisions on the so-called basing-point issue have demonstrated not merely the need for clarifying legislation on the matter of freight absorption but for a thoroughgoing review of the whole pattern of antitrust laws.

S. 1008 has been bitterly attacked in some sources as a promonopoly bill, which it certainly is not. Its sponsors, as well as its endorsement by the Justice Department, should suffice to answer those attacks because it is inconceivable that Senator O'MAHONEY and I, and Congressman WALTERS and others, who have pushed it through both Houses would be interested in furthering monopoly.

The subject of antitrust law is so complex, the contradictions in the law so glaring, that the only way to remove doubts as to whether our laws are tight enough or flexible enough is through the vehicle of a congressional investigation into the entire field of monopoly.

I congratulate the House Judiciary Committee for undertaking such an investigation.

Hugh D. Scott, Jr., Chairman of the Republican National Committee

REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. VURSELL. Mr. Speaker, I regret to mention this matter on the floor of the House; however, I have read in the press that some members of the Republican National Committee are reported to be dissatisfied with the leadership of our colleague, HUGH D. SCOTT, JR., as chairman of the Republican National Committee, and are seeking outside of the Congress for a new chairman.

I think such action is a mistake and might prove extremely detrimental to the success of our party and could thereby result in a great loss to the people of the Nation.

The great mass of Republicans and other citizens who believe a change from the present national administration is imperative to the welfare of the Nation had hoped that question had been settled last winter at Omaha. I cannot understand why responsible members of the Republican National Committee would again raise this question. No good can come of it. It is the wrong move at the wrong time.

Now let us look at the record. For the 1946 campaign a Republican Member of Congress, Carroll Reece, was elected chairman of the Republican National Committee. He knew the party largely had to stand or fall on the record of its representatives in Congress. He was ably assisted and advised by our colleague, CLARENCE BROWN, of Ohio, as the executive chairman of the committee; by Congressman CHARLES HALLECK, the congressional chairman; and by our minority leader, JOSEPH W. MARTIN, JR. For the first time in 14 years, under such leadership, in cooperation with the various national committeemen, the party won an overwhelming victory, resulting in a Republican Congress.

The plan of our chairman to hold three regional conferences over the Nation with the members of the national committee this fall and winter to seek grass-root information from the members of the party and to perfect plans for the future is further proof of the practical, intelligent, and aggressive leadership of Mr. SCOTT.

With party harmony, we can repeat that performance again under the aggressive and very able leadership of our present colleague, HUGH D. SCOTT, JR.

The Congress is the political hub of the party. It is of great advantage for the national chairman to be fully conversant with the work and record of the Congress.

Further proof of the value of a chairman who is conversant with congressional activities can be seen by looking across the line to Senator MCGRATH, of Rhode Island, who successfully managed the campaign of his party, and who is still its national chairman.

Let us stop this bickering, close ranks in unanimous support of HUGH D. SCOTT, JR., our chairman, and win again in 1950.

Conduct of a Federal Judge

REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 12, 1949

Mr. WALTER. Mr. Speaker, the allegations of misconduct on the part of a Federal judge in a case recently tried in New York, relate for the most part to errors of law in rulings from the bench and conduct claimed to be generally prejudicial to the Government and unduly favorable to the defendant. Errors of law, if any were committed, are matters for correction within the judicial branch of the Government. The case has not by any means been concluded. There will be a new trial at which I assume a different judge will preside. During the new trial the judge will presumably have to rule on questions of law similar to those raised in the first trial and perhaps on other points. He should be free to do so on the basis of his own best judgment at that time, uninfluenced by findings that a congressional committee might choose to make under its own interpretation of the law and the facts. For a congressional committee to conduct an inquiry into a matter which is properly the subject of judicial inquiry at the same time is certainly an interference with and obstruction of the administration of justice.
